NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JAN. 3, 1891.

BIRTH.

At Tokyo on the 27th ultimo, the wife of Dr. W. N. WHITNEY of a Son.

MARRIAGE.

SMITH-ALDRICH.—On 15th November, at Bunnythorpe, by the Rev. Mr. Patterson, Robert Bifield Smith, Manager, Bank of Australasia, Palmerston North, to Bertha Elizabeth, fourth daughter of A. S. Aldrich, of Bunnythorpe, New Zealand, and Yokohama, Japan.

## *SUMMARY OF NEWS.*

H.I.H. PRINCE KUNIHIKO left the capital on the 26th ultimo for the hot springs at Atami.

MR. ASADA, Governor of Kanagawa, is at present suffering from an attack of influenza.

HIS MAJESTY THE EMPEROR was present at the meeting of the Cabinet on the 26th at 1.45 p.m., retiring at 2.50 p.m.

THE line of the Osaka Railway between Oji-mura and Nara, which was completed recently, was opened for traffic on the 27th ult.

HIS IMPERIAL HIGHNESS PRINCE KUNI left the capital for Oiso, on the 29th ultimo, starting from the Shimbashi Station at 9 p.m.

COUNTESS YAMAGATA visited the Palace on the afternoon of the 27th ultimo, and had an interview with the Her Majesty the Empress.

THE British Minister entertained Prince Sanjo, Counts Saigo and Oyama, the Foreign Representatives, and other distinguished guests on the 25th ultimo at the Legation.

THE line between Oji-mura and Takadamura of the Osaka Railway Company, will be completed within the year, and opened for traffic about the beginning of this month.

THE Naval Department has decided to construct Government coal depôts at Aishima in Toba harbour, Shichu (Miye Prefecture), the contract for which has been secured by the Miye Doboku Kaisha.

THE resolution of the Imperial Diet as to the Bill for the postponement of the enforcement of the Commercial Code was approved by the Emperor on the 26th ultimo.

HER MAJESTY THE EMPRESS paid a visit to the Aoyoma Palace on the afternoon of the 26th ultimo, and offered her salutations to the Empress Dowager, on the close of the year.

THE *Harima Maru* and *Ise Maru*, which are now undergoing repairs in the Yokosuka Shipbuilding Yard, will, it is expected, be afloat before the middle of next month.

THE Korean steamship *Soryu-go* left Jinsen on the 11th ultimo for Yokohama to take a consignment of arms of Japanese manufacture to Korea. She is expected to arrive here within a few days.

THE resignation by Viscount Torio of his seat in the House of Peers, was presented to the Emperor on the 25th ultimo, through Viscount Hijikata, Minister of State for the Imperial Household.

MR. HO KIHATSU, a member of the House of Representatives for the third district of Hyogo Prefecture, who had been suffering for some time from inflammation of the lungs, expired on the 23rd ult., at 6 p.m.

ON the night of the 25th ultimo, an outbreak of fire took place in a stable near the grand stand at the Uyeno Race-course, but the flames were prevented from extending, and were subdued before much damage could be done.

THERE are at present twenty vessels carrying freight between Osaka and Korea, of which 3 are steamships, namely the *Izumo Maru*, *Shirakawa Maru*, and *Sumidagawa Maru* of the Osaka Shosen Kaisha, 6 sailing vessels, and 8 Japanese junks.

MR. HOSHI TORU, a member of the *Rikken Jiyu* party, intends to form a company with the object of sending *soshi* to America, Australia and Canada as emigrants. Count Itagaki, has, it is said, promised to give his aid to the project.

THE general meeting of shareholders of the Tokyo Fire Insurance Company was held on the 29th ultimo, at the Oyukan, Asakusa. Mr. H. Kumagai was elected Superintendent, and Messrs. T. Hoshi, S. Ando, and K. Yajima auditors of the company.

MR. NODA YASUNORI, Inspector of the Foreign Settlement Police Station at Yokohama, has been appointed chief of Kamiza, Shimoza, and Yasu districts, Fukuoka Prefecture, and Mr. Utaka Seiro, Director of the Police Bureau in the Kanagawa Prefectural Police Station, has been appointed to take his place.

HIS MAJESTY THE EMPEROR proceeded to the Aoyama Palace on the afternoon of the 28th ultimo, and offered New Year congratulations to the Empress Dowager. On the following day, the Empress Dowager paid a visit to the Imperial Palace, and had an interview with Their Majesties the Emperor and Empress.

ACCORDING to a report compiled by the Authorities, the number of schools (including elementary, middle, and normal schools and schools of other various kinds, both private and public) teachers and students in the empire at the end of 1889, was as follows:—Schools, 28,024; teachers, 72,493; students, 3,150,614.

DURING last year the quantity of kerosene oil imported into Yokohama from America and Russia was 1,902,450 cases, of which 1,650,343 were sent to various parts of the Empire, showing a decrease of 109,482 and 136,629 cases respectively as compared with the previous year.

A CABINET meeting was held on the 26th ult., and attended by all the Ministers of State. The proceedings lasted from eleven in the forenoon till the evening. Viscount Tanaka, Superintendent General of the Metropolitan Police, Messrs. Sonoda, Superintendent of the Metropolitan Police, Kiyoura, Chief Commissioner of the Police Bureau in the Home Department, and the Secretaries of various Departments were also present at the meeting.

THE Princes of the Blood now in the capital, Prince Sanjo, the Ministers of State, Counts Oki, President of the Privy Council, and Yoshii, Vice-Minister of the Imperial Household, Marquis Nabeshima, Grand Master of the Board of Ceremonies, Viscount Watanabe, President of the Bureau for the Examination of Accounts, Marquis Hachisuka, Governor of Tokyo, and Viscount Tanaka, Chief of the Metropolitan Police, had the honour of dining with the Emperor on the 27th ultimo at the Palace.

ON the 27th ultimo, at 10 a.m., all the Ministers of State, (except Viscount Kabayama Minister of State for the Navy), Viscount Watanabe, President of the Bureau for the Examination of Accounts, Marquis Hachisuka, Governor of Tokyo, and Viscount Tanaka, Superintendent of the Metropolitan Police, met at the Cabinet Office and reported to the Emperor as to the various important events that have taken place in connection with the Government during the present year. The Cabinet Office was closed for the New Year Holidays on the following day.

THE recent stagnation in the Import trade has been further accentuated if possible by the advent of the holidays, and there has been nothing purchased beyond what was required by pressing need. It has been much the same with all commodities, Yarns, Piece-goods, Metals, Kerosene, and Sugar sharing the same fate. The Silk trade has been quiet, especially so during the last few days, and holders are still strong. Arrivals have fallen off somewhat, due mainly to the closing of most filatures worked by water power, and these will not reopen until the frost has gone. There are, however, nearly 16,000 piculs in stock in this market left over from last year, and there is little doubt that production up country has been slowed down for some time past in view of the loss entailed upon reelers. Of course nothing can yet be said about the new crop, but there is no doubt that an augmented quantity of seed will be laid down, as the enormous increase in mulberry plantations will make ample provision for the feeding of *kaiko* in such quantities as have never before been raised, and if leaf is good and cheap, the outturn of cocoons will probably exceed that of any previous year, notwithstanding the present price of Silk. There is a little Tea left on the market, but nothing doing. Exchange has remained steady all the week, and rates are unaltered, though there is a strong upward tendency.

## *EDITORIAL NOTES.*

### THE HOUSE OF PEERS AND THE TARIFF.

THE *Jiji Shimpo* makes some very sensible remarks about the Representation voted by the Upper House on the motion of Viscount Tani with reference to Tariff autonomy. It says:—"It is perfectly clear that when Viscount Tani proposed the imposition of increased taxes on imports, he intended to indicate a protective policy for the promotion of Japanese industry. The Viscount and his supporters ought to have considered more carefully the effect which such a course might have upon Treaty Revision. The Minister of State for Foreign Affairs, in his recent speech to the House of Representatives, distinctly pointed out how much importance Foreign Powers attach to the question of free trade and protection, and both the proposer and the seconder of the Representation in the House of Peers, being men well versed in Western ideas, ought to have perceived that this policy of protection which they clearly invited the House to endorse, will create difficulties when the Treaty Revision negotiations come to be finally commenced. It is stated that some of the leading merchants of Tokyo desiring to support the principle of recovering the nation's Tariff autonomy, contemplated a meeting to discuss the question and to endorse Viscount Tani's motion, but learning that a protective tariff was his object, they found themselves unable to support him and accordingly postponed their meeting."

* * *

Viscount Tani and many of those ranged under his political banner have long been known to advocate protection, and although it is impossible for anyone trained in the English economical school to call their view sound, it is equally impossible to condemn them unreservedly, seeing that the statesmen and political economists of many of the leading countries in the world advocate the same course. With the McKinley Tariff Bill staring them in the face, Japanese politicians cannot be greatly blamed for preaching protection. There is no doubt that this country ought to work up its own silk, and become also a large manufacturer of cotton stuffs. But the object to be compassed is access to the markets of China in the first place, and to those of Europe and America in the second, and the best way to defeat this object is to artificially foster manufactures by a protective system which raises the price of labour and ultimately has the effect of incapacitating the protected manufactures for competition abroad. If Japan aims simply at being self-supplying, and if in pursuit of this somewhat romantic notion she is willing to pay a good deal more han necessary for her articles of daily use, then here is nothing to say against her adoption of protection. But that was not what Viscount Tani contemplated when he spoke of exporting silk, not in a raw, but a manufactured state. If he had read the history of trade a little more closely he would have seen that countries whose industries have grown up under the shadow of protection can never hold their own in the open light of foreign free trade competition. Even at present, with labour so cheap and materials so accessible, Japan cannot compete with England successfully in supplying cotton stuffs to either home or foreign markets, and her ability to do so would not be improved by a system the inevitable effect of which is to raise the cost of manufactures.

* * *

Apart, however from Japan's industrial interests, the action to which the House of Peers was committed by Viscount Tani cannot contribute to the solution of the Treaty Revision problem. In the first place, the Representation might be construed to mean that the House regards the recovery of Tariff autonomy as the principal object of Treaty Revision, a verdict which would sensibly weaken the hands of the negotiators. There is little reason to think that the House really meant this. On the contrary, when the point was raised by one of the members, the Viscount himself replied emphatically that he aimed equally at the recovery of Judicial autonomy, but that the importance of the Tariff question seemed to him to demand special demonstration. This was another way of saying that the question of Judicial autonomy might be left to stand on its own merits, whereas that of Tariff autonomy needed support. The Japanese public and the Government will doubtless intrepret the Representation in that sense. Of late, however, public opinion if we may judge by the newspapers, has been turning with remarkable insistence to the question of Tariff autonomy. It appears to be thought that because little has been heard on the subject, little is being done about it. Journalists have in many cases discussed the matter in evident ignorance of the fact that countries about whose possession of Tariff autonomy no question can possibly be raised, countries like France, Germany, and England, for example, are all bound by statutory tariffs of precisely the same character as that by which Japan will doubtless be bound under the revised Treaties. These journalists talk as though a country, by signing a tariff convention for a fixed number of years, suffered some impairment of its tariff autonomy. Nothing of the kind. When the owner of a house lets it at a fixed rent for a certain term of years, he does not cease to become the absolute owner but agrees for a consideration to waive the arbitrary exercise of his right of ownership for a definite time. That is precisely the basis upon which all tariff arrangements are made. In point of fact the United States of America is the only country in the world that is not bound by a statutory tarriff. The best that Japan can hope is to be placed on the same footing as European nations in this respect. That must be the first step towards absolute freedom. If at the end of the fixed period she is resolved to inaugurate a protective system, she will be at liberty to do so, but in the meanwhile she will have to be content with a covenant similar to that existing between England and France, or England and Spain. What is absolutely certain is that any attempt to replace her present tariff by a system of protective duties would never be consented to by the British Government. England's principal interests are of a commercial character, and to expect her to agree to an arrangement by which her commerce here would be practically terminated, is absurd. She has every disposition to help Japan to emerge honourably and satisfactorily from this Treaty Revision quagmire, but she certainly will not kill and bury her own trade for that purpose. If Viscount Tani and his supporters are practical statesmen they must be well aware of all this. If being aware of it, they introduced a motion calculated to mislead the public so seriously, they certainly have not added to their reputation for sagacity. If they are not practical statesmen and if they merely framed their Representation for the idle purpose of ventilating a policy impossible of attainment, then perhaps the less note taken of their opinions the better.

### TRIPLE ALLIANCE IN ASIA.

THE *Nippon-jin*, writing on the situation in the East, recommends an alliance between Japan, China, and England. After alluding in general terms to the difficult rôle Japan has to play as an independent Power in the Orient, our contemporary repeats what it had more than once remarked, that it is of paramount importance for this country to settle once for all a definite course of policy in its relations with foreign States. But before entering upon any discussion as to the particular course of policy which Japan ought to pursue, the Tokyo journal tries to introduce its readers to the international situation in Europe, for it believes that a close study of the manner in which Occidental States endeavour to maintain the balance of power between themselves cannot fail to be of great assistance in determining the foreign policy of this Empire, especially since some of the leading nations of the West have to be taken into consideration in discussing the situation in this part of the world. Thus much premised, the *Nippon-jin* briefly describes how the overpowering influence of Russia and its close relations with France, have driven Germany, Italy, and Austria to form the *dreibund*, and how England, though not directly, takes the leadership in counteracting the ambitious designs of the Northern Power. Now with which of these Powers—asks the *Nippon-jin*—is it the interest of Japan to ally herself? "It is a notorious fact that Russia looks with covetous eyes upon the Korean peninsula and British India. . . . No increase of Russian influence in Asia can fail to excite the jealousy and hatred of England. In short, Russia and England are the two irreconcilable champions in the wrestling arena of Asia. Russia's victory would seriously endanger the safety of India, while English ascendancy would prove an insurmountable barrier to the southward progress of Russia. Russia is now watching Korea, while Korea, weak and helpless, is reported to be secretly anxious to obtain the protection of Russia. The Eastern skies are indeed dark with gathering clouds of ominous character. In the event of Russia's declaring a protectorate over Korea, will England sit with her hands folded, or will China remain silent and indifferent? Is it not then plainly the interest of Japan to unite with China and England to check the progress of Russia?" The *Nippon-jin* recommends the formation of a close alliance between Japan, China, and England, and the establishment of an understanding with the Powers constituting the European Triple Alliance. In conclusion, our contemporary exhorts its countrymen not to fear European Powers, but to boldly and deliberately maintain the dignity and prestige of their country.

### NINETEENTH CENTURY REPORTING.

HERE is a wonderful example of reporting, told by the *Pall Mall Budget*:—"The venerable statesman, says a Scottish contemporary, began his speech at 4.6 p.m. and finished at 5.30; the last of the reporters' 'copy' was in the printers' hands—at a distance of half a mile off—at 5.38; the formes of type were made up and sent to press at 5.50; twelve minutes were spent in the stereotyping room; the machines were set rolling at 6.2; and boys with bundles of papers were selling in all directions a minute or two afterwards, the completed report being published half an hour before any other. There were in all over six columns of a report, of which almost five columns were devoted to Mr. Gladstone's speech word for word. Nine of the reporters formed the note-taking corps proper; another took what is known as a "check note," a third acted as 'time-keeper.' No. 1 took a shorthand note for one minute, No. 2 followed; and so on. No. 1, of course, had time to write up his notes before his turn came round after No. 9 had completed his note-taking. In the later stages the 'turns' were reduced to half a minute each. One reporter had charge of the collection and arrangement of the 'copy,' and as each 'section' was ready it was handed to a boy, whose duty it was to act as go-between from the reporters to an outside messenger at the door. From this door at the Corn Exchange to the newspaper office there was a chain of boys, each with a beat of aboout 200 yards Each boy on receiving copy ran forward to his nearest neighbour, returning afterwards to his former post, and in this way the various sections were delivered at the printing office in an incredibly short time—more quickly indeed than by cab or horse. At head-quarters fifty-four compositors in their order each took a sheet of the "copy." The operation of setting up each sheet would only occupy three or four minutes. The report was out of hand within a minute or two of setting down, and all without a hitch."

### THE BARRISTERS BILL.

COMMENTING on the Draft Law for Barristers lately submitted to the Diet, of which a translation has appeared in these columns, the *Jiji Shimpo* says that its intention may be to elevate the status of legal practitioners, but the practical enforcement of its provisions will tend to produce exactly the opposite result. The majority of the present barristers cannot afford

Digitized by Google

to pay the comparatively large sums of money required by the Dratt Law as security. Those who can afford to do so are barristers of long standing, who were called to the bar in days when the examination was much easier than it is at present, and who have made their fortunes by many years of labour. Without attempting to say anything about the experience they may have acquired in the meantime, it is certain that they are much inferior to young barristers in legal knowledge. Even the ablest and best educated among the young barristers will be prevented from continuing their profession owing to inability to find the prescribed sum of money. This cannot but be contrary to the intention of the Law. The *Jiji* regrets that according to its provisions the title of barrister is not conferred for life. Another defect is that barristers are placed under the control of public procurators. Barristers and procurators are often obliged to argue in Court about the application of the laws. They are, in fact, public opponents, and it is to be feared that the peculiar relations contemplated by the new Law may affect them in court, and make itself apparent in the discharge of their legal duties. The *Jiji* believes that this evil can be avoided by placing barristers under the jurisdiction of the Court alone, and allowing the Barristers' Club to establish its own regulations for their control. It will by no means be possible to raise the status of barristers by striking those off the roll who have not sufficient knowledge and skill. The *Jiji* ventures to hope that the proposed Law will not be allowed to pass through both the Houses. According to the opinion current among barristers themselves, a few changes in the present law would suffice to make it in all respects complete. There seems to be no necessity to enact the new Law now submitted for the Diet's discussion.

### FATE OF THE BILL FOR THE POSTPONEMENT OF THE COMMERCIAL CODE.

THE *Bill* for postponement having passed both Houses, the public is keenly interested to know whether the Government will accept the Diet's verdict or not. The *Nippon* says that if the Bill related to a question of administration the Government might defy the resolutions of the Houses and put the Code into operation at once, but since it is a question of law, as Viscount Aoki stated in his speech, the Government will not take such an unwise step as to disregard the Diet and thus set up serious friction between itself and the people.

* * *

It is rumoured, says the *Choya*, that Count Yamagata, the Minister President, addressed the Emperor on the 23rd instant with reference to the Bill for postponing the operation of the Code, and that the Emperor immediately gave his gracious sanction. This was the result of the Cabinet conference held in the forenoon of the 23rd, at which all the Ministers of State, except Count Yamada and Viscount Kabayama, attended, and which terminated at 2 p.m. after warm discussions, a resolution having been formed in the sense of postponement. As to the period of postponement, however, a majority of the Cabinet Ministers are said to be in favour of extension to April, 1892, only.

* * *

The same paper also says:—"The postponement of the operation of the Commercial Code would give rise to difficulties of various kinds. For instance the Bank laws, Bankruptcy law, &c., were promulgated with a view to the enforcement of the Commercial Code, and consequently the sudden postponement of the latter would necessitate some new measures in respect of these laws. But since barely a week remains before the new year, timely notice could not be given throughout all parts of this country, so that in some distant parts of the interior, the official notice of postponement not being received before the 1st of January, the Commercial Code would come into operation there under the former arrangement. There is no precedent for sending notice by telegraph, and such a proceeding would under any circumstances, be difficult. How to avoid the awkward conjuncture is giving much anxiety to the Government. The Bureau of Legislature, in consequence of the postponement, is exceedingly busy, for such points in the laws promulgated this year as have relation to the Commercial Code will have to be amended and submitted to the Diet, and besides laws in the course of preparation will have to be re-examined and amended.

* * *

All these doubts were resolved on the 26th instant, when the following Imperial Rescript appeared in the *Official Gazette*:—"We hereby sanction the Law which has received the consent of the Imperial Diet with reference to the date of operation of the Commercial Code and of the Laws relating to its operation, and Order the same to be promulgated." Then follows an enumeration of the various laws concerned, namely, Law 32 (dated April of this year); Law 59 (dated August of this year) Law 66 (dated August, 1890); the Law relating to stamps for commercial documents; Law 72 (August 1890), relating to Banks; Law 73 (August, 1890), relating to savings banks Law 101 (October, 1890), and the Commercial Code itself. The Rescript concludes with the words:—"The Commercial Code and the Laws for carrying the Commercial Code into operation will go into force from January 1st, 1893.

* * *

Up to a very late moment doubts were entertained in some quarters as to the course which the Government would pursue in this matter. It was considered extremely problematical whether in passing a Bill to fix or alter the date of operation of a law, the Diet had not encroached upon the Imperial Prerogatives as fixed by the Constitution. The 6th Article of the latter says:—"The Emperor gives sanction to laws, and orders them to be promulgated and executed." The power to order the execution of a law seems to include the power of fixing the date of execution, and in point of fact the custom hitherto has been to include the date of operation in the preamble, which contains also the Imperial Sanction and receives the sign-manual. On the other hand, if we consider the legislative habits of Western countries, it will be seen that the date of operation is usually mentioned in the body of a law, and if such has not hitherto been the case in Japan, the difference probably represented a mere point of convenience, not a question of principle. It would have been competent for the Diet, under any circumstances, to make a Representation, as duly provided in the Constitution, but since the Emperor has accepted and sanctioned the measure in the form of a Bill, we must assume that the course taken by the Houses was not unconstitutional. It is certainly a very striking illustration on the one hand of the power that has passed into the possession of the people, on the other, of the respect with which the Sovereign is evidently determined to treat every legitimate exercise of that power.

### A FORTUNATE JAPANESE.

THE *San Francisco Chronicle* has this note, dated at Philadelphia on November 24th:—"The announcement that Miss Mary Elkinton of this city is to become the bride of a native of Japan at any early date, and return with him to the Orient will be, doubtless, the cause of more than a ripple of interest in social circles. Miss Elkinton is a member of one of the oldest and most highly esteemed Philadelphia families. She is a daughter of Joseph S. Elkinton, a prominent member of the Society of Friends. The young Japanese who won her heart and the pledge of her hand is a man high in rank. His family are among the most distinguished and wealthiest in Japan, and he occupies a leading position in the affairs of the Government. For six years he has been travelling through America and Europe, studying to fit himself to occupy an important Government position, and he will return next month with his bride to fill the part which has been assigned to him. A similarity of tastes drew the young pair together, and the admiration Miss Elkinton first cherished for his accomplishments soon developed into a deeper feeling, and when the young man sailed for Europe shortly afterward it is understood that she had pledged him her love. He is now back to claim her as the bride of Inazo Mitobe of Sapporo, in Japan. In personal appearance Inazo reveals all the characteristies of a student. He is of medium stature, light in figure, with sharply defined, delicate features and a persuasive expression. In his manner, conversation, and general address he appears as a man of delicate sensibilities, refined tastes, and cultivated intellect. Inazo has already adopted the faith of the Friends, and the marriage will be solemnized according to their usages."

### THE COMMERCIAL CODE.

ACCORDING to the *Jiyu Shimbun*, the Vice-Minister of Justice, Mr. Mitsukuri, has expressed intense chagrin at the result of the Diet's deliberations on the Commercial Code. He says that the Code represents ten years of hard legislative labour and research; and that under the direction of the present Minister of State for Finance the greatest care was employed to collect information as to the customs existing in all parts of Japan, and to give due consideration to them in the provisions of the new enactment. He regards it as a matter of the deepest regret that the two Houses, without any thorough investigation into the details of the Code, should have yielded to the persuasions of a few eloquent advocates, and destroyed the work of ten years in almost as many hours. But although we can fully sympathise with this view, and although we should most gladly have welcomed a Parliamentary vote in the sense desired by the compilers of the Code, we do not for a moment pretend to think that no valid reasons can be advanced on the side of the opposition. It surprised us that these reasons were not set forth in the Diet, and that the vote went by sentiment rather than by logic. Speaking in the abstract, there is no reason why a Commercial Code should be published separately from the Civil Codes. In countries like Germany, where special tribunals presided over by special judges exist for the trial of commercial cases, a Commercial Code is logical and expedient. But where, as will be the case in Japan, the same Courts deal with all civil cases, there does not appear to be any sufficient reason for the compilation of a separate code of commerce. If, indeed, we consider the actual state of affairs now existing, the crying need of some laws to regulate the questions of Bankruptcy and Trading Associations makes it desirable that a Commercial Code embodying such laws should be put into force without a day's delay. But if, on the other hand, importance be attached to the country's legal system as a whole, then it is obviously better that laws bearing upon the above special subjects should be promulgated independently, and that the other provisions relating to trade should fall into their natural place in the Civil Codes. If the House entertained this view we cannot see that their verdict merits criticism. It is still permissible to hope that some compromise may be effected, and that while the main body of the Commercial Code is restored to its place in the Civil Codes, the portions immediately called for, namely, the chapters relating to Bankruptcy and Commercial Companies, will be put into force without delay.

* * *

The *Miyako Shimbun* states in an extra that the Emperor has given his sanction to the postponement of the date of the operation of the Commercial Code.

### THE BUDGET.

THE House of Representatives occupies a unique and doubtless, from its own point of view, a very satisfactory position towards the Budget. It may cut down the estimates to its hearts' content, without giving itself any concern at all as to whether the irreducible remainder suffices or does not suffice to carry on the administration of the country. If the system of Government by party existed here, the majority in the House would be restrained by the knowledge that its own party leaders must ultimately

Digitized by Google

abide by the reductions made in the estimates of their opponents. But it is not so. The House of Representatives in Japan need not be specially solicitous about the Government's embarrassments. In fact, several of the members would probably be vastly pleased could they succeed in embarrassing the Government seriously. The Committee on the Budget is said to have resolved upon recommending reductions of a sweeping character, the various Departments of State being involved to the following extents respectively :—

| | | |
|---|---|---|
| Foreign Office | *yen* | 216,141.355 |
| Home Office | *yen* | 1,705,429.308 |
| Finance Department | *yen* | 4,034,483.349 |
| Army | *yen* | 856,564.26 |
| Navy | *yen* | 409,126.54 |
| Justice | *yen* | 1,184,871.244 |
| Education | *yen* | 563,222.728 |
| Agriculture and Commerce | *yen* | 194,086.009 |
| Communications | *yen* | 8,570.40 |

This gives a total reduction of something like ten million *yen*, and how the work of administration is to be carried on under such circumstances seems doubtful. Mr. Seki Naohiko, a member of the Committee, proposed a more moderate scheme, which would only have involved a a saving of 5½ millions, but he failed to obtain a majority. The most sensible and practical article we have found in the vernacular press on this subject is the *Choya Shimbun's*. Premising that the Government itself is willing enough to give effect to any reasonable scheme of economy, our contemporary describes the views which, it says, is held in official quarters. Taking for basis a reduction of the Land Tax by one-fifth, it would be necessary to effect an economy of some eight million *yen* in the annual expenditure. To this end twenty per cent. of the present number of *Hannin* officials might be dispensed with, and their duties transferred to officials of higher rank, whose number would remain as before. In this way, as well as by abolishing every possible section or bureau, and uniting the functions of others, a saving of about three million *yen* might be achieved. The remaining economy would have to be effected in the Extraordinary Budget. The *Choya* says that the Extraordinary Budget increased rapidly from the time that Count Inouye came into power, his large ideas of improvement and reform involving corresponding expenditure. Some three million *yen* are now appropriated towards the building of new Houses of Parliament and other Departments of State. If the various public works now in contemplation were changed from solid brick and stone structures to wood, and if their number were limited as far as possible, the required economy might be effected. On such lines the Government would probably follow the Diet, but if it comes to a question of meddling with the organization of the Administration or with other matters lying outside Parliament's province, the Government cannot consent.

* * *

It is stated now that in consequence of the sweeping reductions recommended in the report of the Budget Committee, the Government has resolved to pursue the course indicated by the 30th Article of the Law of the Houses, where it is provided that "the Government shall be at liberty at any time to either amend or withdraw any Bill which it has already brought in." To cut down the estimates by ten million *yen*, as urged by the Budget Committee, is declared to be quite out of the question, consistently with maintaining any proper standard of administrative efficiency. A saving of about three millions may, however, be accomplished in defence to the wishes of the House, although not in accordance with what the Authorities believe to be the best interests of the public service. The Budget will therefore be taken back and amended to that extent, after which it will be again laid before the House. Should the latter still persist in attempting to enforce impracticable reductions, it is thought probable that the Government falling back upon the powers vested in it by the Constitution, will enforce the Budget for the last fiscal year without further reference to Parliament. In that case the House of Representatives, by unwisely attempting to accomplish too much, will end by achieving nothing at all.

### THE MEMBERS OF THE HOUSE OF REPRESENTATIVES AND THE NEW YEAR'S RECEPTION.

THE latest subject about which certain members of the House of Representatives have thought it necessary to assert their dignity is the order of their reception by the Emperor at the New Year. On learning that their audience was to take place on the 2nd proximo, after that of the *Sokan* officials, Mr. Nagai Matsuyemon asked the Chief Secretary whether this would not be putting a certain slight upon the Representatives of the people. The Secretary answered that nothing could be farther from the truth ; that the order had been determined solely to suit the Emperor's convenience, and that the admission of the members by the front gate, which was closed to *Sokan* officials, proved the Emperor's desire to treat the House with consideration. This satisfied Mr. Nagai, but did not apparently satisfy all the other members. Some ten of them, headed by Mr. Hasegawa Tai, came to the House the same evening to see the President, but in the absence of the latter and of the Chief Secretary, they had to content themselves with interviewing one of the under-secretaries. To this official Mr. Hasegawa, who, according to the *Tokyo Shimpo*, had been dining and wining pretty freely, addressed some very loud and peremptory remarks, to the effect that the place assigned to the President of the House at the opening ceremony had caused much dissatisfaction, and that the members could not consent to be received after officials of *Sonin* rank. This somewhat noisy protest was checked by Mr. Hasegawa's companions, and the matter ended for the moment. Subsequently the Heads and Managers of Sections, after consultation, addressed to the Ceremonies Bureau of the Imperial Household Department a request that the members might be received in audience on January 1st, immediately after officials of *Chokunin* rank, and that if this were not possible, they might at least have precedence over all *Sonin* officials, and be received alone on the 2nd, no other audiences being granted on that day. Failing either of these courses, they begged to be excused from attending at the Palace at all. The Chief of the Bureau of Ceremonies replied that as the order of reception had been determined solely with a view to the convenience of the Palace arrangements, and without any notion whatever of slighting the members, no change could be made. The President of the House afterwards consulted with the Minister of State for the Imperial Household, but received the same answer. It is not yet known how the matter will end, but we expect that the members of the House will appreciate the unwisdom of attempting to enforce their own wishes in such a matter. Every one understands that the first Diet has to be specially careful about precedents, but so soon as it is officially stated that the order of reception is fixed not by any principle of rank but merely to suit the convenience of the Palace, it would be veritable childishness to push the point any farther.

### GOVERNMENT SUBSIDIES.

THE *Mainichi Shimbun*, quoting a politician who has expressed his views on the subject of a Government subsidy for marine transport purposes in this country, says :—Although it may be necessary to lay rails with a view to facilitating land transportation, still at present most of those that pay fairly well are the main lines. No branch line without a subsidy from the Government is likely to prove profitable. Now what will be the result upon our transportation business if the Government lend its protection to either marine transport or land carriage? As the number of passengers and the quantity of commodities to be transported are still limited in Japan, that undertaking which receives a Government subsidy will naturally be prosperous at the expense of those that are not so aided. Considered in the light of the topographical situation of this country, it would be more advantageous to protect the marine transport business. But it would certainly be unwise for the Government to give subsidies unconditionally and indiscriminately as has been the case hitherto. A better policy would be to fix the amount according to the distance and the route, as is the case in foreign countries. To give an instance; the amount of subsidy to be granted to a company running steamers between Hongkong and Kobe should be different from the case of those plying between San Francisco and Yokohama. If varying amounts of subsidy are thus given to different companies, the business of navigation in this country may be improved. If, however, our industries remain in such an unsatisfactory state as at present, no matter how much private maritime companies may be encouraged by the Government, they must inevitably come to grief if they cannot obtain sufficient freight. We greatly fear that this is just what will occur, owing perhaps to the fact that the Government has not the right of levying custom duties at pleasure. It is consequently a prime necessity to restore the rights referred to above, and to prevent the importation of foreign commodities to Japan, very large qnantities of which enter here on account of the small duties. At present, therefore, it is necessary to restore the right of levying custom duties, which would tend to decrease the number of commodities now too freely imported from abroad, and to encourage the progress of our own industries.

### THE "NAMOA" PIRACY.

THE British gunboats *Linnet* and *Firebrand* returned to port yesterday afternoon, says the *Hongkong Daily Press* of the 20th inst., after an unsuccessful search for the *Namoa* pirates. The course taken by the former gunboat was, we understand, to the southward and eastward, whilst the latter gunboat went north, touching at several places. At Lam Shu Bay a number of Shaukiwan fishing junks were met with, and on Mendoza Island the Pinhoi people were unable to given any further particulars than what is already known regarding the junks that were seen in the vicinity of the island on the 10th inst. At another place named Kauto the inhabitants had never heard of the affair, whilst the mandarin of a district not far distant had rewards placarded about for the arrest of any of the piratical band. During the cruise two Chinese gunboats were met with which were also engaged in the search, but so far their efforts had been unattended with any result.

### THE "TOKIO MARU"

SEVERAL attempts have been made within the last two or three days to float the *Tokio Maru*, but so far without success. The ship lies parallel with the line of the beach, and, with a considerable cant to seaward, embedded somewhat in the sand. The tide ebbs up to her shoreward bilge; there are about nine feet of water at ordinary high tides under her stern and about four feet at her bow. So far as can be seen, she is not seriously damaged—or was not prior to the blow of Sunday night—no plates being injured, but as she makes water when the tide flows various rivets have no doubt been started. As will be recollected, the *Saikio Maru* first attempted to haul her off, but this failed owing to the parting of the steel hawser employed in the operation. On Saturday the *Naniwa Kan*, placed by the Naval Authorities at the disposal of the Company for the purpose, had a try but failed to move the stranded vessel. The *Kobe Maru* went down on Sunday morning to take her turn at the tow rope, but was unable to get near enough the scene to be of any use, and returned to port. It seems that though the *Tokio* has deepest water immediately under her stern it has been found more convenient to make the towing hawsers fast to her bow, as the assisting vessel can approach more closely to her from that direction. At best, however, the ships cannot get much nearer her than a quarter of a mile, the *Naniwa Kan* having to strain on a hawser of that length. It is not the case that a bank of sand has formed outside the

Digitized by Google

vessel; she is, as we have said, embedded to some extent, but the beach slopes away to seaward naturally, slowly from her stern, and more abruptly from her bows. The only rocks near her are some small ridges which just show their heads above the sand astern of her. The ship lies about five miles from Tateyama.

### PROFESSOR KIKUCHI ON THE WEIGHTS AND MEASURES BILL.

WRITING to the *Mainichi Shimbun* the other day, Professor Kikuchi of the Imperial University said :—As the draft Weights and Measures Bill now under discussion in the Upper House is of a somewhat complicated nature and is thus difficult of comprehension by the general public, I would ask you to be good enough to insert the following recapitulation of its main features :— (1) The question of weights and measures has an important bearing on the economy of the State and should not be treated with indifference or silence as some people imagine. To regard the measure as unworthy of earnest consideration is to be like the *samurai* in feudal times who despised peasants, merchants, and artizans. (2) The object of the bill is not connected with any scientific or artistic theory, but arises from a desire to fix standards of weights and measures, and thus protect the public from the use of false and irregular measures, such as are employed daily in business transactions. (3) In framing the bill special care has been taken to guard against sudden changes in business methods. For instance the mercer's measure is still to be used, and both the old and new measures may be employed for three years after the bill comes into force; and other articles also show the exercise of the care referred to. (4) The bill fixes a standard of weights and of measures for Japan, the present law providing no such standard. (5) The bill fixes the standard, or exact length of one *shaku*, and the exact weight of one *kwan*, which measure and weight are not at present accurately fixed. The standard *shaku* measure preserved in the Department of Agriculture and Commerce is roughly made, of brass, the sub-divisions being indicated by thick lines, and no consideration is had of the point whether, or how much of, each line is to be included in reckoning a sub-division, or at what temperature the standard is to be held as legal measure. The case is almost similar as to the *kwan*. It is therefore a prime necessity that the nature of the materials of which the *shaku* measure and the *kwan* weight are composed should be fixed. (6) The bill aims, not at changing the existing weights and measures, but at definitely fixing them. The length of the *shaku*, the measurement of the *masu*, and the weight of the *kwan* will not be altered. (7) In Art. V. of the bill the *metre* is only referred to as a legal measure, and it is a gross mistake to suppose that the bill is based upon the *metre*. (8) The bill is intended to improve the materials of which weights and measures are at present composed. The regulations for the manufacture and examination of weights and measures hitherto in force are far from complete, and are consequently of very little practical value.

### ANOTHER QUESTION ABOUT TREATY REVISION.

AFTER Viscount Aoki had made his long and painstaking explanation on the 17th ultimo in reply to the queries of Mr. Arai Shogo and other members, he left the House without waiting to be further questioned. A resolution was then passed that the Minister should be invited to attend again, but he declined, on the ground that he had already given the fullest explanation in his power. Thereupon Mr. Arai Shogo made an intemperate and undignified motion, and Mr. Misaki Kamenosuke moved an amendment that, if the House desired fuller information on other points, it should formulate its questions in the prescribed manner and present them to the Government. Mr. Arai's motion did not find sufficient supporters to become a subject of debate, and consequently Mr. Misaki's amendment could not be put to the vote. He has not allowed it to be drop, however, but has prepared a question in due form and presented it through the President with his own signature and those of 104 other members. The question is this:—"In negotiating for Treaty Revision, does the Government take for its object the complete and simultaneous recovery of Judicial Autonomy and Tariff Autonomy, or does it contemplate their complete recovery at a future date, and their partial recovery only at first?" It will not be difficult, we think, for Viscount Aoki to answer this question to the satisfaction of the House.

### THE P. AND O. STEAMER "NEPAUL."

IT appears from a telegram in the *Singapore Free Press* that the *Nepaul* went on the Plymouth Breakwater, whilst making for the Sound. This is explained by the fact that there was a dense fog at the time, otherwise such navigation would be unpardonable, as there is a lofty lighthouse on one end of it, and the breakwater itself is visible from the deck of a vessel approaching it, and at a considerable distance, even at high water springs. The telegram states that the cargo has been salved, from which it may be inferred that the passengers are safe. In a thick fog the steamer would probable be going dead slow approaching the passage between Rame Head and the Devonshire coast, and there are consequently grounds for hoping that she is not so much injured but that she may be got off and repaired.

### SATURDAY'S CONCERT IN HONGO CENTRAL TABERNACLE.

THE concert given in the Central Tabernacle in Tokyo last Saturday afternoon was a thorough success. The hall, which is built to accommodate about twelve hundred persons, was over three parts full, with an audience mostly Japanese. In the reserved seats was a large representation of missionaries, and a fair sprinkling of other residents. At the back of the centre and in the aisles, benches were arranged for the accommodation of the holders of twenty *sen* tickets, while the galleries were appropriated to students who were admitted for the sum of ten *sen* each. The interior arrangements of the hall are scarcely yet complete, and the entrance is also in an unfinished condition, but the audience had nothing to complain of in the way of comfort. The hall is an improved edition of the Koseikan, being better lighted and having more complete platform arrangements. The organ, which is a gift from Canadian sympathizers with Dr. Eby's work, is placed in a well-lighted gallery high above the platform, sufficient space being left on either side for the accommodation of an orchestra. The three other galleries are incomparably superior to the flimsy lofts of the Koseikan. The ventilation of the building seems good, and the whole structure indeed bears the marks of intelligent care in its planning and building. The concert opened with the Doxology, in which the audience joined standing. The orchestra, occupying the left side of the organ loft, then led off with Suppé's lively overture, "Poet and Peasant." The members of the efficient band engaged for the occasion received their training under Mr. F. Eckert and Mr. G. Arpe, and are retired naval bandsmen. They call themselves "The Oriental Band," and give their services, in the capital and elsewhere, at very reasonable charges. The only vocalist, if we omit the singing which formed part of the Japanese music, was a lady connected with the Canadian Methodist Mission, who gave two solos, Mr. Gauntlett accompanying on the piano These were clearly and unaffectedly rendered, and the audience showed that it would be ready to welcome the singer on any future occasion. Mr. Gauntlett, a near relative of the composer (whose name is well-known in musical circles throughout the world) gave two effective solos on the organ, a powerful and excellent instrument. Suppé's "Fatinitza," and Eckert's "Fantasie ueber Engl-Lieder," a medley in which favourite Scottish, English and Irish melodies follow each other in bewildering succession—both attractive pieces—were well rendered by the orchestra. The Japanese musicians hired for the occasion, however, came in for the greatest share of the applause of an audience essentially Japanese. Okamura Masayo and his two partners, on the *koto* and *samisen*, evoked a chorus of applause which seemed ready to burst out at intervals during their performance, and Aragi Kodo and Ishinuma Iwai, on the *shakuhachi* and *samisen*, were even more enthusiastically received. Among the humours of the concert were the erratic gesticulations in the right-hand gallery of a spectacled student, whom Aragi's flute tones seemed to inspire with uncontrollable admiration; and the loudly expressed apologies of an *obasan* in the back gallery who, entering during the first vocal solo, increased the fervour of her apologies the more she was hushed to be silent. A programme is appended :—

PART I.

1.—OVERTURE, "Poet and Peasant" ..... .....V. SUPPÉ.
By the Orchestra.
2.—SONG, "Holy Father Hear Us".....By Miss Lund.
3.—KOTO and SAMISEN. "Shochikubai." By Okumura Masago, Uehara Masaki and Koyama Shimaji.
4.—ORGAN SOLO. "March of the Israelites." By Edward Gauntlett, Esq.
6.—"Fatinitza" ..... .....V. SUPPÉ.
By the Orchestra.

PART II.

1.—"Fantasie ueber Engl-Lieder" .....V. F. ECKERT.
By the Orchestra.
2.—SONG "He Giveth His Beloved Sleep" By Miss Lund.
3.—SHAKUHACHI and SAMISEN. "*Sue no Chigiri, Tsuru no Sugomori.*"
By Aragi Kodo and Ishimura Iwai.
4.—ORGAN SOLO { a. Andante in G. / b. Andante in G. } .....BATISTE.
By Edward Gauntlett, Esq.
5.—KOTO and SAMISEN. By Okumura Masago, Uehara Masaki, and Koyama Shimaji.
6.—"Romaneska" .....V. ZICKOFF.
By the Orchestra.

CLOSING PIECE.

"God Save the Emperor." Words by Rev. A. Hardie.
To the tune of 'God Save the the Queen. By the Orchestra, Organ and Audience.

Dr. Eby made use of the interval between the two parts of the musical performance to address a few remarks to the audience. He first apologized for two omissions in the programme due to the unexpected withdrawal at a late hour of Mr. Dietrich of the Musical Conservatory, who had originally promised his services. This withdrawal of a tower of strength had been partly supplied by the kindness of the Japanese musicians, who gave an extra selection. He then went on to sketch the history of the structure now filled for the first time with an audience. Next Saturday, the third of January, there was to be a formal opening, and, on the fourth, Sunday services were to be conducted in the morning and evening by Messrs. Hiraiwa and Kobayashi, pastors in the Methodist Church, and in the afternoon by Dr. Imbrie. This last service, in English, would be held at 3 p.m. The year 1890 had been for him and his friends a year of hard work in building and rebuilding. Over five months back the first building, whose estimated cost was 7,500 dollars, was destroyed in the fire which devastated the district. All but 1,500 dollars of this sum had been expended when the fire occurred, and it left them with only the foundations and wall, valued at about 2,500 dollars. To complete the building it was considered by the architect that a sum of 5,831 dollars, inclusive of fencing and furnishing, would be required. As the cash and other assets amounted to little over three thousand dollars, a deficiency has to be met of 2,670 dollars. As usual the expenses of building exceeded the estimates, and the deficiency, kindly met by the contributions of friends, was already swallowed up. They were still, therefore, in need of funds, the furniture on which the audience was seated being mostly a mere loan for the occasion. This, however, had to be said in explanation of the further appeal, that the building was throughly well-built, with no scamped work about it. Mr. Ito, the architect, had devoted a year's work, with but scanty remuneration, to its construction, and had, by direct dealings with tradesmen, saved the profits that go into the pockets of contractors. The Board of their Church had already assisted the building, in so far as it served the purpose of a regular mission station, mostly liberally, even beyond possible expectation. The further

Digitized by Google

use of the building as a centre for lectures, free concerts, popular addresses, magic lantern displays, and the like, lay outside the sphere of ordinary mission fund appropriations, and, being a special undertaking, had to carried on with specially raised funds. The reverend doctor hoped that, by subscription concerts like the present, and by the liberality of friends, he would be enabled to carry on the work now happily commenced. He closed with an expression of thanks to the friends who had already contributed, and to the audience who had assisted by their presence and aid.

### VISCOUNT AOKI'S TREATY REVISION SPEECH.

In a leading article commenting on the recen speech in the Lower House delivered by Vis count Aoki, the *Nippon* says :—The speech in the House of Representatives by the Foreign Minister has attracted general attention, as well on account of the importance of the subject as because of the complicated nature of Count Aoki's utterances. Though a well known accompaniment of the constitutional form of government, the public deliverance of speeches by Ministers of State in explanation of the policy of the Administration is a new and wonderful feature in Japan, and when in addition the topic to be dealt with was one of a diplomatic character, in connection with which the most profound secrecy had hitherto been observed, it is not surprising that the occasion and the address should have attracted the eyes of all people. We must frankly admit that the speech deserves our closest attention. Though the Viscount spoke at great length, over a third of his speech was devoted to a description of Japanese diplomatic policy in the past. This branch of the subject, though no doubt very valuable as a ground-work for reference, was not quite what we required. Yet the point which we were chiefly concerned to hear about, the policy to be pursued by Japan in the future with regard to her international relations, was very lightly touched on, the Minister, on the plea of diplomatic secrecy confining his explanation within very small limits. Even such meagre information as he did afford on the problem was not expressly and openly stated, but has to be gleaned from Viscount Aoki's language in referring to certain opinions ventilated by the *Nippon* last month (November), his comments on those opinions forming an indirect species of explanation. If the Viscount had endorsed our views on the subject, then his meaning would have been perfectly clear, but, as he himself remarked, the statement referred to only expressed a part of our hopes, not the whole. In point of fact the prevailing questions in the public mind then were : (1) the nature of the promises made in diplomatic notes with reference to the appointment of foreign judges, and the period for the preparation of the Codes ; and (2) the conditions to be contained in the Treaties with reference to residence of foreigners in the interior, the system of Consular Courts, and the rights of foreigners as to the possession of land. In other words, the questions then before the public were confined to the concession of certain national and private rights ; the problem of recovering Tariff autonomy, which has so grave a bearing on the finances of the nation, was not then under discussion. The draft treaties framed by Count Okuma were opposed by the public chiefly on the ground that they constituted an infringement of the national rights ; that is to say, the proposed alterations were held to be more injurious to the interests of the empire than the old Treaties were. But it would be erroneous to assume that the points then attacked were the only branches of the problem in reference to which our people entertained hopes ; and similarly it would be wrong to conclude that the removal of the conditions then complained of would be sufficient to make the new instruments acceptable to the nation. Last year popular opinion was expressed on certain matters from a purely defensive point of view : the nation was too much occupied in endeavouring to protect itself from the obnoxious provisions to think of formulating demands of its own. If we could have acted on the offensive we certainly would have brought up in the very front of our attack a demand for the complete restoration of Tariff autonomy. We hope the present Foreign Minister will not give his attention only to the desires of the people, as shown in their action while standing on the defensive. We can gather from his utterance regarding a quotation from the *Jiji Shimpo* of December last year, that the policy of the Government with regard to Treaty Revision is to consist (1) of the abolition of Consular jurisdiction, simultaneously with the opening of the interior to mixed residence ; (2) of the omission from the Treaties of the provisions relating to the ownership of land by foreigners ; (3) of the revocation of the promises made in Count Okuma's diplomatic notes, and (4) of the recovery of Tariff autonomy. We have thus endeavoured to show just what trustworthy information we have received with regard to our diplomatic relations, and in doing so we have briefly brought out for our readers' information the chief points of Viscount Aoki's speech. We would only remind the Viscount in conclusion that the recovery of Tariff autonomy is the first, the chief, the great point to which the wishes and hopes of our people are directed.

### THE HOUSE OF REPRESENTATIVES AND THE PALACE.

We have already described the difficulties raised by certain members of the House of Representatives about the order of their presentation to the Emperor at the New Year. They applied to the Bureau of Ceremonies though the Chief Secretary of the House, to have a change of programme made, but the Board of Ceremonies is never very yielding in such matters. Its reply, quoted by the various newspapers, was : "(1) The day and hour of the Reception having been already fixed, cannot be now changed. (2) The hour of Reception was not appointed by His Majesty with any reference to the audience of *sonin* officials. (3) Members coming on horseback or in carriages will be permitted to enter by the Front Gate, a privilege not extended to *sonin* officials. (4) The order of all presentations at Court is determined to suit the Imperial convenience, and no question of precedence is considered." In consequence of the receipt of this answer, about a hundred and twenty members of the Lower House met in a waiting room of the House on the 29th instant, and decided that it should be left to the choice of individual members whether they attended at the Palace on the 2nd or not, but that, so far as the House collectively was concerned, it should meet in its place on the 1st of January and vote an Address of Congratulation to the Throne, the preparation of the address to be at once undertaken by the Chiefs and Managers of Sections. Certainly want of vertebra is not a conspicuous fault of this First Diet.

### MR. HENRY NORMAN.

Mr. Henry Norman was welcomed back on his arrival in London again. Some of the things he has to tell his friends, and later, the world, are no ordinary traveller's tales. The first result of his trip, we understand, will be a volume of "Japanese Essays," dealing with Japanese institutions, social life, treaty revision, and the Japanese army, navy, law, and police. A second will be a book about the Far East and the balance of power in the Pacific. Mr. Norman will attempt to forecast the political future of the various nations struggling in that part of the world. As he has brought back about 2,000 photographs of places, people, and things, most of which have never been photographed before, his books ought to be of unique value, as they certainly will be of unique interest. Mr. Norman has nothing particular to say about his Siamese mine, except that he has associated himself with a capitalist, and that the machinery for working it is being made in America. He is much more ready to enlarge on the revelation and education which his three years of travel and study and sport in the Far East have proved. "There was," he says, "not a single moment of them destitute of interest. They were not always unspiced by adventure, but they are personally memorable most of all for the endless hospitality and kindness one has received and the good friends one has been lucky enough to make. Whether or not my experiences contain anything of interest or value to other people remains to be seen." Next spring Mr. Norman will probably pay another visit to his possessions in Siam, and may, at the same time, take the opportunity of seeing India itself.

### FARTHER RESIGNATIONS.

There is talk of Viscount Aoki's resigning the portfolio of Foreign Affairs. The *Hochi Shimbun* publishes the rumour, but assigns no reason for it other than a vague assertion that the Minister is dissatisfied with the course of events since he delivered his speech in the House of Representatives. Nothing short of a very powerful cause should suffice, in the *Hochi's* opinion, to drive from office after a period of little more than half a year a Minister specially chosen by the Emperor to solve the difficult problem of Treaty Revision. Some recommend the Viscount to take the House into his confidence, and get it to appoint plenipotentiary committeemen of its own in conjunction with whom the negotiations can be carried on. The Minister himself, adds the Tokyo journal, appears to incline to this view, but as it meets with strong opposition in the Cabinet, and as there seems little prospect of its being approved, his resolve to resign assumes force every day.

* * *

It is further asserted that Count Matsukata also talks of resignation. The *Choya Shimbun* is responsible for the story. It makes the Count say that the reductions recommended by the Committee of the House of Representatives on the Budget are utterly impracticable, and that if the Cabinet consents to anything of the kind, he, Count Matsukata, will at once resign the portfolio of Finance. If all these rumours have any foundation, it seems probable that the only achievement of the first Diet will be to drive some of the best and most earnest statesmen from office.

### THE RAILWAY STRIKE IN SCOTLAND.

The telegram which we publish in this issue is the sequel to the following paragraph, which we find in *Industries* of the 14th ultimo :—"At various railway centres on Sunday, the 9th inst., meetings of railway servants were held for the purpose of receiving the replies of the different railway companies to a demand for reduction of working hours. The reply of the Caledonian Railway Company was to the effect that any demand must come to the Board through the ordinary channels, while the North British Railway Company and the Glasgow and South-Western Railway Company had not had board meetings since the demand was formulated. It was surmised that the railway companies generally would follow the lead of the Caledonian Railway and decline to recognise the Railway Servants' Society. On this ground the executive council of the society recommended a strike. A resolution to the effect that a strike was necessary, and that the precise date on which work was to cease should be fixed by the executive, was carried at the meetings held at Glasgow, Greenock, Edinburgh, Hamilton, Motherwell, Kilmarnock, Falkirk, Stirling, and Dundee. At Aberdeen the resolution was rejected. At Forfar no decision was reached."

### THE MANCHESTER SHIP CANAL.

We recently published a telegram which stated that damage had occurred to the works of the Manchester Ship Canal, of which a home paper gives the following particulars :—"Considerable damage has been done to the Ship Canal in one or two places by the heavy floods of about a week ago. In the section near Latchford, where the locks are making rapid progress, a breach was made in a temporary embankment, and the water passed into the cutting, which was almost completed. One life was lost, and a large amount of plant was submerged by the water, which rose to about 10ft. Some damage was done to a temporary tunnel afford-

Digitized by Google

ing access from one part of the canal to another, which is pierced below the London and North-Western Railway Company's line. A partial interruption to traffic occurred in consequence, but the damage is being rapidly repaired, and the water pumped out by a number of engines. It is stated that the interruption to work will not be of long duration.

### THE HOUSE OF REPRESENTATIVES AND THE IMPERIAL AUDIENCE.

IT is a relief to learn that the rumours so freely circulated during the past three days with reference to the Diet's attitude towards the Palace had not much more substance than such stories usually possess. The whole thing seemed to us so strange, and the inferences it necessarily suggested as to the Diet's powers of self-restraint and sense of dignity had so little in common with the conclusion we had begun to think deducible from that body's previous doings, that we refrained from credence and comment, preferring to suspend judgment until established facts were before us. The last rumour, as our readers will remember, was that something like a hundred and twenty members of the Lower House had held a meeting within the precincts of the Chamber, and decided, first, that the House should assemble on New Year's Day and vote an address of felicitation to the Sovereign, which address was to be prepared by the Chiefs of Sections; and, secondly, that attendance at the Palace on the 2nd instant should be optional for members of the House. It would scarcely have been possible to interpret such a course in any sense but one, namely, that the House being dissatisfied with the arrangements made for the reception of its members at the Palace on the 2nd instant, was determined to stand aloof from the Imperial Levée, and to substitute an address for personal attendance. Now it may be very well to say that the Emperor is not directly responsible for affairs connected with Imperial Receptions, *and that* the House of Representatives, in rebelling against the place assigned to its members in the order of reception, opposed itself not to the will of the Sovereign but to the action of the Cabinet by whose advice such points are virtually settled. As foreigners, we experience a difficulty in either accepting or rejecting their plea, because the true nature of the relations between the Court and the Cabinet in Japan still remain shrouded in some mystery to outsiders. But what is certain is that in neither England nor Germany would any room exist for misunderstanding a position such as that which the House of Representatives was supposed to have created. It would be construed as a distinct revolt on the part of the House against the wishes of the Sovereign, and although the abstract fact of such a revolt might not shock any one, the laugh would be decidedly on the side of the Court in this particular case. Men's dignity never runs so much risk as when they attempt to elevate it on a pedestal above the estimate of other folks. This is what the House of Representatives was apparently trying to do. It thought that the Court did not honour it enough, and it wanted to thrust up higher in the scale of reception. The Court, on the other hand, replied that there was no question whatsoever of precedence; that the whole thing was a matter of Palace convenience, and that, as for the special night-mare of the House, it had no reality since the members were to be admitted by a certain gate closed to *sonin* officials. In other words, although the members might succeed *sonin* officials in point of order, their precedence to the latter would be plainly established by the "Gate" arrangement. A paltry business at best, and one to which the House's attention had evidently been directed chiefly by the consideration that whatever was now decided would become the permanent custom, this threatened for a moment to expose the relations between the House and the Palace to some strain. Happily, however, wiser counsels prevailed. If the House really entertained any idea of asserting itself in the manner indicated by rumour, it dismissed the fancy. Meeting yesterday, it contented itself with passing a formal vote of congratulation to the Throne on the auspicious opening of the new year, and the members were left entirely free to attend the reception at the Palace to-day, where they will doubtless appear in full force.

### CUSTOMS RETURNS.

THE following is a summary of the Customs Returns for November, showing the foreign trade of Japan for the month :—

EXPORTS AND IMPORTS.

| | 1889. SILVER YEN. | 1890. SILVER YEN. |
|---|---|---|
| Exports | 7,103,675.260 | 5,912,913.160 |
| Imports | 6,317,740.200 | 4,863,037.570 |
| Total exports and imports | | 10,775,950.730 |
| Excess of imports | | 1,049,875 590 |

| CUSTOMS DUTIS. | SILVER YEN. |
|---|---|
| Exports | 161,503 921 |
| Imports | 215,149 461 |
| Miscellaneous | 8,595.449 |
| Total | 385,248 831 |

TOTAL VALUE OF EXPORTS TO AND IMPORTS FROM VARIOUS FOREIGN COUNTRIES.

### NEW YEAR'S GIFTS TO MEMBERS OF PARLIAMENT.

THE *Tokyo Shimpo* respectfully offers the following list of New Year's gifts to members of the Diet :—

To the President of the Lower House, a box of eggs.
To the Vice President of the Lower House, a box of fried *mamushi*.
To Mr. Shimada, Chief of Committee of the whole House, a packet of bear's gall.
To Mr. Shirane, Government Delegate, a pocket-mirror.
To Mr. Mitsukuri, Government Delegate, a volume of Imperial Edicts.
To Mr. Sone, Chief Secretary of the Lower House, a *saké* bottle.
To Mr. Uyeki Yemori, an oak club.
To Mr. Oye Taku, a picnic box and a tooth-brush.
To Mr. Arai Shogo, one volume, elementary school primer.
To Mr. Nakaye Tokusuke, a gallon of muddy wine.
To Mr. Takagi Masatoshi, one dozen handkerchiefs.
To Mr. Suyematsu Saburo, a pint of hair-dye.
To Mr. Kikuchi Kanji, one bible.
To Mr. Yoshino Seikei, one quene ribbon.
To Mr. Kusumoto Masataka, a black stole and a rosary.
To Mr. Suyehiro Shigeyasu, a barometer.
To Mr. Hamano Noboru, a dose of quinine.
To Mr. Hayashi Yuzo, a copy of "An examination into the resources of North and South."
To Mr. Hasegawa Tai, five bottles of lemonade.
To Mr. Tanaka Shozo, a copy of the stenographic records of the House.
To Mr. Konishi Jinnosuke, a gong and a pair of clappers.
To Mr. Takanashi Tetsushiro, one sheet of the "Detailed Survey."
To Mr. Nagai Mitsuyemon, a meteorogical report for three months.
To Mr. Suyematsu Kencho, a bottle of cough mixture.
To Mr. Takenouchi Ko, a cash-box.
To Mr. Yendo Hidekage, a fancy shirt with a dragon pattern.

### THE CONDITION OF COMMERCE.

THE *Fiji Shimpo* remarks that from various incidents and occurrences during the year the public had been led to expect something unpleasant in financial affairs towards the close of 1890. Contrary to expectation, however, even the month of December, a trying period for monetary matters, gave rise to no serious fluctuation in the money market. The Bank of Japan, anticipating the usual pressing demand for money at this time, made all the necessary preparations, but these proved more than adequate and the same seems to be true of other banks. According to practical business men, the first cause of the present depression is the unusually stagnant condition of the silk market, which has had a serious effect on the general state of business at the close of the year, and especially affects the Tokyo market. Hitherto the money collected as the proceeds of silk sales was used to circulate almost wholly in Tokyo, owing to the principal silk producing province having close connections geographically and financially with the capital, and therefore the unfortunate result of silk transactions has told most markedly this year upon the commercial condition of Tokyo. The second cause is believed be the precautions taken by farmers in the interior. After suffering for several years through the low prices of rice, farmers had to contend with bad crops last year and a miserable harvest of wheat this year, and were obliged to buy for food imported Rangoon rice at anything but a moderate price. This, added to the difficulty they had already been suffering from, served as a severe warning to them, causing them to keep their extra rice in store for future emergencies. In spite, therefore of the unusually good harvest of rice this year, producing a surplus of some six millions *koku* over the country, and in spite of the high prices realized, they refused to sell except for their daily expenses, but kept their grain stored. They would not even buy for their families the usual new dresses, &c., for the new year. The third cause is to be found in the sittings of the Diet. Whilst farmers have been suffering for some years, government officials have been in no way affected in their incomes, and therefore their purchasing power at the end of the year are greatly relied upon in such places as Tokyo. But the rumours of reductions in the national expenses, reductions in the salaries of officials, changes to be made in official circles, &c., have caused much anxiety and in view of the postponement of the date of operation of the Commercial Code, showing the influence of the Diet, officials have become cautious and thrifty, and will not spend more than they find necessary. There may be other causes for the present state of affairs, but these seem the chief.

### THE BURNING OF THE "SHANGHAI."

IN strong contrast to the treatment measured out to unfortunates by maritime disaster in China is that which obtains in Japan. In another column will be found the particulars of a terrible catastrophe on the Yangtse—the burning of a large river steamer, with probably hundreds of her passengers—and although assistance was at hand, not only was none offered, but plunder

Digitized by Google

and assault followed those who managed to scramble on shore. The only foreign passenger was a gentleman well known in Japan, Mr. Kniffler, who jumped overboard and struggled to the bank, but no sooner had he set his foot on dry land than he was surrounded by the natives, who attempted to strip him of his clothing, as they had already done those of their wretched countrymen who had succeeded in saving themselves from fire and flood.

### BRIBERY.

LONG before the Diet met men at all behind the scenes in the capital knew that the people's representatives were not coming to Tokyo to make their bed among roses. Rashly pledged to their electors to accomplish innumerable reforms, above all, to bring about a substantial reduction of taxation, the members, on arriving in the capital and beginning to think seriously of the work they had undertaken, soon perceived that things might prove much more arduous than they had imagined. On the one hand, the machine of State must be kept going; on the other, long-headed statesmen and financiers had been for years studying the most economical means of preserving the motion. Was it likely that amateurs could suddenly tackle the problem, and discover off-hand a solution hitherto hidden from the best experts? Again, it seemed not at all improbable that the Government might decline to be taught its most rudimentary duties by a number of youthful and comparatively untried politicians, in which event the Diet might find itself sent about its business one fine morning, and the members would either forfeit their hardly earned seats, or have to seek re-election at renewed expense and trouble. These were natural reflections, but no sooner did they begin to find a place in the breasts of the representatives than there sprang up a whispier that bribery and corruption had been at work, and at no time has the ugly suspicion been allowed to sleep since then. Considering that everything hitherto done by the Diet has been more or less in opposition to the Government, and that all the measures announced for debate in the course of the next month are decidedly hostile to the Cabinet, it seems to follow that if the Government has been using bribes, the results of their employment have been singularly unsuccessful. The mouth of rumour is not closed by that difficulty, however. On the contrary, the stories gain in number and detail. The most circumstantial was that a sum of five thousand *yen* had been handed to Count Itagaki to lubricate the wheels of the Budget Committee, with a promise of fifty thousand more if the operation succeeded. Then came a tale of a hundred and seventy thousand *yen* expended among the members for general purposes, and then another to the effect that fifty thousand had been paid out by a certain big steamship company to secure its subsidy. The *Nippon-jin* evidently believes all this, or is anxious that others should believe it. In the course of a plaintive article it alludes to the methods of party bribery pursued in England in the times of Walpole and Grenville and to the happy influence of Pitt's administration in putting an end to such practices. Little more than twenty years have elapsed, it adds, since Japan emerged from feudal government, and in that fact some people may find an excuse for irregularities that would not otherwise be tolerated. But the *Nippon-jin* admits no such excuse. It inveighs very powerfully and very uncompromisingly against such demoralizing doings, and asks whether it was for this that people laboured so long to achieve the bourne of parliamentary institutions.

* * *

Now we wonder whether the *Nippon-jin* and other fanners of these rumours are tilting against windmills. It looks very like it. Where can the Government procure two or three hundred thousand *yen* to distribute among the members, even supposing that it desired to do so? The secret service fund is the only source from which such monies could be drawn, but the secret service fund is neither unlimited nor elastic. Walpole, during the ten years of his administration, spent nearly eight hundred thousand pounds of the public money for secret services, whether honestly or dishonestly history has never determined quite distinctly. But Japanese Ministers have no such capacities of expenditure. The secret service fund of each Department in this country is a small and definitely fixed affair, and when people talk of the Government's exceeding its total by seventy or eighty per cent. in less than a month, they show a slight want of reflection, we think. Besides, where are the results of this lavish outlay? What is it that the members of the House of Representatives have been induced to do. Nothing, so far as we can see, and less than nothing. They have opposed the Government at every point, and their opposition shows no sign of relenting. Surely it requires something more than ordinary credulity to suppose that the Government has been distributing tens of thousands among the members, and that the latter have been quietly pocketing "the swag" without any attempt on one side to obtain, or on the other to give, a *quid pro quo*? Elsewhere, men begin to suspect foul play when they see votes cast in a manner unexpected and contrary to the known convictions of the voters. But here members keep on steadily voting against the Government, and the Government is all the while supposed to be cheerfully and liberally rewarding their obduracy by substantial payments. Very nice for the members, assuredly, but a trifle perplexing to ordinary folks.

### UNFORTUNATE CAUSE.

HERE is another example of the delicate, choice and polished writing that lends so much additional beauty to "the cause":—

> But the evidence that we accept as most conclusive of the success of the movement is the frantic condition of the *Japan Mail*: in numerous leaders, and innumerable paragraphs and letters, the editor of the journal manifests his disturbance. Some of the paragraphs are almost incredible in their silly spitefulness and futility; like the growlings of a savage animal who is safely caged and can do no harm but to himself. The correspondence with Mr. Lowder, it must be admitted, is very irritating; it must be annoying to be pierced through and through over and over again in a quarrel you have drawn on yourself. The joke of this correspondence is to find the editor vowing furiously in the foot note to the letter, that Mr. Lowder's letters will be rejected unless he observes the ordinary forms of courtesy, and then whining because Mr. Lowder chooses to answer the *Mail's* assaults in another journal! The *Mail's* venom and fury are the measure of the success of the meeting.

Unfortunate cause! The fact that it holds up its head at all under the weight of such championship, says much for its vitality.

### WELCOME WORDS.

INTO the mouth of Count Oyama the *Jiyu Shimbun* puts words which it were doubtless fain that he had spoken. The occasion was a Cabinet meeting on the 27th ultimo. "Gentlemen," said the Minister of War to his colleagues, "is Yamada's retirement from office right or wrong. If it is right, then we ought to retire with him. If it is wrong, then it ought to be stopped at once. The Commercial Code was promulgated above the signatures of us all, was it not? Why should Yamada alone retire because public opinion is against the Code? We have the precedent furnished by the affairs of Treaty Revision last year. Let us all resign. I cannot approve of the responsibility being put upon Yamada alone." "With that," continues the *Jiyu Shimbun*, "the Count left the Cabinet, and his colleagues remained behind in embarrassed consultation. Ultimately Count Saigo was sent as the Cabinet's representative to wait upon Count Yamada at Oiso, so that perhaps, after all, we may see the resignation of the whole Cabinet."

### T. R. MCCLATCHIE'S "JAPANESE PLAYS."

THE *Graphic* of November 8th, notices a recent edition of this work illustrated by the author's brother, Mr. Ernest S. McClatchie, and published by the firm of W. H. Allen. The premature death of Mr. Thomas R. McClachie was felt at the time as a severe loss to the British Consular Service in Japan, and it is pleasant to think that his work is still living after him. This London edition has succeeded, after an interval of eleven years, to the first Yokohama edition. The reviewer speaks of the freshness and novelty of the "Plays," which give, "in pleasant, rollicking fashion, a certain insight into old time Japanese habits of thought and customs."

### THE VICE-MINISTER OF JUSTICE.

WE read with regret in the vernacular press that Mr. Mitsukuri, the Vice-Minister of State for Justice, has expressed his resolve to retire from office in consequence of the Diet's decision with regard to the Commercial Code. Considering the prominent part taken by Mr. Mitsukuri in preparing the Code, his resolve ought not, perhaps, to excite surprise, but his resignation would certainly be a heavy loss to the public service.

### THE "SURUGA MARU."

JAPANESE papers publish a statement that the *Suruga Maru* is ashore in Owari Gulf, but on enquiry at the office of the Nippon Yusen Kaisha we learn that there is no foundation for the report.

### ADDITIONAL PORTS OF EXPORT.

THE EMPEROR has sanctioned the Bill passed by the Diet for the opening of additional harbours for export purposes, and has also announced that Kushiro will be among the number.

## *THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.*

The ultimate decision of the Budget Committee of the House of Representatives has formed the principal topic of journalistic discussion this week. Before proceeding to this question, however, let us touch briefly on the manner in which the Tokyo press bids farewell to the year just closed.

* * *

In reviewing the year 1890, the papers in most cases take a decidedly pessimistic view. The *Nippon* complains that 1890 was exceptionally disastrous from an economical point of view. The high price of rice, the unfavourable state of the market for Japanese silk, and the fall of shares of all kinds, combined to produce general depression of trade and wide-spread hardship among the lower classes of the community. On the other hand, did 1890 fulfill the high hopes with which it had been awaited by the people from a political point of view? Our contemporary is sorry that it cannot answer in the affirmative. What have the three hundred Representatives of the people done during the opening month of their parliamentary career? In the first place, they disgraced themselves by taking an unconstitutional step for the purpose of protecting a man charged with a dishonourable crime. In the second place, some of them are said to have received bribes in connection with the Budget. And lastly, they have been laughed at by the public for propounding very foolish questions to the Governments delegates. Upon the whole, the people's Representatives—concludes the *Nippon*—have done more to merit the contempt of the nation than to earn its respect.

* * *

The *Nichi Nichi Shimbun* expresses a sincere regret that the members of the Lower House have not thus far conducted themselves in a manner consistent with the gravity of their responsibility, at the present crisis in Japan's history as a constitutional State. Our contemporary is extremely reluctant to say anything that may injure their reputation, for with their reputation is closely bound up the good name of the people who appointed them to the Diet. But the *Nichi Nichi* is constrained to avow that the Representatives are conducting themselves in a manner far from wise. They are stirring up needless friction, and are pursuing with regard to the Budget a course of policy that evidently encroaches upon the prerogatives of the Emperor. The *Nichi Nichi* then passes on to consider the state of things in the economic world, and sums up by saying that the old year closed upon the nation while it was still

Digitized by Google

suffering from the effect of a general depression of trade.

* * *

The *Kokkai* is not at all satisfied with the way in which the Lower House has thus far behaved itself. But it would not be fair, says that paper, to pronounce an unfavourable opinion on the House as a whole; for at this early stage of parliamentary institutions there are many statesmen of prominence who have not yet taken any important part in the debates. The calendar year has already closed, the *Kokkai* goes on, but the political year is only about a month old, and will not close until the end of the present session of the Diet. It will be then and only then that anything like justice can be done to the people's Representatives. Meanwhile, our contemporary reminds the latter that their prime duty is to conduct their first year's business in a moderate and reasonable manner; that although it is important to reduce the expenses of administration it is equally important to move within the limits allowed by the Constitution; that while strictly guarding the powers of the Legislature, the House should take care not to encroach upon the functions of the Executive; and that, although the people do not wish the Representatives to act merely as tools of crafty statesmen, they are not desired to do anything rashly or to court a fatal collision between themselves and the Government.

* * *

The Committee on the Budget met on the 27th of last month and decided by a large majority that the estimates should be reduced by more than 9 million *yen*. As stated in our last weekly summary, the Committee had been unable at its meeting of the 20th ultimo to make a choice between the plans of reduction formulated by the so-called "extreme" and "moderate" sections of its members. It was believed, however, at the time that the "moderates" who protested against the proposed changes in the organization of the Departments of State, had suddenly obtained more followers than the "extremists." But this belief was not confirmed by subsequent events. The failure of the extremists to carry their point at once now seems to have been principally due to the confusion into which they were temporarily thrown by the superior tactics of the "moderates." Meanwhile, rumours were assiduously circulated, charging some of the "moderates" with having accepted bribes from the Government and the Nippon Yusen Kaisha. There does not seem to be a grain of truth in these reports, but under the circumstances they must have more or less contributed to the signal success which the extreme section of the Committee at last obtained on the 27th December. At that meeting a considerable commotion was caused by the conduct of the Government's delegates, who, when the Committee was about to commence its business, suddenly withdrew, simply stating that in their opinion it would be impossible to carry on the administration with the appropriations proposed by the Committee. Mr. Uyeki, who is always prominent in parliamentary affrays, instantly moved to recall the delegates and require them to explain why they thought the sums proposed by the Committee insufficient to carry on the Government of the country. The motion was adopted, but only one of the delegates, Mr. Maeshima, Vice-Minister of Communications, could be found within the precincts of the House. He immediately came back to the Committee room; but as he only repeated the simple declaration above alluded to he was very unceremoniously dismissed by the Committee. The "moderates" who number fourteen in all, among the more prominent being Mr. Oye Taku, Mr. Takenouchi Tsuna, Mr. Seki Naohiko, and Mr. Furusho Kamon, are reported to be determined to oppose the Committee's proposal when it comes to be discussed by the House of Representatives.

* * *

There are many rumours about the probable attitude of the House of Representatives towards the Report, and about the course of action the Government may take in case the Committee's plan be adopted by the Lower House. As to the Representatives, it is thought by the *Hochi Shimbun* that the Committee's Report will be supported by the whole of the *Kaishin-to* members (about 40) by 90 out of 130 Constitutional Liberals, and by some members of the *Taisei-kai*, and that, consequently, no forecast can yet be made as to which side will be victorious. With regard to the Government, it is anticipated by some that the Cabinet may possibly reconstruct the Budget on the basis of reducing the present estimates by about three million *yen*, while others state that, should the Lower House vote the reduction of 9 million *yen*, the Ministry will disolve the Diet. Still another rumour is that the Government will in the event of the House's adopting the Report, simply reject the decision of the Diet and carry out the preceding year's estimates. On the whole, the general idea is that there will be a serious collision between the Executive and the Diet. It is, however, not a little reassuring to learn that the public at large does not wholly approve the conduct of the "extremists."

* * *

The *Kaishinto* organs strongly support the scheme of reduction proposed by the Committee on the Budget. The Constitutional Liberal organs have not declared themselves on this question; indeed they are in a peculiar position, for some of the most distinguished members of that party are understood to oppose the scheme of reduction. Independent papers like the *Jiji Shimpo*, the *Nippon*, the *Nichi Nichi Shimbun* and the *Kokkai* do not hesitate to express disapproval of the conduct of the Committee. We will now reproduce what some of these papers, independent as well as representing parties, say on the question.

* * *

The *Jiji Shimpo* is astonished to learn that the Committee on the Budget had decided to cut down the estimates by the extraordinary sum of nearly nine and a half million *yen*. In order to bring home to the members of the Committee the extravagance of this resolution, our contemporary does not consider it necessary to employ any learned argument. All that they need do is to reflect on their own private affairs, and remember how unwise it would be to suddenly reduce their expenditure by more than 10 per cent. The *Jiji* admits that it would be possible and desirable to carry on the administration for a much less sum of money than is at present required. But it declares that such a reform must be effected gradually and slowly; and that any attempt to attain the object at once by a radical method, would only end in strengthening the very abuses which it is desired to correct. Had the Government asked for more than is actually required, the Representatives would only do their duty in cutting down the estimates submitted to their consideration; but the present Budget is, in the opinion of the *Jiji*, reasonable and moderate under the circumstances. Should the report of the Committee be voted by the Diet, it would be tantamount to asking the Government to do what cannot possibly be done, and the result might probably be the dissolution of the Diet. In that case neither the Cabinet nor the people could be charged with bringing about a most undesirable incident of constitutional Government; the blame would rest entirely with the Representatives, who would not listen to the voice of reason and moderation.

* * *

The *Yomiuri Shimbun*, which, though not an acknowledged organ of any party, is always favourably disposed to the *Kaishin-to*, considers that there is nothing extraordinary in proposing the reduction of the estimates by 10 million *yen*. If there were items capable of being dispensed with there would be no impropriety in voting for a reduction amounting to twice that sum of money. As to the objection that the Committee contemplate a course of action which seriously interferes with the prerogative of the Emperor, our contemporary answers that no such thing has ever been contemplated by the Committee. The proposed changes in the organization of the Departments of State are merely intended for reference, in order to show how a reduction of expenses could be effected without causing any disorder in any branch of the administration. As to the rumour that the Government may withdraw the present Budget and introduce another one reduced by about three million *yen*, the *Yomiuri* observes that such a step, if really contemplated by the Cabinet, would be equivalent to a confession that many superfluous items are contained in the Budget now in the hands of the members of the Lower House. If a reduction of 10 million *yen* be really incompatible with the successful conduct of public business, our contemporary invites the Ministry to explain the reasons why, and to manfully maintain their ground on the floor of the Diet.

* * *

The *Mainichi Shimbun*, in a series of two articles, strongly protests against the imputation cast upon the members of the *Kaishin-to*, that they advocate an extreme course in respect of the reduction of public expense because they are desirous of having the Diet dissolved. This charge is brought against the *Kaishin-to*, thinks our contemporary, for the sole purpose of winning over members, who are afraid of dissolution. It is of course wrong to desire a dissolution, but, says the *Mainichi*, it is worse to be afraid of a dissolution. We (*Japan Mail*) are afraid that the effect of our contemporary's articles will be to leave a strong impression in the reader's mind that the *Kaishin-to* members of the Lower House are, if not desirous of, at least very well prepared for, dissolution at any moment.

* * *

Since the passing of the Bill for the postponement of the operation of the Commercial Code, the political situation has somewhat changed. There seems to be little hope of Count Yamada resuming his Ministerial duties. Viscount Aoki, according to some gossips, is reported to be thinking of resignation, while others state that Count Matsukata may also leave the Government at any moment. According to yet another report, Counts Ito and Okuma are said to have become reconciled, and it is added that they are secretly fanning popular opposition to the present Cabinet. Mr. Mutsu, Count Goto, Viscount Aoki, and Mr. Yoshikawa are said to have formed an alliance. These and several other rumours of similar character are now circulated, but they are in most cases mere bubbles thrown up into the air by ambitious politicians, to find which way the wind is blowing.

* * *

The *Hochi Shimbun* has published two articles on the question of the reduction of the land tax, from the pen of Mr. Sakatani Yoshizo of the Finance Department. Mr. Sakatani is of opinion that the land tax in Japan partakes of the nature of rent rather than of a tax. The present rate is quite high, but it is not at all unreasonably high if viewed in the light of rent paid for the use of land. The writer has many facts to support the position he takes with regard to the above mentioned historical character of the land tax. His views on this subject are recorded at great length in the last number of the proceedings of the Association for the study of State Science. We will refer to his essay at greater length in a separate note.

* * *

The *Choya Shimbun* is still discussing the question of the augmentation of the Navy. The *Yomiuri Shimbun* has commenced to publish an interesting series of articles on the responsibility of Ministers of State, which promises to be very long. The writer is Mr. Takata Sanae, editor-in-chief of the paper. The *Jiyu Shimbun* has finished a long series of essays on the Government Bill for the examination of silkworms' eggs. The *Nippon* continues its interesting articles on the imaginary country of lunatics. The *Rikken Jiyu Shimbun*, the new organ of the Constitutional Liberals, publishes an essay on the Revision of the Treaties, by Mr. Hoshi Toru. The essay is not yet concluded.

## *A SUGGESTION.*

AMONG the meteoric members of the first House of Japanese Represen tatives, Mr. ARAI SHOGO'S track has hitherto been, perhaps, the most dazzling. Mr. ARAI is gifted with dramatic instincts. The piecein which he made his *début* was of aninternational character. It was a short and brilliant affair, which perhaps left little impression on the mind of the general public, but which served nevertheless to display pretty clearly the exceptional faculties possessed by Mr. ARAI. He and several other Japanese patriots planned a raid upon the Korean capital, a raid not incomparable in some respects to the celebrated expedition of the Three Musketeers, by which the person of the King-maker was carried to France in a deal box, and the restoration of the STUARTS was accomplished. It is not clearly on record how many and what manner of men were associated with Mr. ARAI in his great project. We have never heard the number placed above a score, and the resources of the party were about as colossal as their numerical strength. Their hearts were very big, and so was their aim. They intended to raise an insurrection in Korea, to overthrow the then administration, and to make the country the arena of a struggle between China and Japan. Unfortunately the drama never got beyond a full-dress rehearsal. The principal actors were seized just as the curtain was about to rise, and the rest of the play took place in the Criminal Court at Osaka. It was on that occasion that the foundations of Mr. ARAI'S fame were laid. The speech delivered by him in his defence occupied hours, and filled a bulky volume which may still be procured at sanguine booksellers. Mr. ARAI, from his place in the dock, did not condescend to address the Court; he addressed the whole of Japan. Neither did he condescend to defend himself; he attacked the whole world of officialdom. The Court, with that callous indifference to eloquence and volubility so often displayed by judicial tribunals, heard Mr. ARAI to the end, and then sentenced him to two years' imprisonment. Such a man was bound to become audible again, and Mr ARAI has been very audible in the Diet. Chosen to be the mouth-piece of the thirty-two members who interrogated the Government on various quustions of State policy, he had the honour of occupying the tribune and the ear of the House time after time during an exciting and interesting period. He succeeded excellently. His personal appearance is not ill adapted for the rôle of the persistent puppet in the toy-box, and his command of language is really quite conspicuous. He has certainly made his mark in the House, and may perhaps be destined to occupy a permanently prominent place in Japanese Parlimentary history. Concerning this latter point, however, we entertain some doubts. The Japanese are a self-contained race. They do not love showers of words, and let a man be ever so eloquent, they are apt to despise him if he talks much. Mr. ARAI has undoubtedly been talking much. His most recent appearances in the tribune, instead of attracting pleased attention, have actually been greeted with cries of "At it again," and "How often are you coming on?" The exigencies of his part as mouth-piece of the thirty-two exposed him to this misfortune, but it would be a pity if his career should suffer in consequence, and for that reason we desire to offer a suggestion. It is that he should introduce a motion in the House; a motion which, judging by the present temper of the Diet, cannot fail to bring great popularity to its proposer. The motion would be couched in some such terms as the following:—"Whereas, Parliamentary institutions are in their origin, structure, and methods of procedure copied entirely from Western models, and whereas, this House is strongly opposed to any slavish imitation of foreign things, therefore it is hereby agreed that a humble representation be made to the Throne urging the immediate abolition of the Diet and of all the machinery connected with it." The House of Representatives could not fail to appreciate this suggestion, or to be sincerely grateful to the man who helped the members to reach so quickly the logical sequel of the course they are at present pursuing. Whenever any attempt is made to cite foreign precedents for the information of the House, or whenever any member ventures to refer to Western history or Western institutions, he is greeted with execrations. This is very high-spirited and encouraging. Japan for the Japanese is an excellent motto, and nowhere can it find better practical expression than in the proceedings of the House of Representatives. It does not much matter that Japan during the past twenty years, with the apparent consent of all her educated men, has been busily doing the very thing which the Diet now forbids any of its members to do. Such an objection is neither here not there. To be governed by any petty rules relating to sequence of conduct is in itself a Western idea, and as such deserves no consideration at Japanese hands to-day. Therefore we do not venture to cavil at the Diet's objection to be reminded that there is a world outside these four seas, and that to be admitted to equal fellowship with the leading nations of that world has been the chief aim of Japan throughout her whole career of modern progress. But it would be a pity if such an opportunity to make a fine record were suffered to pass unutilized, and Mr. ARAI SHOGO seems just the man to utilize it, whether on account of his dramatic endowments, or in consideration of the striking part he has already played in the House of Representatives, or because the fame that had come almost within his reach seems to be in danger of slipping away from him. Some courage would be needed to make the motion here suggested, but Mr. ARAI is quite equal to the effort. The other day when Viscount AOKI, speaking from the tribune of the Lower House, sought to quote from the speech of a British Prime Minister, and to suggest that in conducting negotiations with European States Japan ought to observe the rules of reticence by which they consider themselves bound, Mr. ARAI uttered an angry protest against any such quotations or suggestions being submitted to the House. He is evidently a leader of the wholesale opponents of borrowing from abroad, and since among all the efforts hitherto made by Japan in the way of frank borrowing, the first place belongs to representative institutions, it is plain that the abolition of the Diet, the tearing up of the Constitution, and a return to a pure monarchical polity would be the strongest effort at self-assertion that Japan could now make on the lines indicated by Mr. ARAI and his fellow-thinkers. Everything points to him as the man to utilize the occasion, to earn lasting fame, and to win the gratitude of his country by bringing its practice and its professions into some sort of consistency.

## *A SEQUEL OF THE EXHIBITION.*

THE Industrial Exhibition of this year, while it certainly served to show that the Japanese are making great progress in artistic manufactures, served also to show either that they are still without any clear perception of the objects of an Exhibition, or that they are singularly lacking in business capacity. The place was a veritable Pool of Bethesda. The first comers alone were fortunate, and while patient orderly folks awaited their turn, the exhibits on which they had set their hearts were snapped up by less scrupulous purchasers. With this, however, no fault is to be found. Competition is never altruistic, and under such circumstances people must look out for themselves. But the point is that an exhibit once sold was placed hopelessly beyond the reach of everyone except its fortunate purchaser. In ninety-nine cases out of every hundred, the exhibitors declined to take orders for the duplication of any object. They appeared to think that the exhibition was a kind of parade ground, where they might show their expert paces, and not at all a place for securing custom. In the case of a beautiful and expensive article it could not of course have been expected that a duplicate would be forthcoming. Besides many works of art produced by common artisans in Japan are genuine labours of love. They are the outcome of long toil and thought, and the maker when he exhibits them does not put

Digitized by Google

upon them prices at all proportionate to what they have really cost him. Such objects he will not reproduce, nor is he even willing to entertain any proposition for their reproduction. He does not want to confess that one feature of his exhibit is its curious cheapness, and that a very different price would have to be named if there were question simply of earning a livelihood. But this does not apply to a multitude of objects of every-day use, examples of which in novel and attractive forms made their appearance at the Exhibition. A Western manufacturer would have prepared beforehand a number of duplicates of such objects, or would at least have made full arrangements to execute orders for their duplication. Such was not the case at the Uyeno Exhibition. It was almost impossible to find anyone who would listen to an order, and still more difficult to find anyone who would entertain it. Utter absence of organization, utter lack of business providence and practicality were salient features of the whole affair. Even such a simple thing as a paper lantern or a set of tea cups could not be ordered except in very rare instances, and the impression left by the Exhibition on the minds of foreign visitors was that, instead of being a scheme for the promotion of industry and the making of money, it was a sort of manufacturers, picnic, to which everyone brought his best contribution without any ulterior purpose whatever. We felt sure that this mistake would be appreciated sooner or later, and it is pleasant to be able to record that our anticipation is partially justified. Within the past month there has been opened at Igura in Tokyo a shop that evidently owes its existence to the Exhibition. Visitors to the latter will doubtless remember that one of the most attractive stalls in the whole building was furnished with blue and white Hirado porcelain. The manufacture of this kind of ware has now been carried almost to the point of excellence reached at the end of the last century. The quality of the blue as a general rule still leaves a great deal to be desired, but in all other respects the ware is approximately the peer of its beautiful predecessor. Many delightful specimens were shown at the Exhibition in the form of cups, plates, tea pots, and other objects of daily use, but the small supply was soon exhausted by eager purchasers and no means existed of procuring duplicates. However, the principal exhibitor, Mr. HIGUCHI, has evidently now perceived that Tokyo needed some shop for the sale of these fine porcelains, and the result is the store at Igura. To visit the store is quite a treat. One learns there what a future awaits Japanese keramic manufactures. For certainly these blue and white porcelains of Hirado must command admiration in all parts of the world. But to connoisseurs the most interesting feature of HIGUCHI'S work is porcelain with pierced designs; the porcelain to which American collectors have given the name of "grains of rice pattern." This class of porcelain was among the most remarkable masterpieces of the old Chinese experts, and fine specimens have now become so scarce that they command enormous prices. The special point which distinguishes the ware is that the body of the piece is removed in certain parts of the design, and the space thus left is filled in with transparent glazing material. In the Chinese ware these perforated portions were generally arranged in geometrical or other formal patterns, and being more or less ovoidal, their resemblance to grains of rice inserted in the *pâte* suggested the name by which the ware is now generally known. The Chinese themselves, fond as they were of fanciful appellations, called this particular porcelain simply "ware with translucent decoration." It represents a keramic *tour de force*, and it seems to be virtually beyond the capacity of modern Chinese potters. They do indeed produce numerous specimens, but the inferiority of the new to the old is glaring. In the old ware fine paste, lustrous uniform glaze, and above all pure limpid transparency in the perforated portions constituted features everyone of which is conspicuously absent in the modern production. The Japanese potter of former times never attempted to manufacture this ware, and we do not know what inspired Mr. HIGUCHI of Hirado to set about the work. He devoted years to experiments of a costly and for a long time unsuccessful character, nor was it, we believe, until 1888 that he found himself in a position to apply for a patent. Now, however, he is able to produce ware which in point of technique equals the old Chinese, and in point of decoration far excels it. The Chinaman seems to have never conceived anything higher than an essentially geometrical design consisting of stars, or simple arabesques, but the modern Hirado experts apply the method to some of the beautiful designs which distinguish their decorative style. In a pair of vases recently manufactured by HIGUCHI for the Household Department, a delicate scroll pattern is surmounted by phœnixes with joined wings, forming circular medalions, the whole transparent. These vases are indeed masterpieces, but like all HIGUCHI'S ware of this nature their price is very high. They show, however, that the Japanese potter, emerging from the meretricious tendencies into which he was betrayed by his first contact with Western markets, is now fairly on his way to take the place that properly belongs to him as a master of technical skill and decorative genius.

## *THE CIVIL WAR AMONGST THE ORIENTALISTS.*

NEWSPAPERS coming from London during the past few months have contained from time to time paragraphs showing a serious division between members of the International Congress of Orientalists. They tell us of meetings of one Committee and an opposition Committee, of disputes, of a Congress to be held in 1891, and an opposition Congress in 1892, of rival presidents and so on. The Orientalists in Europe, especially in England, appear to be rent in twain. But the English papers do not tell us the origin and cause of these differences, and as many of our readers must be interested in the subject, we take this opportunity of explaining the matter from the beginning. The whole difficulty arose at the Congress held last year at Stockholm. The organising secretary on that occasion was Count LANDBERG, the Swedish Consul-General at Cairo, who is said to possess an extraordinary facility in the various dialects of Turkish and Arabic. He is a favourite of the King of SWEDEN, and upon him as legal organising secretary depended the whole success of the gathering, for the statutes of the Congress allot to him sundry duties of a formal though very important character. Among other things his business is to see that the provisions of the statutes with regard to a future Congress are carried out, and if he does not do this the statutes themselves provide no means for repairing the omission. From this circumstance the whole difficulty has arisen, although it has been aggravated by certain personal differences concerning which, since they do not really affect the question, we shall say as little as possible. Count LANDBERG appears to be one of those energetic, masterful men who very frequently excite opposition by reason of their positive qualities. Encouraged and supported no doubt by several members of the Congress of Stockholm, he formed a project for materially altering the constitution of the Congress. The statutes provide that a president and place of meeting for each Congress are to be fixed by the whole body of members at the previous meeting, and accordingly both of these important details should have been settled at a formal business meeting usually held on the last day of the session at Stockholm. But Count LANDBERG called no such meeting; he had a scheme by which these details were to be settled by a committee of five past presidents, which no doubt was very admirable in its way, but which suffered from the fatal defect of being utterly at variance with the statutes on which the Congress was established. He further had a scheme for the creation of a sort of Oriental academy composed of forty "immortals:" the first forty to be elected by the public vote of the Congress, and vacancies in the body to be

Digitized by Google

filled up by the votes of the "immortals" themselves, in accordance with the well known rule of the French Academy. This latter scheme was quite repugnant to the feelings of a large number of the members, and especially to the British section; it was said that it would destroy the equality which prevailed in the republic of letters, and the hostility it excited extended to the nomination of future presidents of the Congress. In the end Count LANDBERG'S proposals and Count LANDBERG himself fell into great disfavour. But he had his opponents on the hip in this way, that it rested with him to call a formal meeting provided by the existing statutes for appointing the date, place and time of the next meeting. He did not call it, but nominated a committee of five ex-presidents to do the work.

In the fullness of time the scholars, dispersed in the four quarters of the globe, set about discussing the position of their body. Before long English scholars came to the conclusion that everything which had been done was utterly illegal, and that if the Congress was not to go to pieces they had better set about repairing the errors of Count LANDBERG. But the difficulty was how to set about this, for the statutes had never contemplated a position in which they would be wilfully broken by an official appointed under them. After a good deal of discussion it was decided that the proper course to take was to go back to the original founders of the Congress, viz., the French scholars, and obtain from them powers for dealing with the new position, since no provision was made for it in the statutes. The French Orientalists readily agreed, and as England was the country in which the next Congress would have been held, they gave the English scholars a free hand to deal with the matter, only appointing Dr. LEITNER to represent France on the English Committee. Dr. LEITNER, we believe, is a German by descent, but he is a naturalized Englishman. He was for many years head of the Punjaub University at Lahore, and is said to possess a wonderful facility for the acquisition of colloquial Asiatic languages. Indeed it is said that he speaks a good many more languages than the famous MEZZOFANTI. He is besides a man of boundless energy, and in mamy other respets resembles Count LANDBERG. He is at present the head of the Oriental Institute which has taken up its quarters in the old Dramatic College near Woking, and the object of which is to provide for natives of India in England accommodation suitable to their religion and caste rites. Dr. LEITNER led the rebellion against Count LANDBERG, who from the point at which we have now arrived, fell with his schemes into the limbo of chaos and darkest night, and a new dispute of an even hotter character arose in England itself. The scheme for arranging the next Congress was that a Committee composed of English scholars should make all the necessary arrangements, and Dr. LEITNER was one of its members. He sat on the Committee as an English Orientalist, as a leader of the revolt against Count LANDBERG, and also as a nominee of the French founders of the Congress. He was also a secretary to the Committee, the other secretaries being Professor DOUGLAS of the British Museum, and Mr. HEWITT, a retired member of the Bengal Civil Service. The chairman was Sir GEORGE BIRDWOOD, of the Indian Office. Sir HENRY RAWLINSON agreed to lend his great name as President of the forthcoming Congress, and Sir GRANT DUFF was willing to be Vice-President. Thus everything seemed set-fair, but the favourable prospect was soon overcast. Dr. LEITNER'S energy and desire to carry everything his own way was not relished by several of the members of the Committee. He claimed that, as representative of the French founders of the Congress, any meeting at which he was not present, or any resolution of which he did not approve, was illegal. Differences arose. He abstained from attending meetings of the Committee, letters to him remained unanswered, and by and by the remaining members of the Committee addressed a letter to Sir HENRY RAWLINSON to say that they could not get on with Dr. LEITNER. Recriminations followed. Sir HENRY RAWLINSON and Sir GRANT DUFF both resigned. The other Committee men called a meeting without inviting Dr. LEITNER; he appeared with a few of his friends; there was a noisy gathering at the British Museum which was hastily adjourned by the chairman to another place, where Dr. LEITNER and his friends were not admitted, and the split was complete. Both parties proceeded to make arrangements for a Congress of their own. Dr. LEITNER called a meeting at the German Athenæum at which Sir LEPEL GRIFFIN presided. The President, Secretaries, and sections of a Congress to be held in London in 1891 were all appointed. The other party did much the same, except that 1892 was the year fixed upon by them, and London and Oxford the places of meeting. Professor MAX MULLER agreed to be their president, and in him they have a tower of strength both in this country and on the Continent. This is the condition of affairs at the present moment. Let us take a glance at the respective parties, and see how they stand from the point of view of Oriental scholarship. If we are to judge by the list of supporters of Dr. LEITNER, he is unfortunate in not having been able to secure Oriental scholars of fame. His President is Sir PATRICK COLQUHOUN, who was for some years Chief Justice of the Ionian Islands, but whose name has never been associated with Oriental studies of any kind, and indeed the only Oriental scholar of eminence he has amongst his following is M. OPPERT of Paris. On the other side are all the Orientalists of the British Museum, who would form a respectable Congress in themselves, and all the Oxford and Cambridge scholars. The Dutch scholars, such as Professor DE GOEK of Leyden and others are with them. The French appear disposed to throw their weight into the same scale. What is certain at this moment is that the founders of the Congress have withdrawn their Commission from Dr. LEITNER, and although the German scholars are holding aloof as a rule, yet several of them have already sent in their adhesion to Professor MAX MULLER, and it is believed that all of them will follow suit. The India Office authorities also are unofficially supporting Professor MAX MULLER and SIR GEORGE BIRDWOOD, while Dr. LEITNER'S support from India comes chiefly from personal friends. Thus on the one side we have a large part of the Oriental scholarship of England which in all probability will attract the Oriental scholars of the continent likewise, while on the other we have Dr. LEITNER himself and his personal friends, together with wonderful energy and organising power. There have already been so many turns and revolutions in this dispute that it is very difficult to say where the palm of victory will ultimately lie, but in all probability the weight of scholarship will finally turn the scale. One thing is certain; the success of Dr. LEITNER'S movement in the present spirit of Orientalists would mean the extinction of the Congress. We do not say that this would be a very severe loss to Oriental scholarship; we only record the opinion that such would be the inevitable result.

## *THE DEAD YEAR.*

IT would certainly be an injustice to 1890 to suffer it to drift out of sight without more than a passing acknowledgment of the remarkable series of events included in its record. It stands alone among the twenty-three years of the Meiji era. Previous years had occasionally been marked by one or more striking incidents, or even by crises of a temporarily alarming character, but 1890 is unique in this that a long list of extraordinary circumstances were crowded into its short span of months, and that the shadow of their consequences lies almost as darkly across the threshold of 1891 and stretches as far into the future as though the evils already experienced counted for nothing in the scales of fate. Before the first plum blossoms made their appearance there had commenced that extraordinary disturbance of the rice market which ultimately drove the staff of life in Japan to an unprecedented height. Still further accentuated by an extensive failure of the barley crop, upon which the poorer classes mainly depend when rice is dear, this calamity with all its collateral

Digitized by Google

effects produced a state of keen suffering and almost paralysed domestic trade. Wild rumours began to circulate about the inhuman action of capitalists in cornering rice, and it became a colloquial formula for describing extreme villainy to say that a man was knave enough to levy toll on the lives of the starving poor. There is no reason to think that transactions of this nature were extensively carried on ; still less that they exercised any sensible effect on the market. Speculators ready and willing to take advantage of such opportunities are doubtless as plentiful in Japan as anywhere else, but the fact that to this day they remain unidentified does not indicate that they existed in very large numbers or operated on a very wide scale. The great shortage of the preceding year's yield was undoubtedly responsible for the whole business, and the authorities finally resolved to supply the deficiency in some measure by becoming direct importers of foreign rice. It was a mistaken resolve, we think, inasmuch as its immediate effect was to deter private enterprise, which, if left unhampered, would assuredly have worked with equal thoroughness and greater discretion. The resolve once taken, however, could only be carried out in one manner, namely, by importing large quantities of rice and selling them by public tender to the highest bidder. This the authorities did, and for doing this they were pretty roundly abused by critics whose view of the situation was so superficial that they blamed the Government for not controlling the ultimate destination of the rice after bringing it to the country. They alleged in short, that measures should have been taken to place it in the hands of the poor, ignoring altogether the well known fact that unless the rice had been reduced to charity prices, the poor could not possibly have profited by its importation, and that, under any circumstances, what the poor wanted was not rice, but work. It is by its indirect effect upon the labour market that dear rice chiefly hurts the lower orders, and to offer them comparatively cheap rice when they could not earn money to buy even a barley diet, would have been pure mockery. Without dwelling on this phase of the business, however, we proceed at once to notice the net result, which, in round numbers may be called a difference of 18 million *yen* in the balance of the empire's foreign trade. For instead of exporting rice to the value of some 7 or 8 million *yen*, as would have been the case under ordinary circumstances, she was obliged to import 10 millions worth, thus on the one hand, experiencing a deficit to the former amount in her recipts and an increase to the latter extent in her expenditure. In the midst of these results, already amounting to something very like a catastrophe when compared with the dimensions of Japan's foreign commerce, came the reckless and empirical legislation of the United States, both financial and fiscal. Never in the history of human intelligence had anything been previously perpetrated that could stand on the same plane of irresponsible rashness. America did not move in the interests of the great problem that has been perplexing the World for years. She moved simply in the selfish interests of a clique of silver-miners. Thoughtless persons have quoted the consequences of her action as evidence that bimetallism would not work in practice. But the bimetallic theory has no relation to such action. With the burden of the nation's public debt growing yearly more intolerable owing to the persistent appreciation of the medium of payment; with the rewards of labour and enterprise steadily diminishing because of a general fall of prices owing, in considerable part, to the same reason ; with international trade reduced to the level of mere gambling owing to the fact that one half of the world conducts its transactions in a medium which the other half capriciously declines to regard as anything better than a mere commodity—with all these huge and perpetually growing ills in flagrant view, bimetallists urge that silver should receive again the treatment it received successfully during so many centuries ; that it should no longer be ostracised from the ranks of money ; that stability should be imparted to its value by authorizing its free coinage ; that, in short, the principles of free trade should be extended to the precious metals instead of the present system of unnatural and injurious protection. But no bimetallist has ever been wild enough to advocate an arbitrary attempt to force silver back to its gold price of twenty-five years ago. No bimetallist has ever suggested that such a Power as America should set itself to re-produce, within a very brief period and in an inverse ratio, all the troubles which have attended the depreciation of silver during the past qusrter of a century, and that, too, not with any fixed hope or restoring equilibrium eventually, but merely in order to find a temporary market for the produce of American silver mines. The United States stands towards the rest of the world in a position of material responsibility that ought to forbid such hazardous experiments. When America wounds herself, all other civilized nations are doomed to suffer more or less. We know it well here in Japan. Some theorists told us indeed, at the outset, that the crippling effect produced upon exports by the appreciation of silver would be compensated by the impetus given to imports. The theory is full of holes, needing all the ingenuity and generalizing liberality of book students to patch them. It will be long before export merchants in Japan can lay any such balsam to their souls, and in the meanwhile the country's chief staple of export, silk, has become a drug in the market. To crown all we had the panic produced in New York by that egregious bit of legislation, the McKinley Bill, followed, as might have been anticipated, by something very like a panic in London, and followed yet again by another panic in the American metropolis. If mischievous sprites had been entrusted with liberty to play football with the world's commerce, they could not have set about the performance with grimmer resolution than did the Republicans under President Harrison. Yet to America, if anywhere, the nations should be able to look confidently for sound and well considered action in financial and fiscal matters. What adds to the pain of the retrospect is—to use a Hybernicism—the gloominess of the prospect. We cannot speak of these things as past and gone. The evil legislation is still active, and its effects must continue to be severely felt by silver-using nations.

These events overshadow everything else in the history of Yokohama during 1890, but at no great distance in point of importance comes the Meeting of September 17th. We are still too close to that memorable incident to view it with absolute dispassion. Besides, enough was said about it at the time in a certain sense, and if some of its less admirable phases have been recently recalled by the blundering vehemence of critics at a distance, that is only an additional reason for thrusting it as far as possible out of sight at the beginning of a new year. Nevertheless, there is just one question that we would fain put to the British residents, and that is, whether they recognise how persistent are the efforts made by a certain section of this community to envelop the whole question of Treaty Revision in a covering of prejudice and racial intolerance. We suppose that there are few instances on record where men venturing to plead for a calm and quiet discussion of a vital problem were so bitterly abused, traduced, and held up to public execration as has been the case here with everyone daring to point out that Japan's claims cannot be left perpetually disregarded. We make no complaint on our own account. Such treatment does not hurt us. But the question is, may this mood towards the other side be taken as an index of the general nature of the agitators' disposition towards the problem itself? If in an argument one party persistently reverts to personalities and rancorous attacks, the public is seldom puzzled to discover on which side the right lies. And under any circumstances, what can possibly be gained by perverting a great problem into an incessant tirade of bickering and slander. In the main there is absolute unanimity among the foreign residents with regard to Treaty Revision. All are agreed, we equally with the rest, that the lives and properties of foreigners must not be handed over to Japanese Jurisdiction without conditions

Digitized by Google

of some sort. The point of divergence is that while some of us—we among the rest—are perfectly willing to trust the elaboration of conditions, so far as British subjects are concerned, to the care of HER MAJESTY'S Government—care which has never yet failed of ample exercise—others are apparently persuaded that the Foreign Office in London requires to be kept up to its first duties by private citizens in Yokohama. There is no reason why either party to such a controversy should call the other names, or variegate its arguments with imprecations. The evil habit is due simply to the influence of men who batten upon the bad blood they create, and who can only attract attention by being turbulent and sharp-tongued. There is a fair prospect that the year upon which we are now entering will bring gradual respite from this local nuisance, and that we shall all awake one morning to discover that absolute unanimity of view is not essential to sound friendship.

## *CHINA'S EMBASSY TO KOREA.*

(COMMUNICATED.)

"APROPOS" the recent visit of the Chinese Embassy of Condolence to Korea, the *Chinese Times* speaking as a representative of that element which looks upon the peninsular Kingdom as the vassal of China, makes the following affirmations:—"It cannot be denied that when it suits the convenience of the Chinese Government to *assert its supremacy,* in other words, when it is absolutely assured of submission on the part of the vassal, *it does the thing in a grand imperial style;* while in the opposite case of a doubtful or recalcitrant tributary the traditional wisdom of the Chinese rulers is conspicuously displayed in a policy of imperturbable reserve. * * * *Hence the ostentation of the mission just dispatched to Korea implies complete conviction of the subjection of the rulers of that country;* a conviction which no doubt rests on solid ground."[1] (Italics ours.) In these words three things are worthy of special notice and consideration; first:—the assumption that a Government recognised as an Independent Sovereignty by the great Powers of the world, is the vassal of China; second:—that the Embassy of Condolence recently dispatched by China, was, in truth an assertion "in a grand imperial style" of her supremacy; "an object lesson in reply to the insidious attacks upon her paramount power, which none can mistake;" and third "the conviction of the subjection of the rulers of that country." These three things are worthy of note because of the anomalous condition of affairs toward which they point.

The claim that Korea is a vassal State is not now advanced for the first time; it has been persistently urged of late years by China. Regardless of the fact that it stultifies her in the eyes of the civilized world, and convicts her of a false declaration to France, and of breaking faith with the United States and Japan, China advances the charge of vassalage simply as a cover to a desperate clutch at her small neighbour. The affirmation of suzerainty is not only without foundation in all law and history applicable to the subject (not even excepting the warped and distorted accounts of a ceremonial which is simply the outgrowth of tributary relations), but is also contrary to the acts and solemn declarations of China, and the assurances of good faith made by HIS MAJESTY of Korea to the treaty Powers.

The sovereignty of Korea is vested in uncontrolled exercise of the powers of the State; these powers are of a two-fold character; viz., the power of entering into relations with other nations, and the power of governing its own subjects. These powers the KING of Korea claims, and the history of the five hundred years during which his family have held the throne sustains him in such claim. Neither by treaty concession nor by conquest have these powers ever been surrendered. China has sometimes ignored them, and, emboldened by success, now flatly denies them, but every interference with them on her part has been looked upon by Korea as a violent outrage perpetrated upon a weak Power by a strong neighbour. And in this view the outside world will be led to coincide by the very force of the logic of facts.

In the maintenance of their authority, in the appointment of the officiary of the realm, in the imposition of taxes, the administration of law, and the conservation of the weal of their subjects, the Sovereigns of Korea have ever acted independently of China. And the historical interferences to which we have referred, have been so infrequent and of such a character as to witness against, instead of for, the charge of vassalage. Furthermore, if in the direction of internal affairs the evidence of the sovereignty of the Korean Kings is so plentiful, the treaties now existing sufficiently establish their independence in external relations.

But even ignoring law and evidence, can China answer the question "when and how her suzerainty was established?" Her simple flat affirmation of such a thing is the height of absurdity. The world has a right to demand historical attestation to the claim; and vagueness or equivocation in her reply is surely destructive of such claim. Let China answer frankly, or else forever abandon this absurd darling of her dotage.

Turning from the legal status of the matter, we find that the acts and solemn declarations of China are directly contrary to the charge of vassalage. Either Korea is a Sovereign Power, or else China has committed the unheard of act of a suzerain making a treaty of commerce and friendship with her vassal; an international paradox which not even the united wisdom of a GROTIUS, a VON PUFFENDORF, and a WHEATON can explain. To extricate herself from this blunder she calls this treaty "Rules for the regulations of trade." She might as well have called it "Hoyle on Chess," for all such a course can avail to rectify her "mistake." The eight articles of this Convention are not the fiats of a Sovereign to a vassel, but the interchange of privileges between two friendly nations, such as extraterritorial privileges, and the regulation of travel by passport. Again, if China is suzerain, why did she affirm Korea's independence to France (in 1866) to the United States (in 1872) and why did she give to MORI ARINORI a written disclaimer of all responsibility over the "outpost State" (in 1876)? Was it simply a stroke of policy to free herself from all possible claims of indemnity from France, the United States, and Japan?[2] Possibly the *Chinese Times* had this in mind, when it alluded to "the traditional wisdom of Chinese rulers conspicuously displayed in a policy of imperturbable reserve."

From the facts in the case we cannot but view the renewal of these claims of suzerainty as an evidence of bad faith in China both with Japan and the United States. Hon. O. N. DENNY, in his pamphlet, entitled "China and Korea," makes the following statements:—

"When the first of the Western treaties came to be negotiated, which was with America, the Viceroy, LI HUNG-CHANG, was invited as the friend of the KING having the broadest experience in such matters, to assist in the negotiations. Two drafts were submitted to that convention, one by the Viceroy and the other by the special envoy who conducted the negotiations for the United States. The very first clause of the Viceroy's draft was a demand for the recognition of vassal or dependent relations between China and Korea, which the agent of the U.S. Government declined to consider or discuss further than to say that, as his mission was to make a treaty of commerce and friendship with an independent State, such a treaty he would make or none at all. Notwithstanding this, the Viceroy urged the approval of this dependent clause to a point beyond which he could not go without breaking off negotiations, *when he yielded*, and the treaty was then concluded upon the same basis with those of other independent States and was signed at Chemulpo, May 22nd, 1882."[3] (Italics ours.) Surely to have granted the independence of Korea that a treaty might be concluded, and then to revise the denial of that independence, is a case of "bad faith."

"If the conclusion of the American and Japanese treaties upon the basis of Korean

Digitized by Google

independence did not honourably settle it" (we still quote Judge DENNY) "the question ought finally to have disappeared when the LI-ITO Convention adjourned; by the terms of which China disposed of whatever right she had left—without the consent of Japan—to send troops to Korea, the only means as a last resort every independent nation possesses of enforcing its sovereign rights when they are assailed or called in question."

The revival of the claim of suzerainty is therefore a breaking of faith with Japan, for it is the reassumption of certain privileges surrendered in solemn agreement.

Thus has China placed herself on record, and it must be a galling thought to her as she faces this Korean question, that she cannot revise the past. Her claim of suzerainty is contrary to the assurances made by the KING of Korea, with the knowledge of China, to the Treaty Powers. Without quoting directly from the treaties, we call attention to an autograph letter addressed by the KING to the President of the United States. In this letter HIS MAJESTY says:—"Full sovereignty has been exercised by the Kings of Chosen in all matters of internal administration, and foreign relations." Did the KING of Korea advance a false claim? No; for whether he appeals to history or to the present, he finds his sovereignty established beyond cavil. Leaving the evidence of the past, let us look at this latest act in the farce of suzerainty, the dispatching of the recent Embassy to Korea. We are told that it was an "assertion, in a grand imperial style, of supremacy." We supposed it was commissioned to bear the sincere sympathy of one monarch to another in the bereavement he had suffered; but instead, it is now claimed that its main purpose was to humiliate that monarch in the eyes of his people and of the whole world. Or, in other words, it was "an object lesson in reply to the insidious attacks upon its paramount power, which no one can mistake."* Certainly this information is as generous as the occasion selected by China was proper. The ceremonies attending the reception of this Embassy at Söul are said to have "a significance which they never possessed so long as there were no third parties to watch and criticize." And what is the nature of that significance, we would ask. Is it political? Then if the politeness of the KING of Korea makes him the vassal of China, how shall his departure, and China's also, from the wonted forms of that ceremonial be explained? Heretofore Korea has borne the expenses of these Embassies, and been under the necessity of making costly present to the Ambassadors. This time China has not only borne the expense of her Embassy, but declined the presents. The ancient ceremonial prescribes that the KING of Korea must meet the *Ambassadors* and *feast* them outside the capital's walls; he must make *obeisance three times* to the Imperial Message; he must visit the Embassy *daily*, and on the day of departure call for the Ambassadors and accompany them outside the City. Such was the ceremonial which had grown out of tributary relations. *But this time the King has omitted the most essential of these particulars.* He went outside the City on the day of arrival, but he neither met nor feasted the Ambassadors; he received the Imperial Message *standing;* he called on the Embassy but once, in return for their call at the Palace; and at the time of departure, the Ambassadors passed out of the Great South Gate unaccompanied. In other words, the "assertion of her supremacy in a grand imperial style" met with a chilling and unresponsive reception in Söul. Yet the Ambassadors were received with every manifestation of that profuse hospitality which is a distinguishing feature of the Koreans; but never once did HIS MAJESTY lay aside his Royal dignity, and more than once did he assert it. The *Chinese Times* tells us that "official etiquette in China has degenerated in the hands of its Ministers into frivolous uses;" but it certainly can be put to no more frivolous use than to attempt to prove Korea's vassalage by it.

Finally, we are told that "the ostentation of the Embassy implies the complete conviction of the subjection of the rulers of that country." But is it a vassal subjection which the rulers of Korea make, or only a submission, willingly it may be, to the necessity which every sovereign Power is under, to politely receive the messages of sympathy sent by a neighbouring Power? And therefore it is either an empty vaunt of the power of China, or else an unkind slur on the sincerity of HIS MAJESTY of Korea, to say that "the KING only submits to the reception of the Chinese envoys because he cannot help it." But possibly this is only an expression of the view held in China; in which case it is of a piece with the whole ungenerous and despicable phase now attempted to be attached to this Embassy. If the *Chinese Times* has correctly stated the main object of the Embassy, then we are to believe that China, under the pretext of offering sympathy, has seized the opportunity of a nation's grief to humiliate that nation in the eyes of the world. And if this is China's method, then it were better to be China's dog, than her vassal. But Korea is not China's vassal. She is recognised as sovereign by the great treaty making Powers of the world; she asserts her sovereignty in unequivocal terms; and in the face of that sovereignty an Embassy commissioned as one of condolence to Korea is a heinous transgression of all laws of national intercourse, paralleled only by the conspiracies of China's representatives in Söul, and the recent outrageous interferences of China with Korea's foreign relations.

GUY PALMERSTON.

## *CORRESPONDENCE.*

### A CORRECTION AND A STATEMENT.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Ordinarily the typographical errors of daily papers are not worth correction, but will you not allow me to say that in the remarks I made it the farewell dinner given to Mr. Knapp, a report of which appeared in the *Mail*, I did not speak of the "nominal Fatherhood of God," but of the "universal Fatherhood of God?" The error in the report is not evident, and I am unwilling to expose the work for which I have now become responsible, to groundless criticism.

In this connection I would like also to make a brief statement concerning Unitarianism, which may serve as a general answer to several communications which appeared not long ago in your columns, and which have as yet received no reply.

Your correspondents may not, with justice, call Unitarianism a "negative" doctrine. Every affirmation necessitates, implicitly or expressly, some denial. Unitarians often antagonize opinions they think to be untrue. But that, only, is a "negative" doctrine which contents itself with denials. Unitarian negations, however, are made in the interest of larger affirmations. No form of religious teaching is more positive than it is.

If I were asked to state in fewest words what Unitarianism distinctively is, I should say, it is a movement springing out of Christianity, which seeks to be the representative religious force of the present age. It does not claim to be the only religious movement which works by rational and scientific methods, or accepts for religious use the results of these methods. Roman Catholicism, Orthodox Protestanism, Liberal Christianity, Religious Rationalism in various forms, are all more or less under the influence of the "modern spirit." Unitarianism, however, has subjected itself without reserve to the direction of this "spirit." By a course of steady progress it has now reached a point where it is seeking to do for the religious part of man's nature exactly the same kind of work that philosophy is doing for man's search for ultimate principles, or that science is doing for his investigation of the phenomena of matter and mind. In other words, the characteristic object of Unitarianism is to promote the knowledge and the practice of pure religion, by the aid of the best philosophy and science.

And what do Unitarians mean by pure religion? Fundamental in the modern conception of religion there appear, the idea of an infinite and eternal Being, named God, the consciousness of Duty and a sense of spiritual individuality in man. By pure religion Unitarians mean, therefore, 1st, Worship of God, as infinite and eternal Source, Power, Life, Guide and Ruler of the universe; 2nd, Following the life exemplified by the world's great spiritual teachers, saints and benefactors, among whom we reverence Jesus Christ as Leader; 3rd, Obedience to moral law, however made known; 4th, Endeavour to realize a perfect Brotherhood of mankind; and 5th, Cherishing a hope of immortal life.

This conception of religion is not set forth here as an authorized denominational creed. I present it simply as my interpretation of the notions which are common among the Unitarians of to-day, as the leading subjects of their thought and work. It is by this statement, however, that Unitarianism may and should be approved or condemned. It is but right, therefore, for me to ask that by this the Unitarian work, now in progress in Japan, should be met and measured. Unitarianism has not been brought to Japan to oppose other forms of religion or other forms of Christianity on any but intellectual grounds. Even this opposition shows itself more by indirect than by direct negation. In common with all forms of Christianity, we put at the front the world uplifting, supreme faith of Jesus in the Fatherhood of God and the divine childship of man. We seek to advance this faith by accepting all available truths of philosophy and science that we may transmute them into life for man's whole nature. We hold it to be both our right and our duty to do this, and we are ready to offer to reasonable men ample justification for the position we have taken.

I hope that with this fact in view those who do not agree with Unitarianism may gauge their estimate of our work. We, with all Christians, have a common cause, in arousing and stimulating faith in God, a sense of personal spirituality in man, hatred of everything that degrades and debases the soul, love of everything that will promote peace and good will among men. This bond should never be forgotten or ignored by those who see

Digitized by Google

Unitarians going their own way in search for such knowledge and for such supports of faith as will bear the tests of matured philosophy and science.

CLAY MACCAULEY,
Representative of the American Unitarian Association.

Tokyo, December 24th, 1890.

## *RURAL LIFE IN EAST ABERDEENSHIRE.—II. THE FARM.*

Leaving the village, we find almost all the community engaged, one way or another, in the tilling of the ground and the raising of cattle.

There are three distinct grades in the farmer class. The first, and of them perhaps there are but two or three in the parish, is the gentleman farmer, who keeps a *grieve* or overseer to attend the markets, make the bargains, subject to the master's approval, engage and dismiss the servants, arrange the work for the day, and, in a word, manage the farm. Meanwhile the master drives a smart dog-cart, or rides a showy mare; keeps a dog or two, and shoots over his own farm, and, in fact, apes the country gentleman. His wife keeps a house-keeper, and has a soul above butter and cheese; she has a governess for the children, gets her bonnets from Aberdeen, if not from London, and, as somebody expressed it, wears her Sunday gown every day.

The gentleman farmer, however, often comes to grief, and is known to have become a servant where he once was master. A much more numerous and respected class are those who direct the work of the farm themselves, and who, at a busy time, do not disdain to lend a hand.

In Aberdeenshire one never speaks of a farm of so many acres, or of such a rental. Its size and importance are indicated by the number of horses it finds work for. Two *pair of horses* is a moderately sized farm, three pair a large one, and four pair extremely rare. Next come the crofters, who seldom keep more than one horse, and who manage their ploughing, and such work as renders a pair indispensable on the *neighbour* system. That is, you lend me your horse, and I'll lend your mine. This plan works very well, and crofters have been known to *neighbour* for years with the happiest results.

The crofter hire no servants. He and his boys do the entire work of the little farm; often indeed, requiring the assistance of wife and daughters in seed time and harvest, during the hoeing and hay seasons, and on thrashing days during the winter.

Wife, or wife and daughters do all the house work; cow-feeding and cow milking, rearing of calves, pigs and poultry, churning, baking, brewing, cheese making, cooking, cleaning, washing, ironing. What wonder that they have little time or inclination to sacrifice to the graces, that they live in the kitchen, and that the *best room* is a cold and dismal horror only opened on the occasion of a wedding, a christening or a funeral, for which latter indeed, it is eminently suited.

The younger sons and daughters of the crofter go into service on the larger farms; the eldest son however usually sticks by the *green* and the *house*, to which in process of time, he brings a wife, but often not before middle age, and when the old folks have been relegated to the fireside.

I remember meeting a young crofter one day, whom I knew to be only waiting for his grandmother's death in order to get married, the prospect of four generations in the one tiny cottage being too much of a good thing.

"Well Bobbie, how are you all at home?"

"Oh! we're a' fine."

"And how's your grandmother keeping?"

"Oh! she's aye steppin' about."

Then he looked up with a sheepish air, but with a twinkle in his eye, and added "I'm thinkin' Guid's forgotten grannie."

The routine of the farm differs from that of the croft in as much as the labour is performed by hired servants. First, second, and third horse man, cattle man, *orra* or odd man, a boy or two, besides extra hands in harvest. These would probably form the staff of a largish farm. All receive food and lodging on the premises, and if any happen to be married men, their families are either provided with cottages on the farm, or live in the village.

In the kitchen, a couple of stout girls are busy from early morning until after the evening milking. What with baking and brewing, churning and cheese-making, besides cooking for the family and the men, they have not an idle moment. In their winsy skirts and short print jackets, with bare arms and rosy cheeks, they are pictures of health, strength, and cleanliness.

The mistress herself undertakes the more delicate operations of butter washing, chicken rearing, &c., and is on her feet, busy as a bee, until twelve o'clock brings the dinner hour. The daughters of the family have meanwhile been employed in various ways about the house, for the duty of the servant lass is limited to the kitchen and the byre, and she is seldom seen beyond them. At noon the men troop into the kitchen to dinner. They have breakfasted at six o'clock on porridge and milk, and oatmeal will, in all probability, form the staple of their mid-day repast: oat meal, supplemented however, by potatoes, turnips, and various kinds of greens. Meat they never see, except perhaps in harvest time, when broth enriched with chopped up beef, mutton, or fowl is a frequent dish. Sunday's dinner invariably consists of barley broth.

This fare seems mean enough, but it must be remembered that the porridge is eaten with good creamy milk, that the potatoes are mashed and stirred with cream and butter until they form a delicious *purée*, and that even kale and turnip brose can be transformed by the same agency, into highly nourishing and palatable dishes.

Strict etiquette is preserved at meal times. The first horseman leads the way, and is followed by the others in order, the little herd laddie bringing up the rear, if indeed he has not been dispatched to the field or the hill side for the whole day, with a "piece" in his pocket. Gravely and solemnly they take their places at the bare but snowy table; not a word is spoken until they have taken off their bonnets, and grace has been said. The broth, or the brose, or the kale, or whatever the food may be, is placed in a huge wooden bowl or *caup* which stands in the centre of the table. Each one deliberately dips his horn spoon into the mess beginning with the first, even to the last. There is no indecent haste displayed, no greediness, no disorder. The whole operation is conducted with the most solemn and deliberate politeness. The *pièce de resistance* demolished, comes a second course, consisting of oat cakes and milk; or cakes and cheese and beer. In breaking off a piece of cake great care is observed: to take, or to break, the *crown of the quarter* as it is called, would be an unpardonable offence.

Dinner ended, pipes are lighted and the men march out again, to smoke and gossip for half an hour in the stable, or in a sheltered corner of the barn yard.

The women servants have had no seat at the table, but have eaten their dinner standing, their bones in their hands, in a shame-faced kind of way, which they always assume in the presence of the men.

The "room" dinner has meanwhile been going on. When the family are alone it differs little from that served in the kitchen: homeliness and frugality are its striking characteristics. But with the advent of visitors all is changed, and unbounded hospitality is the order of the day.

In the afternoon labour slackens a little, except in harvest, and such like exceptionally busy times.

The master reads the *Aberdeen Journal*, and *Scotsman*, even perhaps the *Standard* or *Daily Telegraph*, according to his politics, as he smokes his pipe. The mistress takes a nap on the couch, the daughters dress for the afternoon. The kitchen lass dons her lilac print frock and little tartan shawl, and sets out, bare-headed, to the merchant' with perhaps forty or fifty pounds of butter in her basket. The butter and eggs are sold periodically, not at market, but to the village grocer, who in his turn, deals with the Aberdeen merchant.

She brings back all the gossip of the country side, together with a packet of pins, or a parcel of sweeties, the time honoured, but modest present of the shop-keeper. She is laden too, with tea and sugar, a loaf and fine bread, that is to say cakes and biscuits of various kinds, and whatever else is needed for the week's consumption. For the mistress is supposed to keep the house on the proceeds of her poultry yard and dairy, and it would be an unheard of thing if the guid man should have to open the purse strings for such a purpose.

The kitchen supper is a second edition of the dinner; after it the men sit round the huge peat fire, reading or playing draughts (the "dambrods" as they call it). Some musical genius practises the fiddle or the flute, and in a corner you may see one with a broken slate and stumpy pencil keeping his hand in at the "Rule of Three."

Between seven and eight the maids go out to their milking, and the men to "supper the beasts." At nine o'clock a chapter of the Bible is read, sometimes a psalm is sung, and then the men go off to bed, their quarters being probably a loft over the stable, or a detached building, known as the "chamers."

It but remains to *rest* the kitchen fire, and then poor tired Jessie and Jean can go to rest themselves. The glowing embers of the peat are carefully put on one side, while the soft white ashes are raked well forward on the hearth; the embers are then put back, neatly piled one on the other, a fresh peat or two added, and above all the ashes heaped and patted down so that no breath of air can enter. In the morning when the ashes are removed, the fire is found to be intact. This is called "resting the fire," and so effectual is the method that if only the Vestal Virgins had known and practised it, they need never have got into trouble.

## *IN THE SUPREME COURT OF JAPAN.*

Before Judge NISHIOKA YUMEI, President of the First Criminal Bureau, and Judges S. MASATANI, S. YAMANE, T. KAWAGUCHI, and S. OKUYAMA.

### FALSE REPRESENTATION OF NAME.

THE PUBLIC PROSECUTOR OF THE KUMAMOTO CORRECTIONAL COURT AGAINST SATO OTOZO.

Principles deduced from the following case by the editor of the *Saiban Suishi*:—The offence of falsely misrepresenting one's name is constructed immediately when the registered residence (*seki*) or name of a *kazoku*, *shizoku*, or *heimin* is falsely misrepresented orally or in writing; and repetitions of the act may not be treated as continuations of the same offence (*keizoku han*).

Reference—Art. 13 of the Code of Criminal Procedure:—"The period of prescription for the extinction of criminal and civil suits (*koso shiso*) shall be reckoned from the date of the commission of the offence. In the case of continuing offences (*keizoku hanzai*), however, the period shall be reckoned from the date on which the offence was last committed."

The accused in this case, Sato Otozo, was convicted in the Kumamoto Correctional Court of having used a false name, but was acquitted under Art. 358, Code of Criminal Procedure, on the ground that the suit had been extinguished by prescription.

The Public Procurator of the Court appealed to the Supreme Court. The appeal set forth that on the facts of the case, accused enlisted in the Osaka Garrison under the name of his younger brother Hiraki Shuntenzo, in May, 1882, was transferred three months latter to the Imperial Body Guards, promoted to non-commissioned officer of engineers after ten months' service in the Guards, and transferred to the Kumamoto Garrison, finally retiring from service in 1889 after having served the full term. These facts were clearly recognized by the Judge of the Lower Court. On each occasion of his transfer the accused must have used a false name either orally or in writing, so that though his acts from his enlistment or conscription in 1882 up till March, 1887, may have been extinguished by prescription those committed subsequent to the latter date were not so extinguished. In holding, therefore that the offence had been extinguished by prescription the judgment was a misapplication of law. Further the judgment in one part seemed to admit that the offence was continuous, and in another contradicted this assertion, so that it was not according to law.

The accused objected to the appeal as groundless.

The judges held that where the name or registered residence of a *kwazoku*, *shizoku*, or *heimin* was falsely used, the offence was constructed instantly on such use, and was not continuous. On the facts of the case it appeared that the accused was drawn in conscription in place of his younger brother, and duly enrolled in the Osaka Garrison. The offence of falsely using the name of another was then finished, and could not be affected by acts committed during accused's service with the colours, so that the accused could not be found guilty according to law. Therefore the judgment of the Lower Court, which took this view and discharged the prisoner under Art. 358 of the Code of Criminal Procedure, on the ground that the offence had been extinguished by prescription, was a proper and lawful one. As to the other point raised by the appeal, the Bench held that the judgment of the Lower Court was not contradictory. Under these circumstances, therefore, the appeal was rejected and the judgment of the Lower Court sustained.

THE PUBLIC PROCURATOR OF THE SENDAI CORRECTIONAL COURT AGAINST ITAKURA CHUJIRO AND TWO OTHERS.

Principles deduced by the *Saiban Suishi*:—The offence of falsely stating family and residence is

Digitized by Google

constructed not only when an individual who has a registered residence falsely states the family and residence of another, but also when an individual having no registered residence falsely represents that he has. The offence of falsifying documents is not constructed when the person so falsifying a document signs his name to the same, even although the facts contained therein are false.

Reference—Art. 231, Penal Code:—"Persons who, either in writing or orally, falsely state their family (*zoku*), residence (*seki*), name, age, or occupation, to the authorities, shall be punished with a fine of not less than *yen* 2 and not more than *yen* 20."

The appeal of the accused as well as that of the Public Procurator against the judgment of the Lower Court came before the Miyagi Appeal Court, which upheld the decision of the Correctional Court, sentencing the accused Chujiro to a fine of *yen* 15 under Art. 231 of the Penal Code, the accused Zentayu to a fine of *yen* 15 under Arts. 105 and 231 of the Penal Code, and the accused Teisuke to a fine of *yen* 13 under Arts. 109 and 231 of the Penal Code. The judgment of the Lower Court was therefore affirmed under Arts. 344 and 368 of the Code of Criminal Procedure.

Against this finding of the Appeal Court the Public Procurator of the Lower Court appealed to the Supreme Court on the ground, 1st, that the Appeal Court had not considered the point that the judgment of the lower Court was a misapplication of law; and, 2ndly, that the accused had falsified documents by which grave public inconvenience would be created. The Public Procurator of the Supreme Court brought forward the additional contention that the acts of the accused did not constitute any offence because if a man had no registered residence he could not falsely represent that which he did not possess.

The judges of the Supreme Court held that the offence of fraudulent misrepresentation of family and residence was not limited to the false representation of another's family and registered residence by a person who himself possessed those qualifications; but was also constructed when a person who had no family or registered residence represented that he had. In this case the accused Chujiro falsely stated in writing to Matsudaira Masanao, Governor of Miyagi Prefecture, that he was Itakura Chujiro, eldest son of Chukichi, a *heimin*, of No. 3 Higashi-ura, Kawara-machi, Sendai. This act fully constituted the false representation by document of family and residence; but it did not constitute the offence of falsifying a document because though the facts contained in the document (a petition for the registration of the accused's own family and residence) were false, the accused signed his name and appended his seal thereto. All the appeals must therefore be rejected under Art. 427 of the Code Criminal Procedure.

Before Judge MAKUDO BUHEI, Acting Chief of the Second Criminal Bureau of the Supreme Court, and Judges KOMATSU HIROTAKA, TOMITSU HARUZO, MATSUMOTO MASATADA, and NAKA SADAKATSU.

QUESTION AS TO OWNERSHIP OF LAND.

Principles deduced by the *Saiban Suishi*—The *onus probandi* lies on him who questions a condition that actually exists. The general rule is that an actual holder is presumed to be the real owner.

Nakata Matahichi and nine others raised an action in the Okayama Court of First Instance against the defendant, asking that certain land registered in his name should be declared to be the joint property of all the parties. This claim was rejected by the court, on which the plaintiffs appealed to the Osaka Appeal Court. It was maintained on their behalf that the forest land, extending to 7 *tan* 9 *se* at Ushikubi, Kukitsuki-mura, Kamimichi gun, Province of Bizen, then the common property of the village, was exposed for sale by auction about twenty years ago and bought by the plaintiffs and the grandfather of the defendant, who, numbering eleven persons, each contributed an equal sum of money; that the land thus became their joint property; that for the sake of convenience it was decided that the land should be registered in the name of the defendants' grandfather, Chojiro, his name being successively replaced by those of his son and of the defendant, that these facts were clearly established by the evidence of documents Nos. 1, 2, and 3 of the process which proved that timber from the forest was cut during several years by all the parties, and that white clay was dug from the land by all the eleven persons, who shared the profits accruing from the same; that document No. 4 of process showed that taxes and other expenses connected with the land were paid by the plaintiffs, while documents Nos. 5 and 6 showed that relatives of the defendant and other residents in the village believed the land to be joint property of the eleven persons; that the guardian of the defendant, who was a minor, attempted to prohibit the digging of white clay by the plaintiffs jointly, on which the latter applied to have the land registered in their joint names.

The defendant contended that the land was bought by his grandfather in the Bunkyu era, at which time he was headman of the village, of which the land was previously common property; that at first, the trees being small and of little value, defendant's grandfather did not take any steps to prevent the surreptitious taking away of wood by the plaintiffs, who had no other source from which to obtain fuel; that the title-deed in the name of Gentaro was obtained in the 16th year of Meiji as proved by document No. 1*b* of process; and afterwards on Gentaro's death transferred to the defendant; that the taxes were paid by the defendant, the document No. 4*a* having been procured by force by the plaintiffs, after Gentaro's death, from a woman; that the plaintiffs were hired by Gentaro to dig white clay but dismissed when he found that they had been privately making profits on their work, as shown by No. 2*b*; and that the certificates Nos. 5 and 6*a* were procured by the plaintiffs by force and were false, as shown by Nos. 3 and 4*b*.

In the Osaka Appeal Court the Judges held that neither side had proved, on the one hand, that the property was bought by the eleven parties jointly, or on the other by the defendant's grandfather individually; that while the plaintiffs had all along received more or less profit from the land by the cutting and using of wood, &c., the defendant had by his own admission received no profit during some ten years; that it was proved by Nos. 1, 2, and 3*a*, admitted by the defendant, that the parties had jointly engaged in digging white clay, since the 8th month of the 20th year of Meiji; that the defendant actually participated with the plaintiffs in profits; that the taxes were paid equally by all, but forwarded to the authorities by the defendant as registered owner; that when lands were owned jointly by several people it was not unusual for such land for convenience sake to be registered in the name of one; and that the evidence of relatives of the defendant, as well as other residents of the village, showed the land to be held in joint ownership. The Court therefore ordered that a new title-deed should be issued in the names of all the parties.

The defendant appealed to the Supreme Court, and pointed out that the onus of proof lay on the plaintiffs if they wished to change the ownership of the land; that while the general rule was to presume the registered owner to be real owner, the Appeal Court as a matter of fact held that neither party had proved the conditions of the purchase for their own case, a finding which was directly at variance with the law, as it did not include any ruling as to where the burden of proof lay. The judgment, it was added, was further defective in reason, as it did not state grounds for rejecting the evidence of document No. 1*b* relative to the title-deed.

The judges of the Supreme Court were of opinion, in respect of the Appeal Court's finding, that neither party had proved the conditions of the purchase of the land—that the judgment of the Appeal Court was opposed to law, as it did not state on whom the burden of proof lay. The *onus probandi* was distinctly on those who questioned the right of the registered owner, and not on the latter, whereas the Appeal Court placed both parties on the same footing and required the original defendant to prove that his grandfather had bought the land on his own account. The judgment of the lower Court must therefore be reversed, and the case transferred to the Hiroshima Court of Appeal for a proper judgment.—*Saiban Suishi.*

---

## *SUMMARY OF THE FOREIGN TRADE OF JAPAN FOR THE YEAR 1889.*

Mr. HUGH FRASER, H.B.M. Representative and Consul-General, to the Marquis of SALISBURY.

Tokyo, August 15th, 1890.

MY LORD.—I have the honour to forward, herewith, to your Lordship the Annual Summary of the Foreign Trade of Japan for 1889, which has been compiled by Mr. E. A. Griffiths, Her Majesty's Acting Vice-Consul in Tokyo.

I have, &c.

(Signed) HUGH FRASER.

SUMMARY OF THE FOREIGN TRADE OF JAPAN FOR THE YEAR 1889.

The total foreign trade of Japan for the year 1889 amounted in value to 20,888,116*l.*, comprising:—

| | |
|---|---|
| Imports ..... | £10,131,408 |
| Exports ..... | £10,756,708 |

The above figures compare with those of the trade of 1888 as follows:—

| | 1889. | 1889. |
|---|---|---|
| Imports ..... | £10,131,408 ..... | £11,195,358 |
| Exports ..... | £10,756,708 ..... | £10,067,206 |
| Total ..... | £20,888,116 ..... | £21,262,564 |

Showing a decrease of 1,063,950*l.* in imports, and an increase of 689,502*l.* in exports, or a net decrease in the foreign trade of Japan for the year under review of 374,448*l.*

The comparative table (Table I.) appended to this summary shows the distribution of trade at each of the open ports during the years 1889-88.

The Yokohama import trade is almost entirely responsible for the decrease observable in the foreign trade of Japan for 1889, as, with the exception of a slight decline in the imports of Kobe, there is a decided increase in each of the other ports both in imports and exports. The trade of Yokohama shows a net decrease of 840,281*l.*, being a decrease of 1,082,692*l.* in imports, and an increase of 242,411*l.* in exports. Kobe trade, on the other hand, shows an increase of 229,393*l.*, comprising a decrease of 78,798*l.* in imports, and an increase of 308,191*l.* in exports. Nagasaki returns again show a considerable increase both in imports and exports, the increase being in the case of the former 80,024*l.*, and in that of the latter 99,849*l.*, or a total increase of 179,873*l.* Hakodate trade has advanced by 56,567*l.*, being an increase of 17,516*l.* in imports, and of 39,051*l.* in exports.

It must be noted, however, that while, according to the consular returns given in sterling, there appears the large decrease of 840,281*l.*, or over 5,000,000 dol., in the trade of Yokohama, the customs return for the foreign trade of Yokohama, for 1889 shows a decrease of only 1,177,118 dol. This discrepancy is explained by Mr. Consul Enslie, as follows:—

"Commerce in Japan is conducted in the currency of the country, silver yen or Mexican dollars, and the customs statistics compiled in that denomination of coin, correctly represent the volume of trade.

"Since 1885 consular returns of trade have, in compliance with instructions, been compiled in pounds sterling, the yen or dollar being taken at an uniform average rate for the current year; the sterling values so obtained do not, therefore, correctly represent the valuations in silver currency handed in by merchants throughout the year to the customs.

"Moreover, owing to a considerable readjustment introduced towards the end of 1888 by the customs in the yen or dollar value of the pound sterling, 15 per cent. was added on to the customs returns of imports from gold-using countries for 1887, and 20 per cent. to those for 1888, as regards goods imported during the first nine months of each year.

"The result of these conversions for the past three years is that, in the sterling statistics, the increase in trade during 1888 over that of 1887 is far less, and the decrease in trade during the last year, as compared with that of 1888 is very much more than the correct returns compiled in silver by the customs authorities."

On this question, also, Mr. Longford, Her Majesty's Acting-Consul for Hyogo and Osaka, observes that—"Prior to October 1, 1888, the Japanese customs converted the original gold values into local currency at the fictitous rate of 4 dol. 88 c. to the pound sterling, and the abandonment of this practice in favour of a conversion at the average quarterly market rate of exchange during the whole of the past year has produced an apparent contradiction in the comparative values of the import trade in 1888* and 1889, as stated above, and as given in the customs returns.

"According to the figures above given, there was a falling off of 78,000*l.* in the value of the import trade of 1889 as compared with 1888. According to the customs returns, on the other hand, the value of the imports of Hyogo and Osaka in 1889 exceeded that of 1888 by considerably more than 1,500,000 dol. The explanation of this contradiction is that, for the first nine months of the year 1888, every pound sterling of the original cost of all European and American articles of import was entered in the customs returns as 4 dol. 88 c.; whereas, throughout the whole of the year 1889, each pound was entered at values varying each quarter, but the average of which for the whole year was 6 dol. 46 c."

The share which foreigners and Japanese respectively had in the total foreign trade of nearly 21,000,000*l.* sterling during the year 1889 was as follows:—

| | Exports. | Imports. | Total. |
|---|---|---|---|
| Japanese merchants ..... | £1,056,089 | £1,492,072 | £2,548,161 |
| Foreign merchants ..... | £9,599,385 | £8,407,148 | £18,006,533 |

* In the Consul's Report for Kobe for 1889.

Digitized by Google

From which it will be seen that about 12 per cent. of Japan's foreign trade was in the hands of Japanese merchants, and nearly 88 per cent. in those of foreigners.

As in 1888 the principal customers of Japan were Great Britain, the United States of America, France, China, and Germany.

In the customs return for 1889 the trade with Hongkong, which has hitherto been given in conjunction with that of China, has been stated separately. The trade with British India has also been separated from that with Siam, so that a correct estimate of the total value of the commerce carried on between Great Britain and Japan can now be made.

The trade divided amongst the above mentioned countries was as follows:—

| | | |
|---|---|---|
| Great Britain | £5,225,985 | |
| Hongkong | 1,777,523 | |
| British India | 1,343,304 | |
| Canada | 133,417 | |
| Australia | 117,051 | |
| Total British trade | | £8,597,280 |
| United States | | 4,887,545 |
| France | | 2,736,247 |
| China | | 2,270,629 |
| Germany | | 1,011,230 |

Separating imports from exports we obtain the following distribution:—

IMPORTS.

| | | |
|---|---|---|
| Great Britain | £4,032,384 | |
| Hongkong | 634,789 | |
| British India | 1,134,449 | |
| Canada | 4,635 | |
| Australia | 41,313 | |
| Total imports from Great Britain | | £5,847,570 |
| United States | | 950,267 |
| France | | 515,751 |
| China | | 1,423,072 |
| Germany | | 756,087 |

EXPORTS.

| | | |
|---|---|---|
| Great Britain | £1,193,601 | |
| Hongkong | 1,142,734 | |
| British India | 208,855 | |
| Canada | 128,782 | |
| Australia | 75,738 | |
| Total exports to Great Britain | | £2,749,710 |
| United States | | 3,937,278 |
| France | | 2,220,496 |
| China | | 847,557 |
| Germany | | 255,143 |

Comparing these figures with the corresponding figures for 1888 we find that the increase or decrease in the trade of each of the above countries was as follows:—

GREAT BRITAIN, CANADA, AND AUSTRALIA.

| | |
|---|---|
| Imports, decrease | £1,052,021 |
| Exports, decrease | 175,259 |
| Total decrease | £1,227,280 |

UNITED STATES.

| | |
|---|---|
| Exports, increase | £ 450,260 |
| Imports, decrease | 51,199 |
| Net increase | £ 399,061 |

CHINA AND HONGKONG.†

| | |
|---|---|
| Imports, increase | £ 460,675 |
| Exports, increase | 228,675 |
| Total increase | £ 689,350 |

FRANCE.

| | |
|---|---|
| Imports, decrease | £ 215,615 |
| Exports, increase | 118,235 |
| Net decrease | £ 97,380 |

BRITISH INDIA.

| | |
|---|---|
| Exports, increase | £ 138,401 |
| Imports, decrease | 51,091 |
| Net increase | £ 87,310 |

GERMANY.

| | |
|---|---|
| Imports, decrease | £ 130,371 |
| Exports, increase | 5,777 |
| Net decrease | £ 124,594 |

The largest decrease is observable in the import trade with Great Britain, this decrease amounting to over 1,000,000*l.*, while, with the exception of the figures for China and Hongkong, which show an increase in imports of 460,000*l.*, a decrease is also to be noticed in the import return for each of the other countries. As regards exports, there has been an increase in the trade with the United States, China, and Hongkong, France, India, and Germany, while the only return which shows a decrease is that for Great Britain.

† In order to institute a comparison with the figures for 1888 the value of the trade of Hongkong has been added to that of China for the year under review.

With reference to this decline in British trade for the year 1889, as compared with that for 1888, it must be borne in mind, however, that the trade of the year 1888 was exceptionally large, an extraordinary increase of over 2,000,000*l.*, more than 25 per cent., taking place in the trade with Great Britain alone. Circumstances were not so advantageous during the past year, nevertheless it is satisfactory to consider that, omitting the statistics for the year 1888, British trade for 1889 shows an increase of more than 1,000,000*l.* over that for 1887.

The comparative table (Table II.) annexed to this summary shows a decrease in imports under each of the general headings, with the exception of those of kerosene oil and miscellaneous, the decrease being in:—

| | |
|---|---|
| Cotton yarn | £344,065 |
| Cotton piece-goods | 176,527 |
| Woollen and mixed cotton and woollen manufacturers | 199,689 |
| Metals | 341,895 |
| Sugar | 98,904 |

While the increase in the value of kerosene oil imported is 75,808*l.*, and in that of miscellaneous 21,322*l.*

The import of cotton yarn declined, during the year 1889, to the extent of 344,065*l.* in value. This large decrease took place chiefly in the import of cotton yarn from Bombay. The comparative figures, showing the consumption of Bombay and English yarns during the years 1889 88, are as follows:—

| Articles. | Quantity. 1889. | 1888. |
|---|---|---|
| British yarns | 26,504,800lbs. | 26,564,000lbs. |
| Bombay yarns | 25,489,200lbs. | 31,888,000lbs. |

An increase has taken place under the following heads:—

| | |
|---|---|
| Turkey reds | £23,966 |
| Velvet | 17,171 |
| T-cloths | 7,229 |

While a decrease is observable in shirtings to the large amount of 117,510*l.*; in chintzes to the amount of 8,011*l.*; and in sundries to that of 99,372*l.*

The chief items under this general heading, (woollen and mixed cotton and woollen manufactur), with the exception of flannel and blankets, show a considerable falling off, the decrease being in the case of:—

| | |
|---|---|
| Mousselaine de laine | £117,617 |
| Italian cloth | 49,475 |
| Woollen cloth | 72,659 |
| Sundries | 39,323 |

An increase has taken place in the import of flannel to the value of 61,930*l.*, and in that of blankets to the value of 17,455*l.*

The import trade in metals shows a considerable decrease, amounting to 341,895*l.*, the largest decline being noticeable under the heading of iron rails. The only item under the general heading, which shows an advance is that of plate and sheet iron, and this import has increased by the amount of 18,473*l.*

| | |
|---|---|
| Iron bar and rod shows a decrease of | £ 3,287 |
| Iron rails | 157,179 |
| Iron nails | 34,101 |
| Iron ware | 90,054 |
| Steel | 10,430 |
| Lead | 21,700 |
| Miscellaneous metals | 41,617 |

The metal import trade of 1889, although indicating a considerable decrease when compared with that of 1888, is still in advance of that of any other previous year.

The value imported during the last four years is as follows:—

| | | | |
|---|---|---|---|
| 1886 | £652,667 | 1888 | 1,295,015 |
| 1887 | 864,952 | 1889 | 953,120 |

The following comparative tables show the value of iron rails and iron nails imported from Great Britain, Germany, and Belgium respectively during the years 1887, 1888, 1889:—

RAILS.

| Country. | 1889. | 1888. | 1887. |
|---|---|---|---|
| Great British | £87,106 | £223,231 | £64,463 |
| Germany | 5,947 | 35,728 | 63,771 |
| Belgium | 13,129 | — | — |

NAILS.

| | | | |
|---|---|---|---|
| Great Britain | £30,723 | £60,738 | £32,355 |
| Germany | 76,051 | 68,448 | 35,222 |
| Belgium | 23,296 | 24,634 | 12,333 |

The import of kerosene oil shows an increase of 75,808*l.* sterling in value, and of 8,491,576 gallons in quantity. Russian oil made a considerable advance, 4,526,845 gallons being imported, as against 1,613,840 gallons imported in 1888.

With reference to the remarks made in last year's summary of trade respecting the inferior packing of the oil imported from Russia,* it appears that a considerable improvement has now taken place, in fact "the Batoum† factories are now turning out tins and cans little, if at all, inferior to those sent from the United States."

In spite, however, of the marked increase in the import of Russian oil, American oil has not retrograded; an increase, on the contrary, of 4,106,858 gallons in quantity is noticeable.

The following comparative table gives the amount of American and Russian oil imported into Japan during the years 1889-88:—

| | 1889. Gallons. | 1888. Gallons. |
|---|---|---|
| American oil | 30,231,708 | 26,124,850 |
| Russian oil | 4,526,845 | 1,613,840 |

A further decline has taken place in the import of this staple, the decrease being 98,904*l.* sterling, comprising a decrease in the import of brown sugar to the amount of 52,949*l.*, and in that of white sugar to the amount of 43,746*l.*

There is an increase observable under this general heading in the items of hides, glass, and glassware, and raw cotton, to the amounts respectively of 9,917*l.*, 27,018*l.*, and 614,501*l.* Engines, steam boilers, &c., to the amount of 93,608*l.*, and locomotives and railway carriages to the amount of 112,717*l.*, appear in the import returns of this year's summary, both items having made a considerable advance.

The chief decrease has taken place in the items of:—

| | |
|---|---|
| Books and stationary | £110,984 |
| Drugs | 37,880 |
| Dyes and pains | 46,178 |
| Machinery | 259,294 |
| War material | 97,619 |
| Wines, beer, and spirits | 66,792 |

The import of raw cotton shows a very considerable increase, the trade having advanced from 254,708*l.* in 1888 to 869,209*l.* in 1889, an increase of 614,501*l.*, or nearly 250 per cent.‡

This is due to the increase in the number of cotton spinning mills in Japon, to meet the demands of which the amount of cotton grown in Japan itself is quite insufficient. At the end of 1880 there were 27 cotton spinning mills at work in Japan, having a total number of 200,550 spindles. The gross amount of cotton manufactured during the year was 27,936,116 lbs.

The import of machinery during 1889 shows a decline of 259 294*l.*, but the figures exceed those or 1887 by 130,000*l.* The machinery chiefly imported was:—

| | |
|---|---|
| Spinning machinery | £106,673 |
| Weaving machinery | 22,475 |
| Paper-making machinery | 27,409 |

The export trade of Japan for the year 1889 shows a still further advance, the increase over that of 1888 amounting to 689,502*l.*, and over that of 1887 to 2,576,386*l.*, while comparing the figures of 1889 with those of the year 1879, ten years previous, we find that the export trade has considerably more than doubled itself.

From the comparative table (Table III.) annexed hereto, it will be seen that the principal increase has taken place in the following items:—

| | |
|---|---|
| Silk | £53,084 |
| Coal | 129,514 |
| Dried fish, &c | 56,820 |
| Camphor | 59,297 |
| Silk handkerchiefs | 111,414 |
| Other silk manufactures | 145,562 |
| Porcelain | 25,588 |
| Matches | 59,757 |
| Sulphur | 34,267 |
| Sundries | 91,143 |

while the chief decrease is in—

| | |
|---|---|
| Copper | £93,074 |
| Mushrooms | 6,403 |
| Vegetable wax | 4,280 |
| Straw plaits | 18,534 |
| Fans | 14,076 |
| Paper | 13,657 |

The export of silk in 1889 shows an increase of 53,084*l.* in value, and of 114,350 lbs. in quantity, over that in 1888. Silk handkerchiefs, which in the export return for 1888 showed an increase of 31,171*l.* in value over the amount exported in 1887, show a large increase for the year 1889 of 111,414*l.*, more than 50 per cent., over the figures for 1888. The export of other silk manufactures, too, shows a very considerable advance, the amount exported in 1889 being 193,572*l.*, as against 48,010*l.* exported in 1888, being an increase of 145,562*l.*, over 300 per cent.

The export of rice has slightly increased, the

* The remark in last year's summary to the effect that, owing to this inferior packing, the transport of the oil into the interior had been prohibited, referred to the sale of the oil having been precluded commercially, and not to any official prohibition.

† Report of H.B.M.'s Consul at Yokohama for 1889.

‡ *Vide* the Consular Reports for Yokohama Kobe for 1889.

Digitized by Google

advance amounting to 17,596*l.* in value. As in the previous year, Kobe and Nagasaki are the principal ports of export. While, however, Kobe returns show a slight falling-off, those for Nagasaki indicate an increase of 22,580*l.*

The comparative figures are as follows:—

| | 1888. | 1889. |
|---|---|---|
| Kobe | £921,698 | £926,532 |
| Nagasaki | 217,830 | 195,250 |

The export of tea during 1889 amounted to 958,769*l.* in value, as against 944,225*l.* in 1888, showing an increase of 14,544*l.*

The export of coal has again considerably increased, the figures being 619,702*l.* in 1889 as against 490,188*l.* in 1888, showing an increase of 129,514*l.* The export of copper, on the other hand, indicates a large falling-off, the decrease amounting to 93,074*l.* in value.

Of the other articles of export, dried fish and shell fish, camphor, and matches indicate the largest increase, each showing an advance of over 50,000*l.* sterling in value.

Japan's largest customer in 1886 was the United States of America. Next to her came Great Britain, including Hongkong, British India, Canada, and Australia; then France, China, and Germany, in the order named.

The following table enumerates the chief articles of export to each of the above-mentioned countries, with the amounts exported during the year 1889:—

| Country. | Silk. | Tea. | Rice. | Coal. |
|---|---|---|---|---|
| | £ | £ | £ | £ |
| Great Britain | — | — | 559,718 | — |
| Hongkong | — | 48,588 | | 192,057 |
| British India | — | — | 61,110 | — |
| Canada | — | 95,977 | 14,803 | — |
| Australia | — | — | 43,773 | — |
| United States | 2,431,721 | 848,745 | 65,500 | — |
| France | 1,931,047 | — | 44,191 | — |
| China | — | — | — | 198,925 |
| Germany | — | — | 105,680 | — |

| Country. | Copper. | Dried Fish and Shell Fish. | Camphor. | Silk Handkerchiefs. |
|---|---|---|---|---|
| | £ | £ | £ | £ |
| Great Britain | 114,249 | — | 51,825 | 80,984 |
| Hongkong | 67,628 | 472,165 | 48,057 | — |
| British India | 79,632 | — | — | — |
| Canada | — | — | — | — |
| Australia | — | — | — | — |
| United States | — | — | 52,983 | 172,269 |
| France | — | — | — | 46,459 |
| China | — | 101,730 | — | — |
| Germany | — | — | 34,993 | — |

Table IV. appended hereto shows the number *of foreign* vessels entered at the open ports of Japan during the year 1889. From this it will be seen that 1,619 ships, with a tonnage of 2,334,997, were entered, as against 1,432 ships, with a tonnage of 2,070,402, entered in 1888, showing an increase of 187 ships and 264,595 tons.

British shipping again occupies the foremost position with 984 ships and 1,592,761 tons, as against 846 ships and 1,319,438 tons entered in 1888, showing an increase of 138 ships and 273,323 tons. Germany is again second with 349 ships and 297,489 tons. The United States and France come next with 91 ships and 159,696 tons, and 86 ships and 194,891 tons respectively. German shipping indicates a slight increase in the number of ships, but a falling-off in the amount of tonnage. French shipping shows a slight decrase in both number of ships and the amount of tonnage, while American shipping shows an increase in both ships and tonnage.

The number of ships entered at Kuchinotsu during the year 1889 was as follows:—

| Ships. | Number. | Tons. |
|---|---|---|
| British | 2 | 12,879 |
| German | 6 | 4,851 |
| French | 1 | 1,181 |
| Japanese | 53 | 46,834 |

The following table, showing the amount of merchandise exported from and imported into Japan during 1889 in foreign and Japanese vessels, may prove of interest:—

| Ships. | Exports. | Imports. | Total. |
|---|---|---|---|
| | £ | £ | £ |
| British | 6,110,303 | 6,853,633 | 12,963,936 |
| French | 1,464,536 | 814,554 | 2,279,090 |
| German | 768,904 | 1,042,894 | 1,811,798 |
| American | 1,344,423 | 498,206 | 1,842,629 |
| Japanese | 828,820 | 795,939 | 1,624,759 |

from which it appears that considerably more than half the merchandise exported from and imported into Japan was carried in British ships.

The number of foreign residents at the open ports and at Tokyo, during the year 1889, was 3,324, including:—

| | |
|---|---|
| British | 1,359 |
| American | 718 |
| German | 459 |
| French | 292 |
| Portuguese | 113 |
| Dutch | 79 |
| Russian | 63 |
| Danish | 59 |
| Australian | 51 |
| Swiss | 51 |
| Other Nationalities | 89 |

There were 202 foreign firms established in Japan, of which number 94 were British, 37 German, 32 American, and 14 French.

The number of Chinese residents was 4,879, and the number of Chinese firms in Japan was 277.

NOTE.—In the above summary and annexed tables the value of imports has been converted into sterling at the rate of 3*s.* 1⅛*d.* to the dollar, while that of exports has been calculated at 3*s.* 1⅜*d.* to the dollar.

## *A STEAMER ATTACKED BY PIRATES.*

Hongkong was startled yesterday morning (11th ult.) by the return of the Douglas steamer *Namoa*, which had left the previous day, with the story that she had been attacked by pirates, that her master, one of the best known and most respected captains in the East, a passenger, and one of her quartermasters had been shot in cold blood, several of her officers and crew wounded, and all money and valuables removed from the ship. An examination of the circumstances connected with this terrible occurrence shows it to be one of the most deliberately planned and effectively carried out acts of piracy that has been known for many years in the China Seas. The news of the tragedy has struck with the more force inasmuch as the attacks of pirates on European ships, and especially attacks of such a bloodthirsty character and attended with such dire results, have come to be looked upon as things of the past. That this was so was startlingly evidenced shortly before the affair took place. A passenger, seeing the stand of arms at the top of the companion, made some remark about it to the captain, who replied with a smile, "They are a relic of the past; years ago we used to want them, but we don't ever require them now." So he thought. Within an hour of speaking those words the unlooked for had happened, and he was lying murdered in his cabin. As was more than once remarked yesterday, the story of this terrible outrage seemed more like one of those we often hear, of the times when the colony was yet in its infancy, than in the present year of 1890. The moral to be learned from the facts so clearly and awfully thrust upon us are dealt with elsewhere, and we shall therefore, endeavour to put as clear a statement of the facts as it has been possible to gain.

The *Namoa* left Hongkong, bound for the coast ports, at 8 o'clock on Wednesday morning with a general cargo, and having on board about 250 Chinese passengers and five European passengers. The names of the European passengers were Captain Saunders, Messrs. E. K. Chandler, Peterson, C. F. Mehta, and Rev. G. M. Wales. Among the Chinese passengers were a number of Chinamen returning from the Straits and California with the savings of many years. From what has been learned since, it appears that this fact must have become known to a band of desperadoes, who made their arrangements accordingly. This band, which it is estimated numbered between fifty and sixty, went on board with the other passengers without arousing the slightest suspicion. About one o'clock, that is, after steaming about five hours and when the ship would be about 40 to 50 miles from Hongkong, the passengers sat down to tiffin. They had been seated scarcely a quarter of an hour, when at a given signal

Digitized by Google

the band of pirates rushed on deck, and dividing themselves into four parties, covered the officers' and engineers' quarters in the fore part of the ship, the engine room, the bridge and the saloon, respectively. The pirates were all armed with revolvers and cutlasses, and appeared to be acting under the orders of a leader who is described as being a tall man, above the average Chinaman, and better dressed than the remainder of the band. Although the attack on the four parts of the ship just named appears to have been carried out almost simultaneously, the attack on the officers' and engineers' quarters seems to have commenced a little in advance of the others. Here the second engineer and the second officer were at tiffin. Fire was immediately opened on them from the skylight, and stinkpots were thrown into the mess-room. One of the shots struck the second engineer, Mr. Ramsay, in the arm, and rushing out of the mess-room he took refuge in the engine room. The second officer, who keeps the key of the treasure room, was then taken prisoner by the pirates, who seemed throughout to have had a most thorough acquaintance with the regulations and routine of the vessel. Having secured their man the pirates marched him under guard to the treasure room, which being opened they found, much to their chagrin, to be completely empty, a somewhat unusual occurrence, we understand, on these steamers, and one which doubtless the pirates were unprepared to find. While this search was being carried on the other attacks were progressing in the various parts of the ship. One of the passengers, Mr. Peterson, who was apparently somewhat unwell, had not gone down to tiffin in the saloon with the other passengers, but was taking his tiffin on deck. This trivial circumstance doubtless cost him his life. Fearing, probably, that he, seeing all that was going on, might raise an alarm and thus frustrate their diabolical intentions, the pirates as soon as they appeared on deck, without a word of parley, fired on the unfortunate man, who fell almost instantly dead with four bullets in his head. The pirates then fired shots into the saloon, carrying as can be easily imagined the greatest consternation among the assembled passengers by this unexpected attack. The leader, who spoke "pidgin" English, then called out to Captain Pocock, telling him that it was the intention of the band to rob all the passengers on board, and asking him to come on deck and make arrangements with them, promising that he should escape unhurt. Captain Pocock immediately went up the companion, but before he could reach the deck he was shot through the right breast. He managed to stagger into his cabin, where he died at 2.30 p.m. On seeing the captain shot the passengers rushed to their cabins and shut themselves in. The pirates endeavoured for some time to drive them out by firing into the saloon and throwing stinkpots down, and also, probably with a view to frighten them rather than with any idea of effecting an entrance that way, by cutting partially through the deck over several of the cabins. Finding their efforts to get the passengers out of their cabins futile, the pirates sent down the second officer, whom they still detained as a prisoner, to tell the passengers that if they came out and went into the captain's cabin and remained quietly there, they would be unmolested and the pirates would leave the ship at 8 p.m. On the strength of this promise the passengers left their cabins and proceeded under a guard to the captain's cabin, where they were placed under charge of a sentry. They were treated in every instance with but scant courtesy, being hustled into the cabin in the most summary way, while some of the less fortunate officers and engineers who were brought to the cabin later, after the pirates had routed them from their various places of refuge, were treated with every kind of contumely and abuse, their captors, not content with jeering at them and threatening them, striking them with the flat of their swords and spitting in their faces. These insults were naturally the more galling inasmuch as the victims were powerless to resent them. The pirates in their well-planned scheme had taken the precaution, in the first instant of the attack, to seize the arms belonging to the ship, which were placed at the head of the companion, and those on board were thus left without an arm of any kind with which to resist the desperate attack made on them. Before the passengers were allowed to enter the captain's cabin all the valuables on their persons, such as rings, watches, studs, &c., were taken from them. In the meantime the gangs in charge of the engine room and bridge were carrying out their orders to the letter. A quartermaster, a Malay, stationed on deck was promptly shot through the head and his body ruthlessly thrown overboard, it is said before life was extinct. Two other quartermasters, also Malays, were shot in their bunks, apparently out of mere wantonness, as were two of the ship's cooks, although neither of these four were killed. One of the quartermasters has, however, since died from the effects of his wound. The chief engineer, Mr. Mackintosh, was taking tiffin in his room. On hearing the shots fired he rushed out and made for the captain's cabin, several shots being fired at him *en route*, but after running some hairbreadth escapes he managed to reach the cabin unhurt, and was not further interfered with. The object of the pirates now appears to have been to get all the Europeans on board into the captain's cabin and secure them there, and they immediately therefore set about getting the remainder there. The third mate, Mr. Eddy, who was on the bridge when the attack commenced, was fired at, and jumping from the bridge escaped to the engine room, followed by a number of the pirates, who fired on him, a shot striking him in the arm just as he reached it. The three Europeans in the engine room—the third mate, second engineer, Mr. Ramsay, and the third engineer, Mr. Jones—hid themselves under the boilers. The pirates, therefore, sent the second mate to tell these officers that if they came up on deck no harm would be done to them. They then came up, and after being searched to see it they had any arms with them, were escorted to the captain's cabin, which, all the Europeans being now safely placed therein, was nailed up by means of spars, while a guard of four men was placed round it, who by the occasional clicking of their revolvers and rattling with their cutlasses on the venetians reminded their prisoners of what they had to expect if any noise were made or escape attempted. In this latest type of the "Black Hole" the Europeans remained prisoners for eight hours, and their sufferings at that time may be imagined, as described by one of the party, as nothing less than terrible. The cabin is only an ordinary sized one, and into this were huddled eleven persons, one the unfortunate captain, soon becoming a corpse. To the anxiety of mind caused by the uncertainty of their fate and the dying agonies of their illfated companion were added the physical sufferings consequent on the want of fresh air, the unfortunate prisoners not being allowed to open a window even to allow of ventilation. Having thus secured the Europeans, the pirates drove the Chinese passengers into the fore and after saloons and kept them there under a strong guard. The desperadoes now took charge of the ship. Some of their number took command of the bridge and wheels, while the firemen were made to perform their duties under threats of death for disobedience. The ship was kept going ahead till about 4.30 p.m., when she was turned right about face and brought back close to Pinghoi, as near as possible her position when the attack commenced at 1 p.m. The attack appears to have lasted for about an hour, by which time all the Europeans and the Chinese passengers had been secured. The pirates then began their work of plunder, for which purpose they utilised the labour of the crew. The pirates contented themselves with patrolling the deck, armed each with a couple of revolvers, while the crew were made to bring the baggage on deck, break it open and remove under direction of the pirates, all money and such other articles as were considered by them of value. Pinghoi was reached about 7.30 p.m. On approaching this part the pirates put out the lights, but blew two blasts on the whistle as a signal. This was answered by some junks, six in number, who were evidently awaiting their arrival, and who signalled back to those on the vessel by throwing blue lights on the water. On seeing that everything was in readiness, the anchor was let go, and the work of transferring the loot from the ship to the junks commenced. This labour was performed by the crew of the *Namoa* assisted by the crews of the junks, and occupied about an hour. It is a somewhat curious feature, seeing that they had the ship at their mercy for such a length of time, that no attempt was made to remove any of the cargo. In addition to the general cargo there were some eighty chests of opium on board, but none of this was touched, the hatches never being even lifted off the holds. It may be that the pirates thought it as well to run no further risks seeing that they had made such a good haul. The amount of plunder they cleared is variously estimated at from $20,000 to $40,000, but from a remark made by one of the pirates and overheard by one of the seamen, it appears that the former amount is nearer the mark. Having completed their transhipment the pirates seated themselves on the deck and regaled themselves with a hearty spread. They then damaged the windlass so that the anchor could not be lifted, knocked holes in the lifeboats, threw the sidelights overboard, and made the firemen draw the fires. Having thus made all risk of their being followed well-nigh impossible and rendered the escape of the ship extremely difficult, the band left, after having thrown a bag containing about $200 to the firemen. As soon as the pirates had left the ship, which was about 9 p.m., the imprisoned Europeans were notified of the fact by some of the firemen. They burst open the cabin immediately, the officers and engineers at once set to work to get the ship ready for sea, the anchor was slipped and in a quarter of an hour the ship was steaming towards Hongkong where she arrived about eight o'clock yesterday morning. The police went on board on her arrival, and the wounded men were removed to the Hospital, and shortly afterwards the bodies of Captain Pocock and Mr. Peterson were brought ashore and taken to the mortuary.

The tragic occurrence formed the chief topic of conversation throughout the colony yesterday, and the greatest sympathy is felt on all sides for Mrs. Pocock, who is so suddenly left a widow, with the care of four young children. Captain Pocock had been in the service of the Douglas Steamship Company for over fifteen years, and was universally admired and respected alike by employers, officers, and all who knew him. After the ship had arrived yesterday morning she was visited by a large number of persons, and expressions of regret at the untimely death of the captain were to be met with on all hands. During the afternoon, H.E. the Acting Goveruor visited the vessel and had a long conversation with the officers. The funeral was to have taken place yesterday afternoon, but owing to the *post mortem* examination not being completed, it was postponed until this morning. The body will leave Messrs. Douglas Lapraik's at nine o'clock.

H. M. S. *Linnet* is to leave this morning for the scene of the attack, but it is to be feared that there is small chance of bringing any of the miscreants to justice. Those who saw the junks are positive that they were Hongkong junks, and it is generally believed that the pirates were Hongkong men. In the case of two at least this appears to be a certainty, as one of the engineers, on being shown at the Police Station a book containing the photos of old gaol birds, recognised among them the portraits of two men who had taken part in the attack.—*Daily Press.*

## *BURNING OF A STEAMER ON THE YANGTSE RIVER.*

### APPALLING LOSS OF LIFE.

The *N. C. Daily News* of the 27th ult. has the following:—We issued the following as an Extra yesterday morning:—"News was received last night by wire from Chinkiang that the China Navigation Co's steamer *Shanghai* has been totally destroyed by fire. She left this on Wednesday for Hankow."

Since then the *Taiwo* has arrived with the second officer, third engineer, and 30 Chinese passengers of the *Shanghai*, and we are able to give particulars of one of the most appalling shipping catastrophes that has ever happened in Chinese waters.

The *Shanghai* left Shanghai on Wednesday at 8 a.m. and reached Chinkiang either late the same night or early on Thursday morning, the 25th. She left Chinkiang at 4 a.m. with over 400 Chinese and one foreign passenger, Mr. Kniffler, on board. At about 7 a.m. when the steamer was six miles below Mud Fort, smoke was discovered coming out of the after hold, in which was stowed, among other cargo, a lot of cotton. The second mate, Mr. Nicholson, immediately got the fire pumps to work, and Captain Martin was informed of what had happened. Meanwhile, the hose was played on the main hold hatch, but all of a sudden the hatches gave way, being burnt through, probably, and an immense volume of dense, black smoke shot up out of the hatchway, which made it impossible for the second officer to remain there any longer. He then started to go forward, but found the Chinese a panic stricken seething mass of humanity struggling vainly to get to a place of safety. He could not get through them, so crawled along outside the ship and so got to his destination. As soon as Captain Martin saw there was no means of getting the fire under, a fact that became apparent very shortly after the alarm was given, he headed the steamer for the bank of the river and ran her so violently ashore, that her bow was right up the bank. Under ordinary circumstances, this would have given greater facilities for escape, but the ship was in flames from stem to stern in less than fifteen minutes from the time of the alarm being given, and the Chinese were in such a confused mass in the alley ways that they could not get

Digitized by Google

forward to escape. Many jumped overboard and were drowned, while others were burnt to death. The foreigners were able to get ashore, Captain Martin and one of the pilots being the last to leave the vessel. Mr. Kniffler waded ashore and when he landed, he was attacked by the villagers who attempted to strip him of his clothing. The Chinese passengers who succeeded in reaching the shore were similarly attacked and were stripped of their clothing. A Chinese mandarin gunboat and a steam launch which were near at hand never made any attempt to save any one, but their crews contented themselves with picking up things that floated from the burning steamer.

The number of lives lost will never be accurately known, but of the number who were on board at Chinkiang only some sixty-five have been accounted for, but some of the passengers, when they got clear of the vessel, hurried away from the scene as quickly as possible apparently afraid of being robbed or ill-treated by the villagers. A foreigner, however, counted seventy-five dead bodies on the bank of the riveer, and he saw a drag boat recover sixteen more. Many, of course, were burnt, so that the number of deaths is probably between two and three hundred.

The *Taiwo* was the first steamer to reach the scene of the calamity. She left Wuhu in the morning and arrived off the *Shanghai* at 2 p.m. the same day, and anchored close to her a quarter of an hour later. By this time, the *Shanghai* was completely gutted. Before proceeding she took on board some of the passengers.

The *Newchwang*, bound up, arrived just before the *Taiwo* left the Shanghai, and she anchored by the wreck.

As a coincidence it may be mentioned that the steamer *Bombay* was burnt at Woosung on 25th December, 1880.

The *Shanghai* was an iron paddle steamer of 3,088 tons and 300 horse-power. She was built in 1873, and had an iron main deck, while all the upper works and houses were built of wood.

## *LATEST TELEGRAMS.*

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, December 26th.

Sir John Pope Hennessy has been returned to Parliament for the Northern Division of Kilkenny County, in place of Mr. Edwin P. M. Marum, the late member.

There is a complete deadlock in the United States Congress on the silver question.

London, December 29th.

A strike has taken place among the hands on the railways in Scotland, and an immense block of the passenger and goods traffic has resulted. Several cities are suffering from a scarcity of coals and food, and the work in many mines is being stopped through want of railway waggons. Several factories are also closing on account of the strike.

London, December 31st.

A United States Cavalry Regiment has captured the Indian Chief Bigfoot, and made prisoners of 150 other Indians in a fight which took place yesterday. There were heavy losses on both sides.

[FROM THE "SINGAPORE FREE PRESS."]

London, December 7th.

A split in the Parnellite party has taken place. Fifty-four members elected Mr. Justin McCarthy as Chairman and thirty-one confirmed the election of Mr. Parnell as Chairman. A manifesto by the Bishops condemning Mr. Parnell has been read in the Irish churches, Mr. Gladstone declines to state his intentions in the matter of Home Rule until the question of the leadership of the Irish Party is settled.

London, December 12th.

The P. & O. Company's steamer *Nepaul* has stranded on Plymouth breakwater. The accident occurred during a dense fog; the cargo has been salved.

## *TIME TABLES AND STEAMERS.*

### TOKYO-YOKOHAMA RAILWAY.

DOWN TRAINS LEAVE SHIMBASHI Station at 6.05 * 6.40, 8, 8.35, 9.30,* 10.25, and 11.45 a.m., and 1.25, 2.30, 3.55, 4.45,† 5.50, 6.50, 8.30, 9.55, and 11.15† p.m.

UP TRAINS LEAVE YOKOHAMA Station at 6.30, 7.20, 8.10, 9.15,† 10.22, and 11.30 a.m., and 12.45, 2, 3, 4.25†, 5.30, 6.35, 7.50, 9.10, 10.05, and 11.05† p.m.

FARES—First-class, *sen* 60; second-class, *sen* 40; and third-class, *sen* 20.

Trains marked (*) run through without stopping at Omori, Kawasaki, Tsurumi, and Kanagawa Stations. Those marked (†) run through without stopping at Omori, Kawasaki, and Tsurumi Stations.

### TOKAIDO RAILWAY.

TRAINS LEAVE YOKOHAMA (down) at 6.50, 9, 10.20, 11.25 a.m., and 12.40, 3.25, 4.55, 5.35, and 7.45 p.m.; and KOZU (up) at 6.35, 8.40, 9.40, and 11.07 a.m., and 1.17, 2.45, 4.58, 7.25, and 9.46 p.m.

FARES—To Hodogaya, first-class *sen* 6, second-class *sen* 4, third-class *sen* 2; to Totsuka, *sen* 18, *sen* 12, *sen* 6; to Ofuna *sen* 36, *sen* 24, *sen* 12; to Fujisawa, *sen* 42, *sen* 28, *sen* 14; to Hiratsuka, *sen* 66, *sen* 44, *sen* 22; to Oiso, *sen* 75, *sen* 50, *sen* 25; and to Kozu, *sen* 93, *sen* 62, *sen* 31.

Down trains at 6.50 a.m. run no further than Kyoto arriving there at 11.20 p.m.; at 10.20 a.m. no further than Nagoya, arriving at 10.10 p.m.; at 12.40 p.m. no further than Shizuoka, arriving there at 6.50 p.m., at 3.25 p.m. no further than Shizuoka, arriving at 8.48 p.m.; and the train at 5.35 p.m. runs to Kobe, arriving at 12.45 p.m. next day.

A tramway runs between KOZU and YUMOTO (distance 4 *ri*.) Jinrikisha may be hired between YUMOTO and MIYANOSHIT. (distance 1½ *ri*)

### KOZU-KOBE RAILWAY.

DOWN TRAINS LEAVE KOZU at 8.30 a.m., and 12.50 2.13, 4.57, and 7.10 p.m.; GOTEMBA at 9.52 a.m., and 1.32, 3.35, 6.18, and 8.32 p.m.; NUMAZU at 5.20 and 10.40 a.m., and 2.30, 4.27, 7.09, and 9.24 p.m.; SHIZUOKA at 7.20 a.m., and 12.19, 4.12, 6.50, and 10.59 p.m.; HAMAMATSU at 6 and 10 a.m., and 2.40 and 6 45 p.m., and 1.16 a.m.; TOYOHASHI at 7.10 and 11.10 a.m., and 3.39 and 7.45 p.m., and 2.14 a.m.; OFU at 8 59 a.m., and 1.06, 5.22, and 9.28 p.m., and 4.02 a.m.; NAGOYA at 9.45, and 11.50 a.m., and 2. and 6.08 p.m., and 5 a.m.; GIFU at 10.53 a.m., and 1, 3.06, and 7.09 p.m., and 6 a.m.; OGAKI at 11.24 a.m., and 1.28, 3.33, and 7.38 p.m., and 6.28 a.m.; MAIBARA at 9.45 a.m., and 1, 2.49, 5.07, and 8.55 p.m., and 7.45 a.m.; HIKONE at 10.05 a.m., and 1.18, 3.02, 5.25, and 9.06 p.m., and 7.58 a.m.; BABA (Otsu) at 12, 3.15, 4.40, 7.10, and 10.43 p.m., and 9 34 a.m.; KYOTO at 12.45, 4.05, 5.35, and 8 p.m., and 10.14 a.m.; and OSAKA at 2.25, 5.35, 7.20, and 9.50 p.m., and 11.42 a.m.

UP TRAINS LEAVE KOBE at 5.55 and 9.55 a.m. and 1.55, 3.45, and 5.30 p.m.; OSAKA at 7.06 and 11.06 a.m., and 3.06, 5, and 6.36 p.m.; KYOTO at 5.35 and 8.40 a.m., and 12.40, 4.36, 6.40, and 8.05 p.m.; BABA (Otsu) at 6.18, and 9.31 a.m., and 1.30, 5.25, 7.31, and 8.50 p.m.; HIKONE at 7.56, and 11.05 a.m., and 3.03, 7.02, 9 08, and 10.25 p.m.; MAIBARA at 8.13, and 11.20 a.m., and 3.19, 7.20, and 10.42 p.m.; OGAKI at 9.30 a.m., and 12.36, 4.37, 8.46, and 11.54 p.m.; GIFU at 9.57 a.m., and 1.02, 5.04, and 9.15 p.m., and 12.17 a.m.; NAGOYA at 6, and 11 a.m., and 2.10 and 6.20 p.m. and 1.09 a.m.; OFU at 6.43 and 11.44 a.m. and 2.56 and 7.04 p.m., and 1.41 a.m.; TOYOHASHI at 8.30 a.m., and 1.30, 4.42, and 8.52 p.m., and 3.17 a.m.; HAMAMATSU at 6.30 and 9.45 a.m., and 2.45 and 6 p.m., and 4.25 a.m.; SHIZUOKA at 5.15 and 9.07 a.m., and 12.45, 5.20, and 9.45 p.m., and 7.08 a.m.; NUMAZU at 7.03 and 10.46 a.m., and 2.24 and 7.14 p.m., and 8.43 a.m.; GOTEMBA at 8.15 and 11 58 a.m., and 3.38 and 8.28 p.m., and 9.53 a.m.; and KOZU at 9.40 a.m., and 1.17, 4.58, and 9.46 p.m., and 11.07 a.m.

FARES—Kozu to Gotemba: first-class, *sen* 66, second-class *sen* 44, third-class *sen* 22; to Numazu *yen* 1.11, *sen* 74, *sen* 37; to Shizuoka *yen* 2.13, *yen* 1.42, *sen* 71; to Hamamatsu *yen* 3.57, *yen* 2.38, *yen* 1.19; to Toyohashi *yen* 4.23, *yen* 2.82, *yen* 1.41; to Ofu *yen* 5.22, *yen* 3 48, *yen* 1.74; to Nagoya *yen* 5.58, *yen* 3.72, *yen* 1.86; to Gifu *yen* 6.15, *yen* 4.10, *yen* 2.05; to Ogaki *yen* 6.42, *yen* 4.28, *yen* 2.14; to Maibara *yen* 7.05, *yen* 4.70, *yen* 2 35; to Hikone *yen* 7.17, *yen* 4.78, *yen* 2.39; to Baba *yen* 8.10, *yen* 5.40, *yen* 2.70; to Kyoto *yen* 8.40, *yen* 5.60, *yen* 2.80; to Osaka *yen* 9.21, *yen* 6.14, *yen* 3.07; and to Kobe *yen* 9.81, *yen* 6.54, *yen* 3.27.

The down train at 8.32 a.m. runs no further than Kyoto, arriving there at 11.20 p.m.; at 12.12 p.m. no further than Nagoya, arriving at 10.10 p.m.; at 5.05 p.m. no further than Shizuoka, arriving at 9 p.m.; and the train at 7.10 p.m. runs to Kobe, arriving at 12.50 p.m. next day. The up train at 5.55 a.m. runs no further than Shizuoka, arriving there at 8.40 p.m.; at 9.55 a.m. and 1.55 p.m. no further than Nagoya, arriving respectively at 6.07 and 10.15 p.m.; and the train at 5.30 p.m. runs to Shimbashi arriving at 1.40 p.m. next day.

### OYAMA-MAEBASHI RAILWAY.

TRAINS LEAVE OYAMA (down) at 7.15 and 9.45 a.m., and 2.15 and 5.20 p.m.; KIRIU (down) at 5, 9.11, and 11.40 a.m., and 4.10 p.m.; MAEBASHI (up) at 6.12 and 10.35 a.m., and 1.55 and 6.35 p.m.; and KIRIU (up) at 5.10, 7.13, and 11.37 a.m., and 2 57 p.m.

FARES—Oyama to Kiriu, first-class *sen* 97, second-class *sen* 66, third-class *sen* 33; to Maebashi, first-class *yen* 1.51, second-class *yen* 1.2, third-class *sen* 51.

### OFUNA-YOKOSUKA RAILWAY.

TRAINS LEAVE OFUNA (down) at 7.30 and 9.40 a.m., and 12.05, 1.30, 4.03, 6.14, and 8.30 p.m.; KAMAKURA (down) at 7 41 and 9.51 a m., and 12.16, 1.41, 4.14, 6.25, and 8.41 p.m.; and ZUSHIMURA (down) at 7.50 and 10 a.m., and 12.25, 1.50, 4.23, 6.34, and 8 50 p.m., YOKOSUKA (up) at 6.45, 8.55, and 11.20 a.m., and 12.50, 3, 5.10, and 7.45 p.m.; ZUSHIMURA (up) at 7.01, 9.12, and 11.36 a.m., and 1.06, 3.16, 5.26, and 8.01 p.m.; and KAMAKURA (up) at 7.11, 9.22, and 11.46 a.m., and 1.15, 3.26, 5.36 and 8.10 p.m.

FARES—To Kamakura, first-class *sen* 9, second-class *sen* 6, third-class *sen* 3; to Zushimura *sen* 15, *sen* 10, *sen* 5; and to Yokosuka *sen* 30, *sen* 20, *sen* 10.

### TOKYO-SHIOGAMA RAILWAY.

TRAINS LEAVE UENO (down) at 6, 6.40, 8.50, and 11.40 a.m., and 2.40 and 5.40 p.m.; UTSUNOMIYA (down) at 10 a.m. and 3.03 and 5.59 p.m.; SHIRAKAWA (down) at 8 a.m. and 12.36 and 5.41 p.m.; KORIYAMA (down) at 9.25 a.m. and 1.54 and 6.58 p.m.; FUKUSHIMA (down) at 7.35 and 11.33 a.m. and 3.45 p.m.; SENDAI (down) at 6.15, 10.25, and 10.40 a.m. and 2.30, 6.35, and 6.50 p.m.

TRAINS LEAVE ICHINOSEKI (up) at 6.40 a.m., and 2.50 p.m.; SHIOGAMA (up) at 7 and 11.05 a.m., and 3.10 and 7.15 p.m.; SENDAI (up) at 7.35 and 11.40 a.m., and 3.45 p.m.; FUKUSHIMA (up) at 6.40 and 10.26 a.m. and 2.36 p.m.; KORIYAMA (up) at 8.29 a.m., and 12.22 and 4.28 p.m.; SHIRAKAWA (up) at 6.35 and 9.47 a.m., and 1.40 p.m.; UTSUNOMIYA (up) at 6.20 and 9.05 a.m., and 12.18, 4.14, and 6.33 p.m.

FARES.—Ueno to Utsunomiya, first-class *yen* 2, second-class *yen* 1.32, third-class *sen* 66; to Koriyama *yen* 4.10, *yen* 2.74, *yen* 1.37; to Fukushima *yen* 5, *yen* 3.32, *yen* 1.66; to Sendai *yen* 6.45, *yen* 4.30, *yen* 2.15; to Shiogama *yen* 6.75, *yen* 4.50, *yen* 2.25.

### UTSUNOMIYA-NIKKO RAILWAY.

TRAINS LEAVE UTSUNOMIYA (down) at 5.25 and 10.05 a.m., and 12.25* and 3.05 p.m.; and NIKKO (up) at 7.20 and 11.55 a.m., and 2.25 and 4.55* p.m.

* Through Trains to and from Uyeno.

### TAKETOYO-OFU RAILWAY.

TRAINS LEAVE TAKETOYO (up) at 5.40 and 10.40 a.m., and OFU (down) at 3 5.35 and 8.55 p.m.

FARES—Second-class, 26 *sen*, third-class, 13 *sen*.

### OYAMA-MITO RAILWAY.

TRAINS LEAVE OYAMA (down) at 6.50 and 9.25 a.m., and 2.20 and 5.15 p.m.; and MITO (up) at 6.25 and 10.10 a.m., and 2.05 and 4.55 p.m.

FARES—First-class, *yen* 1.26; second-class, *sen* 84; third-class, *sen* 42.

### TAKASAKI-YOKOKAWA RAILWAY.

TRAINS LEAVE TAKASAKI (down) at 6.30 and 9.25 a.m., and 12.20 and 3.15 p.m.; and YOKOKAWA (up) at 8 and 11 a.m., and 1.50 and 4.55 p.m.

FARES—First-class, *sen* 75; second-class, *sen* 45 third-class, sen 25.

### NAGOYA-TAKETOYO RAILWAY.

TRAINS LEAVE NAGOYA at 9.05 a.m., and 5.05 p.m. and TAKETOYO at 7.50 a.m., and 3.50 p.m.

FARES—Second-class, *sen* 74; Third-class, *sen* 37

### TOKYO-MAEBASHI RAILWAY.

TRAINS LEAVE TŌKYŌ (Ueno) (down) at 6, 6.40, 8.50, and 11.40 a.m., and 2.40 and 5.40 p.m.; and MAEBASHI (up) at 6, 8.55, and 11.50 a.m., and 2.50 and 5.50 p.m.

### YOKOSUKA STEAMERS.

STEAMERS LEAVE the Nippon Hatoba daily at 8.30 a.m., and 12.30 and 3.30 p.m.; and LEAVE YOKOSUKA at 8.30 a.m., and 12.30 and 3.30 p.m.—Fare, *sen* 20.

### REPORTS.

The Japanese steamer *Nagato Maru*, Captain Ekstrand, reports:—Left Kobe the 27th December at noon, with light wind and fine pleasant weather; the 28th at 4 p.m. wind S.W. and weather cloudy with passing rain squalls. Arrived at Yokohama the 29th December at 5.15 p.m.

The Japanese steamer *Satsuma Maru*, Captain Brown, reports:—Left Hakodate the 27th December at 2 p.m.; light westerly wind up to Siriya Saki; from there light to moderate southerly winds and high sea up to Kinkasan. Arrived at Oginohama the 28th at 3 p.m. and left the 29th at 6 a.m., light to moderate westerly winds and fine weather up to arrival. Arrived at Yokohama the 30th December at 8.15 a.m.

The Japanese steamer *Omi Maru*, Captain Wynn, reports:—Left Kobe the 29th December at noon; had light variable winds and fine weather; thence to port northerly winds with rainy and overcast weather. Arrived at Yokohama the 30th December at 5.15 p.m.

The British schooner *Esmeralda*, Captain J. T. Harrison, reports:—Left Yokohama November 3rd for Mariana Islands; called at all the islands of the group and arrived at Guam on the evening of the 15th. Passage from Yokohama 12 days and 4 hours. Left Guam viâ Islands December 1st, had light airs and calms up to 28° N., thence had strong northerly winds and high sea; evening of the 24th had a very heavy gale from the westward; split double reefed foresail and blew away jib; also had minor deck damage. Passed Kannonsaki December 30th at 3 p.m. Schooner *Norma*, Captain Johnson, arrived in Guam from Yokohama November 17th.

The German steamer *General Werder*, Captain M. Eichel, reports:—Left Hongkong December 28th at 9.50 a.m.; through the Formosa Straits had light variable winds and foggy weather, from there to the coast of Japan strong north and N.W. gales with high sea. Along the coast moderate winds and fine weather. Arrived at Yokohama January 3rd at 7.10 a.m.

## IMPORTS.

There is no change to report in the position of the Import market, which still remains stagnant. Importers seem to have a feeling of relief that the old year has come to a close, and are looking forward to the New Year with fresh hopes of better times. The past year may be placed on record as the worst ever experienced in the Import trade, and it is very regretful, after such a long spell of stagnation, that there is no appearance of a change for the better in the immediate future. Sales for the week amount to 3,500 pieces Shirtings and 25 bales English Yarns.

### COTTON PIECE GOODS.

| | PER PIECE. | | |
|---|---|---|---|
| Grey Shirtings—8¼ lb, 38½ yds. 39 inches | $1.35 | to | 1.90 |

## EXPORTS.

### RAW SILK.

Our last issue was of the 26th ult., since which date settlements in this Market amount to 700 piculs, divided thus:—*Hanks*, 40; *Filatures*, 400; *Re reels*, 90; *Kakeda*, 170. In addition to these figures Japanese have shipped 100 bales, making the total business of the week 800 piculs.

Business has gradually tailed off as the year expired, but without any notable change in prices. Japanese, as usual, have been busy the last two or three days in making up their yearly accounts, and in paying their New Year calls.

The market may be noted as quiet, and it is probable that there will not be much business done for the next few days. Some fair orders appear to be coming in from Lyons and neighbourhood, and the majority of holders do not show very much weakness.

Arrivals from the interior are not very large at present, and the stock list shows a small reduction on the week. Most of the up-land Filature and Reeling establishments are now closed for the winter, and will not work again until the spring weather releases their water power.

There have been three shipping opportunities, American, English, and Canadian mails all taking silk. The first named, *Oceanic*, on the 27th inst., had 622 bales for the New York trade. The *Ancona*, same date, carried 378 bales for Europe, and the *Abyssinia*, which left port yesterday morning, took 241 bales for the United States. These departures bring the present export figures up to 12,933 piculs against 28,053 piculs last year and 28,910 piculs on the 2nd January, 1889.

*Hanks.*—Some business at about previous prices; one parcel of *Shimonita* registered at $490 and one at $500; some small parcels of *Hachoji* mentioned at $460. Stock in this department is small and in a few hands, and is fairly well held.

*Filatures.*—Considerable business was done before the departure of the *Oceanic*; since then some few parcels have been taken, including *Gakosha* at 587½; *Kaimeisha*, $582½; *Hiranosha*, $580. In fine sizes good *Mino* has brought $590; with extra at $600; *Shinshu* being held for the same prices. Some good No. 1 *Koshu* were booked at $577½. No. 2 Silks have been done at $560 to $570, according to mark; with something lower in quality at $545.

*Re-reels.*—Small business in these, holders as a rule being impracticable. Amongst the most recent sales are reported *Five Girl* chop at $555; *Deer Chop*, $535; other *Joshu* and *Bushu* re-reels at $532½. As a rule holders are not willing to make much reduction or to meet buyers to any great extent.

*Kakeda.*—This class has had a fair amount of attention; prices ranging from $550 down to $500. The following quotations have been made:—*Daruma*, $550; *Kinko*, $545; No. 1 *Bacupi*, $530; No. 2 *Bacupi*, $515; No. 3 *Bacupi*, $510; *Red Flag*, $530; *Silver Star*, $532½; *Red Star*, $510.

Nothing done in *Oshu* sorts or sundries.

### WASTE SILK.

More doing in this branch, settlements reaching 1,400 piculs, divided thus:—*Cocoons*, 5; *Noshi*, 1,040; *Kibiso*, 348; *Neri*, 7.

As will be seen from the above figures, there has been considerable buying this week, holders pushing through a few sales before closing their books for the end of the year. Position of the Market is unchanged, good quality is getting scarce and holds its own price.

The English mail steamer *Ancona* had 72 bales various Waste for Europe, and another 14 bales *Mawata* have also been exported to New York. These shipments make the present export figures 16,470 piculs, against 15, 331 piculs last year and 19, 147 piculs at the same date in 1889.

*Pierced Coccons.*—Practically nothing doing; one small parcel being entered at $105.

*Noshi.*—The bulk of the trade has been in this department and stocks are much reduced. Large lines have been done in medium *Filatures* at $140; fair *Oshu*, $130; good *Shinshu*, $120; good *Bushu* $130; *Joshu* $85, $80, $75, according to assortment. The total stock in this department is now not more than 1,500 piculs.

*Kibiso.*—Fair amount of business has been done, including *Filatures* at $115, $110, and $100. Nothing done during the week in ordinary kinds. The stock in this department is large, especially of medium and common grades.

*Mawata.*—No fresh purchases, although some previous settments have been shipped to New York.

*Sundries.*—Nothing done beyond a small parcel of *Neri*, common quality, at $10 per picul.

CONTRACTORS TO THE ADMIRALTY, LEADING STEAMSHIP COMPANIES, AND YACHT OWNERS.

STEAM LAUNCHES & YACHTS,

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 10 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for Copy to

SIMPSON, STRICKLAND & CO.

WORKS:
DARTMOUTH, SOUTH DEVON (ENGLAND).
LONDON OFFICE:
181, QUEEN VICTORIA STREET, E.C.

MACHINERY.—Mr. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated)—the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one or two good firms in Japan desiring to deal with a reliable house. Mr. Wadham's intimate knowledge of the English Machinery and Engineering Trades enables him to save large sums to foreign customers placing their orders in his hands. Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address:—Mr. Arthur Wadham, Engineering Offices:—181, Queen Victoria St., London. Registered address for telegrams—"Wadham, London." 1y. June 28, 1890.

KEATING'S COUGH LOZENGES.

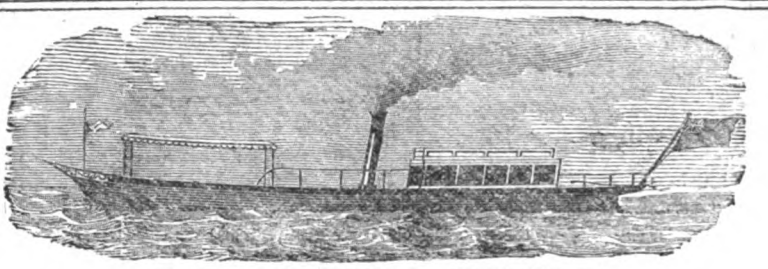
COUGHS, ASTHMA, BRONCHITIS, DIFFICULTY OF BREATHING are speedily cured by KEATING'S COUGH LOZENGES (recognised and recommended by the Medical Faculty). No other remedy is half so effective. One Lozenge alone gives relief. They contain no Opium, Morphia, nor any violent drug, and may be taken by the most delicate. One or two at bed-time ensure rest when troubled by the throat. Sold by all Chemists, in Small Tins. Dec. 27th, 1890.—21ins.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."



SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1890

YARROW'S
SMALL STEAMERS AND STEAM LAUNCHES.
SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.
PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER.
Stern Wheel Steamers with very shallow draft especially suitable for river navigation.
MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.
YARROW & CO., POPLAR, LONDON, E.
Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

At No. 31. Bluff, on the 26th ultimo, of pneumonia, CHARLES EDGAR, youngest son of William S. Mitchell, of Bushey, Hertford, aged 24 years.

At 86, Bluff, Yokohama, on the 9th inst., after a short Illness, B. J. S. BRINKWORTH, aged 38.

## *SUMMARY OF NEWS.*

HER MAJESTY THE EMPRESS has been suffering from influenza.

HER IMPERIAL MAJESTY THE EMPRESS-DOWAGER has been slightly indisposed for a few days.

THE receipts of the Tokyo Tramway Company during the month of December last were *yen* 11,286.72.

DURING three days from the 1st to the 3rd instant, 20,300 visitors passed the turnstiles at the Ryounkaku, Asakusa.

THE Prince Imperial entertained on the 6th instant, the officers of the Imperial Body Guards in the Akasaka Detached Palace.

THE first drill of the firemen of Yokohama for the year took place on the 4th instant in front of the Yokohama Police Station.

THE Prince Imperial left the capital on the 6th inst. for the Detached Palace at Hakone, and intends to stay there about three weeks.

THE Yokohama Bank, the charter for the establishment of which was granted at the end of the year, will be opened on the 13th instant, with a capital of *yen* 2,000,000.

THE residents of Fukui and Ishikawa Prefectures have decided to present a petition to the Imperial Diet asking that the Hokuriku Railway should be constructed by the Government.

ACCORDING to investigations made on the 30th of last month, the quantity of kerosene oil that remained in the godowns at Ishikawa, Yokohama, on that date was 621,180 cases.

THE number of persons attacked by influenza in Yokohama, from the commencement of the epidemic to the 3rd instant, was five thousand (including only those who have been under medical treatment).

THE members of the Cabinet held a private meeting on the 4th instant. The meeting is supposed to have been in connection with the Budget, which is now under discussion in the Imperial Diet.

AN outbreak of fire took place on the night of the 5th instant, in the house of Hasegawa Tomizo, Hongo, Shichome, Tokyo, with the result that 26 houses were destroyed before the flames could be subdued.

AN ordinary meeting of the Cabinet was held on the 6th instant, at which Counts Matsukata, Oyama, Oki, Goto, and Saigo, Viscount Aoki, and Mr. Yoshikawa were present, the proceedings lasting till 4 p.m.

THE offices of the Japan Agricultural Society, Japan Marine Products Society, and Japan Forestry Society will be removed about the 20th inst. to new buildings, now in course of construction at Akasaka, Tokyo.

ON the 4th instant all the firemen from the various stations in the capital marched to the Parade Ground at Kajibashi at 7 a.m. After the usual exercises a quantity of *saké* and dried cuttle fish was given to each fireman.

THE resumption of official business for the year took place on the 4th instant, in the Kanagawa Prefectural Government Office, the Yokohama Custom House, Yokohama Police Station, Yokohama Lighthouse Bureau, and Yokohama City Office.

IT was rumoured some time ago that Mr. Mitsukuri, Vice-Minister of the Judicial Department, had sent in his resignation to the Minister-President, but the rumour is now declared, on the authority of Mr. Mitsukuri, to have been entirely groundless.

THEIR Imperial Highnesses Princes and Princesses Arisugawa, Komatsu, Fushimi, and Kitashirakawa proceeded to the Aoyama Palace on the afternoon of the 1st inst. and offered their salutations to the Empress-Dowager on the advent of the New Year.

THE total number of steamers and sailing ships which arrived at Yokohama during last year was 421 foreign and 2,268 Japanese vessels. The number of men-of-war that entered the port during the period was 77 (including both foreign and Japanese war vessels).

SOME fifteen Korean fishermen were blown ashore on the 18th ult. on the coast near Tsugaimura, Otsugori, Yamaguchi Prefecture. The Prefectural Government forwarded them to the Nagasaki Prefectural Government Office on the 26th ult. by the *Yoshinogawa Maru*, whence they were sent back on the 30th ult. to Korea.

MESSRS. K. MASUDA, Y. Shibusawa, S. Narahara, T. Masuda, J. Yasuda, R. Masujima, M. Yokura, S. Kawata, R. Minomura, and other promoters of the Meiji Fire Insurance Company (capital *yen* 600,000) applied to the Government on the 6th instant asking for a charter to establish the Company.

TELEGRAPHIC information was received by the Department of the Imperial Household on the 6th instant to the effect that Prince Chun expired on the 1st instant at 4 a.m. The event was reported to the Emperor, on which His Majesty despatched at once a telegraphic message of condolence to the Emperor of China.

THE members of the Kwanno Kyokai (Agricultural Society) organized in Hokkaido, forwarded recently to the Japan Agricultural Society, Tokyo, many specimens of agricultural products, including apples and beans of such superior quality that they have been presented to the Emperor by H.I.H. Prince Kitashirakawa, President of the Society, through the Minister of State for the Imperial Household.

IN accordance with custom, the 4th instant being the day fixed for the resumption of official business in the various Government Departments, Viscount Hijikata, Minister of State for the Imperial Household, Mr. Ishida, Vice-Minister of the Agricultural and Commercial Department, Mr. Shirane, Vice-Minister of the Department for Home Affairs, and Viscount Okabe, Vice-Minister of the Foreign Department, attended their respective offices and formally began business.

THE regular general meeting of shareholders of the Tokyo Stock Exchange was held on the afternoon of the 6th instant in the office. The receipts during the latter half of last year were *yen* 53,721.179, of which *yen* 2,000 were set apart as a reserve, *yen* 7,700 as remuneration to officers, and *yen* 44,000 as a dividend for the half-year, to be declared at the rate of 44 per cent. per annum. Messrs. M. Tanimoto and B. Nakano were elected President and Vice-President respectively, Messrs. K. Ito, G. Sagara, Y. Nakajima, and M. Ota being elected managers.

ON the 4th instant, which was the day appointed for the resumption of official business for the year, His Majesty the Emperor held an audience in the Palace at 9 a.m. Count Yamagata, Minister President, and all the Ministers of State (except Count Saigo, and Viscount Kabayama), visited the Palace, and reported to his Majesty officially on the transaction of business in the various Departments of State. Count Oki, President of the Privy Council; Viscount Watanabe, President of the Bureau of Examination for Accounts; Tanaka, Superintendent-General of the Metropolitan Police; and Marquis Hachisuka, Governor of Tokyo, also visited the Palace the same day.

THE Import trade continues without material improvement, and very meagre dealings in Yarns and Shirtings are reported. There has been nothing done in Metals since the close of the holidays, and the Kerosene trade is at a standstill, the stock being further increased by a steamer from New York with 20,000 cases and another from Batoum with 73,000 cases. Sugar remains without demand worth noting. The Silk trade has been small, and is regulated mainly by exchange. Nothing doing in Tea. Exchange has fluctuated, but is fairly steady at the close.

## *EDITORIAL NOTES.*

### IMPERIAL DIET.

HOUSE OF PEERS,—JANUARY 8TH, 1891.

The House of Peers met yesterday, January 8th, at 10 a.m. The President announced certain changes in the personal of Committees, and then declared the debate open on the second reading of the Advocates' Bill. A Secretary read the amendments proposed by members. An amendment by Mr. Obata to erase from the 2nd article the words "Appeal Courts or Supreme Court," was put and lost. Another amendment by the same member, to eliminate the restrictions as to the time during which advocates must practice before being admitted to practice in the Upper Courts, was spoken to at some length by Mr. Obata and opposed by Mr. Yamaguchi in an able speech. Mr. Kato Hiroyuki supported the amendment. His argument was chiefly based on the principle that length of practice is no proper test of an expert's competence, and that examination, or the degree of public confidence obtained, is the only safe standard to apply. Mr. Murata Tamotsu spoke on the other side, and the House then rose for the mid-day recess.

* * *

The House re-assembled at five minutes past one in the afternoon. The debate was resumed by Mr. Hosokawa Junjiro, who opposed Mr. Obata's amendment. Viscount Tani followed on the same side. The amendment was finally lost, and the report of the Special Committee was adopted as to this particular article. Professor Toyama then proposed an amendment of the 5th article, which we need not attempt to explain, as it would be unintelligible without detailed reference to the original Bill. The debate was continued by Mr. Shimauchi, Mr. Nakamura, Mr. Murata Tamotsu, Mr. Hosokawa Junjiro, Mr. Okauchi Shigetoshi, Mr. Obata, and Mr. Mitsukuri, and the amendment being put was lost. The House then adopted the Special Committee's amendment of the 5th article, as well as of the 6th and 7th articles. Coming to the 8th article Mr. Shimauchi proposed an amendment, but, not obtaining the necessary number of supporters, his proposal was not put. The House then adopted the Special Committee's amendment of the 8th article, and it being then 4.35 p.m., the President declared the session adjourned until the 9th instant.

HOUSE O REPRES-NTATIVES.

The House met at 40 minutes past 1 in the afternoon. The President announced that the Report of the Budget Committee had been received, and that three of the members had applied for leave of absence on account of ill-health. Mr. Oye Taku, speaking on behalf of the Budget Commitiee, explained that as the Committee had not been able to complete its work by the prescribed date, namely, the 20th of December, another week had been granted by the House. This brought the time up to the 27th ultimo, and the House having already separated for the New Year's recess, it had not been possible to lay the Report before it during the course of last year. The members, however, had the Report now in their hands, and as reasons and figures were very fully set forth in it, he should not detain them by any lengthy explanation. In accordance with the Rules, he described the methods of origanization and examination pursued by the Committee, and alluded briefly to the great differences of opinion that had existed among the members, and to the almost insuperable difficulty of coming to any agreement. The Committee had sat from 4 o'clock in the afternoon till 1.30 a.m. on the 19th in the hope of being able to present their report on the 20th, but had been disappointed. On the 26th Mr. Watanabe, Vice-Minister of Finance, acting as the Government's Delegate, had informed the Committee that the Government would be unable to agree to the reductions advocated in the Report of which he had that day seen a copy. The President then announced that a motion, with the due number of supporters, had been made by Mr. Suyematsu Kencho to the following effect:—(1.) That without proceeding to a third reading of the Budget Bill, the House should at once consider it article by article. (2.) That the expenditure side should be first debated. (3.) That in the case of any amendments which, according to the 67th article of the Constitution, required Government sanction, a report should be made to the Government immediately on the House's decision being given. (4.) That on receipt of the Government's answer, the debate upon the article or articles in question should be re-opened. (5.) That the debate on the revenue should be opened after the 4th article had been decided. And (6), that when the debate on the revenue was concluded, the totals of revenue and expenditure should be determined. Mr. Suyematsu gave a brief explanation of the object of these proposals, and pointed out the obvious advantage of determining the exact order of procedure beforehand. Mr. Ishiwo Denzo opposed the motion as unnecessary. Mr. Hori Zencho supported it on the whole, but proposed certain amendments. It was then proposed that a decision should be taken without further discussion, as to the propriety of the House immediately going into Committee of the whole, and the proposal being approved, the House decided to go into Committee, and proceeded to consider Mr. Suyematsu's motion. A question arose as to the proposal for which the House had gone into Committee of the whole, several members contending that the step had been taken with the object of discussing the Budget Committee's Report, and several others claiming that the business before the House was Mr. Suyematsu's motion. It was then proposed that Mr. Shimada, Chairman of the Committee of the whole House, should vacate the chair in favour of the President, and that the question of going into committee of the whole should be reconsidered, but finally the House decided by a majority vote that the sitting of the Committee of the whole should be continued. The discussion of Mr. Suyematsu's motion was then resumed, and after a long debate the motion was lost. The House then returned to its ordinary session, and the President took the chair. The order of procedure for the 9th instant having been read, the House adjourned at 5.50 p.m.

### GILDED ARROWS.

MORE iconoclasm! After all these years during which we fondly imagined that the Irish exuberance of pugilistic energy was chiefly attributable to the influences of whiskey, it is painful indeed to discover that the evil is not clothed in the form of a respectable and established alchoholic liquor at all, but is due to a semi-chemical yclept "ether." The discovery of its hold, particularly in the north of Ireland, is of recent date; its origin is shrouded in mystery, but attributed to divers causes. Some lay the blame on Father Matthew's Teetotal Crusade; ether being introduced as a new drink, warranted not to break the pledge. Others accuse the doctors, who used it largely in medicines and thus gave the first impetus to a desire they have since been unable to stem. Probably a judicious combination of both causes produced the result, which presents many sad phases, brought to light by the careful investigations of Mr. Ernest Hart. A footing once gained, inebriety is, we know, an all-powerful foe, and stimulants, suddenly discontinued, leave in their wake a craving not to be satisfied without some substitute. What then more likely when the impulsive Irish character was being moved in the direction of total abstinence, than that a hearty welcome should be offered to anything labelled "harmless," yet possessing power to gratify the perennial need. Again, is not the medical profession unconsciously the means of implanting the first desire in the breast of a great majority of intemperate persons. Just that little snack of brandy, that "teaspoonful with your meals," or at "bed time," or "when you feel down;" how many of us have had medical prescriptions after this style, and how many have followed the advice not wisely, but too well. So has it doubtless been with Ireland. In the effort to put down, to destroy the ill effects of one evil, a worse has been introduced, which from its cheapness alone is not likely to be easily irradicated. Poor Paddy! his new drink has the melancholy disadvantage of quick operation, and its effects pass off as quickly as they pass on, enabling him, if so disposed to boil up and cool down again half a dozen times a day, and this must commend itself very particularly to our warm-headed brethren. At present ether has not seized the Irish lassie in its gruesome grasp to the same extent as it has attacked her parents and male relatives, and it is to be hoped that her bonnie eyes may long, and ever, escape being dimmed by the "cursed thing."

* * *

We are told, with the calm assurance undoubtedly born of firm conviction, that we are cooling down! By "we" is meant that whereof we are supposed to be made, and to which we all return, the earth. At what precise rate the proceeding is going on, Mons. Jaques Leotard sayeth not; but that we are cooling down, and that some day our extreme descendants will reside within, in preference to upon, our terrestial globe, he has no hesitation in prophecying. He places the probable date at a remote period, however, so that preparations for a *sub-terrâ* residence need not be hurried. The process of interment, if it may be so called, is not graphically described; but, the moon, having become a dead star, will thereupon become disunited and scatter its broken fragments into space, while the surface of this insignificant conglomoration of sundries we proudly dub our world, will present a congenial temperature of a hundred centigrades below zero, leaving us no resource but to crawl inside in search of the air and warmth which, he assures us, will be provided gratis around the centre of gravity.

* * *

When woman usurps the reins of medicine, we may prepare ourselves for a novelty in prescriptions and theories. A certain Mrs. Doctor Anderson has been delivering herself of the opinion that "old fogies" ought to go in for calisthenics. She maintains that ladies from 30 to 50 years of age ought in justice to themselves and their families, to perpetuate the exercises of their youth. Doubtless her epithet of "old fogies" is intended to refer to the other sex, however, since she could not possibly be so frank as to use such a graceful sobriquet to her own sisterhood. What a departure from the beaten tracks of recognized propriety is here suggested. Can we not picture a regiment of bald and toothless grandpapas circling with broomsticks and dumb-bells to a lively air, while a brigade of "fat, fair, and forty" practise the tip-toe balance step in the foreground! Mrs. M. D. Anderson further suggests that ball, as a game, would be far more beneficial to those whose childhood's days are becoming obscured in the distance, than dancing, the so-called recreation indulged in by even the most pronouncedly mature. Possibly there is a large modicum of common sense in this lady's theory. It is very certain that youthful games cannot be indulged in without engendering an excessively bouyant appreciation of things in general, and happiness and contentment are true and tried tonics. This sort of thing may, for all we know, lie among the possibilities of the future. The children of our era always seem half grown old, so perhaps the old folks will some of these days turn the tables on them, and start being children at the other end of the journey.

* * *

It is refreshing to find that amid all the deterioration incidental to nineteenth-century competition and selfish rivalry, the English character for veracity still holds its ground. Another testimonial to its worth comes from the venerable lips of Count Moltke, who says that one of the chief attractions in English education is that "lying is treated not only as an offence, but as a disgrace, and unworthy of a gentleman." This is the spirit that permeates the education of every English boy and girl whether at home or at school, and which, on a general average bears fruit in after life. Otherwise, the English-

Digitized by Google

man's reputation for honour would not have attained such a world-wide circulation.

* * *

"Every dog has his day," we are told, and it is a general impression that the Jew is having his now, in England at least. But the channel of daily life is by no means flowing so smoothly in all lands, Russia for instance. Everyone knows that the Jew always has exhibited, and probably always will exhibit, a remarkable talent for turning things to account, and securing that odd half-penny of profit which just makes all the difference in the success of a financial transaction. This line of ingenuity has not called forth feelings of warm estimation on the part of Russia; on the contrary, one is almost led to suppose that she still alhors a Jew. This is unfortunate for the Jew. Russia, however, does not admit that any want of justice prompts her actions toward the Israelite; but argues that her sole desire is to woo him from his shocking incredulity, and embrace him in the arms of the Church. She accordingly encourages him to pay a little tax on flesh and fowl, on house-rent, and indeed on any and every item of his income, and this, merely to furnish a practical illustration of how undesirable it is to be a Jew, instead of a nice, comfortable, taxless, unburdened Christian. The consequence, not unnaturally, is that the Jew who values his interests at a higher rate than the religion of his forefathers, defrauds his brother to enrich himself, and then—becomes a Christian. He is then secure, for the Russian Courts will not receive Jewish testimony against him, seeing that it can only be prompted by malice. However, the Hebrew stranger in the Russian midst, is, on the whole, faithful; and Russia meanwhile profits by those little additional taxes on his daily bread. In England the descendamts of Abraham appear flourishing like unto the proverbial bay tree, and it is pleasant to note that their relations with the Gentiles are creeping out of the confines of pecuniary transactions not calculated to encourage mutual respect and confidence. Just recently two very striking instances of the increasing sympathy between believers and the unconvinced, have come under public notice. One is a Jewish testimonial of respect and admiration for the work of the late Mrs. Booth; the other a deputation of many of the principal Jewish representatives, to the Archbishop's House, at Westminster, to present a congratulatory address to Cardinal Manning on the occasion of his Silver Jubilee. After heartily expressing their sympathy with and appreciation of the Cardinal's labours on behalf of religious education, they listened in turn to kindly sentiments from him, as he concluded with a reference to the three indestructable things in this life; the Jew and his Creed, the Church which had sprung from it, and the World which had persecuted both. Those who know the Cardinal can well imagine the gentleness of manner with which the words were spoken. GRENON.

## THE BUDGET.

How the Budget business will end is the question now on everybody's lips. The Government says that a reduction of three million *yen* might be effected with considerable difficulty, but that beyond that amount no advance can possibly be made without dislocating the public service. The Committee of the Lower House has reported in favour of a reduction of nearly ten million *yen*, but, on the other hand, the moderate section of the Committee thinks that about one half of that amount will suffice. The great supporters of the radical measure are the *Kaishin-to* members, and since these are generally moderate and conciliatory it is naturally supposed that in holding out for a virtually impossible reduction, their main object is to cause the dissolution of Parliament, since fresh elections would give them an opportunity to recover the strength lost at the last elections owing to temporary disorganization. A very few days will now suffice to show what the ultimate attitude of the Diet must be, but we do not, for our own part, perceive that dissolution would be a necessary consequence of the Diet's refusal to pass the Budget in its present form, or after the insertion of whatever amendments the Government may see its way to make. The Constitution provides that in such a case the Budget for the preceding fiscal year may be carried out, and that alternative would probably be preferred to the dissolution of the first Diet.

* * *

As is usual in respect of any question of great public interest, public men are beginning to be interviewed, and their opinions printed by the vernacular press. Count Itagaki is among the number, but he has not much to say on the subject, the gist of his remarks being simply that investigations conducted by himself and other members of his party at Kobe led them to conclude that from seven million to seven and a half million *yen* was the extent of the reductions that could be made in the public expenditure. Mr. Fukuzawa has also been interviewed, and his ideas are much more interesting. He said frankly that while approving the idea of reducing expenditure, he did not approve of attempting to carry out any such reform this session. The Diet had already procured the postponement of the Commercial Code, and driven one Minister of State from office. Let it be content with that. Next year, or even the year after next, would be time enough to attack the Budget question, and in the interval full investigations could be made. It would be better to proceed calmly and deliberately in a matter of such importance. He recommended the members not to allow themselves to be carried away by youthful zeal. The Diet is not an institution of one year only. Its work is all before it, and so is the future.

## MEIKLEJOHN'S DIRECTORY.

MEIKLEJOHN'S well known Directory for Japan made its appearance punctually at the close of 1890. The compiler has adhered strictly to the familiar old lines; conservatism of which we entirely approve, since one half of the convenience of a directory is to be able to use it with the quickness born of familiarity. We observe a few omissions in the list of Tokyo residents, and it is still noteworthy that the names of the principal Japanese firms and leading men of business have not found their way into the alphabetical list. After all these years we cannot but find it strange that such a directory gives us no information whatever about the residences or places of business of men like Messrs. Shibusawa Yeiichi, Okura Kihachiro, and so forth. Probably the difficulty of collecting information of this character would be considerable, but the very existence of such a difficulty illustrates the gulf that still stands between the foreign and Japanese communities. The Directory has a new feature this year in the shape of lists of the members of the two Houses of Parliament. We observe that the compiler has made no attempt to distinguish the members according to their politics. He simply divides them into *shizoku* and *heimin*, which is perhaps as much as could have been expected.

## A CURIOUS "COUP DE GRACE."

FATE is such a wayward jade that one cannot feel quite certain whether her latest freak in Irish affairs may not be seriously intended, or, at all events, may not result as though it were seriously intended. The idea of a wretched two-penny half-penny case of inmoral conduct between an over-youthful man and an over complaisant wife settling a question which has effectually blocked the path of British legislation for years, has upset Cabinets, has perplexed the best English statesmen, and has furnished the world with a nine days' wonder—such an idea is almost incredible. Yet it looks as though things would fall out in that fashion. Mr. Labouchere, with his wonted hard cynicism, tries to recall the public to its senses by asking it what would have been said if the Government of the United Kingdom had deprived the Duke of Wellington of his command on the eve of Waterloo because of some scandal between him and one of the Brussels dames. But the public won't pause to reason out Mr. Labouchere's similies. Parnell has disgraced himself, that is the one and only point of moment, and though there may not be the most infinitesmal logical connection between the escapades that cover him with shame and the political work he directs, his capacity as captain of the Irish cause is fatally impaired. The loss of such a man, the greatest organiser, the greatest parliamentary tactician, and in many respects the greatest leader that Irish nationalism has ever produced would be a terrible blow. But it certainly would not be a fatal blow. The Irish cause throbbed with vitality before Charles Stuart Parnell ever saw the light of day, and his death would not paralyse it. But he will not die. There is the trouble. He insists on clinging to the helm with his dirty hands, and the ship won't steer with him at the wheel. Nothing seems more certain than this, that if Parnell stays Gladstone must go. The Grand Old Man cannot afford to climb his last political eminence on this side of the grave arm in arm with an adulterer who used fire-escapes and water-spouts to get at his mistress. The thing would not work; and Gladstone, eminently acute in his perception of public opinion, knows well that he and Parnell have come to a point where their paths part for ever. If Parnell and his friends could see equally clearly, the political situation need not be gravely effected. But they will not see, and it looks very much as though sweet Mrs. Captain O'Shea had given the quietus to Irish Nationalism for many a year to come. The gods work with strange weapons, but they get there all the same.

## OFFICAL SALARIES AND THE DIET.

WE read in the vernacular press that the chief recommendations embodied in the report of the Budget Committee are these:—First, as to salaries, the Committee suggests that the emoluments of *Shinnin* be reduced to the following:—Minister President of State, to 6,000 *yen* annually; Ministers of State, to 5,000 *yen*; Chief Judge of the Supreme Court, to 4,000 *yen*; Chief of the Audit Committee, to 3,500 *yen*; Presidents of the Privy Council and of the Board of Decorations, 2,500 *yen*; Vice-President of the Privy Council, 2,000 *yen*; Privy Councillors, 1,500 *yen*. In the case of *Chokunin* officials, the following scale is proposed:—Vice-Ministers of State, the Chief of the Hokkaido Administration, and the Governor of Tokyo, 3,500 *yen* each. The four Prefects of Kyoto, Osaka, Kanagawa, and Hyogo, 2,000 *yen* each; Chiefs of First-class Bureaux, Chiefs of Finance Sections, Prefects, First-class Experts, and the Chief Secretary of the Cabinet, 2,500 *yen* each; Chief Secretaries of the two Houses of the Diet, 2,000 *yen* each. The *Sonin* officials undergo corresponding reductions of salary, the Chief of Metropolitan Police especially being cut down to 2,000 *yen*.

* * *

Then follow numerous recommendations for abolishing or amalgamating Bureaux and offices. Thus, the office of councillor (*Sanji-kan*) is abolished, and all the Finance Sections are amalgamated with the Sections of General Affairs. In the Cabinet, the six Sections of Legislature, Rewards, Archives, Statistics, and Finance are abolished, and in the Department of Education the Sections of Finance and Engineering. In the Foreign Office the Sections of Finance and Translation are amalgamated with General Affairs. In the Home Department, the three Sections of Geodesy, Temples and Shrines, and Library are abolished, a part of their duties being transferred to the Building Section. In the Finance Department, the Customs Section is amalgamated with the Taxes Section, and that of Banks with that of National Debts. In the Department of Justice, the Civil and Criminal Sections are abolished, and in the Department of Agriculture and Commerce, the functions of the Patents Bureau are handed over to the Bureau of Trade and Industry.

* * *

It would be presumptuous for mere outsiders to criticise these suggestions so far as they relate to the abolition or amalgamation of ad-

Digitized by Google

ministrative sections, but every one is entitled to express an opinion about the proposed reduction of salaries, and our emphatic opinion is that the Committee of the House of Representatives has allowed itself to be carried to utterly extravagant lengths. Can anything be more absurd than to say that Japan's resources do not allow her to give her Privy Councillors as much as she gives for a very third-rate teacher of English, French, or German in one of her common schools? Eighteen hundred dollars a year, generally with house, or house allowance, is the least that an every-day teacher of English expects to receive, yet a Privy Councillor of *Shinnin* rank is to be content with *yen* 1,500. Consider, again, the case of the Chief Judge of the Supreme Court, one of the highest and most honoured officials in the Empire. He is to receive 4,000 *yen* annually, whereas a member of the House of Representatives is paid at the rate of 3,200 *yen* annually, and gets his expenses in addition. We do not observe that the members have thought of cutting down their own salaries. They evidently think themselves entitled to be as handsomely remunerated for their services as are Vice-Ministers of State, the Chief of the Hokkaido Administration, and the Governor of Tokyo. We regard such suggestions as simply monstrous. The pay of Japanese officials is already miserable. The pay of the Judges and Magistrates is scandalously low. The very last retrenchment that a country should resort to is the cutting down of the pittance paid to its public servants for good and faithful work. The House of Representatives can save 240,000 *yen* annually at one coup by deciding that its members shall serve their country gratis, as do English members of Parliament. But it doesn't relish that.

* * *

It is significant that the Committee reverses the order of things with regard to the Prefects of the districts in which the open ports lie. Hitherto their Prefectures have ranked first. The Committee thrusts them incontinently below all the rest.

### THE DOSHISHA.

THE calendar of the Doshisha for 1890-91 gives some idea of the place which this remarkable college now occupies among the educational institutions of Japan. Situated in one of the quietest and least visited distrtcts of Kyoto, the Doshisha has never attracted any large share of foreign public attention. Only by those who take special interest in such matters has it been known that educational work of the very highest character was being carried on there by the representatives of the American Board Mission and their Japanese associates, and that large sums of money were being expended on the erection of handsome and capacious brick and stone buildings. From the calendar, as now published, a general conception of the nature of these buildings may be gathered, for on the first leaf we find a cleverly executed sketch showing the three principal edifices, the Recitation Hall, the Chapel and the Science Hall, with the grounds surrounding them. The Library, a separate and very imposing pile of architecture, is shown independently in another plate, and so also is the Science Hall, which, as we explained in a former issue, was completed last year. This Science Hall—or "Harris School of Science," as it is also called—owes its existence chiefly to the generosity of Mr. J. N. Harris, of New London, who gave a hundred thousand dollars towards its construction. Its object is "to offer a post-graduate course to such students of the collegiate department as may desire to pursue advanced studies in science and its application to fine arts." Judging from the plans and elevations accompanying the calendar the architect of the Doshisha have been most happy. The noble pile of buildings erected under their superintendence constitutes quite a feature of that quarter of the ancient city, and offers a very striking contrast to the lowly, unpretentious wooden structures inhabited by the citizens of Kyoto. As for the working of the institution, perhaps the most succinct idea may be gathered from the summary at the end of the calendar, where we read that no less than 570 students are entered for the various courses in the current year. Sir Edwin Arnold, we may mention, during his stay in Kyoto, delivered a course of lectures at the college.

### JAPANESE PAINTERS IN OILS.

ONE of the great difficulties with which Japanese painters in oils have to contend is the smallness of their houses. When an artist has painted a picture of some size and had it duly framed, it becomes a most obtrusive tenant of his little dwelling, not only causing much inconvenience to his family, but also effectually preventing any further efforts on the part of the artist until he can rid himself of his last production. The majority of the pictures shown at last year's industrial exhibition were not sold, and it is said that they now lie in their painters' dwellings, blocking the path, furnishing sad mementos of unrequited industry, and occupying the only space which the artist has available for such work. Could any evidence of the *res augusta domi* be more emphatic?

### THE STATE OF THE CABINET.

AFTER declaring that the Cabinet must be very weak if the resolution of the Budget Committee of the House of Representatives to reduce the estimates by some nine million *yen* endangers its existence, the *Nippon* proceeds to publish the gist of certain rumours now in free circulation. The first relates to an alliance between Counts Ito and Okuma. No one, says our contemporary, will be disposed to believe in a compact between these two statesmen, after their dissensions of last year, but the innermost thoughts of statesmen can hardly be fathomed by common thinkers. In spite of the leading members of the *Kaishinto* so much disliking Count Ito, Mr. Yano Fumio (a staunch follower of Count Okuma and one of the prominent men of the *Kaishin-to*) was, through the efforts of Count Ito, appointed to a lucrative official position in the Imperial Household Department. Whether this may be taken as an indication of the alleged alliance or not, it is certain that the two Counts' political tactics are profound, and they seem to have now adopted the course of utilizing the Diet for the purpose of crushing the Yamagata Cabinet by clever manipulation of the Budget question.

* * *

The *Nippon* then discusses the views entertained by the Cabinet Ministers themselves. Every one is curious to know what course will be taken by the Cabinet if the Diet, accepting the Report of the Budget Committee, should attempt to reorganise the present system of administration, and insist upon making a reduction of nine million *yen*. Rumour says that Count Goto, Viscount Aoki, Mr. Yoshikawa, and Mr. Mutsu are determined to join forces and endeavour to force a resolution on the Cabinet, and that such resolution will be in the main in accord with the Diet's action. But as each of these statesmen has special views of his own, their consensus seems problematical. As for Count Yamagata, rumour says that he preserves an obstinate silence, and indeed it is natural for him to remain with folded arms at this critical moment, seeing that originally a purely military man, he finds himself at a loss how to deal with the complicated and difficult political problems surrounding him as Prime Minister. Count Saigo is said to have asked quietly at a Cabinet conference held some days ago "How will all this end? Shall we have to resign our posts before the end of the current year?" This Minister in ordinary times seems indifferent to what goes on around him, but being a man of quick decision at important crises he generally stands by his own views, however divided the opinions of the Cabinet. Count Matsukata has the reputation of being the cleverest man amongst the Ministers of Satsuma origin. He is said to have expressed no opinion so far, but he is known to be on good terms with Count Ito, whose views he shares. His being in a position directly affected by the Budget question, and yet remaining so quiet and undisturbed, excites some curiosity. Rumour already says that his views are probably the same as those of the other four Ministers mentioned above. At any rate, the tactics of the two statesmen, Counts Ito and Okuma, outside the Cabinet, may produce a decided change in the Cabinet itself. The Vice-Ministers are said to be much disturbed by the resolution of the Budget committee in respect of a reduction of nine millions, and to be taking active measures for promoting their own views on the matter.

* * *

The *Toyo Shimpo*, writing on the same subject, states that in spite of various rumours of an alarming nature now afloat, the actual state of affairs is not critical. Counts Ito and Okuma, it declares, are strong rivals and cannot stand together in the same Cabinet. The rumour of their union must have originated in a recent meeting between the two Counts, held probably for the purpose of consulting about the advisability of summoning Count Inouye to act as a mediator between the Government and the Diet with regard to the Budget question. Our contemporary adds that the report concerning the decision of Count Yamagata in respect of the Budget is correct; that the idea of making Count Goto Premier is not new, but seems to have gained much force lately; and that the Ministers of Satsuma origin do not openly express their views, simply because their usual tactics are to maintain a reserved attitude to the last.

### HOME OPINIONS.

THE *Daily Chronicle's* comment on the September Meeting is as follows:—

"It is not, perhaps, surprising that the discussion on treaty revision which has been raging for some time in Japan should have given rise to a good deal of heat; but we were scarcely prepared for the somewhat unreasonable attitude assumed in the matter by Englishmen resident in that country. From what we find in the papers to hand by the present mail our countrymen do not seem to have afforded such an example of political restraint as might have been expected from men educated in the freedom and independence of England. The Japanese are perhaps a little too proud of the rapid progress of their country in civilisation, and are demanding rather too much in asking the submission of foreigners to native tribunals without guarantees; but this scarcely justifies an attitude of determined hostility to all treaty revision whatsoever. It was especially unfortunate in one speaker at a Yokohama meeting to suggest that because torture was legal in Japan a quarter of a century ago therefore her judicial tribunals could not now be trusted by foreigners in any matter."

This criticism would have been considerably strengthened had the writer known that the Japanese were not asking for the abolition of Consular Jurisdiction without guarantees, and that the information upon which the Yokohama meeting acted was in one respect conspicuously erroneous.

### THE EMPEROR AND THE SITUATION.

"NOT now for the first time," says the *Nichi Nichi Shimbun*, "is His Majesty the Emperor showing his solicitude about affairs of State. Still it is worth noting that when Count Ito waited at the Palace to pay his respects at the New Year, the Emperor entered into a long conversation with him about parliamentary affairs in general, and particularly about the attitude of the Lower House towards the Budget. His Majesty expressed the opinion that a want of full mutual understanding was at the root of the trouble between the Administration and the Diet. He said that if the Government's Delegates took greater pains to convey to the Diet the true spirit of official intentions, and to ascertain the views of the members accurately, the breach between the two ought to be capable of adjustment. It goes without saying that the Sovereign's Chief Minister and all responsible officials should lend themselves to accomplish the Imperial wishes, setting aside individual opinions altogether, and working entirely for the public good."

* * *

It does not appear to outsiders that want of mutual understanding is the secret of the trouble. On the contrary, the recalcitrant members of the

Digitized by Google

House of Representatives seem to understand perfectly well what they are about Their evident object is to produce a crisis which shall lead either to the resignation of the Government or the dissolution of Parliament. This is nothing new. Political parties in opposition behave similarly everywhere. Appeals to their intelligence or magnanimity are mere waste of words. Nobody imagines that if the advocates of sweeping fiscal reform came into office themselves, they would be faithful to their own programme. But any stick will serve to beat a dog. The thing to be accomplished is the ousting of the Government. The nature of the pretext employed is a wholly secondary consideration.

### CRITICS AND CRITICS.

In the second number of the new *Japan Gazette*, an article appears defending Mr. Masujima against criticisms which, though not distinctly referred to as ours, are plainly intended to be so understood. It does not seem to us, however, that we receive strict justice at the hands of our contemporary, and we shall show why very briefly. Let us premise at once that we fully admire and appreciate Mr. Masujima's courageous frankness, and applaud his reforming efforts. We do not indeed clearly understand why he should have chosen the lecture hall of a foreign learned society to deliver an address condemnatory of the legal institutions of his own country. But that is a matter of taste, and it is universally agreed that tastes must be allowed to differ. The Asiatic Society at all events will not quarrel with Mr. Masujima's choice of audience. Its members can desire nothing better than to have their inevitable ignorance of Japanese legal tribunals dispelled by the light of an expert admittedly competent to speak with authority, and qualified to approach his subject from a Western point of view. The *Japan Gazette* hints, indeed, that Mr. Masujima's utterances are "extremely distasteful to a few foreigners." "It is rather awkward," says our local contemporary, "to have an eminent barrister coming forward at this juncture and giving information, founded on personal observation and knowledge, calculated to show that it is somewhat premature to expect justice to be administered throughout Japan with the impartiality and thoroughness it is in most Western Courts." Are there in truth any such foreigners? Are we really to believe that the writer in the *Gazette* has discovered foreigners who object to the truth being spoken about Japan, and who would fain have everything Japanese represented in such rosy colours as to lull all uneasiness and disarm all precaution? We know of no such foreigners. They must be very *rari aves*, if indeed they exist at all. Neither have we ever come across foreigners who imagined that the administration of justice in Japan is marked by all the impartiality and thoroughness of Occidental tribunals. If either the former or the latter class of persons are to be found among the members of the Asiatic Society, then indeed Mr. Masujima exercised discriminating benevolence when he undertook to rebuke and correct such silly traits. For our own part, however, we should have been disposed to let these naïve optimists wrap themselves in the atmosphere of their own credulity, nor can we share the commiseration which the *Japan Gazette* apparently feels with their rude awakening. All persons of ordinary honesty want to know exactly how the law is administered in Japan, and all persons of ordinary common sense know perfectly well that the manner of its administration still leaves much to be desired.

* * *

But Mr. Masujima's nominal purpose was to demonstrate the unfitness of the new Civil Codes, and the fault we found with his lecture was that his demonstration was wholly incomplete. He proved nothing. Only one of two conclusions could be formed, either that he had no proofs to offer, or that he doubted the capacity of his audience to understand a detailed demonstration. We object to *ex cathedrâ* utterances on such a subject. We value the *ipse dixit* of Mr. Masujima no higher than we value the *ipse dixit* of the framers of the Codes, and we see no reason to discredit the latter for the sake of the former. If the *Japan Gazette* will furnish reasons, we shall be the first to admit them, but for the present our choice remains free.

* * *

It is denied, too, that the lecture possessed political elements, and it is declared to be utterly foreign to the truth that Mr. Masujima is opposed to the revolution of 1868 and to the men who were instrumental in effecting it. This is a question of Mr. Masujima's own words. Here are a few of them :—"When they had succeeded in destroying the Tokugawa Government they had to submit to the force of circumstances, and to uphold the restoration of the Imperial power, contrary as it was to the original intention of each clan. * * Either because they were not wise enough to see the necessary goal to which Japan must come, or that they consciously ignored it, they adopted the policy of repulsion in order to facilitate the carrying out of their own programme. * * They did not consider that they themselves would be usurpers if successful. * * They may not have been statesmen : I doubt whether they were. But the ease and grace with which they transformed themselves were truly wonderful. Many who had been semi-barbarians before visitiug foreign countries became too civilized for life in Japan on their return home. * * They were then young and inexperienced, but so jealous and patriotic that they decided to bring up this Asiatic State to the same standard of civilization as that of Western nations, as if the influence of so-called men of genius, among whom these undoubtedly counted themselves, would prove magical in effect simply because they happened to be in office. They failed to see the undeniable truth that no nation can change in a day. The history of Japan for the last twenty years has consisted of first the destruction of the old, next the wholesale adoption of foreign institutions, and lastly reactionary attempts to undo the work done. The revolutionists imagined that they could buy and import foreign civilization and foreign institutions like any other commodity, and make use of them with the same ease and benefit as do the nations where they are indigenous. * * * Theorists by thousands, innumerable laws and excessive taxation were the fruits of the policy adopted at that time. * * * These believers in the magic power of great men in office destroyed the whole ancient organization of the Government along with other departments of social activity. They tried to replace this with what exists to-day in the West, forgetting that it is the outcome of the life and labours, the thoughts and feelings of many generations." There is more in the same strain but we have quoted enough. Can anyone for a moment pretend, in the face of what we have quoted, in the face of Mr. Masujima's own words, to deny that his lecture was partly of a political character, and that he is not amicably disposed towards the revolution of 1868 and towards the men who were instrumental in effecting it? If he is well disposed towards them and their work, he has the funniest manner conceivable of expressing his approbation. And when we remember who they were —these men of whom he speaks with such supreme contempt—Iwakura, Sanjo, Kido, Okubo, Saigo, Ito, Inouye, Okuma, Goto, Itagaki, and so forth—we are constrained to repeat our expressions of sincere regret that Mr. Masujima's essay ever found its way into the pages of the Asiatic Society's Transactions.

### THE CHRYSANTHEMUM IN ENGLAND.

The exhibition of chrysanthemums at the Westminster Aquarium, in connection with the Great Centenary Festival of the National Chrysanthemum Society, in honour of the introduction of the flower into England, was opened on November 11. The exhibition was one of the largest and finest ever seen. There were about 200 exhibitors and 750 entries, the latter numbering about double that of last year's exhibition. Such a display of trained varieties of chrysanthemums had never before been seen. The Japanese varieties are wonderfully fine, and the incurved varieties came next in number and quality. There was also a good display of the reflex varieties. The total amount offered in prizes was over 500*l*. The chief feature of the show was that which was called the centenary class —34 blooms of Japanese and 34 blooms of incurved chrysanthemums. In that chass there were eighteen competitors, and the first prize, value 25*l*., was taken Messrs. W. and G. Drover, of Fareham ; the second prize, 20*l*., by Mr. Parker, gardener at Impey, Droitwich ; and the third, 15*l*., by Mr. Gibson, gardener at Morden Park, Surrey. The next class was the National Competition of the Chrysanthemum Society for a valuable challenge trophy, a class only open to societies affiliated with the National Society. The trophy, a silver shield, was won by the St. Neots Society, the Wimbledon Society, which won it last year, being second on this occasion. At the opening ceremony Mr. R. Dean, the hon. secretary of the society, read an address stating that there were now 3,000 varieties of the flower, and that over 200 novelties were put into commerce this season.

### THE LOSS OF THE "SERPENT."

One of the three survivors of the wreck of H.M.S. *Serpent* has made the following statement, which was telegraphed to London from Corunna on the 17th November :—"The *Serpent*, on the evening of Monday, the day of the disaster, was proceeding on her course as usual. We had left Plymouth on Saturday afternoon, and were hoping shortly to round Cape Finisterre. The ship was going about half-speed. The sea was fearful, and the swell of the billows tended to carry the vessel towards the land. The place where the ship struck is a bay formed by Capes Trece and Villano. It was a very dirty night. It was raining hard, and a thick mist hid the shore from us. The *Serpent* passed very close to Cape Trece, but no one on board could see the light on Cape Villano, and the ship headed straight for the middle of the bay. A few minutes later she struck with a frightful shock. Owing to the bad weather the commander was on the bridge. I was on deck myself, as it was my watch. Thirty of the men were close to me. As soon as we felt the vessel strike Captain Ross ordered the boats to be got ready. He was perfectly calm, and at the same time full of energy. By his orders we got out the rocket apparatus and fired a rope off towards the shore, but it was of no use. The wind and waves were terrific, and the rope fell short. About three-quarters of an hour passed before the *Serpent* went down. Meanwhile all the crew were ordered to the bridge. Gould, Luxon, and I were told off to man one of the boats, Gould being in command. We went off to get the boat ready, but we had scarcely set about it when a huge sea swept away all the boats, crews and the boats as well. Captain Ross shouted out that everybody must do his best to save himself. Gould heard him say this. Before we set about getting the boats ready, I and several others had put on cork-jackets. The *Serpent* remained all this time as if balanced between the masses of rock. She was not floating. The waves swept over her with awful violence, and she was soon nothing better than a bare hulk. Boats, men, and even the top-sides, were carried away. Luxon and some of our shipmates who were swept away by the swell succeeded in gaining the rocks, but Luxon was the only man of them who was able to hold out against the force of the seas and to reach the shore—it is true in an almost lifeless condition. A wave carried me away and threw me ashore near to where Luxon was. We looked back and saw a horrible sight—a shapeless mass of men struggling for life and hurled one against the other by the great seas. Luxon and I, after resting for a bit, made a move, and with great difficulty reached at length the village of Javina. Gould was much longer in the sea than we were. He is a strong swimmer, and fought the waves to the end, being at last thrown up almost naked on the beach just

Digitized by Google

by Cape Trece. We all met in the morning in the coastguard hut, where there were also some men who were looking after the cargo of the British steamer *Tunbridge*, which was wrecked near the same place some months ago. When day broke we saw that the *Serpent* had broken in two. The deck was swept absolutely clear, but the six guns remained in their places. The top-sides were totally destroyed a few minutes after the *Serpent* went down. On the following day the bodies of a number of sailors, with cork jackets on, were seen floating on the surface of the water. All were dreadfully disfigured, and some were headless trunks. Most likely they lost all consciousness by being thrown against the rocks. Forty-eight bodies have been buried, among them one believed to be that of Captain Ross, in a lonely spot, called Porto do Trigo, quite close to the scene of the wreck. The parish priest of Javina gave shelter and aid to Luxon, who had met with some grateful charity from some labourers whom he met near the beach, and who gave him a piece of bread. Out of the six boats with which the *Serpent* was fitted not one could be used for saving life. One has been cast up on the shore in a fairly sound condition, but all the rest were smashed. Most of the wreckage reaching the shore in small fragments, having been dashed to pieces among the rocks."

### THE "RIKKEN JIYU SHIMBUN."

THE new Constitutional Liberal organ, the *Rikken Jiyu Shimbun*, made its first appearance on New Year's day. In size and general appearance, it is similar to its sister paper, the *Jiyu Shimbun*. The new journal declares that it is organ of the *Rikken Jiyu-to*, but at the same it proposes to maintaina certain degree of independence, and to oppose even the policy of its own party, whenever such policy is deemed incompatible with justice, or injurious to the interests of the country. The editorial staff seems to remain pretty much the same as at the time when the paper was known as the *Koko Shimbun*.

### THE AMERICAN EXHIBITION OF 1893.

TELEGRAPHIC news was received in Tokyo on the 3rd instant, dated at Chicago, January 2nd, to the effect that an official invitation to Japan to take part in the great international exhibition of 1893 had been forwarded from the United States. There appears to have been considerable delay in carrying the arrangements for the Exhibition to such a point as should justify the issue of official invitations to the Governments of foreign countries. Doubtless Japan will now set about preparations with all possible expedition.

### RETURN TO OLD TIMES.

IN the last issue of the *Tensoku*, a Tokyo magazine of very high standing, the following paragraph appeared among the miscellaneous items of news:—"The editor of the *Japan Mail* says that in the West it does not show a want of respect to look down from an elevated place on the Imperial cortége. The statement itself is a rudeness. The Occident is the Occident: Japan is Japan. Foreigners cannot be suffered to come to Japan and practise their own customs here in violation of Japanese etiquette. The conduct of the bettoes (*i.e.* at the Russian Legation), need not be specially blamed, seeing that such fellows are little better than animals, but the only plan to pursue with regard to the ugly barbarians is that the youth of Japan who possess muscle and manliness should unite their strength to eradicate such rudeness and to strike terror into their hearts."

* * *

With reference to this extraordinary paragraph, the following letter has been published by the *Jiji Shimpo*:—

TO THE EDITOR "JIJI SHIMPO."

SIR,—I enclose a paragraph which appeared in the *Tensoku* Magazine of the 17th instant. It seems to call for immediate correction, being eminently calculated to inflame Japanese against foreigners, and to provoke a breach of the peace. The writer of the paragraph charges the *Japan Mail* with having asserted, in effect, that the etiquette observed in foreign countries may with propriety be observed by foreigners in Japan in their intercourse with Japanese, whether such etiquette is opposed to or in conformity with Japanese customs. Nothing of the kind has ever been published in the *Japan Mail*. All foreigners agree that it is their duty to behave towards the Sovereign of Japan according to the methods prescribed by Japanese etiquette. The Japanese consider it impolite to look down from a high place on the Imperial cortege as it passes. Such an act would not be in the smallest degree impolite in Europe, but since it is considered impolite in Japan, every respectable foreigner deems himself bound to abstain from it. May I ask you to publish this correction in your widely circulating columns, so that the error may not remain uncorrected until the next issue of the *Tensoku*, a month hence. I may add, in conclusion, that I cannot believe that the paragraph in the *Tensoku* was inserted with the Editor's knowledge. The epithet applied there to foreigners, and the direct attempt to excite the youth of Japan to acts of violence against them, are too disgraceful to be wittingly admitted by any respectable journal or periodical.

I am, Sir, your obedient servant,

EDITOR "JAPAN MAIL."

Yokohama, December 22nd, 1890.

* * *

The *Tensoku* was formerly edited by Mr. Kato Hiroyuki, now President of the Imperial University, but Mr. Kato ceased a few months ago to perform editorial functions, and the magazine came under the direction of five or six literateurs and scholars of distinction. Mr. Kato did not, however, sever his connection with the *Tensoku*. He continues to write for it, and this fact, together with the general excellence of the periodical, secure it large circulation and influence among the student classes. In no publication should we have been less prepared to find a paragraph such as that translated above; a paragraph redolent of the worst anti-foreign spirit, and distinctly calculated to provoke breaches of the peace. The word applied to foreigners (*Shuriyo*=ugly barbarians) had passed, we hoped, almost completely out of the Japanese vocabulary: at all events, the columns of the *Tensoku* were the last place where we should have looked for its revival. There is one thing only to be urged in extenuation of such writing, and that is that the chief editors of a periodical like the *Tensoku* exercise no efficient supervision over the contents of the miscellaneous news column. A pleasant fiction prevails in Japanese journalistic circles that an editor is only responsible for what emanates from his own pen. The strong probability is that not one of the distinguished literateurs connected with the *Tensoku* magazine had any conception that such a paragraph had been inserted, or gave himself any thought about the matter which the newspaper hack charged with the function of padding might choose to insert. A peculiar fashion of conducting a periodical, it must be admitted, but since it is the fashion we mention it to obviate any suspicion that Mr. Kato Hiroyuki and his brother-editors sanctioned or inspired the disgraceful paragraph. We do them the justice of believing them quite incapable of anything of the kind.

### A PROTEST.

WE cannot but enter a strong protest against the glaringly unfair and ungenerous treatment which the new editor of the *Japan Gazette* is already receiving. Long before he assumed editorial charge, he became the object of snarling malicious attacks, and now when only two or three numbers of the paper he edits have appeared, every effort is being made to held him up to public obloquy and scorn. It is, of course, none of our business to defend a brother editor. We should be sorry to be guilty of such an impertinence. What we desire to speak of is the general aspect of this question. Is it, we would ask, is it absolutely necessary that this settlement should be kept in a perennial state of bickering and yapping merely because it happens to be cursed with the presence of a man who has ceased to be capable of exercising any faculties save those of slandering, backbiting, imprecating, and maligning? Are we never to have anything resembling peace and quiet, and is rational discussion to be perpetually impossible? It is a public nuisance of the most offensive and mischievous character that a newspaper should be published here having no other purpose than to stir up bad blood and to keep the air full of venom and animosity. The reception accorded to the new *Japan Gazette* illustrates the situation. From the very outset malicious anathemas and truculent abuse were hurled at the editor's head, and every possible effort was made to bait him into some display of anger and resentment. We do not believe that there can be many people in Yokohama sufficiently degraded to find amusement in such a miserable spectacle, or sufficiently fond of wanton quarrelling and mischief-making to sympathise with a man who lives solely on the ill-will he creates.

### A NEW LIBRARY OF ENGLISH LITERATURE.

WHEN the "English Men of Letters" series began to came out a few years ago, it was generally felt that a boon had been conferred upon the reading public. The prominent firm of Messrs. Macmillan, who were the publishers, secured the assistance of the best literary talent available. Mr. John Morley acted as editor, and some of the volumes are masterpieces in their way. The editor's own *Burke*, Mark Pattison's *Milton*, Myer's *Wordsworth*, Symonds's *Shelley*, Cotter Morison's *Macaulay*, are brilliant and suggestive compendiums of all that is most valuable to know regarding these several writers. Some of the series, though the work of competent hands, it is true, are scarcely on the same high level. Goldwin Smith's *Cowper*, for instance, strikes us as slightly perfunctory and distinctly unsympathetic; Minto's *Defoe* is indigestible; Henry James's *Hawthorne* is somewhat crotchety. But these are unimportant blemishes—the series as a whole forms an invaluable shelf in a literary library. Encouraged by the success of these brochures, a less-known London publisher, originally hailing from the North of England, has commenced a series on much the same lines. With Mr. Eric Robertson as editor—a young Scotchman who is Professor of English Literature in one of the Indian universities—Mr. Walter Scott has already published over thirty lives of Great Writers, in this case embracing Hugo, Goethe, Schiller, and other of the continental masters, and more volumes are promised. It is difficult to speak too highly of these little volumes, which are offered to the public at a marvellously cheap price; not in paper covers, like the red shilling reprints of the "English Men of Letters" series, but handsomely bound in cloth. Two initial advantages have these books over the earlier series; they are indexed, no little aid to the student in after reference, and they have appended an invaluable bibliography of the author, by Mr. John Anderson of the British Museum. If we compare the new series with the old, we shall find the newer essays in several cases more able and sympathetic, and in all cases at least comparable. Specially good are Garnett's *Carlyle*, Blackie's *Burns*, and Marzials's *Dickens*. Accompanying this series, and from the same press, there appear in quick succession volumes of the "Canterbury Poets," little books for the pocket prettily bound in buff and gold, with red edges. The price again is one shilling, and each volume contains from 300 to 350 pages. The editor is Mr. William Sharp, a name well-known in London literary circles, who himself edits Shakspeare's *Sonnets*, *Poems and Songs*, *Sonnets of the Century*, and Scott's poems. A series of prose writings, called the "Camelot Series," published at the same price, but of a larger size and in less dainty binding, also receives monthly additions and now includes the Letters of Shelley and Byron, essays by Lowell and Leigh Hunt, de Quincey's *Confessions of an Opium Eater*, and various other interesting works. Truly, this an age of cheap and dainty literature.

### THE ASIATIC QUARTERLY REVIEW.

A FEW months ago we reported that the *Asiatic Quarterly Review* was about to cease publication, Sir Lepel Griffin, the proprietor, being

Digitized by Google

tired of it, and having failed to secure a purchaser. It was generally understood that the April number would be the last, and so indeed it would have been were it not that at the last moment a purchaser did step in just in time to produce the July number. This was Dr. Leitner, the former head of the Punjaub University, at Lahore, and now the head of the Oriental Institute at Woking near London. The July and October numbers were brought out under Dr. Leitner's editorship, and they could scarcely be said to show any falling off from the magazine under Mr. Boulger's editorship. Mr. Boulger, by the way, apparently continues to aid the magazine as a contributor. But Dr. Leitner is nothing if not energetic, and as the magazine was not a great success while Sir Lepel Griffin was proprietor, he is about to enlarge its scope and make another bid for popularity. He has changed his publishers from Fisher and Unwin, to Swan, Sonnenschein & Co., and from the commencement of the New Year he proposes to extend the scope of the *Review* to Africa and the colonies generally, and to call it *The Asiatic Quarterly Review and Oriental and Colonial Record*. The October number, by the way, contains an article by General Tcheng-ki-tong, whom the editor describes as "His Excellency." The article is entitled "China: a sketch of its social organisation and state economy." It is in the General's usual style. "You in Europe think a good deal of yourselves; but we in China have got all that you are proudest of and had it when you were still in a state of barbarism, and we have very much more also." For instance what more delightful explanation of Chinese conservatism could there be than this:—"With us theories do not rank higher than experience; we do not confound mere change with improvement; we hesitate to adopt innovation and to subvert our institutions merely to see what will come of it; and we are averse to experimenting with the happiness and lives of our millions; this is our sin in the eyes of Europe." And so the article goes on, everything is delightful in China, all is based upon the domestic affections, upon the relationship of parents and children; the dead are never forgotten in China as in the West. "We carry them to the hills nearer to the skies, and they are in the midst of eternal nature; they sleep undisturbed their eternal sleep. Their memories are ever kept fresh, and their deeds are recorded as an example to future generations." The concluding paragraph from the General's article reads curiously in the light of our knowledge of recent Chinese famines, and of the methods by which relief has been afforded to starving populations spread over vast areas. "I should have liked to describe state administration more in detail than I have done; to speak of the granaries established in every province to counteract the danger of famines, and especially to have given a consecutive history of the present marvellous system of canalization and irrigation in our country; how our means of communication are of an unrivalled perfection and cheapness, through the medium of our rivers and canals, and how these same rivers are used for the fertilization of the whole country, and give rise to an extensive system of pisciculture throughout the Empire." The General it will be observed applies a pretty thick lacquer to the cracks and crevices of Chinese administration. He is like the horse dealer who with mercury and other deleterious compounds has made a broken down old screw to put on for an hour or two the appearance of a Derby favourite.

### THE LATE MR. HARDING.

By the death of Mr. H. Harding, which took place on Sunday, Yokohama has lost one of her oldest residents. Mr. Harding came to Japan in the early years of foreign intercourse with this country, being a trooper in the escort of Her Majesty's Minister and was present at many of the events which marked the history of that exciting time. He rode in the escort of Sir Harry Parkes when the fanatical attack on that Minister's retinue was made during its progress to Kyoto; was an eye-witness of the daring bravery of the present Minister of State for Communications, which Queen Victoria recognised by the present to Count Goto of a handsome sword; and was if, we are not mistaken, himself severely cut by one of the assailants. Since the death of his wife about a year ago Mr. Harding has been gradually breaking up, and the end was not at all unexpected. A kindly, simple-hearted man, of sterling honesty, Mr. Harding had not an enemy in the place, and many a needy soul has had cause to be grateful for the well-timed bounty of the benevolent couple whose places are now vacant among us.

* * *

The interment of the remains of Mr. H. Harding took place on Monday in the General Cemetery. A short service was held in Christ Church, at 4 o'clock, Rev. C. G. Gardner, and Mr. W. T. Austen officiating. The coffin was then, Miss Leach playing the "Dead March in Saul," on the organ, carried to the hearse and conveyed to the cemetery, Dr. Wheeler, and Messrs. Jas Martin, junr., E. A. Bird, M. Russell, B. H. Pratt, J. L. O. Eyton, A. Patterson, and W. Mann being pall bearers. After the usual services at the cemetery the coffin was deposited alongside that of Mrs. Harding, who died on December 11th, 1889, and on whose tombstone space was left in which to record the death of her husband, who has now followed her at the end of a year. Despite the bitterly cold weather, a large number of mourners attended the services both in the Church and at the Cemetery, and many beautiful wreaths were placed on the grave.

### A NEW GUN.

A PUBLIC company is being formed in London for the production of a new fire-arm, the invention of M. Paul Giffard. The title of the company is the International (Giffard) Gun and Ordinance Company, Limited, and the following is extracted from the prospectus:—

In 1853, in conjunction with his brother Henry, Monsieur Paul Giffard invented the well-known Giffard injector, which is now very largely used in works using steam power. From that period up to 1855, the energies of the two brothers were directed towards further scientific discoveries. Monsieur Paul Giffard is the original inventor of the cold air machine (or refrigerator) used for the preservation of fresh meat, &c., and in 1879 was the successful competitor with that invention at the Academy of Science and Medicine, the Society of Health, and at the Municipal Council of Paris, against thirty-two European and foreign competitors, consisting of the most noted engineers. He is also the inventor of the piston bearing his name, together with various apparatus for the production of vacuum, and for the liquefaction of gases.

Since the year 1874 the delivery of telegraphic letters in Paris has been effected with extraordinary rapidity by M. Paul Giffard's Pneumatic Tube System, which has now been applied throughout Paris. In 1871 he commenced his practical experiments at the works of the Paris Gas Company for the compression of steam and air, and the liquefaction of gases. The result has been the invention by M. Paul Giffard of his method for the production of aquefied gas, in a form which is under absolute control, as li substitute for gunpowder or other explosives.

The liquefied-gas gun appears to be destined to create a new era in the manufacture and use of all classes of sporting guns and rifles, also pistols and saloon arms. By it many of the difficulties which hinder the adoption of magazine rifles are obviated. Guns of 6, 8, and 12 millimetres are capable, according to their calibre, of firing from 50 to 300 consecutive shots without recharging.

The following are the claims by M. Paul Giffard in respect of his new liquefied-gas gun:—

1. Absence of the usual report, fire, smoke, dirt, and smell.
2. Great precision, the force used being capable of the most accurate adjustment.
3. No recoil.
4. No heating of the gun, even when fired with the greatest rapidity.
5. The gun is small, light, and inexpensive, and can be handled with perfect safety.
6. The projective power does not deteriorate, but is as effective after a lapse of twelve months as when the reservoir or cartridge is first loaded, and is not affected by damp.
7. The reservoir containing the liquefied gas is small and light, and the cost is very small.
8. Spherical or elongated conical bullets and small shot can be used.

The guns can be seen and tried at the offices of the Company on application to the Secretary.

### CALENDARS.

AMONG the calendars received this year from various firms and offices, two call for special notice. The first bears the name of Mr. Tamamura, the well known photographer of Bentendori. It is a beautiful object. Three-fourths of a portly sheet of cardboard are occupied by a finely executed chromolithograph of red chrysanthemums, the calendar itself being contained in a bundle of diminutive slips fastened to the card-board with green silk-braid, a loop of which material also serves to suspend the sheet. A pretty and at the same time costly gift, we trust that this calendar may be taken as an indication of Mr. Tamamura's prosperity. The second calendar comes from the great Tokyo firm of Messrs. Maruya and Company. It aims at being useful rather than artistic, but the lettering and the borders of red and gold are so skilfully designed and happily executed that the whole constitutes a decidedly attractive object. The calendar consists of two columns, the one showing the Occidental almanac, the other the Japanese. All sorts of useful information is given. We have a conspicuous list of the Japanese holidays and their meaning. We have a division of the months into long (*dai*) and short (*sho*); a concise and clear arrangement for connecting the lunar calendar with the old Japanese circular reckoning, and an easily understood list of the vital days of the year from a Japanese point of view. Messrs. Maruya and Company's calendar is certainly the most serviceable we have yet seen for the purposes of people living in Japan.

### THE ADVOCATES' BILL.

THE business to be considered by the House of Lords to-day, on the re-assembly of the Diet after the New Year's recess, is the second reading of the Barristers' Bill—or the Advocates' Bill as it might perhaps be more appropriately called. We have already expressed our strong hopes that the House will pass the Bill, since we are fully persuaded that the measure would be of immense utility to the sound progress of the Japanese judiciary. The Bill itself is only a small part of the proposed legislation. If it passes the Diet, the next step would be the issue of regulations by the Minister of State for Justice, according to which the advocates of the Supreme Court, of the several Appeal Courts, and of the most important Courts of First Instance would have to organise themselves into chapters, constituting virtually self-governing bodies with library fund, charity fund and so forth. Every practising advocate would have to belong to a chapter, and upon chapters would devolve the function of examining into professional shortcomings and performing other duties similar to those of the Benchers in England. In a word, the measure aims at elevating the status of the Bar directly, and of the Bench vicariously, and we fail to see how there can be any second opinion about the benefits it would confer on the country.

### THE "TENSOKU" AND THE "JAPAN MAIL."

A CORRESPONDENT points out that a passage in the letter addressed by the editor of this journal to the *Jiji Shimpo*, with refence to the extraordinary note which appeared in the last issue of the *Tensoku* magazine, may possibly give rise to misunderstanding. The passage is:—"The Japanese consider it impolite to look down from a high place on the Imperial cortége as it passes. Such an act would not be in the smallest degree impolite in Europe, but since it is considered impolite in Japan, every respectable foreigner deems himself bound to abstain from it." Our correspondent observes that this passage should be supplemented by the condition "provided that the foreigner has any knowledge of the Japanese rule." We did not think it necessary to add so obvious a proviso. The particular custom referred to by the *Tensoku* is one of which very few foreigners can have any knowledge. It is a custom rapidly becoming obsolete. In the House of Peers itself there is a gallery from which all the foreigners and Japanese invited to be present at the ceremony of opening the Diet looked down on the Throne and the Emperor, and we have ourselves seen Japanese soldiers looking out of the windows of their barracks as the Emperor passed. The *Tensoku* brought against us a

Digitized by Google

general accusation of justifying the observance of foreign etiquette by foreigners in Japan, whether it be opposed to Japanese etiquette or no. We distinctly repudiate the charge, and say that every respectable foreigner is perfectly willing to observe Japanese etiquette in Japan, provided that he knows what Japanese etiquette is. But the most courteous and considerate foreigner may err through inadvertence, especially when, as in this case, there is question of an obscure and peculiar custom which is fast becoming obsolete, which is not universally observed by the Japanese themselves, and which is distinctly violated by the arrangements made for the reception of visitors within the precincts of the Diet itself. We may add, too, that while foreigners in general, and above all such foreigners as were assembled in the pavilion of the Russian Legation garden on the 29th of November, are willing and anxious to avoid every act calculated to offend Japanese susceptibilities, the line must be drawn somewhere. The Japanese themselves, when they go abroad, are not required to observe all the national customs of the countries they visit, and they cannot expect foreigners in Japan to be invariably posted in every little detail of Japanese etiquette. Previously to the incident of last November there were probably not a hundred foreigners in Japan who possessed any knowledge of the peculiar notion that the Sovereign must not be looked down on, and even among these exceptionally well-informed persons we venture to say that half would have honestly regarded the idea as one no longer observed in practice. We are entirely ready to respect Japanese etiquette, but we expect the Japanese, on their side, to behave like reasonable beings, and not to employ savage methods of resenting every unwitting breach of their special and elsewhere unrecognised rules.

### THE ALLEGED BRIBERY OF MEMBERS.

It appears that some active politicians are determined not to lose such an opportunity as that afforded by the alleged bribery of certain members of the Budget Committee. Bribery on a most munificent scale it must have been, if rumour be credited, for certainly we are not asked to believe that the Committee-men who voted for wholesale reduction of the estimates had their pockets lined by a benevolent Government, and if we eliminate these, the large majority of the Committee, it results that a sum of one hundred and seventy thousand *yen* on the part of the Treasury and fifty thousand *yen* on the part of the Japan Mail Steamship Company were divided among about twenty members, so that each must have received about eleven thousand *yen*. Professing to credit this wonderful story, some busy Committee-men are, says the *Hochi Shimbun*, taking active steps to bring the matter before the constituencies of the unprincipled members, with the object of having them driven out of their seats and out of decent society. It is a curious phase of political agitation. We cannot believe a word of the story ourselves, but since it has found so many to circulate it, we trust that a thorough investigation will be made. Doubtless attention will be drawn to the rumour when the Diet re-assembles, for when journals of the *Hochi Shimbun's* standing lend their columns to ventilate it, the House of Representatives can scarcely afford to remain entirely silent.

### THE RESIGNATION OF COUNT YAMADA.

Writing of the resignation of the Minister of State for Justice, the *Jiji Shimpo* says:—Count Yamada sent in his resignation on the plea of indisposition, but His Majesty the Emperor would not allow him to resign, and gave him instead leave of absence for the benefit of his health, appointing Count Oki, President of the Privy Council, to act as temporary Minister of State for Justice. Count Yamada was strongly in favour of the immediate enforcement of the new Code, and had resolved to resign office if his view was not adopted, but the conduct of the Cabinet in dealing with the matter of postponement served to quicken his resolution. The Cabinet Ministers, it seems, had signed their names for approval of the Bill of postponement before it was brought to Count Yamada to sign, or he would have at once sent in his resignation, and on finding it not accepted might have sacrified his inclination for the sake of the general interest of the Government and continued to control Judicial affairs in accordance with public opinion. Having at length resolved to resign, he would not sign the document to be submitted to His Majesty recommending approval of postponement, on the ground that as he had presented to the Emperor his written views pointing out the necessity of enforcement of the Commercial Code, and had also personally answered His Majesty's gracious questions on the subject, he could not now sign a document asking for His Majesty's approval of postponement. This action of the Count's caused the delay in the issue of the Imperial approval of the Bill for postponement, and, finally, as he would not listen to the arguments of his colleagues, Count Oki was temporarily appointed to act for him, and signed the Bill as Minister of State for Justice. Under such circumstances, although his resignation has not been accepted, Count Yamada most probably will not consent to resume his post.

* * *

The *Tokyo Shimpo* says:—The resignation of Count Yamada simply urges his inability to attend to his official duties through illness. He is said to be really ill, but at the same time there can be no doubt as to his resolution having been formed on account of the postponement of enforcement of the Commercial Code, The Government decided for postponement, showing the importance attached to the resolutions of the Diet. If there had been involved any question of altering the policy hitherto pursued by the Government, all the Cabinet Ministers, beginning with the Minister President, should have resigned, and in such an event the duty of the Government would first be to dissolve the Diet. But in the present case there could no objection whatsoever to acquiescing in the resolution of the Diet, and it is really out of the question that the Minister of State for Justice alone should resign. If he cannot attend to his official business during the busy period of the session of the Diet, any of the other Ministers of State may temporarily take his place until he regains health. Count Yamagata is said to have remarked that he himself would act in the Count's stead for any number of days during the illness of the latter, and that Count Yamada need not feel so much concerned on account of a resolution formed by the Diet. It is stated that His Majesty the Emperor will not accept the resignation under any circumstances.

* * *

The *Yomiuri Shimbun* says:—The date of operation of the Commereial Code framed by Count Yamada, Minister of State for Justice, after many years of patient and laborious work, was, without much opposition, postponed at the very commencement of the first session of the Diet, and in consequence the Minister of State for Justice has decided to present his resignation. While we regret that the Minister has given to this unfortunate incident an important place in the first page of the annals of our national assembly, at the same time we must congratulate him on the respect in which he evidently holds the responsibility of a Minister of a Constitutional State and on the precedent which he has formed to guide the movements of Ministers in future. He has sent in his resignation twice, and his resolution seems unchangeable, so that it may be the Emperor will find it necessary in the end to grant his request. For ourselves, we are chiefly anxious that Count Yamada should comport himself as becomes a Minister of a Constitutional State, and we should not attempt to retain him at his post. We regret to say, however, that we think his resignation was premature. There is at present before the Diet a bill amending the Law for the organization of the Law Courts, which is not less important than the Commercial Code, and should this bill pass, the system of *Gōgi-saiban* (Collegiate Courts) on which the Minister is known to have set his heart, will share the same fate as the Commercial Code. In resigning before the fate of this bill is known, we think the Minister has acted rashly considering his grave responsibility in connection with it. We admire Count Yamada's integrity, but we cannot say that his courage has been conspicuous in his present conduct.

### THE SITUATION IN JAPAN.

This is what the *American* has to say about affairs in Japan:—"The situation in Japan has not become more quiet since the elections to Parliament. The reconstruction of political parties has been going on with reference to the control of a majority. Many Liberal groups have at last agreed to form a Constitutional Liberal party, in opposition both to the radical advocates of change and the ossified Conservatives. A large number of members-elect have given their adherence to this programme; but it has also excited the bitterest opposition apparently among the Radicals, and two of its leaders have had a narrow escape from assassination. The Ministry has been reopening the negotiations for Treaty revision, with especial reference to the abolition of the extra-territorial jurisdiction exercised by foreign consuls over cases in which one or both parties is a foreign resident. The plan formerly suggested has not proved acceptable to the people, so another has been devised with a view to obviating popular objections. But this has in turn roused the opposition of the British residents at Yokohama and other ports, who especially object to their being subjected to the new Japanese Code, which is modeled after that of France, and contains no such provision as the writ of Habeas Corpus or trial by jury. They fear the English Government is inclined to assent to the new proposal, which is to subject all residents outside the limits specified by the old Treaties to Japanese jurisdiction at once, and all within the limits after five years, and this without the safeguard of placing foreign judges on the Japanese bench,—the provision which aroused so much wrath among the common people. They transmitted their objections to the British Foreign Office in a series of resolutions, which have called out a fire of sharp criticism from the Japanese press. Certainly, an Englishman who must have the benefits of the English methods of judicial procedure, and cannot put up in Japan with what he would have to accept in France or Germany, and much more than he could look for in Russia, should keep out of any country but his own and its dependencies. He has no business to demand that the autonomy of a friendly Power shall be sacrificed to his preference for the methods of Newgate and Westminster. But it is hardly to be expected that a Jingo government in London will see this."

### SULPHUR MINING IN HOKKAIDO.

The port of Kushiro on the north-east coast of Hokkaido has, in virtue of a bill recently passed by the Houses of the Diet, been added to the list of special ports of exportation. The principal product to be exported from Kushiro is sulphur, though coal and probably some marine products may also find shipment thence. According to an article in a recent number of the *Koku-Hon*, the sulphur deposits in the island of Hokkaido are of two kinds, namely, those found on the surface of volcanic mountains, and those found in layers in beds of volcanic ashes. Only one deposit, that at Esan, not far from Hakodate, belongs to the latter class, the rest being all of the former description. The *Koku-Hon* mentions a dozen deposits, two in the Province of Kushiro, two in Toshima, one in Shiribeshi, one in Kitani, four in the islands of Chishima, one in Etorofu, and one in Ishikari. The best known of these deposits is that at Atosanobori in the province of Kushiro. The quantity of the mineral produced in 1884 was 2,096,945 *kwan* (1 *kwan* = 8¼ lbs. avord.), in 1885, 3,074,062 *kwan*; in 1886, 3,418,002 *kwan*; in 1887, 8,600,280 *kwan*; and in 1888, 13,306,559 *kwan*. The value of sulphur ex-

Digitized by Google

ported to foreign countries during 1889 from the port of Hakodate, amounted to about 220,000 *yen*. There being a near prospect of seeing Sapporo and Nemuro (some 50 miles to the north of Kushiro) connected by a waggon road running through nearly the centre of the island, it may be expected that, with the further construction of some short roads and the improvement of a few river courses, several rich deposits hitherto unapproachable from the coast will be successfully opened up.

### THE SOSHI.

A PARTY of *soshi* distinguished themselves on the 7th instant in a manner which will lead, we trust, to severe measures of repression. The members of the Yayoi Club, who belong almost entirely to the *Rikken Jiyu-to* party, assembled on that day at the Yayoisha in Shiba Park, and opened a meeting to discuss the report of the Budget Committee in the House of Representatives. Mr. Matsuda Masahisa was in the chair, and 74 members were present. Just as the debate opened at about-half past twelve in the afternoon, some twenty *soshi* entered the precincts of the club without notice of any kind. Twelve or thirteen of them immediately passed to the meeting room up-stairs, and breaking in, began to cry out that certain members of the *Jiyu-to* had received bribes from the *Kaishin-to*. This is a novel form of accusation. Hitherto it had been rumoured that the supposed bribes came from the Government and the Japan Mail Steamship Company, but the idea of the *soshi* was that the *Kaishin-to* folk had been tampering with the integrity of the Radicals, and acting upon this conviction, they burst like a thunder-chap into the Yayoi assembly. Seated on the right of the President was Mr. Uyeki Yemori, a gentleman who has already become conspicuous in the House of Representatives for the very un-Japanese warmth of his language and vigour of his gestures. Against Mr. Uyeki the invading *soshi* seem to have been particularly irate. They called to him to come over to them, but Mr. Uyeki not seeing the force of delivering himself over to a dozen hot-headed youths armed with bludgeons, shouted out that he should do nothing of the kind. Thereupon six or seven of the *soshi* sprang forward and began to rain blows upon him with their sticks. In a moment the whole room was in an uproar. The members, having no weapon but the chairs on which they sat, seized these and charged the *soshi*, who finding themselves so powerfully assailed, turned their attention to flight. Strange to say they succeeded in getting away, with two exceptions, Okada Chiusuke and Yamada Kaneo, who were seized by the *jinrikisha* coolies of the members and handed over to the police. It was found that Mr. Uyeki had lost much blood and received a nasty beating, and that another member, Mr. Yasuda Yuitsu, had also been roughly handled, but no serious injury was done to anyone. It is somewhat difficult to understand how any of the *soshi* were allowed to make their escape. The seventy members of the Yayoi Club should certainly have been able to arrest every one of the dozen youths who intruded into the upper storey of the building, whereas, had it not been for the *jinrikisha*-men below, no arrests would have been effected at all. The two men seized are said to be natives of Ishikawa Prefecture, and to be connected with the *Yeishinsha*, which, we believe, is a branch of the *Kokumin-Jiyu-to*. But the truth is that no one seems competent to identify any particular *soshi*, or to determine their political connections. Ever since the *Rikken-Jiyu-to* began to hold meetings at the Yayoi Club, the precincts of that place have been infested by youths generally supposed to be *soshi*, and supposed also to be in the pay of members of the *Rikken Jiyu-to*. What is quite certain is that these *soshi* are maintained by politicians, who perhaps employed them originally without any definite purpose, and who now find themselves unable to shake them off. The law, of course, will not be able to inflict on Messrs. Okada and Yamada any punishment more severe than that attaching to a common assault, but possibly the members of the Diet who voted with such alacrity for the abolition of the Peace Preservation Regulations may be beginning to think by this time that special legislation is not such a bad thing under certain circumstances.

* * *

After the *soshi* had taken their departure, the meeting at the Yayoisha resumed its deliberations, and finally decided that the Budget must be reduced to the extent of 8,600,000 *yen*. Of the seventy-four members present, 42 voted for this reduction and 32 against it. It may be assumed that the *Kaishin-to* members of the Diet will also vote solid for the reduction, but if out of 74 *Rikken Jiyu-to* representatives, a majority of only ten approved the measure, there is apparently a prospect of a pretty close division in the Lower House.

### THE LATE MR. NEESHIMA.

AMONG the Japanese who had the courage to make their way abroad in search of knowledge in the days when to leave the country involved a penalty of death, one of the most earnest and enthusiastic was Mr. Nishima—or Neeshima as his name afterwards came to be spelled for phonetic purposes. A strange influence was at work among Japanese in those early days. We are accustomed to speak of the Restoration as the climax of a political movement inspired partly by the ambition of feudal clans hostile to the Tokugawa, and partly by a wide-spread conviction that unless the Government were centralized and the disintegrated forces of the country united, Japan could not maintain her independence. But it is certain that without considering the question at all from a political standpoint, many a Japanese felt himself impelled by an influence which he did not think of analysing, to study foreign sciences and even foreign creeds, and to labour for the introduction of foreign systems into Japan. The time had come in fact for national awakening. The impulse was in the air and men unconsciously obeyed it. Mr. Nishima, at sixteen years of age, came across an atlas of the United States, with some account of American institutions written in Chinese. This was the turning point of his career. He set himself at once to study a foreign language. English would have been his choice, but like many another of his contemporaries he was obliged to begin with Dutch, and his secret attempts to gain instruction in that language cost him all sorts of ill-usage and suffering. At 21 he managed to get to Hakodate, where he was taken up by Father Nicolai, in whose house he remained for some time. But nothing short of a trip to America or Europe would satisfy Nishima. The story of his departure from Japan is characteristic of the time. Smuggled on board a Shanghai schooner in the disguise of a woman, he lay hid there under a pile of clothes in the captain's cabin while Japanese officials searched the ship. His voyage to Shanghai and thence to America involved nothing worse than working in a menial position, but he seems to have felt this very keenly despite the kindness of the captain, who helped him to study English. From the day of his arrival in America, however, he met with nothing but the most generous treatment. The book from which we extract these details—"A sketch of the Life of the Rev. J. H. Neeshima, LL.D., by the Rev. J. D. Davis, D.D.—makes only the briefest possible allusion to the philanthropy experienced by the young Japanese exile in the United States, but the facts stand out none the less prominently. Mr. Alpheus Hardy, the owner of the ship that carried Nishima to America, no sooner heard the youth's story than he charged himself with the duty of maintaining and educating him, and thenceforth, during a period of more than twenty-five years, this noble benevolence continued to be exercised, the funds originally given for Nishima's support being subsequently devoted to the cause which he had at heart. Nishima was undoubtedly destined to be a Christian propagandist. It may be that a brighter light was shed on the Occidental faith by the noble generosity which he himself experienced at Christian hands. But even before he reached America his diaries show that the whole current of his being had set in one direction. Fortune favoured him. When the Iwakura mission passed through the United States in 1871-72, Nishima had already been seven years in the States, and the heads of the mission found him so useful that they gave him not only a written pardon for the capital crime of going abroad without permission, but also a document according to him the privilege of teaching Christianity when he should return to Japan. Not for three years longer, however, did he think his education sufficiently advanced to leave the States, and the last scene of his residence there was not the least remarkable incident in his career. He had determined that by some means or other a Christian college must be founded in Japan, and being invited to say some parting words before leaving the States at the annual meeting of the American Board, he took the opportunity of announcing his project and appealing for help. He seems to have spoken with extraordinary feeling, and at the end of his address Governor Page of Vermont stood up and said "Put me down for a thousand dollars." Several others followed with five hundred each, or smaller sums, and thus five thousand dollars were subscribed which formed the nucleus of the large sums subsequently expended to build and equip the Doshisha in Kyoto, one of the chief Christian educational establishments in Japan. Mr. Nishima was, in fact, the father of the Doshisha. The relations he had established with the members of the Iwakura Mission, afterwards the leading statesmen of Japan, proved of immense benefit in furthering the cause of religious liberty in Japan, and enabled him to accomplish more for the interests of Christian propagandism than has ever been achieved by any other Japanese. It is interesting to learn from these records that the Doshisha was not founded entirely by American money. In 1888 Mr. Nishima had the good fortune to enlist Count Inouye's sympathies. Invited to that statesman's house, he met a number of the leading officials and merchants of the capital, and the result was that a sum of 31,000 *yen* was at once subscribed, Counts Inouye and Okuma giving a thousand *yen* each, Viscount Aoki five hundred, and Messrs. R. Hara, K. Iwasaki, K. Okura, A. Tanaka, Y. Shibusawa, Y. Iwasaki, H. Hiranuma, and K. Masuda contributing the remaining 28,500 *yen*. This signal success must have greatly brightened the closing months of Mr. Nishima's life. Already incessant work and wearing anxiety had preyed upon a constitution not naturally strong, and as the Doshisha advanced with rapid strides to be a college of which any country might be proud, its indefatigable projector was sinking quietly into his grave. On January 23rd, 1890, he died at Koiso in his 47th year. The reverence and love felt for him by all those with whom he had been brought into contact were touchingly showed in the scenes that marked his interment at Kyoto; scenes set down with simplicity that adds to their force in Dr. Davis' narrative. It seems to us, reading the story of this remarkable man's life, that his memory is destined to occupy a permanently prominent place in the history of Japanese Christianity. He possessed in an eminent degree the qualities of a great reformer, unbounded hopefulness and the widest charity. Every moment of his life was devoted to the cause he had espoused, and the strong earnestness that carried him through many early difficulties was reflected in the work of the many brave helpers who shared his faith and aided his projects. We cannot discover from reading his life how far his influence is responsible for the wise spirit so conspicuous in the policy of the American Board Mission; the policy which indicates that foreign missionaries must more and more content themselves with the position of advisers in this country. It is easy to gather that such was Mr. Nishima's view, but we are disposed to think that the leading members of the American Board needed no suggestion from without on such a subject. Still the record of Mr. Nishima's life will undoubtedly help materially to confirm that view. For we rise from its perusal with the conviction that whatever funds, whatever trained knowledge foreign pro-

Digitized by Google

pagandists may supply, the minute knowledge of Japanese social life and religious needs possessed by native Christians, and in many cases their large personal sacrifices, constitute a contribution on the whole as important as, often indeed far more important than, the contributions furnished from abroad. Japan will be converted by Japanese, and men like Mr. Nishima will be the chief factors in her religious regeneration.

### LAW 84 AND THE CONSTITUTION.

THE nature of the discussion which the Diet will soon be required to engage in with reference to Law 84 is clearly set forth by the *Choya Shimbun*. Law 84 provides that breaches of Ordinances may be punished with a fine of not more than 200 *yen* or imprisonment for not more than one year. The party that seek to have this law repealed base their argument on Article 23 of the Constitution, where it is laid down that "no Japanese subject shall be arrested, detained, tried or punished, unless according to law." They interpret this to mean that no punishment except it be in accord with the express provisions of the law, can be imposed upon a Japanese subject, and that, therefore, a punishment prescribed by an Ordinance is unconstitutional. The other side claim that Law 84 is a logical and necessary sequel of the 9th Article of the Constitution, which says:—"The Emperor issues or causes to be issued, the Ordinances necessary for the carrying out of the laws, or for the maintenance of the public peace and order, and for the promotion of the welfare of the subjects. But no Ordinance shall in any way alter any of the existing laws." It is absurd, say these folks, to contend that while the Emperor, by virtue of the Imperial prerogative, is competent to issue ordinances for maintaining public peace and good order, he is not competent to embody punitive provisions in such Ordinances. This branch of the administrative power would be reduced to a mere farce were it contended that the Ordinances referred to in the 9th Article of the Constitution cannot be enforced by any of the usual processes, but must be promulgated merely in the form of requests which people may respect or neglect according to their own convenience. So far as binding effect is concerned, they go on to say, there is not the slightest difference between a law and an Ordinance, except that whereas the former can make alterations in the latter, the converse is distinctly unconstitutional. Two classes of Ordinances, as fully explained in Count Ito's Commentary, are contemplated by the 9th Article of the Constitution, namely, administrative Ordinances issued for the purpose of carrying out laws, and emergency Ordinances issued to take the place of law in times of exigency. There cannot be the slightest doubt, they urge, that with the power to issue the latter Ordinances is associated the power to give them effect by inflicting penalties for their violation. Such are the two contentions. We confess that we agree with the latter.

### THE BUDGET AND THE CABINET.

THE *Kokumin-no-Tomo*, in its New Year's number, advises the Cabinet to adopt the plan of reduction reported to have been decided upon by the Committee on the Budget. The Diet is, in the opinion of our contemporary, about to furnish the Ministry with a unique opportunity for accomplishing a task which has long been engaging the constant, though until now unsuccessful, efforts of the Government of the present era. Viewing the matter from this standpoint, the Diet is to be regarded only as an instrument to be used by the Cabinet. The Government has thus far been unable to attain its object of retrenching public expenses, not only because it has not had strength enough for the purpose, but also because the force of circumstances has opposed the carrying out of any decisive measure in the desired sense. By way of illustration, the Tokyo periodical reviews the history of the efforts thus far made by the Government to reduce the expenses of the State. In the years 1882, 1883, and 1884, the same estimates were carried out, but there was a great deficit in every one of these years. At the end of 1885, Count Ito introduced thorough reforms in all the branches of the administration, and laid special stress on the importance of curtailing superfluous expenses. But even he was unable to realize his wish, and the year 1886 witnessed a deficit of more than 8 million *yen*. When Count Okuma re-entered the Cabinet, he was appointed Chairman of a Committee to consider some method of economizing public expenditure. But, nothing ever came of the labours of this Committee, as its Chairman left the Ministry upon the failure of his programme of Treaty Revision. Thus the Government, though always trying to cut down expenses, was every time prevented from doing so by some untoward circumstances. But the Yamagata Cabinet has now obtained a lever in the form of the Diet to lift a stone that caused all preceding Cabinets to stumble. Count Yamagata, in the opinion of the *Kokumin-no-Tomo*, is placed in a very fortunate position to accomplish what neither Count Ito nor Count Okuma was capable of accomplishing. At present all the Ministers vie with one another to obtain each for his own Department as large a share of the public allotments as possible; and when at the end of a fiscal year there remains a surplus in any item of expenditure, they always contrive to find some means of using up the surplus, for they fear—we are still quoting our contemporary—that, if they make any refund to the Treasury, they may be called upon to submit to a corresponding reduction in next year's estimates. Evils like this can only be corrected by adopting the plan of reduction which the Diet, or rather the Budget Committee, has determined upon in response to the universal demands of the people. In conclusion, Count Yamagata is recommended to be frank and straightforward with the people's Representatives, for the latter, if they are treated with confidence, will prove loyal and trusty friends to him.

### THE BUDGET AND DISSOLUTION.

IT has been asserted, and the rumour obtains pretty general credence, that the real object of the *Kaishin-to* members of the Budget Committee in insisting upon drastic reductions in the estimates, is to bring about a dissolution of Parliament. The *Mainichi Shimbun*, however, which is one of the principal *Kaishin-to* organs, strongly repudiates this idea, and points out that the reform suggested has two precedents in the *Meiji* era. The first was in 1869, when the salaries of heads of Departments—then called *Taiyu*—were cut down from 600 *riyo* monthly to 300 *riyo*, and all inferior officials were subjected to a corresponding reduction of fifty per cent. The second occasion was in 1878, when the salaries of Ministers—then called *Sangi*—were reduced from 500 *yen* monthly to 400 *yen*, and the pay of all officials from *sonin* grade upwards being at the same time diminished by 20 per cent. the Government was able to reduce the land tax from 3 per cent. to 2½ per cent. of the value of the land. These sweeping reforms were made by the Government of its own accord, and to assert now that a similar reform aims at the dissolution of the Diet and is beyond all reason, simply betrays ignorance of modern history. Such is the *Mainichi Shimbun's* view. The degree of conviction carried by it will vary considerably, we imagine.

### INFLUENZA.

INFLUENZA is making terrible ravages in Tokyo. Thousands of people are down, and once the disease finds its way into a house there seems to be absolutely no chance of escape for any of the inmates. As yet we have not heard of any fatal cases in the capital. It would appear, indeed, that only persons with weak lungs have anything serious to apprehend. The sickness makes itself felt at the outset in the form of severe headache and feverishness. The fever generally runs its course in about 48 hours, but it is apt to recur, and under any circumstances the weakness and prostration produced are quite out of proportion to the seeming violence of the attack. The total inadequacy of Tokyo's hospital accommodation and supply of nurses is brought into strong relief on an occasion of this kind. In some houses every member of the family and all the servants are struck down, yet it is impossible for love or money to procure a trained nurse. The deficiency excites much comment now that its practical inconvenience is so severely felt, but like the cholera and the water supply, the passing of the emergency will doubtless see people drift back into their usual mood of indolent apathy.

* * *

The severity of the epidemic of influenza now prevailing in Japan may be gathered from statistics published in the vernacular press. We read that out of 130,000 inhabitants of Kobe, 25,000 have been attacked by the disease, and that Yokohama has suffered still more. In the latter place, the number of cases officially reported from the commencement of the epidemic to the 3rd instant was over fifty thousand, and it is supposed that the number of unreported cases throughout the Prefecture must be nearly twice as great. In Tokyo also the disease is raging with great virulence. The official classes are chiefly attacked, seven or eight having been struck down in the Sanitary Bureau alone, of all places. In fact the influenza behaves, in one respect, exactly unlike the cholera, for while the latter chooses its victims among poor people, the former principally invades the well-to-do classes.

### NEWSPAPERS IN JAPAN.

IN the vernacular press we find a statement of the number of daily newspapers published in the various Cities and Prefectures of Japan at the beginning of this new year. The following is the list:—Tokyo, 25; Osaka, 5; Hyogo, 6; Niigata, 5; Chiba, 1; Gumma, 1; Nara, 1; Kyoto, 4; Kanagawa, 1; Nagasaki, 2; Saitama, 1; Ibaraki, 1; Tochigi, 1; Miye, 2; Aichi, 4; Shizuoka, 3; Yamanashi, 4; Shiga, 1; Gifu, 4; Nagano, 2; Miyagi, 2; Fukushima, 1; Iwate, 1; Awomori, 2; Yamagata, 2; Akita, 3; Fukui, 2; Ishikawa, 2; Toyama, 3; Tottori, 3; Shimane, 2; Okayama, 3; Hiroshima, 3; Yamaguchi, 1; Wakayama, 1; Tokushima, 3; Kagawa, 2; Yehime, 2; Kochi, 2; Fukuoka, 3; Oita, 3; Saga, 2; Kumamoto, 4; Miyazaki, 2; Kagoshima, 1; Okinawa, 1; Hokkaido, 5; total, 138.

### DR. MARTIN IN AMERICA.

DR. W. A. P. MARTIN, president of the Imperial College, Peking, now in New York, spoke on December 9th, on the Mental Life of the Chinese, and refuted the idea that they were merely imitators. He considers that the nation has furnished the world with the most original thinkers, Confucius being only second to Christ as a moralist. Dr. Martin remarked that the Japanese were more quick to apprehend, but the Chinese were more capacious and retentive. He noted the advance in educational matters, in commercial and political thought, and gave a hopeful view of the coming century in that empire.

### NOTICE TO MARINERS.

THE following corrected issue of the Notice to Mariners, No. 241, in reference to the Anping Light, in the Takow District of the China Sea, has been issued from the Coast Inspector's Office of the Chinese Imperial Maritime Customs:—Notice is hereby given that the Fort Zelandia Light, No. 18 in the published List of Chinese Lighthouses for 1890, was discontinued on the 3rd November, 1890; and on the same date a new Sixth Order, Fixed, Dioptric, white Light, to be known as the Anping Light, was exhibited upon an iron lattice mast, painted white, which stands at a distance of about 340 yards to the N. 56° 15′ W. from the tree on top of the mound in Fort Zelandia. The Light illuminates the arc of the horizon from S. 38½° W. round by west and north to N. 51½° W. The bearings are magnetic and from seaward. The Light is elevated 32½ feet above the level of the sea, and in clear weather it should be visible at a distance of 10 nautical miles. Approximate position:—Latitude, 23° 0′ 40″ N.; Longitude, 120° 9′ 45″ E. Anchorage.—During the north-

Digitized by Google

east monsoon vessels may anchor anywhere in from 5½ to 6 fathoms, with the Light bearing between N. 5° E. and N. 60 E. During the south-west monsoon the best anchorage will be found in from 6 to 7 fathoms, with the Light bearing about N.E. ½ N.

### PARNELL.

THE telegrams by the last American mail indicate that Parnell has simply played havoc with the Irish Nationalists. Had he set himself to show that having made the party, he could also unmake it, his success could not have been more signal. Hitherto the great source of his power was a truly wonderful capacity for restraining both himself and his followers. The wild Irish, by whom the shaking of a fist or of a shillelah used always to be gladly greeted as a summons to battle, became under Parnell's leadership orderly, well organized, and patient folks, and the world naturally estimated the intensity of their purpose by the strength of this strange mood. Parnell himself was the very type of the man who waits, the *vir tenax propositi* whom not the thunders of Olympus nor the collapse of firmaments could disturb. Anything less Irish—according to the generally accepted estimate of Irish character—than his manners and methods could not well have been conceived. But now all is changed. The Celtic strain so long held in check has broken loose, and Parnell is careering through Ireland, bandying bravados with his opponents, shrieking maledictions against his quondam friends, and converting the Nationalist camp into a veritable Donnybrook Fair. People now begin to comprehend something about those springs of latent energy which impelled the cold, impassive parliamentary leader to descend fire-escapes and swarm down water-spouts for the sake of a pretty petticoat. Never was there such a kaleidoscopic metamorphosis. Davitt running amock through freize-coated crowds; Parnell vainly trying to clear the lime out of his eyes with a flask of castor-oil and a lead-pencil, or invading the office of the *United Ireland* with bludgeons and a band of roughs; O'Brien and Dillon hurling anathemas across the water, and the wily John Pope Hennesey riding into Parliament on the first wave of mad meeting—these are some of the episodes of the ruin and riot that have overtaken the cause of Nationalism. Gladstone in his eighty-first year experiences a feeling utterly novel to him, hopelessness. He hears the Liberal party asking him with one voice, "Is this the man that you gave us to rule over us," and he feels that the fates have indeed dealt hardly with him in his old age. Englishmen will not follow the banner of Mrs. O'Shea's petticoat, and it is very doubtful whether even Parnell's bands can long support such a standard. But in the meanwhile he has throughly succeeded in converting Irish Nationalism into a house divided against itself. Its strength consisted in unity and organization, and it has lost both of these qualities suddenly and signally. Some Englishmen are throwing their caps into the air over this issue, and hoping that the "unholy union" of Gladstonians and Parnellites may now be severed. But in our opinion the occasion is not by any means one for rejoicing. The Irish question must be settled. The sooner it is settled the better for British interests. Everything that tends to defer settlement is distinctly opposed to British interests. As for the union between Gladstone and Parnell, that, in our opinion, was the best thing that ever happened, for it immediately converted Parnellism from a revolutionary propaganda into a lawful problem of domestic politics. If Irish Nationalism is again to be thrust outside the pale of respectability and again to be consigned to the support of the Fenian and the Moonlighter, Mrs. O'Shea will deserve to be periodically burned in effigy.

### COUNT OKUMA AND THE BUDGET.

THE *Mainichi Shimbun* may be trusted to know Count Okuma's opinions, and moreover, the views which it ascribes to him in connection with the Budget are just what we should expect to hear from a statesman of his astuteness and perspicacity. He is represented as having said that while he is entirely at one with the principle of reducing administrative expenditure, and while he recognises reduction to be one of the first duties of Government to-day, he cannot forget that the estimates have a wide and potent bearing upon many national affairs of vast importance. With care and deliberation economies to the extent of five or even six million *yen* may be effected, but unless the greatest judgment be exercised, the results of the attempt may be more harmful than beneficial. Turning to the Army and Navy, Count Okuma pointed out that to bring these services to their present condition has been the work of years, and that any sudden reduction of their resources might involve a national loss out of all proportion with the actual economy effected. So too of educational institutions, which require a long time to bear useful fruit. The slightest rashness in meddling with these might fatally hamper the progress of the country towards its educational goal. On the whole the impression left by the Count's remarks is that he favours economy in affairs connected with the civil service, but that, under any circumstances, he would proceed gradually and slowly.

### AN OLD MAN.

KYOTO, says the *Kokumin Shimbun*, can boast a particularly hale old man in the person of Hayashi Mosuke of Takebayashi-machi in the Shimo-kyo district. Hayashi is 112 years old. Every day he drinks 3 pints (1 *sho*) of saké, eats six or seven bowls of rice, and with the aid of his grandson drags a cart containing from two to three hundred *kwan* (1,650lbs. to 2,475 lbs.) of earth.

### A PERFORMANCE OF "NO."

WE are requested to state that a performance of *No Kyogen*, on an exceptionally elaborate scale, will be given in the Nogakudo, Shiba Park, on the 11th instant, commencing at 7 a.m. and lasting throughout the day.

THE *Official Gazette*, in an "extra" published on Wednesday evening, announces six days Court mourning, commencing from the 7th and ending on the 12th instant, inclusive, for the Chinese Prince, news of whose death was received in Tokyo on Monday night.

THE following has been fixed by the Secretary of the Treasury as the rate of exchange for the United States gold dollar for the current year: Gold *yen* .99; Silver *yen* .831; Mexican dollar .837.

## *THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.*

The news columns of the native papers have been during the present week full of rumours and speculations as to probable changes in the Cabinet. We will allude to some of the principal of these reports. Some people seem to believe that Counts Ito and Okuma have become reconciled, and that the former will become Minister President and the latter Minister of Foreign Affairs. Another report is that Viscount Aoki, Mr. Mutsu, Mr. Yoshikawa, and others have formed an alliance with the purpose of making a Cabinet with Count Goto as Premier. Yet another rumour states that conservative statesmen like Count Soeshima, Count Terashima, Viscount Sano, Viscount Tani, and so forth will succeed the present Ministers. There are also people who mention that Count Kuroda will probably be Count Yamagata's successor. The latest rumour is that Count Inouye is now impatiently expected in the capital by Count Yamagata, who, according to gossip, is desirous of having the whilom Minister of Foreign Affairs mediate between his Cabinet and the Diet.

* * *

Writing on the reported alliance between Count Ito and Count Okuma, the *Kokumin Shimbun* pronounces such an alliance a thing of impossibility. These two statesmen, observes our contemporary, have something in common between them; they are among other things equally distinguished from the rest of Japan's present statesmen by their capacity as constitutional and constructive statesmen. But they are to each other "what a cat is to a dog," and nothing can be more absurd than to imagine them capable of becoming friends. Who ousted Count Okuma in 1881, and who gave the decisive blow to his treaty programme in 1889? Count Ito, indeed, is frank and may be ready to become reconciled to his old foe, but it is not in the nature of Count Okuma to accept any approach on the part of the President of the Upper House. Moreover, Count Ito is now very influential in the Houses of Peers, and, as he has thus splendid hope in the near future, he will not be at all over solicitous to court the friendship of his rival. The *Kokumin Shimbun* thus thinks that nothing is more unlikely than a reconciliation between the two great statesmen.

* * *

The *Hochi Shimbun* has published an extremely interesting series of jottings on the political situation, and describes in a lucid style the positions of the various political parties and of the members of the present Ministry. We will allude to this in a separate note.

* * *

The Budget and the various questions that are related thereto, are now monopolizing the leading columns of the vernacular press. The public is anxiously awaiting the decision of the Representatives. The *Taisei-kwai* members of the Lower House held a meeting on the 6th instant, and decided to support the "moderate" section of the Committee on the Budget, that is those who propose a reduction of about 5 million *yen*. The *Yayoi* Club—consisting of the *Rikken Jiyu-to* members of the Lower House—met on the 7th instant and decided by a majority of 42 against 32 to support the "extreme" section of the Committee, that is a reduction of about 9 million *yen*. It will thus be seen that the *Rikken Jiyu-to* members are not, like the *Kaishin-to* members, unanimous on this question, and it is expected that a section of that party will join the *Taisei-kwai* members to vote for a reduction of 5 million *yen*. Supposing that about 50 out of 130 *Riken Jiyu-to* members belong to this category, and that the whole of the *Kaishin-to* support the radical plan of reduction, the forces will be almost equally balanced; the radical plan receiving the support of 80 *Rikken Jiyu-to* members and 40 *Kaishin-to* members, and the moderate plan being voted for by 50 of the *Rikken Jiyu-to* members and about 70 *Taisei-kwai* members. As to those members who do not belong to any party, it is generally believed that the majority will support the moderate plan of reduction. Thus it is strongly hoped in the circle of intelligent outsiders that the so-called "extreme" section of the Committee on the Budget will fail to carry their proposal.

* * *

Such being the case, the *Kaishin-to* organs, especially the *Mainichi Shimbun*, are very anxious to smooth the path for the success of the plan supported by its party. In a series of two articles, our contemporary tries hard to persuade the Ministers of State that it is their interest and to their credit to adopt the plan of reduction proposed by the *Kaishin-to* members and others; and that, should the Cabinet concur with the Diet on this question, the people's Representatives will heartily support the present Ministers against all the machinations of ambitious statesmen. Like the *Kokumin-no-Tomo*, whose utterances on this subject were reproduced in a former issue, the *Mainichi* maintains that the decision of the Diet—should such decision be actually passed—will furnish the Government with a unique opportunity for the accomplishment of a work which has hitherto baffled the successive efforts of statesmen like Counts Ito and Okuma. The Cabinet and the people's Representatives being thus actuated by one and the same desire to lighten the burdens of the nation, there ought not, as some people imagine, says our contemporary, to be any fric-

Digitized by Google

tion on this subject between the Executive and the Legislature.

* * *

The *Jiyu Shimbun* concludes a long series of articles on the question in the following strain:—"The retrenchment of public expenses, the reduction of land tax, the abolition of special subsidies, and so forth are approved by the public opinion of the whole country. In order to effectively represent this public opinion and to carry out the wishes of the people, it will be the duty of the members of the Diet to brave a collision with the present Cabinet or even to risk the dissolution of the Diet. For the accomplishment of the object in view, no one should regret either to work to the utmost of his capacity or to spend all he possesses. The only thing he ought to care about is the ultimate good of the country and the Diet."

* * *

Another organ of the Constitutional Liberal party, the *Rikken Jiyu Shimbun*, is apprehensive that some members of that party may, in spite of the recent resolution of the *Yayoi* club, vote in the House of Representatives for the moderate plan of reduction. When a party has decided on a definite course of action, its members are bound to adhere to the resolution on all public occasions, but in the face of the conduct of some Constitutional members at the time of the election of the President of the Lower House, our contemporary is not at all sure that there may not be some at the present juncture who will at the last moment discard the resolution of their party and join with the *Taisei-kwai* members and others for a reduction of only 5 million *yen*. Those who contemplate such an improper course of action are earnestly requested by our contemporary to manfully declare their intention, and sever their connection with the party, to which they have no right to belong.

* * *

The *Nichi Nichi Shimbun* devotes three articles to the discussion of the same subject. Our contemporary strongly exhorts the members of the Lower House to abstain from encroaching on the prerogative of the Emperor by voting for the proposal of the "extremists" who contemplate drastic changes in the organization of the different branches of the administration. Should the "extremists'" proposal receive the approval of the Lower House, the Upper House, though no doubt desirous of concurring with the vote of the Representatives on financial questions, will most probably find it difficult to give its assent to a resolution which may possibly lead to the dissolution of the Diet. A conference—we are still quoting the *Nichi Nichi*—will then be held between the two Houses; but the difference of opinion being very large, there is little hope of the conference ending satisfactorily. Under such circumstances it will be impossible to bring the Budget into actual existence, and the estimates of the preceding year will have to be carried out by the Government. If the Upper House passed the Budget as amended on the basis of the "extremists'" proposal, that would be a most deplorable event, for then the Cabinet would be compelled either to dissolve the Diet or to resign in a body, neither of which contingencies would be at all beneficial to the country. Should, on the other hand, continues our contemporary, the "moderates" succeed in carrying their proposal through the House of Representatives, there are better grounds to hope for the concurrence of the Peers. But what will be the attitude of the Government? The Government may not be willing to accept the amendments proposed by the moderates, for even then the amount to be reduced is no less than 5 million *yen*. But the *Nichi Nichi* earnestly recommenda the Çabinet Ministers to comply with the wish of the Representatives, should the latter vote for the reduction of the smaller amount. In conclusion, the *Nichi Nichi* asks the members of the Diet carefully to consider the probable consequences of the course they take at the present juncture.

* * *

The *Tokyo Shimpo*, in a series of three articles, advises the members of the Diet not to vote for the reduction of expenses which arise out of the effect of laws or ordinances, for so long as such laws and ordinances continue in force, the Government will be obliged, despite the vote of the Diet, to defray the expenses incurred. If the Diet is desirous of decreasing the salaries of officials and of altering the organization of the different branches of the Administration, it ought to make a representation to the Government for the modification of the ordinances relating to organization and salaries, before proceeding to the discussion of the Budget. But if there be not time to do so, the Diet may, continues our contemporary, first pass the Budget with such amendments as lie within the scope of existing laws and ordinances, and then take steps for modification of the ordinances. If the Government agrees to make the proposed modifications the expenses which may become needless as the consequences of such modifications will form a surplus. By adopting either of the above methods, the Diet will be able to effect its purpose in a manner at once lawful and politic. Further, our contemporary is opposed to reduction of the land tax. Such reduction as is at present contemplated by the members of the Diet will not give any perceptible benefit to individual taxpayers. Rather than reduce the land tax, therefore, our contemporary would like to see any sums saved on other items of expense employed for the extension of iron roads and for the completion of the military equipment of the country.

* * *

The *Kokkai* is opposed to the radical plan of reduction, not because the amount to be reduced is large, but because the promoters of the plan are actuated by motives far from honourable—a desire to gain notoriety, to place the Government in an embarrassing situation, to please their electors, or to further the interests of their respective parties.

* * *

The *Nippon* recommends the Representatives to make up their minds on one thing before proceeding to discuss the Budget, that is, they should interrogate themselves whether they have confidence in the present Cabinet or not. If they do not believe in the Cabinet, they ought to vote for a heavy reduction; but if on the contrary, they have confidence in the Ministry, they ought to vote for the Budget without making any reduction.

* * *

It is refreshing to turn from the endless discussion on the Budget to the discussion of the Eastern Question. It is now a well-known fact that Count Ito intends to go to China upon the prorogation of the Diet. The *Kokumin Shimbun's* reporter saw him a few days ago at the Imperial Hotel, when the Count is said to have stated without hesitation that he will go to China as the Representative of Japan, if the Government should be pleased to give him that appointment. The *Nippon* of the 7th inst. observes that it is quite possible for Japan either to form an alliance with China by sending an Ambassador to Tientsin, or to gain Russia by taking advantage of the reported eastern tour of the Crown Prince of the Northern Power. Japan may also send a clever diplomatist to Söul and control the fate of the peninsular Kingdom in concert with Russia and the United States. But where, asks our contemporary, is the man to carry out such a policy? Will Count Inouye, after the disastrous failure of his Eastern policy while he was at the head of the Foreign Office, have the courage to try his hand once more? Our contemporary is doubtful. Viscount Aoki is well informed, but he has not sufficient influence and power. Count Goto is adventurous, but his intellect backs versatility. Count Ito is experienced and has tact, but he lacks unswerving zeal. Count Okuma is only fit for considering about cents and dollars. Thus the *Nippon* sees no statesman capable of handling such a large problem for the present at least, and consequently warns the Japanese statesmen against burning their hands by rashly taking up the solution of the Eastern Question.

* * *

The *Kokkwai*, in its opening number for the present year, enumerates the questions that are attracting, or will sooner or later attract, the attention of Eastern statesmen. First the Riukiu problem will one day or other be raised by the Chinese Government, which has not yet freed itself from the delusion that that group of islands is a tributary of China. Secondly Russia's policy of aggrandizement in Korea is destined to engage the serious attention of the statesmen of England, China, and Japan. Thirdly, the Mongolian and the Slavonic races are about to come into collision on the borders of Manchuria. Fourthly, a similar collision will take place between the Teutonic and the Latin races in the south of the Asiatic continent. Fifthly, yet another collision between the Tentonic and the Slavonic races will come to pass in Western Asia.

* * *

As to the Riukiu question, our contemporary devotes a separate article to it. The *Kokkwai* seems to place some credit on the rumour that the coming of Lord Li as China's Representative to this country has some connection with the question under consideration. As to Japan's right of suzerainty over these islands, our contemporary states that it rests upon unquestionable grounds, geological, ethnological, linguistic, and historical. It is not necessary to reproduce what is said about Japan's claims of sovereignty over the group of islands, for this part of the subject has been dwelt upon by the Japanese papers over and over again. There are two things, says our contemporary, which Japanese statesmen will do well to remember in negotiating with Chinese diplomatists; namely, that the latter are exceptionally astute and sharp, and that, in consideration of the larger interests of Japan and the East in general, this country ought to do whatever it can do honourably to sooth any ill feeling that China may entertain about the Riukiu question.

* * *

The *Tokyo Shimpo* (*Oriental News*) is now engaged in a long series of articles on the situation in the East. Seven articles have already been published, but our contemporary has hardly finished the introductory part of the discussion, its efforts having thus far been confined to a description of the condition of the various countries of Asia.

* * *

Mr. Hoshi Toru has discussed at great length in the columns of the *Rikken Jiyu Shimbun* the question of Treaty Revision. We may refer to his essay in a future issue. Here it will suffice to quote his concluding words:—"It will thus be seen that extraterritoriality, the present tariff arrangement, and so forth, injure not only the sovereign rights but also the interests of the country. How, then can we remain silent? It is the duty of every Japanese subject to rouse the public opinion of the country, to expose the injustice and unreasonableness of the present treaties and their injurious consequences on the national rights and interests, and thus to induce foreign nations to accept our demands, to abolish the system of extraterritorial jurisdiction, and restore to Japan the right of regulating its own tariff."

* * *

The *Jiyu Shimbun* and the *Choya Shimbun* are discussing the question of the defences of the country. The *Choya* is especially concerned with the development of the Navy. The *Jiyu* has not yet concluded its essay, but its purpose seems to be to advocate the parallel development of the Army and the Navy.

* * *

The *Kokkwai* devotes several articles to the discussion of Law No. 84. The *Yomiuri Shimbun* writes copiously on the responsibility of Ministers of State. The *Jiyu Shimbun* has at last concluded its long essay on the Examination of Silk Worms Bill. The *Jiji Shimpo* discusses the responsibility of the Minister of Education in regard to moral education, and the relation between Codification and Treaty Revision. The *Hochi Shimbun* writes at great length on the 67th article of the Constitution.

## *THE BARRISTERS' BILL.*

THE Imperial Diet has finished its first month of legislative work. Looking back at what has been done, we do not hesitate to say that one of the most important measures submitted for the consideration of the House of Peers was the Barristers' Bill. Should this Bill become law it will stand at the head of the list of useful legislative efforts resulting from the earliest exercise of representative institutions in Japan. The intention of the Bill very clearly set forth in the explanatory document accompanying it, received still further elucidation from the speech of the Minister of Justice in the House. Its prime purpose is to raise the status and increase the privileges of barristers, in order to better qualify them for the discharge of their duties as members of the national judiciary. It is true that some of the provisions embodied in the Bill may seem severe to the Japanese Bar of today; the provisions, for example, that certain fees shall be paid by legal practitioners on enrolment, and that they shall also give monetary security of no small amount to the association with which they connect themselves for purposes of practice; the provision that a barrister must practise for an appointed number of years in the lower courts before becoming qualified to have his name entered in the list of practitioners in the upper courts; the provision for the apprenticeship of law students before they are permitted to practise, and the provision that they must pass certain examinations determined by the Minister of State for Justice. All this has not been found universally agreeable. We learn that many members of the profession both in the capital and in the provinces have been more or less active in endeavouring to obtain some mitigation of the proposed provisions, and that they have carried their opposition so far in some cases as to suggest little attention to the objects of the measure. Their attempt to reduce the enrolment fee from 100 *yen* to 5 *yen*, and to preserve the same scale for passing to the Appeal Courts and the Supreme Court, shows that they are willing to ruthlessly sacrifice the spirit of the Bill to their own temporary convenience. Thus far we have not been able to ascertain the opinions entertained by the leading members of the legal profession, though several of them, we believe, took part in the proceedings of a meeting held by the Tokyo Barristers in opposition to the Bill. Prominent members of the Bar like Messrs. MASUJIMA, OYAGI, TAKAHASHI, HATOYAMA and so forth have not yet spoken. It may be granted that the barristers are the wisest and safest guardians of their own interests, but we cannot go so far as to admit that they are the best judges of what is required for the public welfare. Their treatment of this Bill, or at least the treatment it has received at the hands of a section of them, has surprised us. That they should seek to modify its provisions in degree might have been natural, but that they should endeavour to change its character radically is startling. Having regard to the history and condition of the Bar in Occidental countries, and remembering how imperative is the duty devolving on Japan to develop her judicial system on sound and intelligent lines, we are convinced that the Government showed deep wisdom in framing and proposing the Bill. The temporary convenience of the present generation of legal practitioners is not to be weighed in the scale against the future of the Japanese Bar. We cannot regard it as a healthy state of affairs that a youth who has just graduated at a law school should be able to establish himself in practice at once, without any title whatever to public confidence or any guarantee of respectability. Some differentiating factors are needed, above all under such circumstances as those existing in Japan at present, where the qualifications attaching to education receive consideration quite out of due proportion with the capacities developed. There is no sufficient reason to think that the fees and guarantees prescribed by the Bill would prove really irksome. Their effect would be simply limited to weeding out of the ranks of aspiring practioners those whose presence there has the effect of lowering the general level. The House of Peers passed to the second reading of the Bill on Christmas Eve, and will continue its discussion after the New Year's recess, but judging by the opinions thus far expressed in the House, the majority seem disposed to reduce the Bill to such dimensions as would make it virtually identical with the existing Barristers' Regulations. There is, of course, room for some little reduction in the matter of enrolment fees, and for some little widening of the privileges enjoyed after admission to practice, but we sincerely hope that the House will not meddle with the somewhat strict qualifications for admittance, or with the conditions prescribed for training and apprenticeship. Just at present the current of public opinion seems to set against the Bill. Not barristers only, but the students of certain law schools, including the Law College of the Imperial University have been actively agitating for modifications in the provisions of the measure. Even men like Dr. KATO and Professor HOZUMI, of whom we should have expected different action, seem to have been carried away for the moment by the wishes of the students. But we are not without hope that, at a later stage of the discussion, they will recognise the relation of the Bill not to the present time and the present generation of law students, but to the future judicial progress of the nation. The students themselves ought to perceive that it is not for their own interest to have the doors of the profession thrown open too widely at this stage, since that simply means that youths admitted to practice will find their advancement more and more checked by over-stocking in the senior ranks. Japan has planted many foreign trees in her soil, and the time has now come for her to watch over their growth, and see that they do not become mere exotic weeds. The future of the Bar, one of the most important of all these trees, depends to a great extent on the fate of the Bill before the Upper House, and we sincerely hope that the Peers will exhibit statesmanship and judgment worthy of the occasion. Some very distinguished members have still to speak. The Chief Secretary, Mr. KANEKO, may lend his powerful voice in support of the Bill, and Professor TOYAMA, despite his proverbially low estimate of the reforming influence of legislation, may endorse the arguments advanced by the Vice-Minister of Justice. Certainly if the measure is passed without radical alteration, it will materially help to raise the status and dignity of the Japanese Judicial system.

## *JAPANESE POTTERY.*

PROBABLY no one has done so much to familiarise the Western public with the art of Japan as Mr. JAMES L. BOWES of Liverpool. From the point of view of insight into that art, and scientific analysis of its characteristics, Dr. W. ANDERSON is far ahead of any other writer. His *magnum opus* on the Pictorial Art of Japan, and his smaller work on the Japanese and Chinese paintings in the British Museum, constitute in themselves a library of information. Nothing that Mr. BOWES has accomplished enters so high a category, but on the other hand, all the books of which he has been sole or joint author, are without exception highly attractive for the sake of the loving spirit of enthusiasm that pervades them, the exquisite illustrations that embellish them, and the splendid indifference to cost that has presided at every stage of their preparation. The last of these works which has just made its apparance—"Japanese Pottery, with Notes describing the thoughts and subjects employed in its decoration"—is to our mind incomparably the best of the number, being in the main happily free from the inaccuracies and misconceptions that disfigure its predecessors. It is a noble book, printed on the most luxuriantly thick paper, and resplendent with chromolithographs and engravings of the highest type. The text proper, which contains the history of Japanese Keramic art, and information about the various factories, is somewhat meagre. It occupies only 162 pages, as against 307 pages filled with a descriptive catalogue of specimens forming the collection of the author. Per-

Digitized by Google

haps we ought not to quarrel with this distribution of space, since the genuinely enthusiastic collector will doubtless study all Mr. BOWES' descriptions with eager satisfaction, and since the text itself is certainly too curt to convey sufficient information without the aid of the catalogue. Mr. BOWES has never been in Japan, we believe. In reviewing one of his previous works, we alluded to this fact as a drawback to perfect knowledge, but we now find that our sympathy was misplaced, for Mr. BOWES asserts very emphatically that Europe is the proper place to study Japanese Keramic art. His theory about this is so curious that we venture to quote it in full:—

The circumstances under which many of the finest wares were made, and the manner in which they were dispersed, have given collectors in Western countries a wider and more correct experience on the subject than it was possible for visitors to Japan, or even residents in that country, to obtain.

It is well known that the finest examples of pottery, lacquer, and other wares were made either in the factories established by the various princes, or by the artists more immediately attached to their courts; these objects would either be presented by the princes to their friends or to the ruling Shogun, or preserved in their own collections, and there they might remain for generations little seen, for in Japan there have been no museums, and it was the custom to exhibit such objects with much reserve, a few only at a time, and this chiefly at the change of the seasons, when a simple vase, or perhaps a pair, a *kakemono*, or some other example of art, would be placed in the *tokonoma*, a recess in the room formed for the display of such objects; and when another season came round other works appropriate to it would be substituted, and all in their turn would be restored to the treasure house. "It would have been considered the height of vulgarity in my country," said a Japanese visitor to the author, "to display all these works at once, as you do in your museum."

It will be plain that such conditions as these would render it difficult, indeed impossible, for visitors to Japan, or even residents, to acquire a wide and comprehensive knowledge of its art-works; and even those residents who have had the opportunity of inspecting the collections of some of the *daimyo* have been surprised to find how small they were. And this was generally the case, but there was one notable exception: for the house of Tokugawa, during its lease of power, was always a liberal patron of the arts, and had accumulated in its treasure houses numerous works of the highest beauty, to which were added the gifts of the princes from amongst the rarest objects produced at the factories under their patronage, or by the artists attached to their courts. These treasures were little known except by reputation in Japan, and were perhaps never really seen until they were displayed at the Paris Exhibition in 1867, to which they were sent by the last of the Tokugawa Shogun, ostensibly to illustrate the arts of his country, but in reality for sale with the object of raising funds with which to carry on the civil war. It was these works which first gave European collectors the opportunity of studying the finest examples of Japanese art.

Four years later, when the feudal system in Japan was abolished, the *daimyo* broke up their establishments and sent their collections out of the country; comparatively few of the objects were offered in Japan, for the princes would naturally prefer to send their heirlooms away for disposal rather than have them exposed for sale in the curiosity shops of Tokyo or Yokohama. The position is well illustrated by the circumstances under which the most important examples of old *cloisonné* enamel, which were sent to Europe about the same time, left the country; they were evidently shipped secretly, for many of them were pasted over with paper to disguise their nature, and it is a most singular fact that these beautiful works are entirely unknown to the connoisseurs and dealers of Japan, who confess that they had never seen them in their own country, although they were well acquainted with the smaller efforts of the Hirata family in the ornamentation of sword furniture, and the modern imitations of both, but at the same time they admit that the character of the decoration, and the imperial emblems with which they are ornamented, undoubtedly indicate that they must have been made for imperial use. And it is a still more curious fact that, even now, after most of the examples of the art have been in England for about twenty years, the Japanese who have seen them are unable to dispute the theories as to their date and origin which were set forth in *Japanese Enamels*.*

We admire the boldness of this announcement, and its originality. But at the same time, we at this end of the water cannot consent to be thus quietly relegated to a back seat. It may be frankly admitted that a student of Japanese Keramic art in Europe possesses some advantages. He can study the collection made by the ELECTOR of Saxony between 1698 and 1724, that brought together in Madrid, and those assembled in more recent times for museum purposes. At Dresden he can be quite certain of seeing what kind of work Japanese potters were capable of doing at the end of the seventeenth and the beginning of the eighteenth century, whereas in Japan there exists no collection of correspondingly authenticated date. But surely this is a very small stage on the route to complete knowledge. The collections in Dresden and Madrid are virtually confined to one class of ware. They tell us nothing whatever about the hundred varieties which complete the Japanese repertoire, and the information which they do convey is not only partial but misleading, since there are the strongest reasons for believing that these exported specimens of Hizen porcelain owed much of their decorative motive to foreign inspiration. Further, Mr. BOWES is mistaken in his ideas as to the routes by which Japanese Keramic specimens travelled westward. It is entirely erroneous to suppose that the Keramic exhibits sent by Japan to Paris in 1867 were taken from the TOKUGAWA collection. Of not a single specimen can this be stated. They were one and all procured in the open market, and similar pieces might have been obtained by anyone whose fancy lay in that direction. Truly we can scarcely suppress a smile when we read that the real purpose of these exhibits was to raise funds wherewith to carry on the war. Mr. BOWES has evidently very little conception of what the TOKUGAWA Regents were even in 1867. Equally glaring is his misconception about the manner in which the collections of the feudal barons were dispersed. There was no hesitation whatsoever about offering these collections in the Japanese market. In fact, no other way of getting rid of them existed. The invariable method was to call for tenders from Japanese tradespeople, and as the highest tender was unhesitatingly accepted without reference to the real value of the article, many extraordinary bargains were made. But foreigners had no share in this spoil. They were not even suffered to know that such sales took place. Not until after the specimens came into the hands of Japanese dealers were they offered to foreigners. It is a mere myth to imagine that they were privately sent out of the country, or that collectors abroad had better opportunities of procuring them than collectors in Japan. Mr. BOWES must abandon this silly theory, entirely inconsistent as it is with the sound judgment he displays in other directions. We wish, too, that he could be induced to recognise the truth about those curious enamels, upon which he now builds another wonderful argument. Early in the Meiji era an enterprising exporter conceived the idea of turing to account the enamel-making capacities of Japan. With this object he had a number of specimens manufactured. Being intended for the Western market, they differed from previous specimens of the same class, both as to size and decorative design. These enamels have perplexed Mr. BOWES ever since. He cannot reconcile himself to the fact that they were a new and special manufacture, and since he fails to find any Japanese connoisseur who can identify them as old work, he concludes that they are specimens which were secretly spirited out of Japan, having lain there for decades hidden from public gaze. Even the paper pasted over them at the time of shipment helps to confirm him in this view, though in point of fact the use of Japanese paper in this manner has been a common device of careful packers for the past twenty-five years, and is a common device to-day. However, if we dispute Mr. BOWES' thesis as to the superior opportunities enjoyed by connoisseurs in Europe, we do not at all dispute the fact that he has made excellent use of his opportunities, and given the public a book of most valuable and genuine character. He is unsparing in his exposure of some of the shameless frauds that have been practised on innocent collectors; as when, in 1879, a consignment of faience was offered for sale in London, accompanied by a circumstantial statement that above 50 of the pieces had been expressly "prepared for the Jesuit priests' expedition from Japan to Rome under the special auspices of the Prince of Bungo, in 1582," and that certain other specimens had been owned "by the Princes of Satsuma for many generations," and "carried by TAICO SAMA into Korea as historical evidence of his country's former triumph over the Koreans." These distinguished pieces were simply modern imitations of Satsuma faience, made at Ota or painted in the Shiba ateliers. The publication of a book like this by Mr. BOWES ought to close the way to such audacious chicanery. We note, however, with regret that Mr. BOWES himself clings to some fallacious ideas. He still thinks that large, boldly decorated specimens of Satsuma faience were manufactured in old times, and he still maintains that objects of art

*Japanese Enamels*, by James Lord Bowes, printed for private circulation, 1884, and published by Bernard Quaritch, London, 1886.

Digitized by Google

were often made in pairs in Japan. With regard to the former point, we can only say that we have never ourselves seen, nor have we ever met a Japanese who had seen, a large vase or censer of Old Satsuma decorated with peonies and phœnixes in the *nishiki* style. Perhaps such things existed, but it will certainly be safer for the foreign collector to assume that they did not. As for pairs of vases, censers, and so forth, they were never made in this country for Japanese service. There could have been no use for a pair of anything, whether on the shelves of an alcove or before a temple altar. The evidence adduced by Mr. BOWES, namely, that flower-vases are depicted in pairs in *makimono* of the 17th century, possesses no value, for the vases shown in such pictures are almost invariably Chinese, and every one knows that the Chinese potters constantly manufactured pairs. We do not say that a perfect pair may not be occasionally found in ancient Japanese ware. Five or ten identical specimens were not infrequently potted, and two or three of them sometimes survive intact. But that is quite other question. We would fain follow Mr. BOWES through his clear and masterly, though all too short, descriptions of the various porcelains and faiences of Japan, but the subject is of such limited interest to our readers that we must apologise for the length of even what we have said. It is evident that Mr. BOWES has brought together a really representative collection of Japanese wares, and that he has made every specimen it contains the object of careful research and intelligent scrutiny. We are not all gifted with leisure or means to indulge these expensive hobbies, but we can all enjoy the clear descriptions and exquisite plates contained in such a work as "Japanese Pottery."

## *CHINESE IMMIGRATION TO AUSTRALIA.*

THURSDAY and Friday in the second week of November, and Monday, Tuesday, and Wednesday in the following week were appointed by the Judicial Committee of the Privy Council for the hearing of an important case arising out of the anti-Chinese agitation in Australia in 1888. The case which was to engage the attention of the Lords of the Council, and for which it is said a specially large and influential council had been summoned, arose in this way. On the 27th April, 1888, the British ship *Afghan* entered the port of Melbourne, having on board 268 Chinese labourers intended for various ports in the Australian colonies. The week previous great excitement had sprung up throughout Australia in consequence of the news of a treaty between China and the United States restricting Chinese immigration, and the Government of Victoria, fearing, as they said, disturbances of the public peace, ordered the Collector of Customs at Melbourne to permit no Chinese whatever to land. Now there were statutes prevailing in Victoria authorising vessels to bring one Chinese immigrant for every 100 tons burden, and under these statutes the *Afghan* was entitled to land 14 Chinese; there was also a statutory provision that native Chinese (naturalized Chinese of course could land freely on showing genuine naturalization papers) should pay each a poll tax of £10, while the Captain who brought more than the statutory number was to be fined £100 per head. But it was not under any of these statutes that the Victorian Government proceeded to prevent all landing; it was an act of sovereign power to be justified or not subsequently by the law as might be. Amongst the passengers who were prevented from landing was a Cantonese named AH TOY, who, aided by Chinese guilds in Melbourne, brought an action against the Collector of Customs claiming £1,000 damages on the ground that he was by law entitled to land on payment of the £10 poll tax, which sum he said he had offered to the Collector, and it was refused. His technical argument on the statute was that although the Captain of the *Afghan* would be fined £100 for each immigrant above 14 that he brought, yet that the immigrant, being once there, was entitled by law to land on payment of his £10. It was of course not the fault of the immigrant that the law was broken, for he could not tell what the law was, or even though he knew, was quite unable to prevent the captain taking as many as he liked. However, as it turned out, this point is of very, small importance indeed. The Collector of Customs took a lofty ground that rendered mere technical discussion unnecessary. He claimed to act by the authority of the Government of Victoria. That Government, he said, had for various reasons decided as an act of State or of sovereign power that Chinese should not be admitted for the time, and this being an act of State, was a matter to be settled between the Governments of the British and Chinese Empires, and no municipal court could take cognizance of it. He further said that Her Majesty the QUEEN has as one of the prerogatives of her Crown the right at any time to exclude alliens from her dominions, and that this prerogative, so far as the colony of Victoria was concerned, was exercisable by HER MAJESTY'S Ministers for Victoria. This position the Chinaman absolutely denied, and as there was no question about the facts, it was agreed that the whole six judges of the Supreme Bench of the Court of Victoria should sit to consider the questions of law raised in the case. The arguments on both sides lasted for 4 days in the month of July, 1888, and they occupy nearly 200 printed folio pages. The Government of Victoria was represented by Mr. WRIXON (the Attorney-General) and two other Counsel, but AH TOY did not lack able assistance. Indeed, the argument both in opening and replying of Dr. MADDEN, his leading counsel, is one of the ablest, most closely woven, and most convincing that we have ever read. As to the first question raised by the Victorian Government, viz., whether this was a high act of State of which no municipal Court could take cognizance, the judges were unanimous that it was essential in Victoria as it was in every other part of the British Empire that in order to constitute an act of State there must be either the direct command or the subsequent ratification of the Sovereign, and as neither of these existed on this occasion, they found that it was not an act of State. This decision will no doubt be a lesson in constitutional principles, for it shows that the Sovereign is a living, active, powerful entity in the Constitution. And it appears that the Colonial Government accept the position, because they have dropped this point altogether in the case which they have laid before the Privy Council. The next question was whether HER MAJESTY has the prerogative to exclude alien friends (*alien amis* as they are called in curious legal phraseology) from her dominions, and if she has, whether that prerogative has ever been transferred to HER MAJESTY'S Ministers in Victoria or any other self-governing colony. On this point there was a difference of opinion among the Melbourne Judges. Two of them answered both questions in the affirmative. The QUEEN, they said, had that prerogative, and although it was not given expressly to the Victorian Ministers, yet as Victoria was a responsible government, that gift was impliedly accompanied by the grant also of all prerogatives necessary to make it effectual, on the principle that a grant in law has always been supposed to carry with it everything to make it an effectual grant. Therefore the judgment of these two judges was against the Chinaman, inasmuch as they decided that the Victorian ministers had the prerogative to exclude aliens. The other four judges, however, while declining to decide whether the QUEEN had this prerogative or not, were clearly of opinion that if she had it was never delegated to the ministry of Victoria. These judges said the prerogative could never be touched except it is expressly mentioned in the statute. This prerogative is not expressly mentioned in any statute relating to New South Wales, while the two prerogatives, that of mercy and the dissolution of Parliament, which it was intended to give to the Government for the purposes of government in Victoria, are expressly given in so many words. The result of the judgment was of course in favour of AH TOY, and ultimately the Courts awarded him £150 damages. Leave to appeal

Digitized by Google

to the Privy Council was refused by the Supreme Court in Victoria; AH TOY received the money and disappeared. But it was obvious that the Victorian Government could not be satisfied with a decision against them on points of great constitutional importance, unless it were that of the highest court in the Empire. Accordingly they applied to the Privy Council for special leave to appeal, on the ground of the important nature of the questions involved, and they got it. But as AH TOY had gone with his money and did not care a brass farthing what the Privy Council thought about the constitutional questions, there was no real respondent. It was thought by the advisers of the Government that a decision in a case where there was no argument on the other side would lose much of its weight, so it has been arranged that all the costs incidental to AH TOY'S case in the Privy Council shall be paid by the Victorian Government. The result of the case of course remains to be seen, but in spite of the high constitutional principles involved it is impossible not to be amused by the surrounding circumstances. The ragged Cantonese outcast arrives in the port of Melbourne, with all Australia, from Cabinet Ministers down to the larrikins at the street corners, aflame against his race. The air is full of banners and processions and speech-making against Chinese labourers; ministers claiming to exercise the powers of a great empire issue their ukase to prevent the ragged creature from landing. And how has it all ended so far? Why so far the conclusion has been that he has punished his enemies to the extent of what to him is a colossal fortune; he has called in question the prerogative (and Lord COKE has called the prerogative the jewel of the Crown) of a mightier monarch than his own. He has denied to British colonies with responsible governments powers without which they say responsible government is almost useless; he has disturbed set opinions of government and administration, and the relations between British colonies and the mother country; he has resolved a large portion of the constitution of Victoria into its original elements, and now it is for HER MAJESTY in Privy Council to put these together somehow. Having done all this, having produced confusion and chaos where it is vital that there should be order and law, he vanishes. He descended on Victoria like the evil sprite in Fairy Tales; he leaves behind him wreck and dismay and disappears as suddenly as he had appeared. Then to add to the absurdity of the situation his enemies besides paying him a large sum for damages, are compelled by his conduct to pay a very much larger sum to have his battle fought against them. Probably it would not be too much to say that many a colonial statesman groans in secret at ever having touched Chinese questions, or at least having touched them in this particular way.

## *THE SALVATION ARMY: ITS ORIGIN AND ORGANIZATION.*

I.

A LEARNED Archbishop, in referring to the members of the Salvation Army, characterized them as "holy enthusiasts." The term, deliberately used as it was, carries with it a large significance. For it is undoubted that sincere piety or holiness has never yet, when united with combative zeal and energy, failed to work wonderful social revolutions. Whatever vagaries and eccentricities may in the first instance be associated with the enthusiasm and the energy, the real piety at the back of such movements tells in the end, and a sober and efficient organization is the final result. The Salvation Army does not stand to-day in the estimation of philanthropists where it stood half-a-dozen years ago; it has completely justified itself. There is no doubt that, year by year, this wonderful band of self-sacrificing workers is becoming better understood, and that, with the better understanding, goes a higher appreciation of their work and their character. They are good people, with attractive faces and honest ways. The Quakers in the seventeenth century were for long considered pests of society, and were subjected to all manner of insult and persecution; and Methodism fared only a little better in the eighteenth. Both have long ago won the world's respect. It seems as if history were repeating itself in the case of the Salvation Army.

The origin of the movement is not generally known. People, associating it with the name of BOOTH, suppose that it is the creation of its "General," and that it took its rise in the East end of London. The real fact is that it began in the country, down in Cornwall, and that for many years it was an ordinary mission in connection with the Methodist Church. The Rev. WILLIAM BOOTH, whose wonderful power of persuasion and of organization has converted this "Christian Mission" into the world-famous Salvation Army, was trained as a lad in the Church of England, but, being brought under Wesleyan influences, he joined the latter body and became one of its most active workers. Having attended services conducted by an American Evangelist, the Rev. JAMES CAUGHEY, he was struck by the latter's direct, conversational mode of preaching, and resolved to change somewhat the lines upon which he himself had hitherto been working. For many years as a Methodist minister he carried on a successful evangelizing work in Cornwall, assisted by his wife, whose death at the beginning of last Octobor was regretted so widely. This sad event has furnished a graceful occasion to newspapers of all views and standings in London to testify their admiration of Mr. and Mrs. BOOTH'S devotion to the cause of humanity. The deceased lady was a woman of no ordinary gifts, and as a speaker could appeal to the cultivated and uncultivated alike. She proved a most energetic helpment to her husband, and on one occasion, during his illness, not only supplied his pulpit but attended to the other pastoral duties. Her death at the comparatively early age of sixty-one, in the midst of a career of singular usefulness, is an irreparable loss.

Shifting their operations, about twenty-five years ago, to the East end of London, the BOOTH'S began their life work at Mile End Waste; and as time went on the Mission added shelter to shelter, and hall to hall. At length they found themselves strong enough to venture on the lease of a notorious public-house, "The Eastern Star," which they converted into a work-centre, with book-store, class-rooms, and hall. All this time Mr. BOOTH was merely 'Superintendent,' and the embryo Army had no suspicion of its future development. From the very beginning, however, it had been given to "marching," and the accidental declaration, by BOOTH, at one of their conferences that this was a "War Congress," led to the enthusiastic adoption of the present system of nomenclature. Then followed the publication of the "War Cry," a paper without fiction or advertisements, which has now reached a weekly circulation of 300,000 copies. At the beginning of the year 1883, the Salvation Army, which ten years before had been a small mission conducted by twelve evangelists, was a mighty organization possessing no fewer than one thousand and sixty-seven officers in the various countries and colonies whither its work had spread. This year the number of officers has increased to nine thousand three hundred and forty-nine, who direct the work of two thousand eight hundred and seventy-four corps.

When the Army begins its work in a town or city, it divides the whole into wards, and places a sergeant in charge, who with his corporals, is responsible for the district. A corps being formed, and a drill-hall secured, special sergeants are told off to carry the colours, and a corps Treasurer and Secretary are appointed to keep the duplicate records and accounts. The Army flag is blue in colour, with a square red centre enclosing a gilt star. In addition to the local organization, there is a staff organization so complete, that in twelve hours a message from head-quarters can be delivered to every one of a million soldiers scattered over four continents. General BOOTH "wires to the Chief of Staff, the Chief to the various Commissioners, these to their Colonels or Brigadiers, they to their Majors, the Majors to Staff Captains and Adjutants, Adjutants to Captains and their Lieutenants and Cadets." The organization has been based on a close study of the rules and regulation of the British Army. The military idea and nomenclature are kept up throughout, each soldier being

Digitized by Google

provided with a "Soldier's Manual," meant to serve as a guide for conduct. The "Articles of War" which take up one section of the manual, inculcate abstention from the use of low and profane language, from swearing, and from unclean conversation; the avoidance of falsehood, deceitfulness, misrepresentation, or dishonesty; the chivalrous treatment of women and children; the practice of godliness and of energetic soldiership. By godliness is to be understood "a straightforward conversion, a clean heart, the spirit of a soldier, a good life at home, a clear assurance of the favour of God, and a 'soul flooded with His love.'" For promotion from the ranks five essentials are demanded,—godliness, love for souls, energy of character, ability to talk, and loyalty to the Army. Field officers are also provided with a Manual which contains the most explicit directions as to the ordinary routine of duty, and behaviour in emergencies. It includes also chapters on ventilation, diet, and the department of hygiene, besides sections on finance, on building and on kindred practical subjects. Officers are allowed salaries, which afford a bare livelihood and nothing more £156 a year being the maximum. They are not encouraged to receive personal gifts, except such as are of immediate use for the work; and the wearing of trinkets for personal adornment is discountenanced. One notable feature of the Army is the free use it makes of the services of women, who are promoted to rank on the staff on equal terms with the men, and receive the same military titles; an absolute equality having been proclaimed so far back as 1875. Both men and women wear a plain gray uniform faced with red. A candidate for a post on the staff enters one of the Training Homes as a Cadet, where he has to submit to a rigid discipline, and is instructed in the methods of spiritual campaigning. When he leaves the Home to become a Cadet-Lieutenant, his training is still continued under his Captain, one of whose chief cares is the superintendence of his Lieutenants. All their time is at the Captain's disposal, and the tie between subaltern and commander is of the closest.

Such is a short outline of the origin and organization of this wonderful society, which in the face of ridicule and persecution has been steadily making its way and doing a good work among the masses. In Europe it has established stations in Great Britain, France, Switzerland and Sweden; in North America the United States and Canada have been occupied; in Asia it has eight corps in India and Ceylon. Forty-five stations are planted throughout the Australian colonies, Tasmania, and New Zealand, while Africa is represented by three at the Cape of Good Hope. So fast is the work growing that it is probable these figures are already out of date. It is the general testimony that we have in the Salvation Army a body of men and women who are willing to do without comforts, to forego every luxury, and to devote all their efforts to the rescue of their fellow-creatures from a life of sin. The story of their philanthropic undertakings, now exciting no little interest in the great metropolis, will be treated of in a subsequent article.

---

II.

TWO of the greatest factors in the spread of the Salvation Army movement are characteristic of the Anglo-Saxon race. The first, to which we have already referred, is the equal position it accords to women. Since the foundation of the Society of Friends over two hundred years ago, no other organization has ever so trusted women; and in the case of neither of these organizations can the complaint be made that its women are unwomanly. When, fifteen years ago, the absolutely equal footing of the sexes in the affairs of the Army became an article of its constitution, an expansive power was set free which has caused the Salvation Army to advance by leaps and bounds. The other factor is the importance attached to the family. Marriage is encouraged, the advent of children is welcomed as a promise of future accessions to the ranks, the accession, too, of trained recruits likely to prove serviceable as staff and local officers. The BOOTH family itself is a striking example of a diversified unit, a force that is not growing weaker with the years, but is continually recruiting itself. Mrs. BOOTH, in addition to all her other heavy cases and responsibilities, brought up a family of eight children, who have been carefully trained to help their parents in the great work. The eldest, Mr. BRAMWELL BOOTH, now a man of thirty-four, is Chief of the Staff, a position in which he shows conspicuous talent. One of the daughters, Mrs. BOOTH-CLIBBORN, is Marshal of the French Salvation Army; and all the other six are prominent workers. The various additions made to the family by marriage have proved in each case a source of strength, every member in the connection being an ardent missionary. Let us leave aside to be discussed elsewhere the mystical or purely religious element in the movement. To some this will appear the important fact, which explains all the rest. To others, perhaps less consistently, it will appear nothing but "drivelling superstition" a phrase recently used to characterize it by a leading London thinker. Struck with the admirable results of the Army's work, he was speaking in its praise to a friend, who seemed surprised at his warmth of eulogy. "But," continued he, "don't suppose it is the religion; that is nothing but drivelling superstition." He owned, however, that General BOOTH had done more for the masses than all other living philanthropists together. It is this philanthropical work in the slums of London, Brooklyn, Paris, Bombay, and a crowd of other cities, that forms an intensely interesting study to the sociologist. These slums are a plague spot in our civilization, and the man who can bring to light an efficient remedy for the disease is a leader and a benefactor of the human race. The "Social" department, as it is called, of the Army's work is divided into four branches "Rescue," "Slums," "Shelters," "Labour." During the horrors of the "Jack-the-Ripper" time in Whitechapel, when people could scarcely talk of anything else than murder and butchery, the "Slum-sisters" came and went as before, acting as helps to broken-down women, nursing poor sick folk, caring for the dying, and relieving the hungry. Six young girls living in a single room in the Army Training Home began this work and now it has grown thirty-fold. They receive nothing for their labours except food and clothing, and money to pay their rent and to provide necessaries for the sick and the starving.

An interesting corps of the Army is the Prison Gate Brigade, whose work it is to establish itself in the neighbourhood of large prisons, and to become acquainted with discharged criminals. These unfortunates, the downward career once commenced, are apt to go from bad to worse, often not so much from inherent evil as from the force of circumstances. To obtain decently remunerative work and resume respectable life again, is a Herculean task; society in nine cases out of ten crushes them out remorselessly. General BOOTH has paid due attention to this very promising field of labour, and now, at the gates of our great prisons, may be found a Home, where discharged prisoners are welcomed and are given a helping hand. This Prison Gate work has, almost more than any other, recommended the Army to the friendly attention of thoughtful men. A Christianity that is attractive and not repulsive, that can preserve its purity and yet help the sinner, shows itself here under bright aspects. The recruits who are thus gained from among these criminal classes, knowing the habits of their fellows, become in their turn powerful and efficient missionaries. The great organization turns them into efficient officers, supplies them with food and necessaries, and with a solid basis for good work; they learn self-respect, are full of ardour in their new life's work, and from being possible pests to society become its saviours.

Other schemes that have been successfully started are the shelters in the great cities for the homeless and friendless; refuges for fallen women; reformatories for confirmed drunkards. So successful are these proving, that General BOOTH has now launched a grand undertaking which will grapple with the whole question of what to do with the Homeless and Unemployed, with what has been called the great "Army of Despair." His book

Digitized by Google

on the subject appeared on the 10th of last October, and has attracted wide attention in London and elsewhere. Undoubtedly there exists a noble field for social experiments, so great is the waste in our present social organization from imperfection of methods. The principle of buying in the cheapest market and selling in the dearest, which was supposed to form the basis and strength of political economy, is in its unmodified state a miserably thin and selfish dictum. We are now, on all sides, beginning to find out its shallowness and its weakness. Socialism screams out against it. But a socialism after Mr. BELLAMY'S heart seems to have a dry-rot at its core, inasmuch as the ideal aimed at is bodily and intellectual comfort. Now this ideal "comfort" is an elastic quantity according to the habits and notions of the individual; we are meanwhile provided with no safe bond to hold society together. The great, gloomy, outstanding fact of Sin is also ignored in the dainty pages of "Looking Backward." The Salvation Army, however, grasps the weapon by the handle, instead of poising it airily on the finger and playing with it. Looking upon this life as merely the portico to a higher, its members do not dream of a pleasant city life, with every imaginable comfort and luxury, as constituting the goal of earthly endeavour. A sufficiency to keep the body in good working order, and success in gaining recruits for the religious life—this to them makes life well worth living. Obedience to an authority which they trust in and respect, and perfect assurance of a home in the world to come, keep the Army soldiers cheerful and happy. With his enthusiastic force behind him General BOOTH proposes a stupendous scheme, commencing with the founding of a City Colony, that shall provide food and shelter for every man, and congenial work for all. In addition there is to be a Farm Colony, for out-of-door labourers. Then also a colonization scheme is to be set on foot, and emigrants are to be taken across the seas in Salvation ships. The other philanthropic work, which we have already touched upon, is to be prosecuted with increasing ardour. Improved lodging-houses, a poor man's bank, a poor man's lawyer, a matrimonial bureau; such are to be some of the new features of the Army's enterprise. In a forthcoming article we purpose giving a more extended explanation of the great undertaking; as yet merely an outline of it has come to hand. A more comprehensive scheme of philanthropy could scarcely be entertained; but the Army's organization seems strong enough to bear the strain.

FOR PROSTRATION AND DEBILITY USE HORSFORD'S ACID PHOSPHATE.

DR. W. E. FULFORD, M.R.C.P., and L.S.A., Wadebridge, says:—"It brought me from a state of utter prostration and debility, both of mind and body, to one of fair convalescence, and that within fourteen days.

## *THE "JAPAN GAZETTE" AND THE PROBLEM.*

IN common doubtless with a considerable section of the public, we have been curious to read the first utterances of the new *Japan Gazette* on the subject of Treaty Revision. It was chiefly if not altogether on account of Treaty Revision that the *Gazette* underwent a radical change of organization and ownership, and the opinions it expresses on that important topic must now be regarded, we presume, as those of a thoughtful and representative section of the community. So regarding them, we are compelled to confess that our contemporary's earliest pronunciamiento causes us some disappointment. Stated briefly, the proposition advanced by the *Gazette* is that Great Britain must hesitate to place her subjects in Japan under Japanese jurisdiction, because, unless she is prepared to do as much by China, the latter Power may throw itself into Russia's arms and the result might be an invasion of India by Chinese troops under Russian officers. The *Gazette* puts forth this argument in a tentative, half-hearted fashion, but nevertheless bases pretty hard-and-fast conclusions on it, as for example:—"England's interests in China exceed to an enormous extent those in Japan. Would it be statesmanlike to ignore the great for the sake of the small, to gratify Japan at the risk of enraging China? * * It is not improbable that in the eyes of our home statesmen the Treaty Revision question, which to some local residents seems so simple, may involve issues of the gravest nature." Now it has often been suggested in the past that the recognition of Japan's industrial autonomy might place Western Powers in an awkward position towards China, but the suggestion has always been treated with the scant courtesy it deserves. To attach any importance to it we must assume, in the first place, that China is concerned about the recovery of her Judicial Autonomy, and we must concede in the second that the claims of Japan and China in respect of this matter are at least approximately equal. Such an assumption and such a concession would be extravagant. Nobody has ever paid any serious attention to them. A nation's ambition must be judged by its behaviour. China's intercourse with Western States covers a period many times as long as the intercourse of the latter with Japan, yet never throughout the whole time has the Chinese Government made any move towards the recovery of jurisdiction over foreigners within her borders. If she really desires anything of the kind, she has most studiously concealed her wishes through all these years. The *Japan Gazette*, indeed, represents her as having been considerably exercised last year "when the Revision of the Treaties was, as most of us thought, about to become a *fait accompli*," and avers that she even went so far as to solicit for herself, on certain conditions, the same privileges as those about to be granted to Japan. But this is too novel news to be quite credible. We must be permitted to doubt whether our local contemporary is well informed about this particular phase of China's ideas or doings. For in the first place, the Chinese Government certainly did not fall into the mistake of supposing—as Yokohama was persuaded to suppose—that Treaty Revision was on the verge of accomplishment last year, and in the second place, we know too much about the methods of the thing called "Government" in China to imagine that, after decades of listless inaction, it suddenly woke up last year and attempted to inaugurate a remarkably vigorous and bold foreign policy. There is another reason, too, which makes us doubt the exactness of the *Gazette's* estimate of China's mood. That reason is that our contemporary puts into the Celestial's mouth precisely the same argument as we have heard so often advanced by the anti-revisionists in Yokohama. The *Gazette* makes China say:—"The adoption of laws is no guarantee of an equitable administration of justice. The Japanese cannot transform themselves in a generation so as to think and act in matters of justice as you do." Elastic as we would fain render our imagination for the purpose of following the *Gazette's* very original chimera, we confess that this flight is beyond our range. China as the mouthpiece of the foreign doubters is for us an unattainable conception. Chinese statesmen do not admit, nor have we ever before heard it seriously advanced against the Japanese, that Oriental ideas of justice differ from Occidental. There have been perfectly just judges in China and Japan, just according to any standard of justice accepted anywhere. Neither Japanese nor Chinese lack the faculty of justice, or the capacity to administer it. But their laws are defective and their procedure faulty. In China the old rule still exists that confession by the accused is necessary to establish guilt, and torture is still employed to extort confession. There has been no change whatever in the provisions or processes of Chinese laws from time immemorial, and with such provisions and such processes no doubt exists that the ends of justice are often flagrantly defeated. But Chinese statesmen would be the last persons to admit, as the *Gazette* makes them admit by implication, that without some new form of training exercised through generations, their capacity to appreciate and administer justice must be regarded as defective. On the whole, therefore, we think that the *Gazette's* information as to China's attitude last year is not thoroughly trustworthy.

With regard to the general question, so often before propounded, that what foreign Powers do for Japan they must also do for

Digitized by Google

China, we do not think that a more flagrantly unjust proposition was ever formulated. To talk in one breath of a lack of the faculty of justice among Chinese and Japanese, and in the next to assert that China, who has done nothing whatever to merit confidence, should be treated in the same way as Japan, who has done everything possible during the past twenty years to deserve trust, this does indeed seem like straining at a gnat and swallowing a camel. The *Japan Gazette* fully recognises the immorality of such a contention, but thinks that as self-interest is the mainspring of international action, England will probably hesitate to concede to the Japanese anything which she feels constrained to withhold from China. England has never shown any such mood; and we are entirely confident that she is not about to show it now. She has indeed hesitated to admit Japan's qualifications, but never can it be believed for an instant that the British Government has been playing fast and loose with this Empire for ten years, and that while professing to be negotiating for a Revision of the Treaties, HER MAJESTY'S Ministers have all the while confessed to themselves that the danger of disturbing China's equanimity is a fatal obstacle to conceding Japan's claims. That at any rate is not England's way. She long ago made up her mind that the one and only Oriental State which has seriously and sincerely adopted Western civilization deserves to be treated differently from a State which for fifty years has preserved an attitude of supreme conservative contempt towards everything Occidental. If any theory could be advanced better calculated than another to dishearten the Japanese and to inspire them with anger against Western injustice, it is this theory that China's utterly baseless susceptibilities must be considered in preference to Japan's practical achievements. We do not pause to examine the phantom of Chinese soldiers invading India under Russian leadership, or to discuss that most improbable of all events, a Russo-Chinese alliance against Great Britain. Such contingencies have no practical interest for us. But nothing could be more regretable than that the idea should circulate among the Japanese that Great Britain, in her negotiations with this Empire, is not thinking of Japan's qualifications or of the weight of Japan's claims, but is only endeavouring to avoid the danger of wounding China's *amour propre*. That, we repeat, is not England's way.

---

About three hundred Japanese emigrants, who had been at work in the Hawaiian Islands for some time, returned to Japan on the 8th inst.

According to returns compiled by the Authorities, the quantity of salmon caught in the Ishikarigawa, Hokkaido, during three months, from September to November last, was 5,823 *koku* (one *koku*=2½ piculs), which shows a decrease of 3,034 *koku* as compared with the same period in the previous year.—*Jiji Shimpo*.

## *YOKOHAMA ENGINE AND IRON WORKS, LIMITED.*

The half-yearly general meeting of the shareholders of the Yokohama Engine and Ironworks (Limited) was held on Thursday in the Chamber of Commerce Rooms. Among those present were Messrs. J. F. Lowder, J. Rickett, J. T. Boag, Jas. Walter, J. Curtis, J. A. Fraser, A. Center, D. Fraser, E. Blanc, S. D. Hepburn, W. R. Bennet, C. W. Arnould, F. Gillett, and G. Charlesworth, secretary.

The chair was taken by

Mr. A. CENTER, who, the minutes of the previous meeting having been put and confirmed, said—Gentlemen, this meeting is called in accordance with our Articles of association, which require that two meetings a year be held, but at the half-yearly general meeting no statement of accounts or report by the directors is to be submitted, that being done only once a year at the annual general meeting. This meeting is chiefly for the purpose of communicating to the shareholders the general prospects of the company and so forth, and on that I can say that we are in exactly as good a position now as we would be at the annual meeting, for we have our accounts duly audited up to the 30th of November, and we know the precise position of the company on that date. I would first refer to the Kobe branch. You will doubtless remember that a year ago matters were not looking as well at Kobe as we thought they ought to look, and it appeared to us that a change was necessary. Mr. Stewart was sent from here to take charge of that work; he has been there now nearly a year, and I can give you full assurance that the change has been a most beneficial one to the Company, and that the advantages arising from it have exceeded the expectations entertained by the directors at the time the change was made. Kobe has been doing splendedly of late, and I think you need give yourselves no more uneasiness on that point. Our business there is increasing month by month, and is going to prove a most valuable asset to us; in fact it is doing so now. Then as to Yokohama. In August last Mr. Kildoyle, who was our manager at Yokohama, desired to retire—not from any reasons connected with the Company, but of his own free will; his resignation was accepted, and in September Mr. Joseph Taylor was appointed manager in his place, a change which has proved to be to our entire satisfaction. The first half year of our business—that is from June 1st to Nov. 30th—is as a rule, and has been always, the duller half-year, so to say. That portion of this year, to which we now refer, was perhaps duller than it has been for several years, but, notwithstanding that, it gives me great pleasure to inform you that after making ample provision for depreciation of property and plant, and for the payment of auditors' and directors' fees for the six months, we have made a nett profit at the rate of 15 per cent. per annum. The second half of our financial year promises to be very much better. We have a lot of work on hand. We employ every man we can get hold of, and I think you will find that for the next six months the report cannot be other than a very favourable one to the company. Having, as I say, the audited accounts before us to the 30th of Nov. showing nett profits at the rate of 13 per cent. per annum, the directors have decided to declare an interim dividend of 6 per cent., to be payable at once.—(Applause.) I do not know that I have anything further to say, but if any one has any questions to put I shall be very happy to answer them.

No questions being put, the Chairman declared the meeting adjourned, and the proceedings terminated.

## *SUPPLYING COAL TO FOREIGN WAR VESSELS.*

IMPERIAL ORDINANCE No. 295.

We hereby give our sanction to the supplying of foreign men-of-war with coal stored for the use of ships of the Imperial Navy, and order the same to be promulgated.

[His Imperial Majesty's Sign-manual.]

[Great Seal.]

Dated December 27th, 1890.

Viscount KABAYAMA SUKENORI,
Minister of State for the Navy.

Coal stored by the Navy Department may be supplied at a reasonable price to foreign men-of-war which may apply for the same on account of difficulty in obtaining supplies by other methods.

## *EPISODES OF JAPANESE HISTORY.*

A visit to Nikko, the most famous summer resort of Japan, was not only interesting but also instructive. As I walked about through the court-yards, and entered some of the temples and other buildings, and finally climbed to each tomb, hidden in the trees at the summit of a hill, my curiosity was aroused to learn something of these persons, Iyeyasu and Iyemitsu, whose mortal remains are supposed to have been deposited in those two tombs. I wondered what were their surroundings and their achievements in Japan, and what their relations were, if any, with the rest of the world. Therefore, with such material as I had at hand, I began a line of study, which grew in interest as I proceeded. It has shown to me that Japan, although it has been essentially a hermit nation, was not completely isolated from other nations.

It is, of course, well known that until 1868 there existed in Japan a peculiar form of Government. The nominal Emperor, variously styled *Dairi*, *Tenshi*, or *Mikado*, was in reality only the theocratic, or ecclesiastical, chief of the nation. He as "the spiritual head of the national church," was treated with great reverence, and, apotheosized at death, became one of the national deities.

But the real authority was in the hands of the *Kubo*, or *Taikun*, or *Shogun*, who was nominally only general of the army. But, as the Roman Imperator in time became Emperor; as Lord-General Cromwell was in reality King; and as the Mayor of the Palace easily became the French monarch; so the Shogun held the actual civil authority. He was scrupulous to treat the Mikado with formal respect, and also to keep a large garrison at Kyoto, the capital, to prevent any revolutionary attempt, such as would again unite the civil and the ecclesiastical authority in the person of the Mikado. Thus the latter was *roi faineant*, and the former was Charles Martel, or Pepin; except that while Pepin thought that he who had the authority ought to have the name of King, and therefore deposed the Carlovingian dummy, the Shoguns of Japan permitted the dual form of government to continue.

The close of the sixteenth century witnessed a change in the dynasty of the *de facto* rulers of Japan. From a few years before the time when the House of Valois, becoming extinct, was succeeded by the House of Bourbon in France, the position of Shogun, though not in name, yet in reality, had been held by Hideyoshi. He it was who signed the first order for the expulsion of the Catholics from Japan; and it was during his reign, in 1597, that the first Christian martyrs were crucified. But in the following year, that of the Edict of Nantes, when the Huguenots of France were granted toleration by Henry IV., the Christians of Japan were freed from prosecution by the death of Hideyoshi.

Inasmuch as the latter's heir, Hideyori, was an infant of only three or four years of age, a council of regency was established, with Iyeyasu at its head. But, as might naturally be expected, the child became as much of a figure-head as the Mikado: so that about the time the proud Elizabeth Tudor left the crown of England to James Stuart of Scotland, Iyeyasu had the power firmly in his own hands, and had founded the Tokugawa dynasty, who retained the authority of the Shogun till the Revolution of 1868.

But before the sixteenth century had passed away, an event occurred which was of great consequence to Japan. In 1599 a Dutch ship with an Englishman, William Adams, as pilot, after a stormy voyage in the Pacific Ocean, finally, in great distress, reached the eastern coast of Kyushu. Adams was after a few days carried to the presence of the "Emperor," by whom he was very closely catechized. At last, although the Portuguese, then in Japan, tried to procure his execution, the lives of himself and companions were spared. Gradually Adams, because of his knowledge of mathematics and ship-building, was received into great favour, and treated very kindly, by the "Emperor." In 1609, when Hudson was opening territory in America for the Dutch, the latter, taking advantage of the opening thus made for them in the Orient by an Englishman, sent out a vessel to establish, if possible, regular commercial intercourse with Japan. This vessel, in the next year, returned to Holland with the following letter from Iyeyasu[1]:—

"THE EMPEROR OF JAPAN TO THE KING OF HOLLAND.

"I, Emperor and King of Japan, wish to the King of Holland [Prince of Orange], who hath sent from so far countries to visit me, greeting.

"I rejoice greatly in your writing and sending unto me, and wish that our countries were

[1] Hildreth's "Japan As It Was and Is."

Digitized by Google

nearer the one to the other, whereby we might continue and increase the friendship begun betwixt us, through your presence, whom I imagine in earnest to see; in respect I am unknown unto your Majesty, and that your love towards me is manifested through your liberality in honouring me with four presents, whereof, though I had no need, yet coming in your name, I received them in great worth, and hold them in good esteem.

"And further, whereas the Hollanders, your Majesty's subjects, desire to trade with their shipping in my country (which is of little value and small), and to traffic with my subjects, and desire to have their abiding near unto my court, whereby in person I might help and assist them, which cannot be as now, through the inconvenience of the country; yet, notwithstanding, I will not neglect, as already I have been, to be careful of them, and to give in charge to all my governors and subjects that, in what places and havens, in what ports soever they shall arrive, they shall show them all favour and friendship to their persons, ships, and merchandise; wherein your Majesty or your subjects need not to doubt or fear aught to the contrary. For they may come as freely as if they came into your Majesty's own havens and countries, and so may remain in my country to trade. And the friendship begun between me and my subjects with you shall never be impaired on my behalf, but augmented and increased.

"I am partly ashamed that your Majesty (whose name and renown through your valorous deeds is spread through the whole world) should cause your subjects to come from so far countries into a country so unfitting as this is, to visit me, and to offer unto me such friendships as I have no deserved. But, considering that your affection hath been the cause thereof, I could not but friendly entertain your subjects, and yield to their requests, whereof this shall serve for a testimony; that they in all places, countries, and islands, under mine obedience, may trade and traffic, and build houses serviceable and needful for their trade and merchandises, where they may trade without any hindrance at their pleasure, as well in time to come as for the present, so that no man shall do them any wrong. And I will maintain and defend them as mine own subjects.

"I promise, likewise, that the persons whom I understand shall be left here, shall now and at all times be held as recommended unto me, and in all things to favour them, whereby your Majesty shall find us as your friends and neighbours.

"For other matters passed between me and your Majesty's servants, which would be too long here to repeat, I refer myself unto them."

Although Hildreth cannot vouch for this letter, or for the correctness of the translation, it surely exhibits that strange mixture of humility and pride so evident even now in both the Japanese language and many of their customs.

In the meantime, the Spaniards also had attempted, but without much success, to obtain an entrance into Japan. Don Rodrigo de Vivero, the governor of Manila, was wrecked off the coast of Japan, and spent altogether about two years in the country. He visited the Mikado, and both the titular and the real Shogun; and, though he obtained royal protection for the Christian priests, and an acknowledgment of amity with Spain, he was unable to procure the exclusion of the Dutch.

In the year when King James's Version of the Holy Bible was given to the World, Portuguese, Spanish, and Dutch ambassadors visited the court of Iyeyasu. The Dutch were most kindly received, and finally, by the aid of William Adams, obtained the following license, through which a large trade was opened:—"All Dutch ships that come into my empire of Japan, whatever place or port they put into, we do hereby expressly command all and every one of our subjects not to molest the same in any way, nor to be a hindrance to them; but on the contrary, to show them all manner of help, favour, and assistance. Every one shall beware to maintain the friendship in assurance of which we have been pleased to give our imperial word to these people; and every one shall take care that our commands and promises be inviolably kept.

"Dated (according to the Japanese calendar equivalent to) August 30, 1611."

Thus far William Adams had helped only his former employers, the Dutch; but he had not forgotten his native countrymen. A letter of his to some English merchants on the island of Java set forth the advantages of having a share in the trade with Japan, and finally reached the East India Company. But, even before that, the English, hearing that a countryman was in Japan, had conceived the same idea, and had sent out Captain John Saris with letters from the King of England (James I.) to the Emperor of Japan. He (Capt. Saris) in time met Adams, and was finally presented to the "Emperor." The result of this visit may be seen in the following document[3]:—

"1. Imprimis.—We give free license to the subjects of the King of Great Britain, namely, Sir Thomas Smith, governor, and the company of the East India merchants and adventurers, forever, safely to come into any of the ports of our empire of Japan, with their ships and merchandises, without any hindrance to them or their goods, and to abide, buy, sell and barter, according to their own manner, with all nations: to tarry here as long as they think good, and to depart at their pleasures.

"2. Item.—We grant unto them freedom of custom for all such merchandises as either now they have brought, or hereafter they shall bring into our kingdoms, or shall from hence transport to any foreign part; and do authorize those ships that hereafter shall arrive and come from England, to proceed to present sale of their commodities, without further coming or sending up to our court.

"3. Item.—If any of their ships shall happen to be in danger of shipwreck, we will our subjects not only to assist them, but that such part of ship and goods as shall be saved be returned to their captain, or cape-merchant,[3] or their assigns: and that they shall or may build one house or more for themselves, in any part of our empire where they shall think fittest, and at their departure to make sale thereof at their pleasure.

"4. Item.—If any of the English, merchants, or others, shall depart this life within our dominions, the goods of the deceased shall remain at the dispose of the cape-merchant: and all offences committed by them shall be punished by the said cape-merchant, according to his discretion; our laws to take no hold of their persons or goods.

"5. Item.—We will that ye, our subjects, trading with them for any of their commodities, pay them for the same according to agreement, without delay, or return their wares unto them again.

"6. Item.—For such commodities as they have now brought, or shall hereafter bring, fitting for our service and proper use, we will that no arrest be made thereof, but that the price be made with the cape merchant, according as they may sell to others, and present payment upon the delivery of the goods.

"7. Item.—If, in discovery of other countries for trade, and return of their ships, they should need men or victuals, we will that ye our subjects furnish them for their money as their need shall require.

"8. Item.—And that, without further passport, they shall and may set out upon the discovery of [4]Yeadzo, or any other part in and about our empire."

Is the latter half of the fourth article the first instance of extraterritoriality?

Accompanying this was a letter to King James, as follows[5]:—

"Your Majesty's kind letter, sent me by your servant, Captain John Saris (who is the first that I have known to arrive in any part of my dominions), I heartily embrace, being not a little glad to understand of your great wisdom and power, as having three plentiful and mighty Kingdoms under your powerful command. I acknowledge your Majesty's great bounty in sending me so undeserved a present of many rare things, such as my land affordeth not, neither have ever before seen; which I receive not as from a stranger, but as from your Majesty, whom I esteem as myself. Desiring the continuance of friendship with your Highness, and that it may stand with your good liking to send your subjects to any part or port of my dominions, where they shall be most heartily welcome, applauding much their worthiness, in the admirable knowledge of navigation, having with much facility discovered a country so remote, being no whit amazed with the distance of so mighty a gulf, nor greatness of such infinite clouds and storms, from prosecuting honourable enterprises of discoveries and merchandising, wherein they shall find me to further them according to their desires. I return unto your Majesty a small token of my love (by your said subject), desiring you to accept thereof as from one that much rejoiceth in your friendship. And whereas your Majesty's subjects have desired certain privileges for trade and settling of a factory in my dominions, I have not only granted what they demanded, but have confirmed the same unto them under my broad seal, for better establishing thereof. From my castle in Suruga, this fourth day of the ninth month, in the eighteenth year of our Dairi, according to our computation. Resting your Majesty's friend, the highest commander in the kingdom of Japan.

"[Signed] MINAMOTO NO IYEYASU."

[3] From Hildreth's "Japan As It Was and Is."
[3] Probably, "head merchant."
[4] Yezo, or the Hokkaido.
[5] Hildreth's "Japan As It Was and Is."

The closing years of Iyeyasu's reign were marked by renewed persecution of the Christians, who had up to that time enjoyed comparative peace. It has been asserted, and also denied, that the jealousy of the Dutch Protestants may have helped to inspire this persecution of Spanish and Portuguese Catholics. In 1616, the very year when William Shakespeare left the stage of the world, Iyeyasu also passed away. He was deified, first under the title of Gongen Sama, and afterwards under that of Toshogu. In the following year the corpse was deposited with an imposing ceremony in the tomb at Nikko.

Iyeyasu was succeeded by his son, Hidetada, of whose reign we shall speak briefly, only for the purpose of connecting Iyeyasu with Iyemitsu. He it was who "began that system of foreign policy since pushed to such extremes"; and accordingly he restricted the English to the single port of Hirato. He also renewed with terrible vigour the persecution of the Catholics, who met torture and martyrdom with zealous courage. This persecution was raging the fiercest at just about the time when the Pilgrim Fathers, seeking a place of freedom to worship God according to the dictates of their consciences, landed on Plymouth Rock.

Another little circumstance in the same year connects the history of Japan with that of the United States. This was a voyage to Japan by Martin Pring, who is well known for his explorations on the coast of Maine. Sir Thomas Dale also, who had been governor of Virginia, was with Pring for a while, but died before the fleet reached Japan. When Pring returned to England, he carried with him the will of Adams, who, when he died, was lord of the village of Hemi.

In 1623, Iyemitsu, the grand-son of Iyeyasu, became Shogun. Soon finding that the Christians of Japan were not yet extirpated, he began the most terrible persecution, in which the "torment of the fosse" was employed in the following manners.[6] "A hole was dug in the ground, over which a gallows was erected. From this gallows the sufferer, swathed in bandages, was suspended by his feet, being lowered for half his length, head downward, into the hole, which was there closed by two boards which fitted together around the victim so as to exclude the light and air. One hand was bound behind the back, the other was left loose, with which to make the prescribed signal of recantation and renunciation of the foreign creed; in which case the sufferer was at once released. This was a most terrible trial indeed. The victim suffered under a continual sense of suffocation, the blood burst from the mouth, nose, and ears, with a twitching of the nerves and muscles, attended by the most intolerable pains."

Soon after, in order more effectually to prevent the introduction of Christian missionaries into the empire, the Portuguese sailors and merchants were confined to the little island of Deshima, in Nagasaki harbour. In the meantime the Dutch had continued their subservient and cringing policy, and made every effort to incite the Japanese against the Portuguese. Once, however, they were brought into trouble by the indiscretions of a certain Dutch governor of Formosa. This man, having been delivered up to the Japanese for punishment, was finally released by the Emperor of Japan, because the latter was so much pleased with a fine chandelier which was among the Company's annual presents. This chandelier was used as an ornament for the temple mausoleum of Iyeyasu at Nikko, and is still pointed out with pride by the guides.

But the machinations of the Dutch, and suspicion that the Portuguese were privy to a rebellion, finally led to the following edict, which was issued in 1638[7]:—

"No Japanese ship or boat whatever, nor any native of Japan, shall presume to go out of the country: whoso acts contrary to this shall die, and the ship with the crew and goods aboard shall be sequestrated till further order.

"All Japanese who return from abroad shall be put to death. Whoever discovers a priest shall have a reward of 400 to 500 *shurts* of silver [from $2,000 to $2,500], and for every Christian in proportion.

"All persons who propagate the doctrine of the Catholics, or bear this scandalous name, shall be imprisoned in the *Ombra*, or common jail of the town.

"The whole race of the Portuguese, with their mothers, nurses, and whatever belongs to them, shall be banished to Macao.

"Whoever presumes to bring a letter from abroad, or to return after he hath been banished, shall die with all his family; also whoever presumes to intercede for him shall be put to death.

[6] Heldreth's "Japan As it Was and Is."

Digitized by Google

No nobleman nor any soldier shall be suffered to purchase anything of a foreigner."

At the same time "the Emperor" sent to all the governors of the maritime districts an ordinance, which, according to Hildreth, reads as follows:—

"The express and reiterated commandments against the promulgation of the religion and doctrines of the Christians have been duly published and everywhere proclaimed; but it being found that these edicts were not efficacious, they [the Christians] were forbidden to approach the coasts of Japan with their gallies and other sea-vessels; and some of them, in contempt of this prohibition, having come to Nagasaki, orders were given, in punishment of this offence, to put them to death. It was commanded last year, by a special edict, that in case any sea-vessel were seen on the coasts of Japan, or entered any port, it might be permitted to anchor, with a strong guard on board, till what they proposed was sent to the Emperor. This commandment is now revoked; and it is ordered instead that these vessels [Portuguese and Spanish], without hearing a word which those on board have to say, shall be destroyed and burnt, whatever pretence they may set up, and all their crews to the last man be put to death.

"It is also commanded to erect watch-towers on the mountains and all along the coast, and to keep constant watch to discover Portuguese vessels, so that news of their arrival may at once be spread everywhere; and, if such a vessel shall first be discovered from a more distant point, it shall be imputed as a crime to those in charge of the nearest watching places, and the governors thus guilty of negligence shall be deprived of their offices.." * * * * *

The triumph of the Dutch was not, however, complete or long continued. They themselves soon become objects of suspicion to the Japanese; and three years later they were confined to that same island of Deshima. From this time until the visit of Commodore Perry, the Dutch, although their trade was from time to time restricted, nominally enjoyed, together with the Chinese, the monopoly of the commerce of Japan.

In 1651 Iyemitsu died, and was interred at Nikkō. Thus the first three Shoguns of the Tokugawa dynasty ruled during the first half of the seventeenth century. Of Iyeyasu the Japanese say that he restored peace to a country formerly troubled by civil commotions. Of Iyemitsu they say, that he consolidated the government founded by his grandfather. If a foreigner, in the light of the nineteenth century, expresses an opinion, he must say that Iyemitsu seems to have been narrow-minded, bigoted, and conservative; while Iyeyasu appears as broad minded, liberal, and progressive. Iyemitsu upheld that system of foreign policy which kept Japan at a standstill for two centuries: Iyegasu favoured that system which has done so much in the last 35 years for this nation. Iyeyasu was the forefather of "New Japan."

Mito, December 31st, 1890. CLEM.

## *YOKOHAMA SEAMEN'S MISSION.*

The Rev. W. T. Austen, Seamen's Chaplain, in presenting the Ninth Annual Report and Financial Statement of the above, begs to return his hearty thanks to the subscribers and friends of the institution, for their liberal contributions and help, by which the work had been successfully carried on during another year. The year was commenced with a balance in hand of $66.31½, and closed with a balance carried forward of $89 50. During the past year a greater number of distressed seamen, in need of food and shelter, have been relieved than in former years, over 500 meals and beds having been given, thus lessening the annoyance at one time so often complained of by residents who were appealed to either at their dwellings or in the streets in such cases. The mission has an arrangement by which these men are provided with a meal for ten cents, and a night's lodging for a similar amount, so that any persons feeling disposed to afford assistance in any cases that may be brought to their notice, will find it much the best way to send them at once with a chit to the mission, stating the amount they are willing should be expended and for which they will be responsible. This will help to prevent the same men from receiving aid from different persons, which when given in small sums of money is usually spent for *sake* or whiskey. If the case is an unworthy one it is more likely to be found out at the mission than elsewhere.

It has been with much regret that owing to Mrs. Austen's long continued ill-health, and other unavoidable causes, the social entertainments that have proved such a popular feature of the work of the mission in former years, have had to be given up during the past twelve months. For the same reason the Annual Christmas Tree and Dinner had to be given up and abandoned. Through the kindness of several ladies, who undertook the personal superintendance of the matter, a good dinner was provided at the mission on the evening of Christmas Day, for between twenty and thirty needy persons.

The reading room, recreation room, and library have been open daily throughout the year for the free use of seamen of all nations, nearly 6,000 visits of these men being recorded during that period. The services held afloat and on shore by the Chaplain have been well attended, the aggregate attendance being 6,482, chiefly seamen. The need of a Mission Boat for daily visitation of the ships in port has been long felt, and an effort will be made early in 1891 to provide a suitable one for this purpose.

The thanks of the Mission are here tendered to the following friends who have kindly sent gifts of books and newspapers, &c., for the reading room, the sick in hospitals, and for sending away to sea, also for parcels of left off wearing apparel.

The Missions to Seamen (England), Miss Agnes E. Weston (Devonport), The Religious Tract Society (London), Mrs. Brider, The Old Gaol (Salisbury); the Proprietors of the *New York Weekly Witness, Toronto Faithful Witness, Japan Mail, Japan Gazette, Japan Herald,* and *Japan Daily Advertiser, China's Millions,* for copies of their papers regularly supplied gratis; Dr. and Mrs. Hepburn, Dr. and Mrs. Wheeler, Dr. and Mrs. Whitney, Mr. and Mrs. J. Ramsay Parsons, Mr. and Mrs. Otis Averill, jr., Mrs. J. C. Hartland, Prof. B. H. Chamberlain, J. Honigsberger, Esq., Rev. H. Loomis, and others.

The following statistics are added for the information of all who are interested in the work of the Mission:—

STATISTICS FOR 1890.

No. of visits to Merchant Ships, 221; No. of visits to Men-of-War, 85; No. of visits to Hospitals, 107; No. of visits to Prisons, 86; No. of visits to Saloons, 15; No. of Services held on shore, 203; No. of Services held afloat, 43; No. of Temperance pledges taken, 75; No. of Bags of Reading distributed, 288; No. of Bibles and Prayer Books sold and given, 47; No. of Articles of Clothing given to distressed Seamen, 55; No. of visits to Reading room, 5,827; No. of attendances at Services, 6,482.

## *IN THE SUPREME COURT OF JAPAN.*

Before Judge NAKAMURA GENKWA, Acting President of the First Civil Bureau; and Judges TAKAGI TSUTOMU, KATO SOICHI, YASUI SHUNZO, and KODAMA JUNICHIRO.

URUSHIYAMA KICHIYEMON AGAINST UDZUYE TAKICHI.

Principles deduced from the following case:—

—"The general rule is that loss in trade through partnership must be charged to each partner according to the amount of capital contributed."

"Judgment should not be given on any point outside the point at issue."

"A party must prove the allegation that in a decision judgment was not given on the point at issue."

The plaintiff obtained judgment against the defendant in the Gifu Court of First Instance. The defendant appealed to the Nagoya Court of Appeal contending that he had not traded on joint account with the plaintiff, but that he had lent the plaintiff *yen* 1,230 in several sums at the urgent request of the plaintiff since November, 1886, on condition that he should receive as interest on such loan 30 per cent. of the profit gained by the plaintiff in the silk trade. Even if it should be held that he had engaged with the plaintiff in trade on joint account, the defendant submitted that he should only be required to bear a part of the loss incurred on silk purchased from Uchiki Mohei. Further if it should be decided that he ought to participate in the loss, the defendant contended that his share must be decided according to the amount of capital contributed by him. The judgment of the Court of First Instance, inasmuch as it apportioned the loss equally to the parties, was opposed to law.

For the plaintiff (defendant in the appeal) it was held that the evidence produced in the case showed that the parties had traded on joint account; the silk in this case was bought on joint account, and the judgment of the Court of First Instance was therefore a proper one, as in trade on joint account loss as well as profit had to be equally divided. The judges in the Appeal Court took the view that the parties had traded on joint account, but, inasmuch as there was no special agreement decided that the loss must be born by each party according to the amount contributed by him. On the other points raised the Court held that no decision was necessary. The judgment of the Gifu Court of First Instance must therefore be reversed and the claim of the defendant in the appeal that the appellant should bear one half share of the loss must be disallowed.

Against this decision an appeal was taken to the Supreme Court. It was contended on behalf of

Digitized by Google

the appellant (the original plaintiff) that by general rule and custom loss and profit must be borne equally by the partners in joint account trading, in the absence of any special agreement to the contrary. Even admitting that the Appeal Court was right in deciding that the loss should be proportionate to the amount of capital contributed, the judgment erred in law by failing to fix the amount of loss to be so borne by the parties respectively.

The Supreme Court held that by general rule, in the absence of any special contract, loss in trade on joint account must be borne in proportion to the amount of capital contributed. In this respect the judgment of the Appeal Court was quite in accordance with law. On the point taken as to the failure of the Appeal Court to fix the amount of loss to be borne by the parties respectively, the Supreme Court decided that no decision of the kind was called for, there having been no discussion on the subject. Even through there had been discussion on the point the burden of proving that fact was on the appellant, and he had failed to bring the necessary proof. The appeal, therefore, could not be sustained.—*Saiban Suishi*, November 29th, 1890.

KIMURA KATSUYA AGAINST MATSUMOTO HIKOYEMON.

Principles deduced from the following case:—No sale of any article which is deemed an immovable either in nature or use, can transfer complete ownership, unless the procedure necessary in the case of immovables is taken, or actual delivery of such article has occurred.

In this case judgment was given in favour of the plaintiff in the Hiromaye Peace Court. The defendant carried the case, however, to the Hiromaye Court of First Instance, contending that while certain articles purchased by the plaintiff from the common debtor, Kitagawa Tomijiro, such as mats, doors, *shoji*, &c., being moveables had to be delivered, other articles such as an alcove, a closet, an out-house, &c., must be registered in the Register Office, being immovables. The plaintiff could not exercise any right superior to the defendant in respect of the movables, for the latter had secured public registration, as shown by the warrant to seize the debtor's property, before the plaintiff had obtained registration or attempted to take possession of the property. *A fortiori* the plaintiff had no prior rights of ownership. The plaintiff on the other hand submitted that, having a claim of *yen* 700 against the common debtor, he had taken over parts of the buildings owned by Tomijiro to be applied in payment of interest. The transaction took place on March 10th, 1887, before public registration and seizure of the property by the defendant, which only occurred when the plaintiff attempted to take some of the property so transferred to him.

The Judge of the Court of First Instance held that though the property included articles which in nature and use were immovable, registration was not necessary, the purpose of the transaction being to make them movables. The judgment of the lower court was therefore reversed.

The plaintiff in the original suit now appealed to the Supreme Court contending that as no settled rule existed as to the sale of movables, such transactions must be governed by general principles of law. Transfer from seller to buyer must be taken to have occurred as soon as the views of the parties came into agreement, and the buyer's rights were not affected though the seller still continued to occupy and use the property sold. In the present case Kitagawa Tomijiro's position with regard to the property after its transference to the appellant was purely that of bailee.

The Supreme Court rejected the appeal, holding with the judgment appealed against, that in this case actual delivery must take place unless the usual procedure with regard to the sale and transfer of immovables were taken.

Before Judge NISHIOKA YUMEI, President of the First Criminal Bureau, and Judges H. YAMANE S. KAWAGUCHI, S. SHOYA, and S. OKUYAMA.

MAY A BURGLAR BE ASSAULTED?

THE PUBLIC PROCURATOR OF THE FUKUSHIMA CORRECTIONAL COURT AGAINST MITSUYAMA KISUKE.

Principles deduced from the following case:—"Assault and battery committed on a housebreaker with an instrument seized at the moment when, having been found trespassing by night in a house he fails to reply on being asked who he is, may be regarded as a justifiable act."

Reference:—"Any person who wounds or kills by a justifiable act in one of the following cases shall be adjudged not guilty:—

"Where the wounding or killing is done in defence against a person entering without any reason an occupied house by night, or climbing over or destroying gates, doors or fences." Par. 3, Art. 315, Penal Code.

The accused in this case was found guilty at a preliminary examination in the Fukushima Correctional Court, of battery and wounding. A motion for the recall of this finding was made in the Consultative Bureau (*Kwaigi Kyoku*) of the same Court, with the result that the first decision was ordered to be withdrawn, and it was adjudged that as the act of the accused could not justify a finding of guilty under Art. 315 of the Penal Code, he should be discharged under Art. 224 of the Code of Criminal Procedure.

The Public Procurator of the lower court appealed to the Supreme Court against this decision, contending that in order to bring the case within the application of Art. 315 of the Penal Code there must be three essential conditions; (1) that the intruder entered by night, without cause, a house occupied by others; (2) that the occupant of the house found it necessary to defend himself; (3) that the wounding or killing was justifiable on the ground of self defence. In the present case the first and second conditions were existent, but the third was not; for the wounding or killing must under the article in question be unavoidable,—no other means of defence being at hand. In this case the wounding was not unavoidable, for on the facts it only appeared that the injured person was in the kitchen, and failed when called on, to say who he was. The finding of the Consultative Bureau was therefore unlawful. The accused simply contended that the appeal was groundless, and that the original finding should be sustained.

The Bench found that the appeal chiefly set forth that the original judgment—which held the injuries to have been inflicted in self defence, whereas as a matter of fact the assault was not unavoidable or justifiable—was unlawful. The original judgment, however, found that the accused had struck the intruder with an axe which he found lying near him, on no answer being given; that he did so thinking the person thus discovered in his house under cover of the darkness of night was a wrongdoer; that the assault was committed as a means of defending the house and its inmates, because the act of trespassing in the house by night was presumably with a view to the commission of some wrong, and the assault might be necessary as a means of protection. The original finding must therefore be sustained and the appeal rejected.—*Saiban Suishi*, Dec. 5th, 1890.

LARCENY.

THE PUBLIC PROCURATOR OF THE NIIGATA CORRECTIONAL COURT AGAINST USAMI RINKICHI.

Principle deduced from the following case:—"Theft by opening the door of a house with a key borrowed under false pretences must be punished under Art. 368 of the Penal Code, and cannot be dealt with as common larceny under Art. 366."

Reference—"Any person who steals the property of another shall be guilty of larceny, and be punished with major imprisonment for not less than two and not more than four months." Art. 366, Penal Code. "Any person who commits larceny by entering the house or godown of another, climbing over or breaking any door, gate, or fence, or opening any lock, shall be punished in manner similar to the foregoing article." Art. 368, Penal Code.

The accused was convicted of larceny and of removing goods in the Niigata Correctional Court and was sentenced to major imprisonment for a month and a half and to be subject to police surveillance for six months—the imprisonment for larceny under Arts. 366 and 376 of the Penal Code, and, he being under 20 and over 16 years of age, under Art. 81, the offence of removing goods not being taken as a simultaneous offence.

The Public Procurator of the Lower Court appealed to the Supreme Court, maintaining that on the face of the judgment it appeared that the accused borrowed a key from Kobayashi Ushitaro (the latter being then absent from his house) on the pretext that he meant to enter the house and make the woodwork of a plane (*kanna*); and that he entered the house by opening the door with the key so borrowed, the judge admitting that the accused had borrowed the key on a false pretext with the aim of making preparations to commit larceny. The offence must therefore be punished under Art. 368 of the Penal Code and the judgment was an unlawful one.

The accused opposed the appeal on the simple ground that it was improper.

The Supreme Court held that having opened one of the doors of the house with a key obtained from the occupant on false pretences, and with the object of committing larceny, the accused must be punished under Art. 368 of the Penal Code, and the judgment of the lower court, which decided that the offence should be dealt with under Art. 366, was a misapplication of law, and must be cancelled. Deciding the case anew in accordance with Art. 427 of the Code of Criminal Procedure, the Supreme Court held that the first act of the accused fell to be punished under Arts. 367, 368, and 376, and the second act under Arts. 390 and 394, and the last paragraph of Art. 395 of the Penal Code. As the accused, however, was under twenty and over sixteen years of age when he committed the offences, and as the offences were simultaneous, he must under Arts. 81 and 100 of the Penal Code be punished with major imprisonment for four months and a half and be subject to police surveillance for six months.—*Saiban Suishi*, Dec. 5th, 1890.

OBTAINING PROPERTY UNDER FALSE PRETENCES.

THE PUBLIC PROCURATOR OF THE FUKUOKA CORRECTIONAL COURT, AGAINST NOMIYAMA HANA.

Principles deduced from the following case:—The appropriation under false pretences of goods entrusted to one, with the object thereby of making wrongful gain, constitutes the offence of obtaining property under false pretences.

Larceny consists of the theft of property, in reference to which the offender has no responsibility of custody.

Reference:—Art. 390, Penal Code—"Obtaining property by cheating or the use of threats constitutes the offence of obtaining property under false pretences, and shall be punished with major imprisonment for not less than two months and not more than four years with a fine of not less than *yen* 4 and not more than *yen* 40."

Art. 395, Penal Code—"The act of cheating or embezzlement or other false pretence shall render the offence obtaining of property under false pretences."

The accused in this case was convicted in the Fukuoka Correctional Court of having appropriated under false pretences property entrusted to her keeping, and was sentenced to major imprisonment for two months with a fine of 4 *yen* and to be subject to police surveillance for six months, under Arts. 390, 394, and 395 of the Penal Code.

The Public Procurator of the lower court appealed against this judgment;, contending that the offence should have been treated as larceny. To constitute the offence of obtaining property under false pretences the element of cheating or threatening should be present, and such cheating must be of a skilful nature, and not the unskilful and clumsy act attributed to the accused. True the offence might be regarded as the appropriation by the accused for her private purposes of goods entrusted to her; but as the judgment stood it was a misapplication of law.

The Supreme Court found that the accused had placed inside her *tansu* or bureau a box which had been left by Sakuragi Sakichi on a mat before her door, and had denied all knowledge of the box when the owner returned to ask for it. The Public Procurator had suggested that the offence was one of larceny, or the use for private purposes of goods entrusted to the custody of the accused. As the offence of larceny, however, consisted of stealing goods in reference to the custody of which the accused had no responsibility, the present offence could not be treated as one of larceny, the accused having no responsibility for the custody of the box, which was as a matter of fact left on the mat before her door by the owner. Nor was the offence the use for private purposes of goods entrusted to the care of the accused, because there was no evidence that the box had been so used. The accused in fact assumed custody of the box and appropriated it under false pretences. The original judgment was therefore a right and proper one, and the appeal must be rejected under Art. 427 of the Code of Criminal Procedure.—*Saiban Suishi*, December 6th, 1890.

## *THE "NAMOA" AFFAIR.*

The enquiry into the circumstances of the recent piratical attack on the steamer *Namoa* was again resumed at the Magistracy, Hongkong, when the following additional evidence was taken:—

Dr. Marques said—On the afternoon of the 12th inst. I held a post-mortem examination on the bodies of Captain Pocock and Mr. Petersen. Captain Pocock had a bullet wound on his right side; below the right nipple. The bullet had entered there, travelled through the lungs and liver, eventually lodging in the spinal cord. The abdomen

Digitized by Google

was full of blood. Death was the result of hemorrhage caused by the bullet wound. The bullet was from a bull-dog revolver. Mr. Petersen had three incised superficial wounds on the left side of the forehead, and an ordinary incised wound over the left eyebrow. On the right cheek was a wound which might have been caused by a knife or by the grazing of a bullet. On the upper portion of the left arm were five bullet wounds, one of the wounds being only superficial. Of the others, two bullets had passed through the arm, entered the chest, and passed out of the right side. The collar bone was fractured by a bullet. The right arm had also two superficial wounds, apparently caused by one bullet. Death resulted from hemorrhage caused by the bullet wounds.

Yung Ma Sing, trader, said—On the 10th inst. I was a passenger by the *Namoa*. I took my position on the 'tween deck, amidships, on the starboard side. I had a basket with me containing Tls. 600 in silver. About 1 p.m. I was sitting down when I heard some shots fired on the upper deck. I started to go to the upper deck to see what was the matter. I got as far as the companion leading to the upper deck, when a man standing at the top there called out, "Passengers don't come up." The man was one of the pirates. He called out in a loud, threatening manner. In one hand he held a revolver and in the other a sword. I went back to the place where I had been sitting. Nothing further happened till about 4 p.m., when six or seven of the pirates came down leaving two standing at the top of the companion They told the passengers to go up on deck, one by one. We all went up and were searched. They then drove us into the after saloon. There we remained until the pirates left the ship. There were about thirty or forty men in the after saloon. The remainder of the passengers were taken to different parts of the ship. None of the pirates were on the 'tween deck when the attack began. I saw about twenty of them altogether. They did not kill any of the Chinese passengers, nor did they fire at us. I have not heard of any of the Chinese passengers being killed. If any were killed it must have been after we were told to go on deck. There were two or three women on board. I saw them at the end of the voyage and they were all right. I could recognise one or two of the pirates again. I could recognise two who had European hats on. These were the two who searched me. The pirates were Hakka and Punti men. I have been shown a number of men in the gaol to-day, but I did not recognise any of the pirates amongst them.

The enquiry was further adjourned.

## *HOW HASSAN THE WATER-CARRIER BECAME MARRIED.*

[AN EGYPTIAN TALE.]

When I was in Cairo I remained a long time perfectly ignorant of the names, qualities, and professions of my nearest neighbours—not for want of prying about and questioning. At first, a view from the lofty terrace promised to give me some information; but no! The urban architecture of the Arabs has been so influenced by their love of retirement, that in a City of Terraces nothing was to be seen. All the houses are of different heights, and, as it were by general consent, every builder has managed matters so that nothing scarcely but white walls or palings can be distinguished near at hand. At a little distance, it is true, I could look down upon several terraces, upon which a few bearded old fellows daily smoked their pipes or performed their prayers; and now and then, at evening time, I perceived some shadowy female forms, enveloped in sombre drapery, hovering upon them. A lofty kiosque, that towered on the roof of a large mansion not very far off, was the favourite resort of an Abyssinian slave, who would often look out unveiled, and even once or twice made telegraphic signs to me. Farther off was a low mosque, with a scolloped parapet to its terrace; but I rarely saw any one upon it except a boy, who came out of the minaret at stated intervals to declare the unity of God and call the faithful to prayers.

The lacunes left by the sense of sight were ill-supplied by that of hearing. I could sometimes catch fragments of conversations between the women in a neighbouring courtyard, but little that was definite or characteristic. As usual, one-third of the words employed were curses or terms of abuse—expressive of tenderness or anger according to the tone in which they were uttered. Opposite the window of my room, I must add, was the low-terraced roof of a mud house, upon which two or three large, dirty women occasionally sprawled; but I never could ascertain anything of them or their mode of life. They scowled abominably when they saw me; and the youngest generally raised a cry and ran away. I at first thought that they belonged to an especially bigoted family; but on making inquiries, ascertained the truth. It appears that, in the early time of my residence, during some excessively hot weather, I had taken two or three turns in a state of nature in my apartment; that I had been perceived, and had been, not very absurdly, set down as a madman.

Beyond this terrace was a lofty house, inhabited by a half Spanish, half Levantine family. Two pretty girls occasionally peeped through the palings of the terrace, attracted—I at first flattered myself—by my English aspect, but I was disappointed to find that my landlady's son, a Levantine, had been in the habit of making love to them by signs, and that it was in search of him their bright glances were sent.

I used to sit at my window for hours smoking and watching the people in the street. The inhabitants of the low mudhouse, were, it appears, very charitable. No dervish scarcely ever stopped at their door and sang his song without receiving a piece of bread; and an old blind beggar used to come at stated periods, feeling his way along the wall, and crying, "Geeân ya Rab!—I am hungry, O Lord;" in order to partake of their bounty. Charity is always found amongst the poor.

But this is a digression. I am going to tell the story of Hassan the Sakka (Water-carrier) and of Sitt Mishmish (Lady Apricot), the only two of my neighbours of whose saying and doings I could gather anything definite. The others seemed to be aware a "chiel" was among them "taking notes," and kept their adventures to themselves.

The water-carriers are a curious class of people, and famous for getting into all sorts of intrigues. They pursue their trade in various ways. Some have camels, which carry two enormous watersacks of ox-hide, one on each side; others have only donkeys which bear a sheepskin full; others carry a *kurbah* on their backs and distribute cool refreshing draughts to the passers-by. In Cairo they go about exclaiming, "Recompense me, O God!" but in Alexandria they have a peculiar cry of which I could never obtain any proper explanation, "sellâow, sellâow!" The Levantines maintained that this was a relic of the French occupation, being no other than a corruption of the expression *C'est de l'eau!* which the Sakkas were ordered to use for the information of the soldiers; but the Muslims said that the words were of Moggrebbyn—perhaps of Berber origin.

But to revert to Hassan and Lady Apricot. The former dwelt in a narrow street, down the whole length of which I could see from my window; the latter, in a large house, at the bottom of a blind alley close by. She was a woman of property, and, being a widow, lived by herself with her hand-maidens. Her short experience of matrimonial life had been unfortunate, and consequently she had resolved never to put herself again in the power of man. This determination of hers became well known in the neighbourhood, and during the early time of her widowhood formed the subject of spiteful remark. But she lived down scandal, and her doings at length passed perfectly unnoticed.

However, Hassan the Sakka, a handsome little man, with a glossy black beard and sparkling eyes, took it into his head that, humble as was his position, he might, by daring and preseverance, induce the rich widow to change her mind. Celibacy he considered an unnatural state—a single woman as a banquet without guests, a house without inhabitants, a ship without a crew, a camel without a hump, or an ass without a driver, or, to quote Mona Caird, a ramrod without a gun. He rightly enough argued that Lady Apricot, being a quaint woman, must be attacked in a quaint way, and, having formed his resolution, proceeded to devise means for carrying it out.

He was one of the few strangers admitted into the house. When he came with his string of camels, he drove them all into the great courtyard where was a large stone cistern, which he filled. Sometimes he was ordered to carry a plentiful supply of water into a little garden, where was a reservoir that furnished a *jet d'eau*, which he supposed was made to play on important occasions. The garden was quite a gem, with two tapering palms, and a number of orange, citron, fig, and pomegranate trees tastefully disposed in walks and arbours. A pretty kiosque, half hidden by vegetation, occupied nearly the whole of one end. In its centre was a tank and the *jet d'eau*.

"I judge," said he to himself, as he viewed this spot, "that Sitt Mishmish indulges here in *fantasias*; that she collects around her the means of delight—the singers and the dancers—and breathes the fragrance of the flowers, and listens to the music of the fountain, and enjoys her keyf. Happy the man who is admitted to share in the festivities."

Hassan was an inventive genius, and doubted not that, if it suited his purpose, he could obtain admission into the garden whilst the lady was indulging in her sports. So he artfully lured one of Sitt Mishmish's eunuchs to a coffee-house in the neighbourhood, made him merry with coffee and smoke, and got from him that his mistress was wont, on the night of every Thursday, to amuse herself in the kiosque of the garden; that her hand-maidens were all trained to singing and dancing, but that on great occasions some of the first public performers were hired.

"The Sitt is a fantastic woman," said the eunuch, "and Allah has blessed her with little sense; for every day in the week she lectures against marriage, and orders her favourite slave, Zareefeh—for slaves are still an institution in Egypt, doubt it who may—to tell tales of tyrannical husbands; but on the night of the fantasia she seems to droop with languor, and she cries out sometimes in a faint voice, 'When will my beloved come?'"

Hassan could not contain his delight at these revelations; for thought he, "surely I must be this beloved one that is expected."

So Arab-like he began to cast about to devise means of obtaining admission into the garden; but found the task more difficult than he had imagined. Houses and lofty walls hemmed it in on every side; and he would not run the risk of betraying himself by endeavouring to corrupt any of the domestics.

"God is great," said he; "I must have patience. Fortune will at length cast that which I seek before me."

And he continued carrying water every day for household use, as well as for keeping up the freshness of the garden, and replenishing the fountain.

One evening he was sitting in a coffee-house, when a narrator began to tell the story of a man who had been carried by an eagle into a wonderful palace sewed up in a sheepskin. Hassan at once formed his plan, which was no other than this—to get into one of his ox hide sacks, armed with a knife, and cause himself to be left, as if accidently, by his assistants. What he was to do if success crowned his plan, destiny would determine.

The trick was easily played. Two cunning friends sewed him well into the sack—begging him to appear as much like water as possible—and when the backs of the slaves were turned, hoisted him off the camel and carried behind a pomegranate tree in the neighbourhood of the kiosque. No suspicion seemed to be raised. Two men had been seen to enter; two men issued forth. The doors were closed; and, as evening approached, preparations were made for the festivity.

About an hour after sunset, Hassan who began to feel very uncomfortable in his sack, heard a voice calling from a window somebody.

"O Zara!"

"Present, O Sitt!" was the reply.

"Go with Yacoub, and light the lamps and let loose the waters, and brush the floor and spread the carpets; for I am sad, and must be delighted with music and singing."

Presently the two slaves—the eunuch and the girl—came to the kiosque and obeyed the orders of their mistress. As they bustled about they saw the sack behind the tree, and Yacoub said:

"Those accursed Sakkas have left this great ugly bag behind. We must drag it out of the way."

On hearing this, Hassan endeavoured to look as liquid as possible; and for the first time felt fear.

"If they discover me now," thought he, "they will beat me, and turn me out before Sitt Mishmish comes; and I shall gain nothing but bruises by the adventure."

Yacoub and Zara gave two or three tugs at the bag, but finding it heavy, came to a stop.

"It will be better," said Zara, "to let the water run out. Untie the knot."

"No," replied Yacoub; "I will poke my sword through it it; and if the rascally Sakkas complain, I will pull their beards and be insolent."

"It is advisable not to cut the sack," quoth Zara, to the infinite relief of poor Hassan.

The slaves then again bustled about, and often walked over the sack without noticing that it held anything but water; and Hassan remained quiet, still striving to liquify himself.

When Sitt Mishmish came down to the kiosque she saw the water-sack, and said:

"What is the meaning of this?"

And they told her.

"Pigs that ye are!" exclaimed she, "that ye have not removed it." Hassan prepared his knife, and commending himself to the Prophet, awaited impatiently for the Sitt to call for her beloved one. But the dancing and music began and continued for an hour, and the lady remained silent and sad. And Zareefeh said to her:

Digitized by Google

"O Sitt! what can we do to amuse thee? Shall we tell stories? or shall we jump upon this water-sack? or shall we try our strength and roll it to the tank?"

"Roll it into the tank," was the reply.

Immediately five or six women, laughing and pushing one another, began to roll the sack rapidly along. Hassan was turned over in all directions, and found it almost impossible to use his knife. So he began to roar for mercy, fearing lest he should be drowned. But the slaves paid no attention, and had got him to the edge of the tank, when with a desperate effort, he slit open a hole large enough for him to pass his head. On seeing his shaven scalp, with a long top knot thrust forth, the girls gave a loud scream; but Zareefeh exclaimed:

"Have courage, O girls!" and—"paff, paff"—slapped the poor man's face with both hands.

In an instant they soused him in the tank with screams of laughter. He struggled and roared; but they had no mercy on him, and would probably have drowned him in their fun had not Lady Apricot called upon them with a loud voice to desist. By her orders they drew him forth, half dead and dripping like a rag; and brought him warm towels to dry himself, and threw silk robes over him, and presented him to their mistress; who looked upon him, and said:

"Is this my beloved?"

He replied:

"Yea; and I am happy to have suffered all this for thy sake."

And she said: "I knew of thy coming and was resolved to try thy patience. Thou art a wise person—not foolish and weak of heart. I had sworn never to take as a husband any one but the man who should make himself fire, or air, or water for my sake. Thou hast made thyself water and I am content. Sit by my side."

So Hassan became the husband of Lady Apricot, and lived happily in her society.

Such was the story related to us one evening by an old gentleman who came in to smoke his pipe with my landlady. She was vexed with him because he was long-winded and put off the supper for an hour. So she mildly told him that he was a "Kedab" (liar); but Om Barbarâ, who was nodding in a corner, woke up to declare that it was all perfectly true; that she knew a Muslim who used to visit Lady Apricot, and that such things constantly happened. I do not answer for the details, but it is certain that Hassan the Sakka became the husband of Sitt Mishmish. Such a circumstance has nothing surprising in Egypt, where no prejudice in favour of birth or breeding exists to impede the free play of caprice, or the development of romantic affection. And of this I shall give some examples in my next.—*Statesman.*

## *MADAME BLAVATSKY'S WORK IN THE WEST.*

It is with some surprise that an F. T. S. arriving in India from England or America finds that the larger portion of the public outside the Society either believes Madame Blavatsky to be dead, or, at the very least, to have been crushed under the weight of falsehood hurled against her by enemies and calumniators. Even within the Society there are not a few who imagine she has lost her love for India, or that, owing to increasing years and constant ill-health, her energy has declined, and that she is no longer working for the noble cause to which her life is devoted with the same fire, the same enthusiasm, the some untiring devotion, as in the days when her presence gave new life and vigour to the decaying reverence of the Hindus for the priceless gems of truth contained in their ancient literature. Naturally the more earnest and active members of the Society know otherwise; but even they do not seem to appreciate the amount and value of the work she has accomplished during the last four years, nor do they grasp its significance for, and important bearing upon, India.

Thus, although readers of the *Theosophist* have always had the materials before them for realising these facts, yet it may not be ultimately useless if I attempt to sketch, however inadequately and briefly, the work which H. P. Blavatsky has accomplished in Europe and America since she was ordered away from Madras by Dr. Scharlieb.

To begin with Europe. In May, 1883, there existed one fairly active Branch of the Society in Paris, one in Greece, and a dead-alive one in Holland. In London, there was a Branch numerically strong, but which, however, was practically almost dormant. Besides these there were inanimate Branches in Cambridge and Edinburgh, and a somewhat less sleepy one in Dublin, Ireland. There was also a useful centre at Odessa. These represented Theosophy in Europe, and an impartial observer would have declared that the prevailing tendency of the movement there was towards gradual euthanasia and final decay. That this picture is not drawn in too gloomy colours will, I think, be borne out by the opinion of most persons acquainted with the Society in Europe at the time referred to. In May, 1887, Madame Blavatsky came to London from Ostend, and an immediate revival of activity became perceptible. The magazine, *Lucifer*, was started, the "Blavatsky Lodge" formed, and work went on apace. New enthusiasm was infused into the members by her presence, and the present state of the movement may now be described as follows:—

On the continent things are slightly improved, as witness the formation of centres of Theosophical activity in Spain, Vienna, and Italy. In Sweden a new and most energetic Branch, now numbering over 100 *active* working members, has sprung up, while the dormant Branch in Holland has began to work in earnest. But it is in England, around her from whom this new life has really sprung, that its effects are most visible. Instead of 1 moderatly active and 3 inanimate Branches in the United Kingdom, the Society now counts 13 active, working, energetic Branches, among which the "Blavatsky Lodge" numbers some 100 active members, and more than that number of associates. So large has become the attendance at its weekly meetings, that we have been driven to construct a hall for this purpose, capable of seating 300 persons, as well as for use as a general lecture hall on Theosophical subjects.

In 1887, the existing Theosbphical literature was comparatively meagre. Now, besides the older books, we have the first two volumes of the "Secret Doctrine," the "Key to Theosophy" and "Voice of the Silence" from H. P. B.'s pen, besides a mass of pamphlets, leaflets and tracts. In addition, several sterling works on Theosophical topics by other able writers have appeared; and when one adds to this the existence and success of the magazine, *Lucifer*, and the establishment and maintenance of a regular publishing and printing office, conducted *solely* in the interests of the Theosophical movement, where all works, tracts, &c., on these subjects may be published at a minimum of expense and for the sole benefit of the T. S., one is able to form some measure of the growth in activity and strength of the movement since 1885. This, however, is not all; for besides the above, the Theosophists in Europe have erected a Head-Quarters for the Society in London at a cost of over £1,200. And most striking of all is the strength and loyality of the *Esoteric Section*, now barely two years old, but already numbering many hundreds of members.

So much regarding Theosophy in Europe; let us turn now to America. When Mr. Judge went back to that country from India, at the end of 1884, he found the movement almost dying, and in spite of his earnest efforts and constant exertions, the revival of its life and activity was at first very slow. Throughout all these years, Mr. Judge has unswervingly followed H. P. B.'s advice and guidance; he has striven to inspire himself with the same spirit that fires her efforts, and to carry on the movement upon the lines she has marked out. The consequence of this policy has been the steady, and—during the last two years—the extraordinarily rapid growth and spread of the movement throughout the United States. The number of active, working Branches has doubled in each of the last two years, the Society having spread quite across the Union, from the Atlantic to the Pacific Oceans. Moreover, the increase in numbers of the Society has been even larger in proportion than its growth as measured by the number of new Branches formed; while the hold which Theosophical ideas are taking upon the public mind, as shown both in the Press and in general literature, cannot escape even the most superficial observer, and is more striking and of greater ultimate importance than the spread of the Society itself.

Almost as much, too, has been done in the production of Theosophical literature in America as in Europe, and the back numbers of the *Path*, Mr. Judge's edition of Patanjali's Yoga Philosophy, his Theosephical Glossary and Echoes from the Orient, Dr. Buck's Study of Man, Mrs. Ver Planck's new book, and the numerous leaflets, pamphlets and papers circulated to the American Branches, as well as the *Theosophical Forum* under Mr. Fullerton's editorship, form together a body of work done, done well and thoroughly, of which *any* Society might justly be proud.

And to what is this due? Like the workers in Europe, Mr. Judge and his devoted colleagues in America ascribe all to the example, the guidance, the help, the counsel, the inspiration of H. P. B.

Now it is not my intention to write a panegyric of that noble woman in a magazine she once edited. I make these statements simply because they are *facts*, and because, though familiar to every one of us in Europe and America, I have reason to think that the greatness of the work she has accomplished and is still performing, as also the extent to which Theosophy has spread and the Theosophical Society has grown and prospered in the West under her leadership, are neither realised nor appreciated—even by her devoted friends—in India, though the facts have been recorded in this magazine.

Again it seems to me that the Hindus, both within and without the Theosophical Society, have failed to perceive the enormous importance which the spread of Theosophy in the West and the growth of the Theosophical Society possess in regard to the spiritual reawakening and regeneration of India. Neither do they realise the direct bearing of this on the present, and its great possibilities for the future—regarding the question that is, whether the India of to-day shall awake from her slumber of centuries, and through the revival of spirituality in her peoples, through the Unity and Brotherhood which are the essence of true Theosophy, as they are likewise the direct and inevitable outcome of *true* spirituality—shall escape the deadly morass of materialism, its consequent degradation, disintegration, and decay, and so regain once more her lofty place in the van of Humanity; or whether, falling into the opposite extreme, she shall perish and disappear for ever as have the mighty nations of Egypt, Babylon, Assyria, Greece, and Rome.

On this subject, then, a few words may be in place.

One of the most potent factors in the moulding of India's present and future is the influence of Western thought, education, and habits upon its more intelligent and better educated classes. Now the first effect of these forces has been to turn the minds of those who were subjected to them, away from their ancient spirituality and the time-honoured learning and modes of thought of their ancestors. Not altogether has this effect been evil. On the contrary, it was a necessary and unavoidable stage in the new birth of India; but its danger lay in the tendency thus created towards a selfish, sensual materialism and a mind prejudiced against, and so closed to, all stirrings of that latent spirituality, which alone can really regenerate India. This tendency grew unchecked, year by year taking deeper, firmer root in the mind of Indian youths, till the advent of the Theosophical Society. Then a reaction set in, and the ablest men in India are no longer ashamed to avow their great forefathers. One great force in bringing about this reaction was undoubtedly the fact that the Theosophical Society was created and led by two people from the West, and throughout the history of the Theosophical Society in India, it is the Western element in it which has played the most prominent part, and exercised most influence in reviving and stimulating interest in spiritual matters among the English educated Hindus. Thus, to speak generally, it is India which has supplied the material, while the West has contributed the energy and force required to make it available and bring the latent power of the spiritual thought and science of India's glorious past into active, living contact with men's minds to-day. It seems further, as if this process was destined also to characterise the future relations of West and East, especially in all that concerns the spiritual life and activity of the latter. If the spiritual life of India is to be revived, it must be through the quickening into growth and activity of the dormant, but still vital germs of spirituality in its peoples through the active energy of the West bringing to bear upon them the vivifying influence of the spiritual knowledge and wisdom which the West is now beginning to draw from the treasure house of Sanskrit and vernacular literature and tradition.

But the mere revival of reverence for, and belief in, the Shastras, will do but little for the future of India. To substitute merely a blind belief in certain sacred books for an equally blind belief in materialestic science is of little value. It is not sufficient for the Hindus to reverence and study their sacured literature; they must learn to *understand it.* This understanding, too, must be a vital re-assimilation of the ancient thought; not a mere world knowledge, it must be a re-reading of these old teachings, not in the light of empty verbal abstractions of the logic chopping of a period of decay—it must be a new, vivid apprehension of the old truths, with a fresh and ample context of concrete truth and fact; otherwise it can bring no worthy fruit to ripeness. Here again, too, the importance of Western Theosophical thought to India is apparent, for it is precisely Western students who, guided by H. P. B., are beginning to learn how to render living and full of meaning these old time-honoured but abstract forms. Nowhere in India, however, except in the

Digitized by Google

Theosophical Society and allied organisations, can people be found capable of infusing this new spirit into its ancient religious thought. Hence those who hold that the Society has done its work, take, it seems to me, a very superficial view of India's needs, and of the forces which are needed to bring about that national re-birth to which all look forward.

But some, perhaps, may think that this revival of India's spiritual life is of but minimal importance to the future progress and development of their native land. They may think that it is rather through material progress, through political and social organisation and development, through eating meat and drinking spirits, through parliamentary institutions and local self-government, that their goal—the re-birth of India as a united and mighty nation—is to be achieved. Such ideas are woefully erroneous. Let them learn the lesson of history as exemplified in the decay of Aryavarta herself, not less than in the decline and fall of Egypt, Babylon, Assyria, Persia, Greece and Rome. In each and every case, it was the growth of materialism with its inseparable attendant—selfishness—which led to the breaking up of these mighty empires, and the destruction of their civilisations. For is it not obvious that the inevitable outcome of the spread of materialistic thought, and the accompanying decline of spirituality, must be that all man's interest, thought, and aspiration become centred in physical life, in the enjoyments of the senses, in the gratification of the personal desires and passions, ambition, vanity, lust, love of power, and so forth? In other words, under the influence of such thought men begin to live more and more each for himself alone, without regard to their fellow citizens, and in proportion as this spirit gains sway in a community, so must the social organism break up and disintegrate through the ever-intensifying struggle between the individuals composing it.

If more evidence of this truth be needed, it can be found in abundance in the present struggle between Labour and Capital throughout the West, in the growth in number and acrimony of the strikes, in the ever-increasing misery, suffering, and degradation of large portions of the population. So bitter, indeed, has the struggle for existence become, that its very intensity is forcing home to men's hearts the deeper *spiritual* truth of human solidarity and unity, as opposed to the *prevailing* doctrine of the unchecked "struggle *for existence*" and its logical outcome—unrestrained selfishness. Thus the hard logic of bitter experience comes in to confirm the essential truths of all spirituality, viz.,—that the Law of Life is unity and solidarity, that the purport of human existence is the realisation of this oneness, and that the only road to true happiness lies in the steadily growing conscious realisation and practical carrying out of this law in our daily and hourly lives.

Every mighty nation of the past was built up because its individual citizens realised their own unity with the nation, forgetting themselves, their selfishness and personality, in the consciousness of this higher unity. And it is by this growth of self-sacrificing devotion that India must be re-born as a nation, if she is ever to live again as she has lived in the past. As it has been the strength of the innate spirituality in her people which has till now preserved even a semblance of existence amid the crash of falling empires and the inroads of foreign invaders; so it must be the revival, the reawakening of this inner spiritual life, the thought of the greatness of the past, and the lofty ideal of its spiritual teachings, which must nerve the efforts and fire the enthusiasm of her sons if Aryavarta is once more to be counted among the foremost of nations.

It is because the Theosophical movement is one of the strongest agencies working in this direction, and because the progress of the movement in the West must, as been shown, react with multiplied power upon India, that Madame Blavatsky's work in Europe and America is of such vital import to every Hindu. Therefore they should aid the Theosophical Society in its work, therefore they should seek in every way to strengthen its influence, therefore, finally, that they should not forget or cease to honour the one about whow I am now writing, to whom in the present they owe so much, and to whose labours they will be ever more and more indebted as the years of the future roll by and the influence of her life and work begins to be appreciated at its true value.—BERTRAM KEIGHTELY, F.T.S. in the *Theosophist*.

[REUTER "SPECIAL" TO "JAPAN MAIL."

London, January 2nd.

A fight has taken place between the Indian tribes now on the war-path and the United States Cavalry under General Miles at Porcupine Creek, in which the Cavalry lost 75 killed and 110 wounded. The Indians had fired a mission building near Pine Ridge, in which a number of priests and sisters and hundreds of children were burnt alive.

London, January 3rd.

After the action at Porcupine Creek between the United States Cavalry and the Indians, the troops discovered that it was only an empty school, and not the mission at Pine Ridge, as previously reported, that was burned.

London, January 4th.

In consequence of the severe weather, which has thrown thousands of men out of employment, there is terrible distress in the East End of London, amounting almost to a famine.

London, January 6th.

It is stated that Sir Julian Pauncefote has notified Mr. Blaine that any seizure of a British sealing vessel outside the three-mile limit in the Behring Sea will be forcibly resisted.

London, January 7th.

It is reported that sixteen United States warvessels have been ordered to rendezvous at San Francisco in February.

It has been denied by the Foreign Office that Sir Julian Pauncefote has informed Mr. Blaine that any seizure of British sealing vessels outside the three-mile limit in the Behring Sea would be resisted.

London, January 8th.

Several swift [British] cruisers have been ordered to be got ready for commission to reinforce the North Pacific Squadron before the sealing season commences.

Later.

The North American Indians are coming to terms, and five of the principal bands have already surrendered.

[FROM THE "SINGAPORE FREE PRESS."]

London, December 16th.

Silver securities are advancing and rising in New York owing to the belief that prospects are favourable for legislation. Senator Sherman will introduce to the Senate on behalf of the Republican Caucus, after conference with the Hon. W. Windom, Secretary of the Treasury, a Bill providing for the purchase of the surplus silver bullion valued at twelve millions, and issue one hundred millions two per cent. bonds for the purchase of bullion when required, in order to make good the retirement of National Bank notes and the recoinage of trade dollars.

London, December 17th.

The Caucus having discussed Senator Sherman's bill regarding the purchase of the surplus silver, decided to eliminate the proposal to issue two per cent. bonds for the one hundred millions.

London, December 19th.

The Republican Bill has been finally drafted and will be presented to the Senate shortly. It provides for the purchase of the bullion surplus amounting to twelve million ounces within the year but not exceeding three millions monthly, this in addition to the present monthly purchase; the bill also provides for free coinage when silver is maintained at par for one year; it likewise comprises provisions for increasing the currency.

London, December 22nd.

The Egyptian Budget shows a surplus of half a million.

Major Wissmann has recalled Emin Pasha in consequence of his disobeying orders.

## IMPORTS.

There is no change to report in the position of the Import Market. A few complimentary sales were made at the beginning of the year at rates below what Importers are willing to accept. There is no demand, and prices all round are purely nominal. Sales for the week amount to 150 bales English Yarns and about 1,000 pieces Shirtings.

### COTTON PIECE GOODS.

| | PER PIECE. | | |
|---|---|---|---|
| Grey Shirtings—8¼ lb, 38½ yds. 39 inches | $1.35 | to | 1.90 |
| Grey Shirtings—9lb, 38½ yds. 45 inches | 1.60 | to | 2.52½ |
| T. Cloth—7lb, 24 yards, 32 inches | 1.15 | to | 1.47½ |
| Indigo Shirtings—12 yards, 44 inches | 1.20 | to | 1.60 |
| Prints—Assorted, 24 yards, 30 inches | 1.70 | to | 2.00 |
| | PER YARD. | | |
| Cotton—Italians and Satteens Black, 32 inches | 0.07 | to | 0.14 |
| | PER PIECE. | | |
| Turkey Reds—1¾ to 2¼lb, 24 yards, 30 inches | 1.00 | to | 1.15½ |
| Turkey Reds—2¼ to 3lb, 24 yards, 30 inches | 1.20 | to | 1.40 |
| Turkey Reds—3¼ to 4lb, 24 yards, 30 inches | 1.70 | to | 2.05 |
| Velvets—Black, 35 yards, 22 inches | 4.50 | to | 6.00 |
| Victoria Lawns, 12 yards, 42-3 inches | 0.50 | to | 0.65 |

### METALS.

Prices weak and nominal. No fresh business since the holidays and buyers hang back. Quotations unchanged but concessions must be made to induce business.

| | PER PICUL. | | |
|---|---|---|---|
| Flat Bars, ½ inch | $2.65 | to | 2.75 |
| Flat Bars, ¼ inch | 2.75 | to | 2.85 |
| Round and square up to ¾ inch | 2.65 | to | 2.85 |
| Nailrod, assorted | | Nom. | |
| Nailrod, small size | | Nom. | |
| Iron Plates, assorted | 2.80 | to | 3.00 |
| Sheet Iron | 3.20 | to | 3.40 |
| Galvanized Iron sheets | 5.80 | to | 6.00 |
| Wire Nails, assorted | 4.40 | to | 4.90 |
| Tin Plates, per box | 5.00 | to | 5.25 |
| Pig Iron, No. 3 | 1.25 | to | 1.27½ |

### KEROSENE.

Business suspended still. The dealers appear reluctant to return from their holiday-making. During the week the steamer *Port Fairy* from New York brought 20,000 cases Comet oil, and the steamer *Lochiel* from Batoum has arrived with 73,000 cases Russian. Deliveries have been fair up to the end of the year and present stock is about 650,000 cases.

#### QUOTATIONS.

| | | | |
|---|---|---|---|
| Chester | $1.70 | to | 1.72½ |
| Comet | 1.67½ | to | 1.70 |
| Devoe | 1 65 | to | 1.67½ |
| Russian | 1.60 | to | 1.65 |

### SUGAR.

There is nothing yet, but some enquiries are said to have come from Tokyo.

| | PER PICUL. | | |
|---|---|---|---|
| Brown Takao | $4.10 | to | 4.15 |
| Browu Daitong | 3.10 | to | 4.20 |
| Brown Canton | 4.80 | to | 5.90 |
| Brown Java and Penang | 5.00 | to | 5.60 |
| White Refined | 4.55 | to | 7.50 |

## EXPORTS.

### RAW SILK.

Our last was dated the 2nd instant, since when settlements in this Market amount to 572 piculs, divided thus:—*Hanks*, 8; *Filatures*, 333; *Re-reels*, 92; *Kakedas*, 139. There have been no direct shipments this week, consequently the total business is comprised in the above mentioned 572 piculs.

This has been a broken week, trade being practically suspended for some days at the turn of the year; latterly, however, there has been more doing, business averaging 200 piculs per day.

Market is fairly active at about late rates. Buying goes on apparently both for Europe and America; prices are steady, some holders being even firm, and, now that exchange has once more taken an upward turn, purchasing is likely to be more difficult again.

The stock does not show much diminution on the week, but it is probable that from now on we shall see a marked falling off in supplies. The wealthy owners of silk seem still resolved to keep their goods off the Market, believing in a better future later on.

There has been only one shipping opportunity during the week, the French mail of the 4th inst. This vessel, the *Sydney*, carried 229 bales for the South of Europe, and her departure brings the present export figures up to 13,161 piculs, against 29,120 piculs last year, and 30,401 piculs in 1889.

*Hanks.*—Very small business, consisting of one very small parcel of *Hachoji*, said to be of good quality, at $470. Holders are willing to sell at quotations, but buyers require some further concessions.

*Filatures.*—Fair amount of business has been done during the last two days, and among the purchases are *Saishinsha*, $580; *Higashi-Gakosha*, $570. Some good medium *Koshu* have also been done at $555. *Kaimeisha* is still held for $580; while *Tokosha* and *Shunmeisha* are still withdrawn from the market. In fine sizes a few bales *Shinshu* and *Oshu* have been done at $590, with *Koshu* at $575.

*Re-reels.*—Business has not been large in this class, although there is a little more doing at the close. The most notable sale is 50 boxes *Five Girl* Chop at $555. Few parcels of Medium and Common have also been done as low as $510.

*Kakeda.*—These have received a fair amount of attention during the last few days, and some considerable sales have been made. *Daruma*, $545; *Kinko*, same price; down to *Black Tiger* at $507½ with a small parcel of *Deer* Chop at $500.

*Oshu* sorts and sundries have given rise to no business this week.

### Export Raw Silk Tables to 9th Jan., 1891:—

| | Season 1890-91. | 1889-90. | 1888-89. |
|---|---|---|---|
| | Bales. | Bales. | Bales. |
| Europe | 4,720 | 12,807 | 16,632 |
| America | 8,091 | 15,884 | 13,598 |
| Total { Bales | 12,811 | 28,691 | 30,230 |
| Total { Piculs | 13,161 | 29,120 | 30,401 |
| | Piculs. | Piculs. | Piculs. |
| Settlements and Direct Export from 1st July | 14,000 | 32,000 | 31 200 |
| Stock, 9th January | 15,600 | 4,300 | 8,800 |
| Available supplies to date | 29,600 | 36,300 | 40,000 |

### WASTE SILK.

Trade in this branch is 850 piculs, divided thus: *Noshi*, 350; *Kibiso*, 490; *Sundries* 10. There is no talk of direct export this season.

The buying goes steadily on, and is apparently for continental Europe. As on the Raw side, the week has been broken by holidays; but during the last three days considerable settlements have been made.

As before noted, the chief trade has been in *Noshi*, although *Kibiso* of the better grades has been well patronized.

The French Mail Steamer, *Sydney*, on the 4th inst., took 199 bales Waste and 25 bales Pierced Cocoons. The *General Werder*, which left port on the morning of the 7th, had also 44 bales Waste Silk for Europe. These departures make the present export figures 17,329 piculs, against 16,207 piculs last year and 19,791 in 1889.

*Pierced Cocoons.*—No business during the past week; holders require more for their stocks than buyers can pay.

*Noshi.*—The demand for good fibre continues, and stocks are getting very low; buyers are therefore turning their attention to the staple article of *Joshu*. Among the recent purchases are *Filatures* at $138; *Hachoji*, $128; *Oshu*, $130; *Shinshu*, $110; and *Joshu* from $75 to $85, according to assortment.

*Kibiso.*—Good demand for Filatures, prices ranging from $95 to $114, according to quality. *Mino*, *Yechigo*, and *Oshu* have also been done in considerable quantities at or about $50 per picul.

*Mawata.*—There have been no transactions on this market, but some portion of our stock has been shipped down south.

*Sundries.*—Only one small purchase of common *Neri* at $8; in this department also stock is decreased by some purchases for home consumption.

#### QUOTATIONS.

CONTRACTORS TO THE ADMIRALTY, LEADING STEAMSHIP COMPANIES, AND YACHT OWNERS.

STEAM LAUNCHES & YACHTS,

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 10 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for Copy to

SIMPSON, STRICKLAND & CO.

WORKS:
DARTMOUTH, SOUTH DEVON (ENGLAND).
LONDON OFFICE:
181, QUEEN VICTORIA STREET, E.C.

MACHINERY.—Mr. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated) — the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one or two good firms in Japan desiring to deal with a reliable house. Mr. Wadham's intimate knowledge of the English Machinery and Engineering Trades enables him to save large sums to foreign customers placing their orders in his hands. Firms dealing with Mr. Wadham may rely upon being served in a prompt and straightforward manner. Address: Mr. Arthur Wadham, Engineering Offices, [illegible], Queen Victoria St., London. Registered address for telegrams—"Wadham, London." 1y. June 28, 1890.

KEATING'S COUGH LOZENGES.

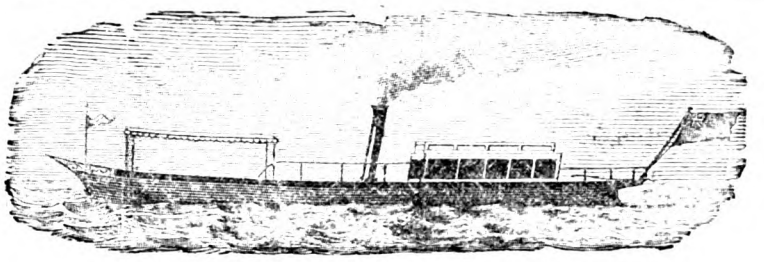
COUGHS, ASTHMA, BRONCHITIS, DIFFICULTY OF BREATHING are speedily cured by KEATING'S COUGH LOZENGES (recognised and recommended by the Medical Faculty). No other remedy is half so effective. One Lozenge alone gives relief. They contain no Opium, Morphia, nor any violent drug, and may be taken by the most delicate. One or two at bed-time ensure rest when troubled by the throat. Sold by all Chemists, in Small Tins. Dec. 27th, 1890.—21ins.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In I short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."



SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1890

YARROW'S

SMALL STEAMERS AND STEAM LAUNCHES.

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER.

Stern Wheel Steamers with very shallow draft especially suitable for river navigation.

MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.

YARROW & CO., POPLAR, LONDON, E.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same: and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JAN. 17, 1891.

MARRIAGE.

On Jan. 10th, at H.B.M.'s Consulate, Yokohama, by special license, before James Troup, Esq., H.M.'s Consul, and afterwards at the Union Church, by Dr. Meacham, FRANCIS JOHN WILLIAMS, third son of the Rev. Jabez Palmer, The Elms, Clapton, London, and grandson of the late Sir James Williams, to LENA, only daughter of the late Capt. Jacob Ewalt, of Yokohama. No Cards.

DEATHS.

On the 10th instant, at 12 o'clock noon, at his residence, Negishi, CHRISTIAN WAGNER, born at Cassel, Germany.

On the 11th inst., at No. 90, Settlement, Yokohama, CHARLES HAENNI, of Thun, Switzerland, Vice-Consul for Switzerland, in his 49th year.

At his residence, 4, St. Stephen's Villas, Norwood, London, ALFRED MITCHELL, formerly of Yokohama, aged 50 years. (By telegram.)

## *SUMMARY OF NEWS.*

VISCOUNT SAKURAI TOMOYOSHI expired on the 9th instant.

COUNT ITO is suffering from influenza and has gone to Odawara.

H.I.H. PRINCE KOMATSU left the capital on the 9th instant for Sano.

HIS IMPERIAL HIGHNESS PRINCE ARISUGAWA started from the Shimbashi Station on the 12th instant at 8 a.m. for Yokosuka.

COUNT YAMADA proceeded to the Palace on the 9th instant, and was granted an audience with His Majesty the Emperor.

ABOUNT thirty-five Court Ladies in the Imperial Palace are suffering from influenza, and several are also ill at the Aoyama Palace.

MR. TAKEUCHI KO, one of the leading members of the *Rikken Jiyu* party, resigned on the 12th inst. his membership of the party.

MR. MUTSU, Minister of State for the Agricultural and Commercial Department, purchased recently several thousand *tsubo* (one *tsubo*= 36 sq. feet) of land at Nishigahara, Oji, Tokyo, with the intention of erecting a country villa.

THE laying of the line of the Sanyo Railway, between Wake and Shiraishi, being completed, a trial run was made on the 10th instant.

COUNT TODA, Envoy Extraordinary and Minister Plenipotentiary, paid his respects to the Emperor on the 9th instant at the Palace.

MR. ASADA, Governor of Kanagawa, who had been suffering for some time from influenza, was able to attend business on the 10th instant.

THE Tokushima Prefectural Government has erected a meteorological observatory and applied to the Home Office for an engineer to take charge of is.

HIS IMPERIAL HIGHNESS PRINCE KUNIHIKO arrived in the capital on the 8th instant from Atami, where His Highness had been staying for some time.

BARON TOKUGAWA YOSHIATSU and Mr. Yoshikawa, Vice-President of the Nippon Yusen Kaisha, have resigned membership of the Honjo District Assembly.

THE receipts of the Post and Telegraph Office, during December last, were *yen* 246,060, showing an increase of *yen* 171,558 as compared with the previous month.

IT is stated that the wreck of the *Kii Maru*, of the Nippon Yusen Kaisha, which went ashore at Omayezaki (Yenshu), will shortly be offered for sale by public auction.

DUING the month of December last, the visitors to the Tokyo Library numbered 3,289, showing an increase of 1,958 as compared with the same month the previous year.

MR. STONE, recently appointed agent of the American Trading Company, at Yokohama, was entertainment by a number of the leading traders of Yokohama on the 12th instant at Chitose-ro.

MR. K. KAWAKAMI, Chief of the Commercial Bureau in the Foreign Department, who returned from Korea on the 18th inst., will leave Japan shortly to inspect the Japanese Consulates in various parts of China.

DURING last month gold, silver, and nickel coins were struck in the Osaka Mint to the following amounts:—5 *yen* pieces *yen* 117,425. silver 1 *yen* pieces *yen* 156,210. and nickel 5 *sen* pieces *yen* 344,250.

AN ordinary meeting of the Cabinet was held on the 13th instant, at which Counts Yamagata, Saigo, Matsukata, Oyama and Goto, and Messrs. Yoshikawa and Mutsu were present, the proceedings lasting till late in the evening.

H.I.M. THE EMPEROR despatched Viscount Hojo, a Chamberlain, to the residence of the late Mr. H. Yamane, a Councillor of the Administrative Court, who expired on the 7th instant, with a message of condolence and a present to the family.

THE receipts of the Tokyo Rice Exchange during the latter half of last year, were *yen* 43,000, of which *yen* 14,400 were set apart as a special reserve, *yen* 4,300 as ordinary reserve, *yen* 4,300 as remuneration to officers, and *yen* 20,000 as a dividend for the half-year, to be declared at the rate of 40 per cent. per annum.

THE workmen of the Sapporo Hemp Manufacturing Company, who went out on strike with the intention of shortening their hours of labour, resumed work on the 9th instant, the conferences between them and the Company having proved successful.

MR. MIYOSHI, Chief Public Procurator, who had been abroad for some time on official business, arrived at the Shimbashi Station on the 9th instant at 3 p.m, where he was received by several officials of the Judicial Department, and a number of private friends.

THE half-yearly meeting of shareholders of the Dogashima Rice Exchange (Osaka) was held in the afternoon of the 9th instant. The receipts during the latter half of last year were *yen* 56,996.708, of which *yen* 13,500 was provided for a dividend at the rate of *yen* 18 per share.

ACCORDING to returns compiled by the Authorities, the population and the number of houses in Hakodate, at the end of last year, were 48,748 (of which 24,851 were males and 23,897 females) and 11,609 respectively, showing an incresae of 1,845 and 697 as compared with the population and number of houses at the end of the first half of last year.

A FAREWELL entertainment was given on the 12th instant at the Kaiko-ro, Aioicho, Yokohama, by the inspectors of the Kanagawa Prefectural Police and the Yokohama Foreign Settlement Police, and by the judges and public procurators of the Yokohama District Court, to Mr. Noda Yasunori, formerly Inspector-in-Charge of the Yokohama Foreign Settlement Police Station, who has been appointed chief of one of the districts of Fukuoka Prefecture.

THE Peace Preservation Regulations were put into operation on the night of the 13th instant, against Nakasugi Yojuro, Ura Kisaku, Bokube Keitaro, Oka Tahichi, Aoki Masayasu, and Ryo, of Ishikawa Prefecture; Kwanno Michichika, Ujiiye Naokuni, Shibatei Sanetada, Iida Shukai, Kawashima Retsunosuke, and Namba Noboru, and other *soshi*, numbering about sixty in all, who were ordered to retire from the capital within ten hours from 10 p.m. of the 13th instant, on suspicion of harbouring an intention to assault members of the Imperial Diet.

THERE is little change to note in the Import trade, but that little is on the right side, and of the few hundred bales of Yarn sold the greater part has been of English spinning. Shirtings have also been taken, but other Piece-goods and Woollens have been very much neglected. Nothing doing in Metals, offers being lower than ever; and though some enquiries have been made for Kerosene, no business has resulted. Sugar is scarcely sold in sufficient quantities to make a quotation. There is still a small trade in Silk and Waste, but an enormous stock remains, though arrivals have almost ceased. There is a scheme afloat among silk-men to obtain official aid in getting this silk on foreign markets, but it is hardly likely they will succeed. The Tea season is practically over, and the prospects of the new crop will be shortly discussed. Exchange has not fluctuated quite so much this week, but after moving up slightly during the past two days again declined to-day.

## *EDITORIAL NOTES.*

### COUNT GOTO AND MR. TANAKA SHOZO.

THE curious query put by Mr. Tanaka Shozo in the House of Representatives on Friday, was not altogether as unreasonable as it appeared to be. Mr. Tanaka, declaring that, according to rumour, the Minister of State for Communications harboured suspicious characters at his residence, called for an inquiry into the matter. Of course the President ruled that such a question could not possibly be raised in connection with a debate on the Budget, and the House at the same time showed by its demeanour that it did not mean to have its time wasted by any ridiculous charges. Thus Mr. Tanaka's inquisitiveness was nipped in the bud, and naturally Count Goto, who would fain have defended himself against a charge which, though technically suppressed, had nevertheless been publicly preferred, could not obtain permission to speak. The fact is that this event was one of the consequences of the riotous behaviour of the *soshi* who, on the preceding day, made a raid upon the Yayoi Club and cudgelled some of the members. It will be remembered that the *soshi* avowedly acted on the supposition that certain prominent members of the *Rikken-Jiyu-to* party had allowed themselves to be persuaded or bribed by the *Kaishin-to* into supporting the latter in their scheme of wholesale budget reform. Of course no one imagines that the *soshi* have any objection whatsoever to drastic reductions of the public expenditure, or to any other measure likely to embarrass the Government. What they do very strenuously object to, however, is the notion that their party should serve as the *Kaishin-to's* cat's-paw. Rightly or wrongly, an opinion prevails pretty generally that what the members of the *Kaishin-to* seek to compass is, not fiscal reform, but the dissolution of the Diet. Their object is supposed to be the bringing about of such a collision between the Diet and the Cabinet, in connection with the Budget, that the Emperor will be forced to dissolve the Diet, in which event the *Kaishin-to* expect to secure, at the next general election, three times as many seats as they now possess in Parliament. Whether this theory be true or false, it is beyond question that several members of the *Rikken Jiyu-to*, who were not originally in favour of any extreme reductions in the Budget, have been won over to the *Kaishin-to's* way of thinking, and the *soshi*, in their self-imposed capacity as saviours of society, are irate at the notion that their party should be thus betrayed into assisting the designs of political foes. Now, among the *Rikken Jiyu-to* members of Committee who voted for the ten millions reduction—the "extremists" as they are called—two men had made themselves conspicuous, namely, Messrs. Ishida Kannosuke and Suzuki Shoji. These members did not attend the Yayoi-sha meeting on Thursday, and after the *soshi* had invaded the meeting and been driven out, they proceeded to the residences of Ishida and Suzuki in the Shirokane suburb of Tokyo. It happened, however, that Count Goto, anxious to meet Messrs. Ishida and Suzuki, and to converse with them on the subject of the Budget, had arranged through Mr. Inouye Kakugoro that they should visit his house at Shinagawa, and they had proceeded thither when the *soshi* arrived at their residences. The *soshi* declined at first to believe that the members were not at home, and showed a good deal of rude obstinacy before they could be persuaded that Ishida and Suzuki were at Goto's house. Finally, they took their departure, not, however, before a youth called Aoki, an inmate of Mr. Suzuki's dwelling, alarmed at the demeanour of the intruders, had hastened off to warn Mr. Suzuki that the *soshi* would probably follow him to Count Goto's. By and by this forecast was fulfilled. A considerable body of *soshi* arrived at Count Goto's, and asked to see Mr. Suzuki, who of course refused to gratify them. Soon more *soshi* appeared upon the scene, but presently a force of police came and told the intruders to clear out. The *soshi* pretended to obey, but instead of leaving the enclosure, attempted to hide themselves among the trees in the extensive grounds surrounding Count Goto's house. The police ultimately unearthed them and drove them away, but not, of course, without some noise and excitement, as it was now eight o'clock in the evening and quite dark. Subsequently, when quiet had been restored, and the coast pronounced clear, Messrs. Suzuki and Ishida, declining Count Goto's invitation to pass the night at his place, returned to their homes unmolested. All sorts of strange versions of this affair have been published, some of them evidently devised with the intention of showing that Count Goto was at least cognisant of the *soshi's* purpose, and that his guards as well as the police showed marked perfunctoriness. But the account we have given is declared, on the best authority, to be correct, and is, moreover, the only credible version.

* * *

Mr. Tanaka Shozo, who showed so much anxiety to bring a wild charge against Count Goto, is one of the members for Tochigi Prefecture. He appears to be well on in middle life and it is probable that he played a leading part in the Local Assembly of his prefecture, for his ways in the House suggest even more than the usually remarkable applomb displayed by the Japanese in public. He is one of the very few members that wear Japanese costume. At first sight a genial, pleasant-looking kind of person, who manipulates his spectacles with an air of benevolent meditation, and who possesses a considerable power of expressing himself with terseness and wit, he speedily won the ear of the House and for a moment a prospect of parliamentary fame unfolded itself to him. But he was unmasked within a fortnight. The members discovered that he never dealt in anything weightier than chaff and persiflage, and that while he scarcely ever rose to a ratiocinative level, he constantly descended to depths of great venom and bitterness. Then by degrees it began to get difficult for Mr. Tanaka to make his way to the rostrum. In order to do this two things are necessary, first, to catch the eye of the President, and, secondly, to have some measure of the House's good will. Mr. Tanaka discovered that at the moment of his rising in his place some evil fate always turned the President's optics to another quarter of the House, and half a dozen members invariably established claims to a prior hearing. These difficulties were intensified by his procedure in a debate of some importance. Having reached the rostrum and made his usually deliberate preparations to speak, he observed that the House had begun to attend to something else. Nettled, perhaps, by this unsympathetic mood, he talked more sarcastically and even less to the point than is his wont. Cries of *muyo* and other interruptions ensued. Then it was seen that the speaker evidently found himself confronted by no novel experience. Removing his spectacles and leaning leisurely against the President's desk, which stands behind the rostrum, he said:—"Go on, gentlemen. Make as much disturbance as you please. You seem to be in a hurry. Very well. The more you interrupt me, the longer you'll have to listen to me. I am in my right here. I occupy the rostrum in due order, and I mean to say everything I have to say if the task occupies me till to-morrow. You'd better listen to me quietly." The House laughed but listened. Thenceforth, however, the members became still more vigilant to keep him from the rostrum, and at the same time developed a tendency to put him on Committees where his sphere of boredom would be circumscribed. Now-a-days the journals begin to refer to him as "that Mr. Tanaka" (*rei no Tanaka-kun*) and his last escapede has set people thinking that after all, Count Goto's epithet, "mad talk," may be applied not inappropriately to his tirades. But who knows. Perhaps Mr. Tanaka is a budding Disraeli.

### SUSPENSION OF THE "KOKUMIN SHIMBUN."

THE *Kokumin Shimbun* has been suspended for publishing an extraordinary article, the writer of which professes to believe that the *soshi* who entered the precincts of Count Goto's residence last Thursday, and sought an interview with Mr. Ishida, who was then on a visit to Count Goto, were in the employ and acting at the suggestion of that Minister. We have seldom seen so wild and intemperate an article in a Japanese journal. It commences with a series of lamentations to the effect that everything is in a terrible condition: the Constitution is declared to have no effect, the rights and liberties of the subject are pronounced non-existent, the law is accused of utter impotence, and the eyes and ears of the police are said to be as useless as their arms are ineffective. It is argued at some length that the *soshi* could not possibly have been anything else than Count Goto's employés, and the Minister of State for Communications is directly charged with inviting the people's representatives to his house at night, and plotting to have them waylaid and assaulted within the enclosure of his own dwelling. We cannot conceive what the *Kokumin Shimbun* means by inserting such demented folly in its columns. It is true that moderation has never distinguished this journal. Unlike the periodical bearing a similar name (the *Kokumin-no-Tomo*), it has frequently made itself notorious by wild declamation and inflammatory writing. Its singularly violent utterances against foreigners after the meeting of last September, are fresh in the memories of every one. But on this occasion it has plunged headlong off the rails, and little as we approve of the suppression of newspapers, we cannot pretend to feel a scintilla of sympathy with the *Kokumin Shimbun*. It is monstrous that newspapers should expect to enjoy the privileges appertaining to rational self-restraint, and a dignified sense of responsibility, when they prove themselves nothing better than disseminators of slander, and disturbers of the public peace. The *Kokumin Shimbun* has disgraced Japanese journalism, and done everything in its power to postpone the day when the country will be able to boast the possession of a free press.

### AN IMPORTANT REPRESENTATION.

Two members of the House of Representatives, Messrs. Kanmuchi Tomotsune and Furusho Yoshikado, supported by thirty-seven of their fellow-members, have prepared a Representation which will be submitted to the House at the earliest opportunity, and will doubtless be sent up to the Government by an almost unanimous vote. The purpose of the Representation is to urge the speedy recovery of the country's Tariff and Judicial Autonomy. The Representation is given in the following terms by the *Nichi Nichi Shimbun*:—"The legislative power and administrative power connected with customs dues can only be exercised after the consent of foreign Governments has been obtained, according to the present Treaties. These Treaties interfere with the sovereign rights of the Empire, and inflict grave injuries on its economy and finances. Having regard to the state of the Empire's finances, and of its industries, it is essential that import duties should be increased. Further, the sovereign rights of the empire are most seriously impaired by the existing Treaties, which exempt foreigners living in these territories from territorial jurisdiction, and permit them to be judged by Consular Tribunals. Further, if foreigners be allowed to engage in the coasting trade, the development of the country's maritime enterprise will be gravely checked. Therefore, this House desires that, in the revised Treaties now under consideration with Foreign Powers, the Government will take steps for the immediate recovery of the Tariff Autonomy which belongs to the Empire's Sovereign prerogatives, and for such increase of import dues as may be dictated by the financial and industrial interests of the country. And this House also desires, with reference to the revision of the Treaties now under consideration, that although, as explained in the recent speech of the Minister of State for Foreign Affairs, it may be unavoidably necessary to wait a few years in order that the advantages attending the actual operation of the

Digitized by Google

various laws may be offered as guarantees to foreign nations, the Government will take steps for subjecting foreigners residing in this empire to territorial laws and for the abolition of Consular Jurisdiction. Further, this House desires, with reference to the Treaties now under consideration, that all doubt may be removed as to exclusion of foreigners from any participation in the coasting trade. The above being of the utmost national importance, and being also the object of the people's most earnest hope for many years, we have confidence that it will meet with the Government's approval, and we therefore offer this Representation. Having learned from the speech delivered by the Minister of State for Foreign Affairs on the 17th of December, that the Government is now engaged in negotiating for Treaty Revision with Foreign Powers, this House deems it of the utmost importance to lose no time in bringing the nation's wishes to the notice of the Government. Persuaded that these points have the full endorsement of public opinion, this House refrains from entering into any detailed statement of reasons."

### THE POPULATION OF TOKYO.

ACCORDING to the latest statistics, says the *Kokkai*, the population of Tokyo is rapidly increasing, and has already reached the total of one million four hundred thousand. The populations of the other cities and towns in the empire, on the other hand, are becoming gradually reduced, Kanazawa, for instance, which always had over one hundred thousand inhabitants since the feudal times, has now only ninety-nine thousand. The increase in the population of the capital is in direct proportion to the decrease in that of the other cities and towns. The material resources of the interior communities are on the decrease, and Tokyo alone increases in prosperity. Tokyo is the seat of the whole empire, and the provinces are left destitute. If some genius were to carry off the whole metropolis, the Japan left behind would be indeed a a lifeless body. Should we then regard the increase of Tokyo's population with satisfaction or the reverse? The history of Europe tells us that "in the latter days of Greece the population of the capital, Athens, very largely increased in contradistinction to that of the other cities and towns in the country districts, which daily and monthly became depopulated." It seems as if we must take the increase in population of the capital as an indication of a imilar tendency in this country.

### JAPAN'S FOREIGN TRADE IN 1890.

THE total figures of Japan's foreign trade during 1890 have been determined at the Customs Bureau of the Finance Department, and are given in the *Choya Shimbun*. The aggregate value of the trade was 138,321,246 *yen*, being an increase of 2,156,780 *yen* as compared with 1889. Of this total Exports figure for 56,593,513 *yen* and Imports for 81,727,733 *yen*. It thus appears that the excess of Imports over Exports was no less than 25,134,220 *yen*, and if we apply to this a correction of 18 per cent. for freight, insurance and other charges, the difference becomes 29½ million *yen* in round numbers. No such record had been shown previously. Of course the greater part of the excess of imports is to be referred to the failure of the rice crop in 1889. Under this one heading alone we have a loss of fully seven millions on the export side, and a gain of some ten millions on the import, so that seventeen millions of the difference are immediately accounted for, leaving only about eight millions to be attributed to the great disturbance of international exchange caused by the silver legislation of the United States.

### COUNT MATSUKATA'S SPEECH.

THE full text of Count Matsukata's speech in the House of Representatives on the 9th instant is given in the *Official Gazette*. The importance of the speech as an indication of the policy which the Government intends to pursue with regard to the Budget, suggests the advisability of an exact translation:—"Gentlemen: Having received a copy of the Report of the Special Committee on the Budget, I wish to say a few words to you. Upon the Government and the Diet alike, as I am sure you will all agree, devolves the moral duty of working together on a basis of mutual concession, to the end that the operation of the Constitution may have fair and admirable results. That is the first object to be achieved by representative institutions. But after careful perusal of the Report submitted to you by the special Committee on the Budget for the 24th year of Meiji, and after examining the opinions therein expressed with reference to the revenue and expenditure of the State, I am confronted by the unfortunate necessity of telling you plainly that the Government cannot agree with the recommendations here set forth. This Report only represents the decision come to by the Budget Committee. It cannot yet be considered to embody the sentiments of the whole House. Neither has the time yet come when this House will be required to seek the consent of the Government. Nevertheless the Government takes the opportunity of publicly bringing its decision to the notice of the whole House, and above all of the Special Committee. The Government is fully persuaded that to avoid as far as possible the misfortune of a breach between the Executive and the Legislature is its bounden duty. If, after careful scrutiny of this Report prepared by the Special Committee, it appeared that administrative efficiency was not impaired by the reductions recommended, the Government would go to the utmost limits of concession in order to endorse the Report of your Committee. But the reductions embodied in the Report are distinctly prejudicial to administrative efficiency, and I have now to tell you plainly that, speaking generally, the Government cannot consent to them. I beg of you, gentlemen, most sincerely to give the matter your mature reflection once more."

* * *

It will be perceived that the plain object of the Minister's speech was to warn the House of what is before it if it persists in adopting the Report of the Special Committee. His Excellency carefully refrained from going into details. Indeed, the time had not come when he could with propriety express the Government's views on this point or on that. But with the Report of the Committee in his hand, he wished to let the House know beforehand that if the general recommendations contained in the Report were adopted, the Legislature would find itself in direct conflict with the Executive. Such reductions, he explained, were inconsistent with administrative efficiency, and could not be endorsed by the Government. After this announcement, doubtless made with the consent of the whole Cabinet, the House knows exactly what it is about, and can be quite sure that should it persist in the radical course advocated by some of its members, the Government, however willing to meet it half-way, will be forced to fall back upon the alternative provided by the Constitution, and carry out the Budget of the last fiscal year.

### MR. UYEKI YEMORI.

WE are glad to be able to state that Mr. Uyeki Yemori, the member of the Diet who received such a severe beating from *soshi* on the 7th inst. in the Yayoisha, is recovering rapidly and will soon be able to resume his parliamentary duties. On Saturday and Sunday it was persistently rumoured that Mr. Uyeki's injuries were of a fatal character, but happily this statement proved incorrect, and though for a time the wounded man's life seems to have been in some danger, all grounds for apprehension have now disappeared. Mr. Uyeki has been interviewed by the police, and, in reply to their questions, described the Yayoisha incident just as it was described in these columns at the time. He said that a number of *soshi*, forcing their way into the room where the meeting was in progress, assembled opposite the President's seat and summoned him, Uyeki, to come to them—a summons the probable purpose of which was to induce Mr. Uyeki to furnish them with some means of identifying him. If this was their object they succeeded, for Mr. Uyeki shouted in reply that he had no intention of going to them, whereupon they fell on him, and began to beat him with their sticks, two heavy blows descending on his head. Pulled down from behind, he managed to struggle up again and defend himself with a chair. Meanwhile, the whole room was in an uproar, and a general fight ensuing, the *soshi* were driven out. Asked whether he could not recognise some of his assailants, and whether he had any private reasons for hushing up the affair, Mr. Uyeki declared that he could not identify one of the men, and that he had no reason for desiring silence. He admitted that legal interference might be superfluous in cases where politicians, carried away by the heat of discussion, resorted to physical arguments, but no such forbearance need be shown in the case of men who deliberately invaded a meeting and set about inflicting severe bodily injury on persons with whom they had no declared political differences or any cause of violent quarrel.

* * *

Much has been said about police precautions in the vicinity of the Diet and the stoppage of traffic on the roads leading to the House of Representatives, but nothing of the kind was visible yesterday (Monday). Only the usual number of constables were stationed in the precincts of the Diet and no exceptional precautions of any kind were taken. The solitary indication of hypothetical disturbance was that in the *kuruma* of several of the members, or in the hands of their *jinrikisha* men, thick sticks, some evidently containing swords, were to be seen. This is a move in the right direction. If people who have anything to fear from *soshi* would only carry effective weapons of defence and use them with energy and promptness in the event of assault, the *soshi* would soon become chary of risking their lives and limbs.

* * *

Considerable surprise was caused by the intelligence that the two men, Okano and Yamao, arrested by *jinrikisha* coolies at the Yayoisha on the 7th instant, and handed over to the police, had been released. Their respite was not long, however, for they were re-arrested the following day, and are now in custody. Three other men have been arrested on suspicion of being implicated in the Yayoisha disturbance. Two of them are *soshi* named Fujinata and Takata, and the third is a *jinrikisha* coolie who is also believed to have taken some part in the assault.

### THE "SOSHI" AGAIN.

ANOTHER remarkable affair has taken place in Tokyo. It occurred on the night of Saturday the 10th instant, and the scene was the Imperial Hotel. Thither Messrs. Kobayashi Kusuo, Yamada Taizo, and Itakura Naka, with about ten other members of the House of Representatives, betook themselves in the evening, and, having engaged a room, proceeded with some investigations of a pressing character. At 9 o'clock eleven *soshi* came to the Hotel. They were armed with stout sticks, and they informed the servants that it was essential they should gain access to Messrs. Kobayashi and Itakura. The servants refused to admit them, and an altercation took place. After a time one of their number, Buto Kakunosuke, who was said to have business with Mr. Kobayashi in connection with some affair at Osaka, was allowed to enter, and asked his reasons for coming. Meanwhile the police at the nearest station became aware that something unusual was in progress, and information having been immediately conveyed to the Kojimachi station by telephone, a considerable force of constables and gendarmes quietly assembled at the Hotel. They took speedy steps to control the ten youths who were pressing for an interview, and at the same time two or three policemen proceeded to the room where the interview was in progress between Mr. Kobayashi and Buto. The latter, seeing the policemen, said that he had much to communicate to Mr. Kobayashi, but that, as he found it inconvenient to speak

Digitized by Google

freely in the presence of officers of the law, he should merely explain that Mr. Kobayashi and his fellow-members, being affiliates of the *Riken-Jiyu* party, were bound to follow the policy of their party, and to reduce the Budget as far as possible; whereas it appeared that they had been guilty of taking an inexcusable line, and pronouncing the reductions recommended by the Committee extravagant. Mr. Kobayashi proceeded to argue the point, and, the interview growing somewhat lengthy, the ten *soshi* below-stairs began to grow impatient, and tried to push their way to the upper storey. The constables steadily restrained them, however, and it chanced that while doing so, a policeman, putting his hand on the breast of one of the *soshi*, felt something like a sword. Instantly an examination was made, and it turned out that every one of the ten *soshi* was armed with a formidable dirk about a foot long. Regularly caught in a trap, the youths were all arrested, and are now in durance vile. Their names are as follow:—Iizuka Kimpei, Naito Buhei, Buto Kakunosuke, Terajima Taikichi, Akiyama Matazaburo, and Ishii Ushinosuke, of Kanagawa Prefecture; Furuyama Matazaburo and Mayejima Yuji, of Niigata Prefecture; Yamada Keizo, of Tokyo; Abe Gorokuro, of Shizuoka Prefecture, and Taya Toyomatsu, of Ishikawa Prefecture.

### A STRANGE STORY.

In the *Shogyo Shimpo* we find a tale which taxes our powers of credence. The particulars are these:—In the province of Iyo at Ichinokawa there is a mine the joint property of a member of owners. Recently the owners became divided into sections, aud one party, the Tosa section, planned to get the mine entirely into their hands. Being without the necessary capital, however, they made up their mind to apply to foreigners, and with this object Mr. Hunter of Kobe was approached. Shares representing a face value of 210,000 *yen* were prepared, and it was agreed that these should be handed over to Mr. Hunter, who on his side made an advance of sixty thousand *yen* on this security, and concluded a draft agreement with the sellers. The agreement, however, was in truth a spurious document, the signatures it bore being those of persons having no right of ownership in the mine. Mr. Hunter, ignorant of this, accepted the contract as genuine, and holds it now by way of security for his advance. The *Shogyo Shimpo* does not vouch for the truth of the story, but says that it will be a very lamentable affair should it prove correct. We doubt it altogether, for a very simple reason, namely, that a mine in the province of Iyo would be absolutely worthless as security to a foreigner under existing circumstances. He could not lawfully hold such property or have any lien upon it, and if he advanced money on the strength of any agreement transferring shares in the mine to his possession, as the story alleges, he would be almost entirely at the mercy of the Japanese proprietors. It is most unlikely that Mr. Hunter or any other shrewd merchant would be betrayed into such a rash act.

### THE ADVOCATES' BILL.

The Advocates' Bill, we most sincerely regret to record, has met with such treatment at the hands of the House of Peers, that it may be said to have been reduced to a mere skeleton, adding so little to the Regulations already in force as to lose all reason for promulgation. The Special Committee of the House set to work on the Bill with an apparent resolve to extract all its spirit and leave a mere inanimate carcase. They succeeded pretty effectually, and the House not only endorsed their recommendations, but proceeded to kill the Bill a little more thoroughly on its own account. At the second reading, it excised the 11th Article, which practically contained the pith of the Bill, and at the third reading, it extended the same fate to the provisions relating to security money and licence fees. Well may the *Mainichi Shimbun* say that the Bill became a mere boneless jelly-fish, or a puppet without breath. The Government had no recourse but to avail itself of the retreat provided by the Constitution, and withdraw the Bill. The House of Peers, in our humble opinion, has added a bad item to its record by this procedure. Judged by foreign lights the Advocates' Bill would have greatly contributed to the sound progress of the Bar and to the elevation of its status. But foreign lights are somewhat hid under a bushel at the present juncture in Japan, nor do we yet see any signs of the reaction that is to set them once more in their old place of public refulgence.

### GERMAN SCIENTIFIC LECTURES.

We are requested to state that German General Scientific Lectures will be held as in former years, in the Lecture Hall of the Imperial University, Tokyo. The President of the Imperial University, Mr. H. Kato, has kindly consented to act as President. The programme of lectures is as follows:—

19th January, 1891—Professor Dr. Inouye, on Chinese Wisdom.
16th February—Professor Dr. Eggert, on the most important stages of development of social economy.
2nd March—Mr. Kessler, on Electricity for lighting and motive purposes (with experiments).
N. B—The place of holding this lecture will be notified hereafter.
23rd March—Professor Terada, on German Universities.
27th April—Dr. Grasmann, on forestry, its historical, scientific and economic aspects.
25th May—Professor Dr. Mori, Subject not yet fixed.

The Lectures will begin at 6 p.m. punctually, and will be delivered first in German and (after five minutes' interval) in Japanese. Entrance will be free: ladies are invited to attend. The names of the Committee are as follow:—Dr. Baelz, Dr. Busse, Professor Dr. Eggert, Dr. Grasmann, Prof. Dr. Inouye, Prof. Dr. Koganei, Prof. Dr. Mori, Dr. Nippold, Schulinspector Omura, Prof. Dr. Osawa, Dr. Riess, Pfr. Spinner, Prof. Dr. Takahashi, Prof. Dr. Tamba, Prof Terada, Prof. D. Wadagaki, Dr. Weipert.

### REUTER'S TELEGRAMS.

The *Japan Gazette* declares itself perplexed, we see, about apparent differences between telegrams published by the *Japan Mail* and the *Official Gazette*, though both journals are supplied by Reuter. The explanation is simple, we think. By the time that a message has been translated from English into Japanese and re-translated into English, it is apt to be a little mangled. Our local contemporary and the *Official Gazette* have between them made out that Her Majesty's Government "disavowed" Sir Julian Pauncefote's action. The word in the original message is "denies." Persons conversant with the Japanese language will at once see how this word might become "disavowed" in a re-translation, though no mistake could possibly be made between the two English terms "denies" and "disavows," when diplomatically used. Any one who has the pleasure of Sir Julian Pauncefote's acquaintance will be amused at the notion of his exposing himself to being "disavowed" in his management of a big international question.

### THE CODES AND THE TREATIES.

The *Jiji Shimpo* writes as follows:—The compilation of the codes was one of the greatest undertakings of the Government and its completion after the consumption of much time and labour has brought about a crisis by which the movements of the Ministers of the present Cabinet will be determined. If we look for the reason which led to the codification of the laws being regarded as imperatively necessary, we shall find, no matter what grounds the authorities may set forth, that it was undertaken from the pressing needs of the Government in connection with the Treaty question. This hardly requires explanation as it is pretty generally understood by the public, but we take this opportunity of the postponement of the operation of the Commercial Code until 1893 to discuss the merits of the new Codes. In our opinion, the codification of the laws of a country is a most important affair, affecting the national interests for centuries to come, and it should not be considered too long to spend ten or twenty years over the work of preparation. We hold that not only is the postponement of the operation of the Commercial Code until 1893 not unreasonable, but both this and the Civil Code should be postponed to any length necessary for perfecting them. Besides we can not find any reason for haste in the causes assigned. The ostensible cause is that codification is absolutely necessary for the Revision of Treaties, but we would ask where the necessity exists. We are told that the negotiations for the Revision of Treaties are to great extent retarded because foreigners do not feel confidence in our laws, and by perfecting them we may inspire the foreigners with a feeling of safety so far as regards life and property; but we differ from this way of thinking. We think that the real objections raised as to Treaty negotiations have not been caused by disapproval of our laws, but rather because foreigners do not understand the true features of the country. We say so, because the codes are really nothing but so much priuted paper: the true safety of life and property depends entirely on the degree of civilization to which the nation has attained, and, consequently, however complete the laws may seem superficially if there is wanting confidence in the condition of the nation, no one can feel safe as to life and property under the protection of such laws. For instance, if in such countries as China or Korea, new codes, compiled on Western principles of jurisprudence, were promulgated and quite perfect as to substance, would Japanese feel safe under such laws and place their lives and property under such protection? We, for our own part, would not do so, for in spite of the perfect appearance of such codes, we could not place confidence in the national conditions of those countries. The security of life and property is therefore not dependent on the contents of written laws, and it would be a most roundabout course for us to take to invite the confidence of foreign nations by simply preparing codes of laws. As we said above, the true cause of the foreigners' want of confidence in this country consists in their not being able to understand our national conditions, and therefore, our first attempt should be to make those conditioas intelligible to them. Some Japanese say that the laws of this country are imperfect and that we should be ashamed of them Such people are either very self deceptive or have some interests of their own to subserve, and even foreigners acquainted with the true features of Japan will find themselves unable to agree with such views. If we look back even to the times of the Tokugawa Government, when there was no such thing as codified law, we find that our lives and properties were safe; during two hundred and fifty years of the Tokugawa Shogunate we are unable to recall any instance of the ruling Government menacing life or property. This is in fact a marked trait of our national character which it is difficult for foreigners to realise. But the history of this country for those two hundred and fifty years will serve as a good evidence and in addition to this, our Government has since the Restoration been endeavouring to effect improvements in all directions especially paying attention to questions concerning personal rights. This being so, there is really no necessity for talking of the security of life and property as if it were a new idea, and no Japanese really feels any anxiety on that score. Foreigners, however, not having a true conception of our national condition, naturally feel uneasy, and the point before us is to make foreigners acquainted with the true phases of our national life.

### A PETITION.

Among the petitions sent up to the House of Peers there is one, says the *Tokyo Shimpo*, of a peculiar character. It is a document advocating a large scheme of fiscal reform. The petitioners suggest that steps should be taken by the Government to buy up the whole of the arable land now in the hands of the people, the area of which is estimated at 13,805,100 *cho* (34,512,750 acres). To effect the purchase, public bonds bearing three per cent. interest should be issued. The interest annually pay-

Digitized by Google

able on these is put at 41 million *yen* annually. The purchasers of the land would further have to be responsible for the land tax, which amounts to 40 million *yen* in round figures. The income from the land, however, is put at 150 million *yen*, and if from this total be subtracted the two former figures (of 41 and 40 millions), there remains sixty-nine million *yen* which, say the petitioners, would not only suffice to form a sinking fund, but would also materially help to clear off the present public debt.

* * *

A more perplexing statement than the above we have seldom encountered. It is known beyond all doubt from the taxation returns that 40 million *yen*—the total annual land tax in round figures—represents 2½ per cent. of the value of all the taxable land in Japan; in other words, that the taxable land of the whole empire is supposed to be worth 1,600 million *yen*. If the Government purchased on that supposition, it would have to issue bonds to the extent of 800 million *yen*—the other 800 millions representing the capitalized value of the land-tax at 5 per cent. Whence, then, do the petitioners obtain 41 million *yen* as 3 per cent. of the value of the land? We cannot tell. Above all, what is meant by saying that lands which, according to the official records, are only supposed to be paying a total income of 80 million *yen* annually (*i.e.* 40 million land tax and an equal amount of revenue to their owners), do really pay nearly twice that amount (*i.e.* 150 million *yen*)? And what is meant by saying that the Government, by agreeing to pay out a sum of 41 million *yen* annually could acquire property giving an income of 150 millions? This calculation baffles us altogether.

### THE "SHANGHAI."

THE accounts hitherto received of the burning of the steamer *Shanghai* and the consequent loss of something like 230 lives, were difficult to comprehend. Not more than fifteen minutes elapsed from the time the alarm of fire was given until the ship's head was firmly wedged into the land. The fire, originally so insignificant that it could have been extinguished with the greatest ease had the crew been free to work, had gained complete possession of the ship in the interval of about twenty minutes between to first outbreak and the beaching of the vessel. There were ample appliances for extinguishing it, but apparently not even an effort was made to do so. Further, when the ship was beached, there was no evident reason why everyone should not have been saved, yet out of 453 passengers, about 230 lost their lives by fire or water. Such was the original account, decidedly needing further explanations. Now, however, having before us the evidence given by the Captain at the Naval Court of Inquiry, the whole affair becomes quite clear. The 450 Chinese passengers were the sole cause of the disaster. From the moment that the alarm was given, these people fell into such a state of confusion and disorder that it became totally impossible for the crew to do anything. The hose could not be worked because the Chinese trampled it under foot, and passage from the fore part of the vessel to the after part where the fire was, could only be effected by climbing along the hull outside. In a word, the ship carried such a number of passengers that the crew were totally helpless. It was a mere question of chance. If the passengers retained their self-possession and were careful not to impede the handful of men working the ship, all might go well. If the passengers lost their head and fell into confusion, there ceased to be the smallest chance of managing the vessel. Further, the provision made against disaster was wholly inadequate. The ship had only four boats, which, supposing them to be all launched successfully, were capable of holding 210 persons out of 491. That is to say, more than one-half of the people on board must have remained without any means of escape had the ship foundered or met with any other misfortune. The Captain knew all this, and knowing it, would doubtless have hastened to beach the vessel even supposing that the wild disorder caused by the Chinese passengers had not compelled him to do so. Perhaps the saddest part of the whole affair occurred after the ship had been beached. Ropes had been put over the bows on both sides and a portion of the crew were standing in the water ready to receive and assist the passengers. By this means all the people forward and on the upper deck were saved. But the passengers in the after part, owing either to the confusion or to their desire to save their baggage, did not come forward and were ultimately obliged to throw themselves into the water. They were only some seven yards distant from the shore, and within easy reach were about fifty native craft which, had they made any exertion, could easily have saved everybody. But, incredible as it sounds, these inhuman Chinese left their fellow-creatures to drown and confined themselves to looting. Their brutality was emulated by the inhabitants of the locality, who stripped the dead and robbed the living as fast as they came ashore. Even the crew of an official boat lying near and in charge of officers, did nothing except pick up any articles that drifted their way, leaving the unfortunate people to drown within a few feet of the shore. Such barbarous cruelty is happily rare in the history of any nation. The whole affair is one of the most appalling incidents that has occurred for many decades. The ship putting to sea with a compliment of crew and passengers nearly three-fifths of whom must have perished in case of disaster, as no means existed of carrying them away from the steamer; the franctic panic and confusion that ensued so soon as the alarm of fire was given; the captain wisely heading the vessels shorewards and beaching her in ten minutes; then some 220 people perishing within a few feet of land and under the very eyes of fifty boats' crews of their own countrymen who would not stretch out a hand to save life; and finally the stripping of the corpses and the looting of the wretched survivors, all this makes up a picture such as could not be witnessed anywhere save in China. When every allowance is made for the well-known antipathy of the Chinese to give themselves any concern about dying folks—antipathy based upon the old rule that all persons assisting a fellow-creature *in extremis* become responsible for the disposal of the corpse—this closing scene of the *Shanghai's* wreck remains a frightful and almost incredible example of brutal inhumanity sufficient to permanently disgrace any nation. As for the absence of rules or control which enables vessels like the *Shanghai* to put to sea with twice as many passengers as there are means of taking off the ship in case of disaster, it is not in the smallest degree likely that the Chinese Authorities will give themselves any concern.

### A PARABLE.

"OVERHEARD and communicated by our own cat," is the *St. James's Budget's* preface to the following "parable":—

"Well, old fellow," said the Waterspout to the Verandah, "and how do you feel, now it's all over?"

"Very poorly indeed, thanks," said the Verandah mournfully. "Just look at my nice paint! I'm scratched and kicked all over."

"Paint, indeed!" said the Waterspout, with scorn; "What does paint matter? Now look at me. I'm all twisted and bent like a bayonet. If it hadn't been for our old friend the Fire-escape there, who took some of the work, I should have been old iron long ago."

"Well, it's splendid exercise," put in the Fire-escape meditatively; "*I* don't mind, if he thinks it does him good. But, really, I didn't think he had it in him. He's a marvellous man!"

"Oh, *you* don't mind, of course!" remarked the Waterspout; "escaping is your business. But it's not mine, and I don't want to take it up. And now my old friend the sparrow, who's built in me these five years, has had to go. Says she didn't mind the racket so much; but there will be a young family to bring up next spring, and she must think of them."

"Quite right too," said the Verandah. "Good old sparrow! But between ourselves, now, it was very funny sometimes, wasn't it? First of all *He* would slip in, in a modest and unassuming manner, as if he had called to tune the piano; then he—I mean Shea—would come and kick at the door; then she would open it for Sh—I mean him; and *He* would come sliding down our friend here, like a lamplighter. Then *He* would pick himself up and ring the visitors' bell; and Shea would open the door for *He*—I mean him; and all would be surprise, delight, and harmony. And the next night he'd give the fire-escape a turn."

"He gave *me* a turn once or twice," said the Waterspout reflectively. "I've had a burglar down me, and a schoolboy or two, but never the idol of a nation's hopes and aspirations. The boat that carried Cæsar and his fortunes will have to take a back seat now."

"By the by, old chap," said the Verandah, "what will the other old Waterspout say? The Grand one, you know—the head of your family."

"Why," put in the Fire-escape, "he'll say that the subject is one of vast human interest, and he would like nothing better than to hear it fully and freely discussed. He fears, however, that at his time of life he must leave to younger and more vigorous"——

The measured tread of the policeman approached down the quiet lane, and silence reigned once more in the peaceful little suburb.

### THE INFLUENZA.

THE influenza has evidently made the Orient its head-quarters this year. Its ravages in Japan are before our eyes, and the latest news from China is that it has spread over the provinces of Shansi and Shantung, and made its way northward to Peking, prostrating whole households with the cruel impartiality that marks its procedure everywhere. There certainly has been nothing in the climate of Japan this winter to account for the virulence of the epidemic. Since winter fairly set in we have been comparatively free from both violent fluctuations of temperature and bitter winds. In fact the season has been exceptionally mild up to the present; so much so that a very unusual show of plum blossoms already graces sunny nooks. A green Christmas, however, has always been credited with the faculty of filling the churchyards. Perhaps a good fall of snow might have better served the health of the community.

### ONCE MORE THE "SOSHI."

THE residence of the President of the House of Representatives, Mr. Nakajima Nobuyuki, in Nakanocho, Azabu, has been the latest rendezvous of the *soshi*. On the night of the 9th instant, quite a number of these gentry visited that place and peremptorily demanded audience of Mr. Nakajima. One of the inmates of the House, warned by the threatening demeanour of the men, ran out of the back gate and gave notice to the police, who speedily arrived in force and ordered the intruders to disperse. The following evening, six *soshi* again made their appearance at Mr. Nakajima's house, and asked for an interview, but on being informed that the President, after the rising of the House, had proceeded to a political meeting in the Sanyen-tei, Shiba, they quietly retired. A number of policemen have been stationed in the vicinity of Mr. Nakajima's residence in consequence of these events.

### POLITICAL SECTIONS.

IF we adopt the views enunciated by the *Hochi Shimbun* as representing public opinion, it becomes necessary to conclude that very little cohesion exists among the sections of the chief political party in the empire, the *Rikken Jiyu-to*. The original organization of the party is declared to have been defective. It met the Diet fresh from failure to accomplish the absorption of the *Kaishin-to* and with its own political opinions on many questions in such an inchoate condition, that many of its members did not know their own minds, and in consequence something very like disruption is threatened in connection with the Budget problem. The party was formed originally by the amalgamation of five sections, the *Daido* section, the *Aikoku-to* section, the *Saiko-Jiyu-to* section, the *Tohoku Shimpo* section and the *Kiushiu Shimpo* section. Among these the *Daido-ha* is now known as the Goto section, and the *Aikoku-ha* as the Mutsu Section. Whether these two will ultimately fuse into one seems difficult to foretell, but it is certain that the representatives of both on the Budget Committee have united to oppose the radical scheme of ten millions retrenchment, and are in favour of a reduction amounting to only half of that sum. The Mutsu section is strongly in favour of re-adjusting the land-tax assessment, a subject concerning which the Goto section has not yet declared itself positive-

Digitized by Google

ly, whereas the *Tohoku* section, whose constituents would suffer by re-assessment, is distinctly opposed to the measure. The Goto section has not yet forgotten the fight that took place over the election of the President of the Lower House, and many people think that it will ultimately throw in its lot with the recently organized *Kokumin-Jiyu-to* or even join forces with General Viscount Tani's followers. The *Saiko-Jiyu* section does not at present appear to be very active. The *Hochi* suggests that its chief business is lobbying, and that if the truth of the attempt to bribe certain members became an object of inquiry, information should be sought in the ranks of the *Saiko-Jiyu-ha*. The *Tohoku* section preserves an attitude of considerable independence. It originally busied itself to bring about a union between the various progressionist sections and the *Daido-ha*, but it does not appear to regard itself as a part of the union. The *Kiushu* section owes its origin to the scheme of effecting a fusion of the *Jiyu-to* and the *Kaishin-to*, and it has never wavered from that purpose. In the Diet it plays the part of a mediator, always trying to keep the two parties from engaging in any important struggle. In this programme it has the support of many other provincial sections, as the *Kiyo-yu-Kai* of Kagoshima, the *Kokumin-to* of Kumamoto, and the political coteries in Nagasaki, Saga, Fukuoka, Oita, and so forth.

* * *

The condition of the *Kaishin-to* at present is very different from that of the *Rikken Jiyu-to*. The *Kaishin-to* has nominally some forty representatives in the Lower House, but of these not more than seventeen or eighteen are really active in the interests of the party. By these active members, however, various plans have been devised for extending their influence, and at this moment it looks as though they were strong enough to defy any of the great parties. Whether they will be able to hold their ground or enlarge it is a question concerning which two opinions prevail. The first is that while there is not much fear of their retrograding, there is equally little probability of their progressing, and that at the second elections for the Diet the party is not likely to make any great show. The second opinion takes a much more favourable view of their prospects. It says that, though finding themselves in the Diet with a following little more than one-third of that of the *Jiyu-to* and one half of the *Taisei-kai*, they have nevertheless succeeded in making their influence felt more than either of these parties. They even managed to have one of their representatives elected Chairman of the Committee of the whole House, and they are now evidently bent on cementing a union with the various progressionist sections in the provinces, so as to acquire solidarity both inside and outside the Diet. At the next elections, according to this view, they are pretty sure to double or even treble their present number of seats. The *Kaishin-to* has always been exceedingly unpopular with other parties, and when there was talk, some time ago, of its union with the *Jiyu-to*, the party seemed for a moment likely to break up into two sections, of which one would doubtless have united with the Mutsu Section of the *Jiyu-to*, and voted for reducing the Budget by not more than five million *yen*. The other and more numerous section would have remained independent. It appears, further, that the sweeping reduction of nine or ten millions is not really the work of the *Kaishin-to*—so at least says the *Hochi Shimbun*—but was brought about by the *Jiyu-to* members.

* * *

The *Taisei-kai* can scarcely be called a political party. It is rather an association of members of Parliament professing independent principles. It came into existence after the elections, and it has no ramifications outside the Diet. The mere fact that it was supposed to stand aloof from all parties gave it a certain measure of popularity and attracted to its ranks men who had not yet determined what policy to adopt. Nevertheless, one incident of recent occurrence seems to indicate the tendency of the *Taisei-kai*. It is the fact that the majority of its members pronounced in favour of the five-million reduction of the Budget proposed by the Mutsu and Goto Sections. This incident also shows that the members who are in favour of the larger reduction, namely, the *Kaishin-to* and the three sections of the *Jiyu-to* known as the *Kiushiu-ha*, the *Tohoku-ha*, and the *Saiko-Jiyu-ha*, are likely to find themselves confronted by a powerful band of adversaries. Some people hold, however, that this Budget question will be the means of breaking up the *Taisei-kai*, since it has not only failed in its efforts to attract the *Kaishin-to* and other sections of the *Jiyu-to* to its side, but since also several of its members have thrown in their lot with the advocates of the ten-million reduction.

* * *

The *Hochi* then passes on to consider the Conservatives (*Hoshu-to*). "There is not," it says, "at present in Japan a single party that can properly be called conservative. Viscount Torio's party goes by that name, indeed, but it is a name only. In the same category may be placed the *Kokumin-Jiyu-to*, the *Tani-ha*, the *Hoshu-chiusei-ha*, and the *Jichi-ha*. The *Kokumiu-Jiyu-to* made its appearance when the union between the Progressionists and the Radicals proved a failure. It consists of parts of the *Daido* section of the *Rikken-Jiyu-to*, and of the *Taisei-kai;* and few events in the political world have been more striking than the sudden springing up of this party on the very day before the Diet opened, with a following of no less than seventy members. It is supposed that the *Kokumin-Jiyu-to* has some connection with Count Goto, but Count Goto is already the leader of the old *Daido* section of the *Rikken-Jiyu-to*, and it would be only natural that if the new party also follows him, he should unite the two. Last year, indeed, there was much talk of an amalgamation of the *Kokumin-ha* with the followers of Count Goto, Viscount Tani, and Mr. Nakashima Nobuyuki, and on the face of things it seems reasonable that the *Mutsu* Section should also be included, but such a fusion has not been effected. On the contrary it is now rumoured that the *Kokumin* party includes a political and a nonpolitical section, and that a split is not unlikely to take place in its ranks."

* * *

The *Jichi-to*, as every one knows—we still quote from the *Hochi*—is connected with Count Inouye and Mr. Mutsu. Last year, too, there was talk of relations being established between Counts Inouye and Goto. The *Jichi-to* sided with the Goto and Mutsu Sections on the Budget question, being in favour of a reduction not to exceed five million *yen*. The Tani party is chiefly in the Upper House, and may almost be called the Senators party. The Tani Representation for the recovery of Tariff autonomy found supporters chiefly among the ex-Senators, who followed up that victory by voting for the Commercial-Code-postponement measure. Without the support of the Tani section the Bill never would have passed, and in this fact we have some indication of the strength of the section. Of course the General has followers in the Lower House also. The Independent Conservatives (*Hoshu-chiusei-ha*) are the weakest of all the Conservative sections. Their leader, Viscount Torio, is very active with voice and pen, but he makes few converts, and has resigned his seat in disgust. He has not a single partisan in the House of Representatives.

* * *

Such is the *Hochi Shimbun's* analysis of the present condition of political parties. The impression we gather from it all is that confusion and uncertainty are the most prominent elements of the situation. But what else could have been expected? We have always expressed the conviction that political parties could never have any rational existence in Japan until they found a stable basis in parliamentary discussion. The programmes put forth by the various parties during the past twelve months were, for the most part, vague and nebulous in the extreme; programmes such as could not possibly furnish a substantial creed to earnest men. The only two really practical questions embodied were financial retrenchment and Treaty Revision, and it is doubtless about these questions that the members of the two Houses will group themselves into genuine parties with intelligent issues at stake.

---

### REUTER'S TELEGRAMS.

THE question of the mutilation undergone by Reuter's telegrams in their passage through the various media by which they ultimately reach the columns of the *Japan Gazette*, has assumed quite an entertaining complexion. Our local contemporary, with assurance admirable in the abstract, entirely ignores the fact that it is only a picker up of crumbs falling from other people's tables, and assumes to itself the rôle of the giver of the feast. We really should have been disposed to think that the part better becoming the *Gazette* in this business was to preserve a discreet silence, so as to avoid directing public attention to the second-hand nature of its own telegraphic items and to the strong probability of their inaccuracy. The case stands thus:—Reuter's telegrams come direct to us, literally deciphered from the code in which they are transmitted. They receive at our hands a minimum of expansion before publication. The same telegrams are sent in English to the *Official Gazette*, and rendered into Japanese by the staff of that journal. On receipt of the *Official Gazette* in Yokohama, these Japanese telegrams are re-translated into English at the office of the *Japan Gazette* and published by the latter. Thus, after expansion by Japanese editors and after translation and re-translation, they appear in the columns of our contemporary. It is perfectly plain, on the face of it, that news which has been subjected to such manipulation cannot be relied on. The *Japan Gazette* ought to know this, and knowing it, should humbly take the back seat appropriate to a copyist. But a sense of the fitness of things is not universal. Finding that its own twice-laids occasionally differ in appearance from the original joints served up in our columns, the *Gazette* rashly draws attention to the fact, and when the various disfiguring processes undergone by its third-hand items are pointed out by us, it turns round, and with consistent incontinence accuses us of "evasion." One would imagine that the *Japan Mail*, which publishes the original telegrams, were on its defence, whereas the point is that the *Japan Gazette* has to show why it misleads its readers by laying before them re-translations of translated telegrams. The *Gazette* wants to know whether, in our opinion, any amount of translation could alter a plain statement of facts, such as, for instance, "John Smith fell into the river Sumida and was drowned." Irrelevant as the question is, we answer, first, that there was question not of a plain statement of facts but of the twisting of the word "deny" into "disavow"; secondly, that we should be doing an injustice to the *Gazette's* capacity for mutilation if we doubted the possibility of even John Smith and the Sumida becoming John Sumida and the Smith in its columns. And this we say because equally flagrant perversions have graced our contemporary's telegraphic corner during the last few days. Here are two examples:—

| ORIGINAL TELEGRAMS PUBLISHED BY *Japan Mail*. | RE-TRANSLATION OF TRANLATED TELEGRAMS PUBLISHED BY *Japan Gazette*. |
|---|---|
| Several swift British cruisers have been ordered to be got ready for commission to reinforce the North Pacific Squadron before the sealing season commences.—January 10th. | It is reported that prior to the commencement of the seal fishing season several fast sailing vessels will be added to the British North Pacific Fleet.—January 10th. |
| After the action at Porcupine Creek between the United States Cavalry and the Indians, the troops discovered that it was only an empty school, and not the mission at Pine Ridge, as previously reported, that was burned.—January 6th. | The buildings burned by the Indians in the neighbourhood of Pine Reach, after the battle, were discovered by the American troops to have been unoccupied.—January 7th. |

Thus, in the process of re-cooking, "swift cruisers" become "fast sailing vessels," "Pine Ridge" is converted in "Pine Reach," and the whole portion of the second telegram relating to the action at Porcupine Creek is left out. Is it too much to say that even John Smith in the Sumida River could not count on an accurate obituary notice if the tale of his catas-

Digitized by Google

trophe had to filter through so many devious channels as these converging in the telegraphic columns of the *Japan Gazette*? We quite appreciate the fact that it would never do for the *Japan Gazette* to copy directly from the *Japan Mail*. Its dependence on other journals for telegraphic information is a shade less palpable when it whips the devil round the post by borrowing from the *Official Gazette's* Japanese translations of the *Mail's* original English messages. But why call attention to the fact? Surely that is very indiscreet. And surely the farce is carried a little too far when the *Gazette* informs its readers that it is "taking steps to have this matter of Reuter's telegrams cleared up," and that "in a day or two it may be in a position to put its readers in possession of the real facts." If one of the gentlemen who go about picking up fragments of old clothes with a pair of bamboo tongs, were to inform the public that he was taking steps to ascertain why the contents of his basket of scraps frequently differed in appearance from the stuffs of which they originally formed part, we should treat him as a peripatetic jester whose idiosyncracies soared above his humble calling. With the utmost deference, we recommend the *Japan Gazette* to be content with its rags of telegraphic news, and refrain from calling public attention to their threadbare and dilapidated condition.

### PRECAUTIONS AT THE DIET.

WE stated in our issue of on Tuesday that very little evidence of protective precautions was to be observed during the day in the vicinity of the House of Representatives. But it appears that when the House rises in the evening the police are very active. We read in the *Nichi Nichi Shimbun* that at the conclusion of the session on the 12th instant, which, as our readers will remember, was an exceptionally hot and excited affair, all the members supposed to be more or less marked men, found, on emerging from the Chamber, that a guard of five constables had been detailed to accompany each member to his house or hotel. Moreover, from four to five hundred policemen were stationed in the Hibiya district, from the Diet to the neighbourhood of the Tokyo Hotel. It is rather peculiar, as Mr. Minami remarked in the House on that very day, that the members should be compelled to look for protection to the very Bureau the abolition of which it recommended in the Report of the Budget Committee. And it is still more peculiar that the Government, in order to secure the proceedings of Parliament against violent interruption, and in order to guarantee representative institutions against the interference of physical force, has been compelled to have recourse once more to the Peace Preservation Regulations for the repeal of which the House of Representatives recently voted with so much unaminity and alacrity.

### FEES FOR ENDORSING PASSPORTS.

A CORRESPONDENT of the *Nippon* writes from Shimonoseki as follows:—"I had always been told that the people of foreign countries were generally just and honest, but on leaving Tokyo on this occasion and coming for the first time to deal with foreigners, I have been surprised to experience quite incomprehensible treatment at their hands, beginning with Yokohama, which is so near to the capital. I now discover that a calculation is necessary for ascertaining the fees for endorsing passports. I had a notion that for such a definite thing as a passport, there should be a definite amount of fees previously settled, whether in Japan or in foreign countries. Thus I understood that the rate of payment to our Foreign Office for a passport for going abroad was 50 *sen* when paid in this country, and 2 *yen* when paid at a Japanese Consulate abroad, but such does not seem to be the practice in alien countries. On the 24th of last month, I, with a friend, intending to go over to Manila, requested the Spanish Consul in Yokohama to endorse our passports. The Consul at first said something to the effect that one *yen* fifty *sen* would be the fee for a passport, but after making certain calculations, he told us to pay two *yen* thirty *sen* for each passport. This was the first incident that puzzled us, but we met with a still more incomprehensible experience when we reached Kobe. Another friend of mine was to join us at Kobe in our trip to Manila, and at my suggestion he went to the Spanish Consulate to got the required endorsement on his passport. He was told that the fee was four *yen*, whereupon he informed the Consul what we had paid at Yokohama and contended that the same fee should suffice in Kobe. The Consul replied that the fees were different at different places. My friend left the passport with the Consul and came back to me, and I advised him that as the case was so extraordinary, he should get back the passport, saying he did not want the endorsement under the circumstances. The Consul seemed much perplexed by this request, and gave a new explanation. He said that, being a British subject and acting as Honorary Consul for the Spanish Government without receiving any return for his service, he could not proceed in the same way as the Spanish Consul in Yokohama, who is regularly appointed and salaried by the Spanish Government. He had in consequence to charge a larger fee. He would have given back the passport unendorsed but as it had been already endorsed he asked my friend to pay, and the latter, though thinking it a ridiculous affair, felt sorry for the Consul, paid the required sum, and brought back the passport. The position of an Honorary Consul is gratuitous, as is indicated by the term, and should be given to persons of position properly qualified for such a trust. If I am to take this as a basis of judgment, my belief in Western integrity will be naturally much shaken. We find in Japan persons who think that nothing is good unless it be imported from Europe, whether in the nature of laws, customs, manners, or what not. I wish to suggest to these persons the expediency of more careful reflection, and I write these lines to warn travellers to Manila and other places."

### POLITICAL CONJECTURES.

THE little band of Choshiu statesmen whose names are so intimately associated with the events of the past fifteen or twenty years, begin once more to occupy a prominent place in public observation. It is easy to understand that this should be so when we string together the names of the chief of these statesmen—Counts Ito, Inouye, Yamagata, Yamada, and Viscount Aoki. Count Yamagata is now at the head of the Cabinet, and Viscount Aoki is a prominent member, but Count Yamada has retired, and where are Count Ito and Inouye? There is no doubt that Count Ito's influence in the State at present is enormous, and that it grows daily. He has always possessed the full confidence of his Sovereign, and if for a moment the confidence of the nation was partially alienated from him, he has recovered it now in ample measure. In every office assigned to him he furnishes fresh proofs of tact and ability. The House of Peers under his Presidency is a model assembly, and the people watch its proceedings with a renewed conviction that the man who directs its deliberations is a tower of force for the country to fall back on in times of emergency. As to the public sentiment towards Count Inouye, it is more difficult to speak confidently. Count Inouye has always been his own enemy in one important respect—overearnestness. He has not a grain of sympathy with half measures, and is absolutely unsparing towards official deliquencies and shortcomings of every kind. While on the one hand he inspires strong admiration, wins staunch friends, and prompts devoted service, on the other he hurts many feelings and earns for himself a full measure of the enmity that fate metes out to all men of uncompromising greatness. Gifted with singular sweetness of manner, he wins hearts without an effort, and suggests no suspicion of the unyielding thoroughness that underlies all his policy. Counts Ito and Inouye, at the very zenith of their faculties and useful capabilities, standing aloof altogether from administrative affairs, is a spectacle that the nation cannot long contemplate without astonishment. Therefore men are beginning to marvel, and as the wonder grows, speculation grows also. It is even whispered that Counts Ito and Inouye are secretly encouraging the action of Parliament towards the Budget, and that the parties headed by Counts Kuroda and Okuma and Viscount Enomoto are working in the same direction. But whether the Kuroda faction comes into power or whether the *Kaishin* faction comes into power, its reign is not expected to be long. Six or seven months, or at most a year, would witness its downfall, and then the Choshiu party would come in with flying colours and a long lease of life, and on taking office would inaugurate its favourite policy of cementing friendly relations with China. Such is the rough forecast of some political prophets. They think that they detect the first-fruits of the fulfilment of their prediction in Count Yamada's resignation, and in Count Matsukata's uncompromising attitude, for Count Matsukata, though of Satsuma extraction, is expected to throw in his lot with the Choshiu side. Doubtless we shall hear many such prophecies in the course of the next few months. What they chiefly reflect is the fact that Japan is labouring in the throes of Government by party. To Government by party she must inevitably come, but the first really practical step in that direction must be the breaking up of the Sat-cho combination, and the distribution of its principal elements among the ranks of the two principal parties, whatever they may be. Nearly all the tried administrative ability of the empire stands outside party circles at present. Its absorption into them is an essential preliminary.

### THE FINANCES OF THE GOVERNMENT.

THE *Jiji Shimpo* has the following:—"The Budget Committee of the House of Representatives having finished its examination of the Budget Bill submitted by the Government at the end of last year, resolved on a reduction of some ten million *yen* on the total amount of eighty millions. We have already stated in these columns that the expenses of the present Government contain many superfluous items that might very well be eliminated, but that as the conditions created during over twenty years cannot be abruptly removed, such an excessive reduction as suggested by the Committee ought not to be at once put in force. We will now go into the matter more fully, and discuss it by reference to actual facts. The annual expenses of the Government for twenty-three years from the year of the Restoration have been as follows according to the *Tokei Nenkan* (Annual Statistics):—

| | Yen. |
|---|---|
| 1st period December, 1867—December, 1868 | 30,505,085 |
| 2nd period January, 1869—September, 1869 | 20,785,839 |
| 3rd period October, 1869—September, 1870 | 20,107,672 |
| 4th period October, 1870—September, 1871 | 19,235,158 |
| 5th period October, 1871—December, 1872 | 57,730,024 |
| 6th period January, 1873—December, 1873 | 62,687,600 |
| 7th period January, 1874—December, 1874 | 82,269,528 |
| 8th period January, 1875—June, 1875 | 66,134,772 |
| 8th fiscal year, 1875-1876 | 69,203,241 |
| 9th fiscal year, 1876-1877 | 59,308,956 |
| 10th fiscal year, 1877-1878 | 48 428,324 |
| 11th fiscal year, 1878-1879 | 60,941,335 |
| 12th fiscal year, 1879-1880 | 60,317,578 |
| 13th fiscal year, 1880-1881 | 63,140,806 |
| 14th fiscal year, 1881-1882 | 71,460,320 |
| 15th fiscal year, 1882-1883 | 73,480,067 |
| 16th fiscal year, 1883-1884 | 83,106,859 |
| 17th fiscal year, 1884-1885 | 70,663,108 |
| 18th fiscal year, 1885-1886 | 61,115,313 |
| 19th fiscal year, 1886-1887 | 82,617,988 |
| 20th fiscal year, 1887-1888 | 79 687,515 |
| 21st fiscal year, 1888-1889 | 81,389,013 |
| 22nd fiscal year, 1889-1890 | 76,596,313 |
| 23rd fiscal year, 1890-1891 | 84,579,443 |

From the above it will be seen that during the first few years the accounts were irregular owing to the unsettled state of the Government immediately after the Restoration, and therefore we will take no heed of them. Thence up to 1877, for a period of ten years, the annual expenses were an average of sixty millions or thereabouts (those for 1874 are unusually large on account of the Formosan affair), and from the 13th fiscal year, they were suddenly augmented to seventy millions in the 14th and to eighty millions in the 16th fiscal year. From that time the expenses were kept between seventy and eighty millions up to the 23rd fiscal year (those for the 18th fiscal year being smaller than usual, as, owing to the reform in the system

Digitized by Google

of taking the annual accounts made at the time, the figures only represent the expenses from July, 1885 to March, 1886), in which they reached the large amount of eighty-four millions. The sudden increase of expenditure after the 14th fiscal year arose from the fact that in 1877, to make up for the deficit in the State finances produced by the Civil War, the Government issued large amounts of paper money in addition to the considerable quantity already in circulation since the 1st year of Meiji, and in consequence a difference of value between silver and paper money was produced, which, becoming greater every year, at last showed a maximum disparity in 1881. In this way the total of sixty million *yen* fixed as the expenditure for that year, actually represented a much reduced amount, and the increased amount in the annual expenditure from that year simply shows the difference between the values of silver and paper money then existing. This was an unavoidable circumstance of the time, and those who were then in power and who caused, by such a voluminous issue of paper money, serious financial suffering to the country, were of course bound to find some means of remedying the evil produced. But as the ailment was not of sudden occurrence, having been brought about by repeated imprudent acts on the part of the sufferer, a gradual and most cautious course of treatment should have been resorted to just in the same way that we would rub the body of a frozen person with ice before applying anything warm, or that we would administer to a person nearly starved to death such light food as soup before we ventured to give him more substantial nourishment. Our financiers did not take this wise course, and with the accession of Count Matsukata to the office of Minister of Finance, the Government became more pressing in carrying out the policy of diminishing the amount of paper money in circulation, in utter disregard of anything else. The Bank of Japan was established, and silver notes were issued, and as a result of all this zeal, silver and paper money in 1886 and 1887 were brought to par. This was satisfactory to the Government; but, such sudden and violent treatment of a weakened patient could not fail to produce an exceedingly bad effect on him; and both before and after the time when the so-called influential merchants of Tokyo entertained the Minister of Finance at the Rokumeikwan, presenting him with a memorial of praise and loudly applauding his beneficial efforts, the actual state of the financial community was very far from satisfactory: no debts were duly repaid, the prices of commodities were falling, and cases of insolvency abounded. This was undoubtedly the result of the unwise policy pursued by those in charge of the national finances, but it is now a thing of the past, and at this day censure is useless. However, having once accomplished its object of redeeming paper money, the Government was bound to gradually reduce the amount of its annual expenditures, which had been augmenting since 1881, and to lighten the burdens of the people by eventually bringing it back to the original figure. The Minister of Finance, however, who displayed so much courage in resolutely carrying out his policy of reducing the paper currency, seemed somehow not to be so clear-sighted in regard to the internal matters of the Government; and not only was little attention paid by him to the duty of gradually reducing the annual expenses, but they actually increased. We therefore consider the proposition as to reduction by the Diet quite reasonable, and so far we agree with it. But the relations of financial affairs are exceedingly delicate, and any sudden change in the financial world, whether for good or bad, cannot but produce temporary confusion. If, therefore, excessive reduction is suddenly made on the eighty million *yen* required by the present administration, apart from the shock to be given to the internal arrangements of the Government, the direct effects produced on the commerce and industry of the nation must be of a serious nature, and the result, we fear, may be a repetition of the scene of failure played by the State financiers years ago. We would therefore request those who are interested in the financial problem to give mature consideration to the subject; to avoid any sudden change; and, taking the present state of affairs as if it existed just after the plan of sudden restoration to par was put in force by the Government, to turn their eyes to financial interests generally and gradually, year by year, to carry out the scheme of reduction.

### LONG LIVES.

STIMULATED probably by the example of the *Kokumin Shimbun* which long ago published a note regarding a hale and hearty old man in Kyoto who has attained the ripe age of 112 years, and who drinks 3 pints of *sake* daily, the *Jiji Shimpo* has unearthed a lady of 106 years, the grandmother of one of Mr. Fukuzawa's grooms. She is a native of the province of Shimotsuke; she has a son 64 and a daughter 75 years of age; has fifteen grand-children, twenty great-grand-children and two great-great-grand-children. Her daily food consists of equal parts of barley and rice boiled together with *sato-imo* and *tofu*, and during her long life she has been chiefly engaged in agricultural work, varied by spinning and weaving. At the age of fifty she could with ease handle a bag containing 5 *to* of rice (equal to about 167 lb). Her hearing and eyesight are defective, but she was able to carry on her ordinary pursuits up till three years ago. It is curious, says the *Jiji*, to note that this woman was five years old when the Bastile was taken and when Washington became first President of the United States; that she was thirty-nine years of age when the Great Napoleon was sent to St. Helena. She is twenty-five years older than Mr. Gladstone and thirty-one years the senior of Prince Bismarck.

### FOREIGNERS AND KEROSENE.

THE *Shogyo Shimpo*, generally a sober and well informed paper, contains the following, which we translate without comment, having no information as to the circumstances related:—"On New Year's day the Prefect of Hiyogo issued a series of regulations for the control of warehouses containing inflammable substances, as Kerosene oil. It had long been recognised that the construction of these warehouses in Hiyogo and Kobe was bad, and that, in many cases, they were built in crowded localities where an outbreak of fire could not fail to have disastrous consequences. A rule had accordingly been promulgated that by the last day of 1890, the warehouses must be removed to a distance from the people's habitations, and the Japanese merchants, in compliance with the rule, gave all their Kerosene into the charge of the Kerosene Oil Storage Company, whose warehouses are at Wada Point. The foreign merchants, however, refused to take the prescribed steps, alleging that as Wada Point is in the vicinity of the Gunpowder Magazine, they could not obtain insurance upon goods stored there. Considering that the Kerosene owned by foreigners is stored in Japanese warehouses in the name of Japanese, their refusal to move it and their efforts to have the date of operation of the law postponed are peculiar. Through their Ministers and consuls they succeeded in getting the enforcement of the law postponed until the 1st of April. We should like to know what this means. What reason is there for delaying a measure that concerns the safety of the whole of Kobe? We presume that there must be some sufficient cause for this display of partiality to foreigners.

* * *

The version of this affair given by the *Hiyogo News* is as follsws:—

Many of our readers have doubtless been surprised at the news of the attempted removal of the kerosene oil godowns at Ono after their occupation for that special purpose during such a number of years with the congnizance and sanction of the authorities. As we stated a few days since the matter when brought under the notice of the Central Government was promptly and satisfactorily dealt with, and now that the immediate danger is removed, the foreign merchants more particularly interested have naturally enough, cast about to find a plausible reason for the attempt to inflict a grave injury upon an important branch of local commerce. It transpired that until about a fortnight since no objection was raised to the present godowns. The police then notified the Japanese owners of the property that unless the contents of the godowns were removed forthwith, fines would be imposed, and that continued disobedience would be followed by imprisonment. It is hardly worth while speculating at present upon the condition of affairs which permits such high-handed proceedings, and apparently allows valuable private interests to be at the mercy of irresponsible and subordinate officials. But the solution put forward to account for the change deserves particular notice. The police, as we have stated, gave the Japanese landlords notice that the oil (foreign-owned) must be removed, but no mention was made of an alternative place of storage. Now it seems that not long since a speculative company built some godowns at Wada Point which have never been occupied. The difficulties in the way of landing and shipping goods there would alone render the situation very undesirable for oil, the handling of which necessitates more delicate manipulation than perhaps any other class of heavy goods. But an even greater objection to Wada Point is the fact that the Government godown for the storage of dynamite, gun-cotton, powder, and other dangerous explosives is situated in close proximity. The existence of the empty godowns explains the whole nature of the movement. It was an effort to compel the merchants to use these godowns through police interference. Reason was all in favour of the present godowns, since the risks are much less, and the insurance charges necessarily are lower. Indeed, with the oil at Wada Point, great difficulty would be experienced in arranging policies. It was a well-calculated plan. The suddenness of the announcement would leave the merchants Hobson's choice, while if the occupation of Wada Point should at any time lead to disastrous consequences the officials could screen themselves by saying: "We never instructed you to go there. All we did was to compel you to leave Ono and Hyogo." Thanks, however, to the intervention of the national representatives at Tokyo, the scheme has for the moment been defeated, and since its objects have been unmasked merchants will to a certain extent be prepared for future contingencies. The matter, however, should not be allowed to rest as a merely defeated scheme. It requires the strictest investigation at the hands of the Japanese Government. If the present godowns are condemned as unsafe after twenty years of occupation, and without a single prior complaint, then it is the duty of the officials to give due notice and to provide some safer locality, though that locality will not be found contiguous to a powder magazine. We do not for an instant believe that the Government would tolerate, much less authorize, such a proceeding at any time, least of all now at such a crucial period in the history of Japan. If the Government wished the godowns to be evacuated they would have entered into proper official negotiations, and these negotiation would have been conducted with all the courtesy, and with all the desire to promote and not to embarrass trade, which is characteristic of the Japanese Government. Japan is under-going an hitherto unprecedented ordeal, and we are sure that during it she will not leave the stain of so foul a blot on her relations with the commerical representatives of so many Western nationalities.

### THE DISRUPTION OF THE "JIYU-TO."

WHAT is happening now in the House of Representatives is nothing more or less than the creation of political parties. The so-called parties that took their seats in the House when the Diet was opened, had no real bond of union and were destined to be disintegrated so soon as any crucial question came up for discussion. The Budget is such a question. We noticed, the other day, when writing of the discussion in the Yayoisha, that though the extreme reduction of the Budget was voted by a majority of those present, the minority was quite sufficiently large to give promise of a tough fight. Immediately after the meeting, the *Jiyu-to* journals began to exhibit their uneasiness on this point by exhorting the members of the party to remember that whatever might be their individual opinions, they were bound to support the majority. Such, however, has plainly not been the view taken by the members themselves. The divisions in the House on the motions of Mr. Nishi show that many of the *Jiyu-to* men must have voted against the majority of their party, and since then several members of prominence have resigned their association with the party. The first to adopt this course was Mr. Yakenouchi Ko. His example was followed almost immediately by Messrs. Oye Taku and Kobayashi Yuhichiro, and Messrs. Hasegawa Tai and Suyehiro have now taken the same course. All these were men of note in the party,

Digitized by Google

and there is no doubt that they will draw away with them the whole section of the Moderates. Such a split will of course be fatal to the party's independent status, and must be followed by re-fusion of some kind. The present indications are that the extremists will be absorbed into the camp of the *Kaishin-to*, temporarily at all events. A strange fellowship truly. Can it be permanent? Can the essentially moderate and well-balanced *Kaishin-to* ally themselves definitely with the most radical of the Radicals, or will they sever the connection when they have accomplished the object for the sake of which this association is tolerated?

### THE IMPERIAL MINT.

THE Report of the director of the Imperial Mint for the year ending March 31st 1890, shows that the total coinage of gold, silver, and nickel pieces during the year amounted to 11,159,905.55 *yen*, namely:—

| pieces. | *yen*. |
|---|---|
| Gold 5 *yen* ..... | 1,764,210. |
| Silver 1 *yen* ..... | 7,294,735. |
| Nickel 5 *sen* .. ..... | 2,100,960. |

These figures, compared with those of the preceding year, show an increase of 834,515 *yen* in gold, and a decrease of 3,152,807 *yen* in silver. The nickel coinage was an entirely new addition, but, on the other hand, the coinage of copper having been stopped altogether, this subsidiary branch shows a net decrease of 445,930.50 *yen*. The assays for the year indicate very satisfactory results, all the coins examined being found well within the prescribed limits of fineness. We do not know whether the Mint has abandoned its former practice of submitting its coins for assay by the experts of mints in foreign countries, but no report of any such proceeding appears in this volume. One of the operations which occupied the Mint's attention during the year was the cutting up and melting down of *Tempo-sen*, *Bunkiu-sen*, and *2-sen* pieces. The total weight of these coins thus treated was 9,164,766 lbs. An interesting note added to the Report refers to the plumbago crucibles used at the Mint. We read that crucibles manufactural by Messrs. Yamato and Co., of Osaka, "though they do not compare in quality with foreign crucibles," have been employed with the hope of stimulating national manufactures. The Mint carried this patriotic forbearance to the extent of using 541 of the Osaka crucibles out of a total of 1,565.

### QUALIFYING FOR EXILE.

ANOTHER youth has been qualifying for exile. He is said to be about twenty-two years of age. In the afternoon of the 14th instant, while the House of Representatives was in session, he came to the entrance and asked to see Mr. Mayeda Kagaku, who was in the strangers' gallery. Something in the youth's appearance suggested suspicion to the vigilant porters, and instead of summoning Mr. Mayeda, they summoned a policeman. The latter saw enough to warrant a search, the result of which was that the young man was found to be in possession of a large iron ball and a nine-inch dirk, the dirk being sewed into his coat. Arrest followed immediately of course, and the prisoner was taken off to the Kojimachi station, where he gave his name as Imai Tsunejiro and said that he was a native of Kyoto. Young men who carry deadly weapons are apt to find their residence in Tokyo cut short now-a-days.

### THE SOSHI EXPELLED FROM THE CAPITAL.

WE learn on fuller inquiry that the 56 *soshi* expelled from the capital during the night of the 13th, under the provisions of the Peace Preservation Regulations, were all proved to have either sent threatening letters to members of the House of Representatives, or to have taken part in assaulting them, or to have acted in a manner that plainly portended violence. In fact, the precautions taken by the Authorities are distinctly actuated by a desire to secure the Diet against molestation, and the House of Representatives evidently recognises the truth of the case, inasmuch as, when it was yesterday invited to pass a vote of censure on the Government for having given effect to a law which the Diet, only a few days previously, had passed a resolution to rescind, it endorsed the action of the Authorities by a majority of 25 in a House of 193. This is the first time the House of Representatives had signified its acquiescence in any measure taken by the Government, and under the circumstances the fact is sufficiently remarkable. It is not to be supposed, of course, that the number of *soshi* expelled from the capital will be limited to 56. Others will probably be sent to join the exiles during the next few days. But there is just a possibility that this timely step may strike terror into the hearts of these still remaining in Tokyo, and that the certainty of being immediately rusticated if they exhibit any truculence or turbulence, will deter them from further attempts of an aggressive character.

### JAPANESE JOURNALS.

REMARKABLE have been the vicissitudes of newspapers within the past few months, says the *Choya Shimbun*. The opening of the Diet was the signal for an unprecedented display of journalistic enterprise, and the immense activity to which political parties were stirred by that event, also exercised no small effect on newspapers. New publications made their appearance and old ones retired from the scene in a manner that argued a state of great uncertainty. From the 1st of February last year the *Kokumin Shimbun*, the *Koko Shimbun*, and the *Boyeki Shimbun* began to be published; in October, Count Itagaki's *Jiyu Shimbun* was added to the list of journals. Shortly afterwards the *Kokō Shimbun* ceased to be published, but was by and by resuscitated as an organ of the *Rikken Jiyu-to*. On the 12th of October the *Musashi-no Shimbun* made its *début*, and in November General Viscount Torio issued the *Chinsei Nippo* as the organ of the Independent Conservatives. In the same month another conservative organ, the *Kokka Shimbun*, made its appearance, but soon feel out of the ranks. Then followed the *Bakuretsu Shimbun* (the Bombshell), which, true to its title, blew itself up in a very brief space. For the rest, the *Toyo Shimpo* came into existence, whereas the *Daido Shimbun* and the *Tokyo Koron* expired. Since the Diet opened, too, several periodicals have been born and several have died, so that on the whole the past ten or eleven months have been an exceptionally troubled era for journalism.

### NEW YEAR'S PRESENTS TO THE MEMBERS OF THE HOUSE OF REPRESENTATIVES.

A CORRESPONDING of *Nippon* gives the following list of New Year's gifts which he thinks should be presented to members of the lower House:—

300 packages of *moxa* for curing light headedness.

200 volumes of a book on polite etiquette.

200 bottles of chemicals for removing unpleasant odours.

300 volumes of a book of recipes for preventing the wearing away of gold plating.

300 letters to be carried on the backs of wire-pullers.

200 spectacles for curing shortsightness.

300 streamers to be displayed in the breeze.

300 guns to be fired without aim being taken.

15 purses for receiving bribes.

56 volumes of geography of Hokkaido.

300 large mirrors so that members may be enabled to view themselves.

### THE POSITION OF THE JAPANESE NATION.

THE *Nippon-jin* discusses, in its issue of the 6th instant, the future position of the Japanese *vis-à-vis* European and American nations. Even among the Japanese least tainted with the denationalizing tendency, few, observes our contemporary, are perfectly assured that they are not naturally inferior to the Aryan race. Is it, however, true that the Japanese are inferior to Europeans and Americans? In point of physique, there is a decisive superiority—the *Nippon-jin* admits—on the side of the Occidentals. But our contemporary contends that superiority of physical development does not necessarily imply superior capacity for civilization and progress. On the contrary, fine muscles and large bones are found in people who being naturally slow to form themselves into a peaceful society, have long been in a state of primitive barbarity; while nations comparatively weak in body have been quick to settle down into a state of tranquillity and progress. Thus the *Nippon-jin* thinks that whether a nation is well developed in physique or not depends upon the length of time during which it has remained in an uncivilized state, for under uncivilized conditions individual prowess forms the essential condition of successful existence. In a highly civilized age like the present, a nation inferior in physical development may successfully contend in war against a strong-bodied nation, because with the progress of civilization, intellect plays, directly and indirectly, a more and more prominent part in deciding the fate of a campaign. It is, then intellect that ought to determine the position of one nation in regard to another. And as to the measurement of intellectual power, our contemporary takes exception to the phrenological theory which lays stress on the size and the development of a particular part especially the forehead. The prominence of forehead is strikingly noticeable in the peoples of the Aryan race is ascribed by our contemporary to the circumstance that their nomadic forefathers had to walk in the sun so constantly that in the course of ages their forehead gradually projected forward so as to afford shelter to the eyes. If the size of the skull forms a sure measurement of intellectual power, elephants —says the Tokyo journal—ought to be wiser than man. There is, therefore, in the opinion of the *Nippon-jin*, no standard of measure to ascertain degrees of intellectual power. Nothing can be relied on except the approximations afforded by the quantity and character of the work accomplished. Having lived an isolated life for so many centuries, the Japanese nation has done little distinguished for magnitude and splendour. But if can safely he asserted, avers the *Nippon-jin*, that Japan has produced in every walk of life representattve men comparable with those of any other country. Toyotomi Hideyoshi, for instance, displayed rare genins both in his manner of conquering his enemies and in the devices he employed to keep them in subsequent subjection. Tokugawa Iyeyasu planned and carried out a system of feudalism which, in point of completeness, has no parallel in the history of the world. In more recent times the late Saigo Takamori stands out pre-eminent in chivalry, truthfulness, and his capacity for forming gigantic schemes. Inō Tadamori has few equals in his wonderful geodetical achievements. He surveyed the whole coast line of Japan and produced an exceptionally accurate map all by his own efforts without any assistance whatsoever. In literature, Bakin's name stands on a level with the greatest authors in the West, while Murasaki-Shikibu, the graceful authoress of the *Genji Mono-gatari*, can be compared with any lady writer of Europe or America. It is not difficult, says the *Nippon-jin*, to mention other names, but these instances are sufficient to show that the Japanese nation is not inferior in intellectual capacity to any other people. The Japanese being among the best representatives of the Mongolian race, our contemporary claims that whatever has been achieved by another people of the same race may fairly be considered to be within the reach of this nation. We are then introduced to the history of China, in the pages which figure a number of men who can be compared to the greatest men in Europe. Chen is compared to Pericles; Kwan to Alexander the Great; Confucius to Socrates; Bo-kiu Ming to Zenophon; the founder of the Han dynasty to Napoleon the First, and so forth, the only difference is that European civilization is on a higher level than the Chinese. This circumstance is to be ascribed to the difference in their respective relations of the two peoples to the ancient civilizations of India, Arabia, Egypt, and so forth. Europe has been able by her fortunate position to collect and select from all these different forms of civilization, while China,

Digitized by Google

for geographical reasons, has been unable to profit much by the importation of Asiatic and Egyptian civilizations. The Mongolian race has also produced a world-renowned conqueror, namely Gengis Kan, who subjugated the whole of Asia and carried terror far into the interior of Europe. Our contemporary further refers to the great Wall, and to the construction of immense canals, and to the splendour of civilization under certain dynasties. Lastly the Mongolian race now comprises a population of 600 millions, while the Aryans only number about 400 millions. The Mongolians have thus far maintained their ground in the struggle for existence. And our contemporary thinks that a time will come when the Mongolians, their vast potential energies being fully developed, may assert themselves in the world's affairs. Such a time is not far distant. The increased attention which European nations now pay to the East will ultimately rouse the Mongolian race from its present torpor and open up an entirely new chapter in its history. Thus the *Nippon-jin* is assured that a bright future awaits the Mongolian race in general, and the Japanese nation among the rest, and exhorts all the enterprising youths of the land to turn their attention from petty questions of domestic politics to the fulfilment of the splendid mission assigned by Nature to the Japanese nation.

### THE NEW JAPANESE HYMNAL.

THERE has just been published by the American Board and United Presbyterian Missions in Japan, a most carefully prepared translation of Hymns and Songs of Praise in common use among Christians. The work of translation appears to have been going on since 1886, in the hands of a committee appointed by representative bodies of the United and Congregational Churches, the members of the Committee being the Revs. Matsuyama, Miyagawa, and G. Allchin and Mr. Tamura, for the Congregational Church; and the Revs. Okuno, Uyemura, Segawa, and Dr. G. F. Verbeck for the United Church. It does not seem, however, that the members of the Committee laboured equally on it, for we read in the preface that the hymnological part was prepared almost exclusively by Messrs. Matsuyama, Okuno, and Uyemura, and the musical by Mr. G. Allchin. There are 263 hymns in the collection, and so far as we are competent to judge, the renderings into Japanese retain most happily all the simple grace of the original. This, of course, is a point upon which we speak with hesitation. Japanese has perhaps not yet reached such a stage of development on modern lines as permits its employment for the purpose of translating literally all the special turns of thought and peculiar metaphors of an English hymn-book. But it is certain that many of these familiar hymns appeal to us with new beauty and directness in their Japanese dress, and that the translators have shown rare skill and fidelity. Take the well-known and beautiful hymn "Abide with me; fast falls the eventide," and it will be seen that the Japanese version compares not unfavourably with the original:—

1 Yūbe to narinu hi kurenu
Tomo ni yadorase tamae
Yorube naki mi no tayoru
Shu yo tomo ni yadoriteyo.

2 Inochi no yūbe wa chikashi
Kōmei eigwa mo kie-yuku
Yo no kawari ikani zo ya
Shu yo tomo ni yadoriteyo.

3 Yuku michi wa ito kewashi
Semaru ata wo Shu narade
Tare ni yorite manukaren
Shu yo tomo ni yadoriteyo.

4 Tozuru me ni mie-wataru
Jūjika no kagayaki ni zo
Ien no akebono wo nozomu
Shu yo tomo ni yadoriteyo.

Apart from the question of rendering, there are two points of special interest about the book. The first is the fact that it is the pioneer music-book printed in Japan with type made and set up in the country. It is true that not a few music readers have been published by promoters of Western music, for use in the public schools, but they are printed from blocks. We may say, therefore, that we have before us the first Japanese attempt at music-book printing, and truly the attempt is highly creditable. The Seishi Bunsha of Yokohama—a firm where no foreigner is, we think, employed—has done the work. A few specimens of type were, we believe, ordered in the first place from America, and from these models the whole fount was cast. A skilled music printer in the West might perhaps find some few points to criticise, but on the whole only the eye of a keen expert could detect that the book did not issue from first class Occidental hands. Of course a great deal of this happy result must be due to the Rev. Geo. Allchin, to whose sole share, as we have said, the musical part of the volume fell. The second point of interest is that the book will be immediately used by three-fourths of the total number of Protestant Christians in Japan; in other words, fully 25,000 Japanese will be almost immediately singing from this hymnal every Sunday. Strange it is to think that those revered and noble airs which form such a large feature of our household memories in bygone days, the *Magnificat*, the *Te Deum*, the *Nunc Dimittis*, and so forth should, now be sung every Sabbath to Japanese words under Japanese skies. The *Shinshi Sambika*, as the hymnal is called, appears in two forms, both plainly but prettily bound in soft leather with red edged leaves. The first contains the music and words in *shiragana;* the second, and smaller, contains the words only in Romanized letters.

### FUNERAL OF MR. HAENNI.

THE remains of the late Mr. Haenni, Vice-Consul for Switzerland, were interred on Tuesday afternoon in the General Cemetery. The coffin was conveyed at 4 p.m. from the premises of Messrs. Sieber and Brenwald, of which firm deceased was a partner, and placed in a hearse which then proceeded to the Cemetery. Messrs. A. Dumelin and Jas. Walter were chief mourners, and a very large assemblage of the leading official and mercantile residents of the Settlement followed the coffin to the grave. Prominent among the former were members of the Consular corps, but many persons, official as well as civilian, were prevented by the prevailing epidemic of influenza from being present. The deep respect and esteem in which the deceased gentleman was held was powerfully evidenced by the large attendance of different nationalities, a considerable proportion of the mourners being Japanese, and in view of his official position the flags of the varions Consulates were flown at half-mast.

### IN A SUBURBAN GARDEN.

The Lily murmured to the Rose,
"Love, every night when clamours cease,
I strive my passion to declare—
If we could get a moment's peace!
But who's this kicking to get in?
And who's that trying to get out?
Is this an Uncrowned King I see
Come gliding down the waterspout?"
The Shamrock sighed unto the Rose,
"I fear we're in a tight position:
Dissent will hardly tolerate
So amorous a politician.
The man who rules our destinies,
Who's free a nation's ends to shape,
Should not be seen from lady's bower
Descending by a fire-escape!"

—*St. James's Budget.*

### THE DESIGNER OF THE NICARAGUAN CANAL.

THE *Kokkai* notes the arrival in Japan of Capt. Taylor (of the U.S.S. *Alliance*) whom our contemporary hails as the designer of the Nicaraguan Canal. A representative of the *Kokkai* appears to have conversed with Captain Taylor who laid stress on the important bearing the completion of the work will have on the foreign commerce of Japan. In particular the Canal will materially shorten the distance to be covered by exhibits and sightseers going to the Chicago Exhibition, before the opening of which it is expected to be finished. Captain Taylor, according to the *Kokkai*, suffers at present from influenza, but on his recovery will deliver a lecture on the Canal before the Tokyo Geographical Society.

### THE LATE MR. BRINKWORTH.

ON Saturday afternoon the remains of the late Mr. B. J. S. Brinkworth were interred in the General Cemetery. A short service was performed at the house by Rev. E. C. Irwine, M.A., after which the remains were conveyed to the Cemetery, Dr. Wheeler, and Messrs. J. Johnstone, Cameron, Charlesworth, J. Curtis, Bugbird, Hewett, and Kennaway, acting as pall bearers. After appropriate exercises, the coffin was lowered into the grave. Rev. Mr. Irwine, in the course of a few brief remarks, said those who could go back to their homes, upon whom grief and sorrow had not laid their heavy hand, as they had upon their poor young friend—for she was very young—ought again to bless God that they had not to experience such grief as hers. It was a grief no words of theirs could allay. They could do no more than express their sympathy. They hardly knew by what mysterious dispensation of Providence such a hardworking and industrious citizen, such a kind and cheerful friend, was struck down; they could not account for such things, and could only leave them to the Almighty Father, in whose hands they all were. Many beautiful wreaths were placed on the grave.

### INFLUENZA.

THE present visitation of influenza is developing virulence and deadliness which were almost absent in the previous epidemic. As the list of deaths traceable to its effects increases, people begin to realise the serious nature of the ailment; above all the danger of too speedily going into the open air while suffering from influenza or recovering from its attacks is plainly established. The death of Mr. Brinkworth, whose funeral took place on Saturday was due in some sense to a lack of these precautions, which, indeed, unhappily cannot be enforced in all cases; and so also we believe was the demise of Mr. Haenni, the much respected Vice-Consul for Switzerland, which took place yesterday.

* * *

The death of Mr. Ch. Wagner, which occurred on Saturday at his house at Negishi, was no doubt due to causes other than influenza, but may still be attributed to the peculiar climatic influences by which we are at present surrounded.

### MEDICAL MEN IN JAPAN.

THE *Jiji Shimpo* says that according to statistics compiled by the Home Department, the total number of medical practitioners in the empire on the 1st of January, 1891, was 40,215. These are divisible as follows:—

| | |
|---|---|
| Medical men who have passed the prescribed examinations | 5,595 |
| Medical men who graduated at the Imperial University | 1,340 |
| Medical men who graduated at Upper Middle Schools | 246 |
| Medical men who graduated at local Medical Colleges | 1,356 |
| Medical men who from official positions have gone into general practice | 1,536 |
| Medical men who graduated abroad | 19 |
| Medical men who were in practice before the present system was inaugurated | 30,003 |
| Medical men whose practice is confined to special localities | 120 |

### THE HOUSE OF REPRESENTATIVES YESTERDAY.

THE proceedings in the House of Representatives yesterday were very interesting. Great excitement prevailed. Before the House could resume its sitting in Committee, Mr. Nishi moved for permission to bring forward a motion, as a matter of urgency, for rejecting the Report of the Budget Committee. There were 224 members present, and 120 voted in favour of urgency and 140 against. This vote may probably be taken as an indication of the feeling of the House. Evidently there is going to be a tough fight over the Budget.

### VICTORIA PUBLIC SCHOOL.

WE hear a good account of a youth who up to June last had been a pupil at the Victoria Public School, Yokohama, and is now at the Newton High School, Masachusetts, U.S. The youth is Harry Loomis, a son of the Rev. H. Loomis, and at a recent examination he did great credit to his former teachers in general subjects, being also at the top of the tree in French with 99 points out of a possible 100. The new term at the Victoria Public School opened on Friday.

## *THE PEACE PRESERVATION REGULATIONS AGAIN PUT INTO OPERATION.*

ON Tuesday night the police received orders from the Government to put the Peace Preservation Regulations into operation against the *soshi* who have been making themselves conspicuous in assaulting or molesting members of the House of Representatives. It is scarcely necessary to remind our readers that the Peace Preservation Regulations are a special law originally promulgated on Christmas Day, 1887, and that they confer on the Authorities power to banish from the capital all persons whom the police have reasonable grounds to suspect of harbouring designs prejudicial to public peace and good order. At the time of the law's enactment and immediate enforcement, a number of youths had assembled in the capital from various localities, having pledged themselves to bring about a change of government by fair means or by foul. Arrived in Tokyo, they soon found how powerless they were either to influence public opinion or to move the Cabinet, and being in some cases reduced to extremities and in others unable to return to their provinces without accomplishing their pledge, there were grave reasons to apprehend that they might resort to acts of wholesale violence. The Peace Preservation Regulations were accordingly framed and put into force amid a chorus of disapproval from all persons outside the Government, the general idea being that the Authorities had resorted to this extreme measure chiefly for the purpose of securing their own despotic sway and in order to create an opportunity for banishing political enemies whose presence in the capital they found inconvenient. The step was completely successful so far as concerned anticipating and preventing rash acts on the part of the misguided youths, but, as might have been expected, many persons refused to believe that any real danger existed, and the administration, instead of getting the credit of having fore-fended a crisis of some magnitude, fell under the imputation of resorting to harsh and cruel measures. Thenceforth the Peace Preservation Regulations became a frequent object of journalistic and political attack. Their abolition formed a leading plank in the platform of every political party, and one of the first acts of the House of Representatives was to pass a Bill annulling them. This Bill had to receive the Government's assent before becoming law, and fortunately that assent had not been given when the present disturbed state of affairs began to make itself apparent. The behaviour of the *soshi* at the Yayoisha and their conduct at the Imperial Hotel, whither eleven of them went, armed with daggers, seem to have finally decided the Government to put the Regulations once more in force. At what hour orders were issued to the police we cannot tell, but at 10 o'clock on Tuesday evening fifty-six *soshi* received notice that by 8 o'clock the following morning they must have removed themselves from Tokyo, to remain absent during the period of the Diet's session, the alternative being arrest and imprisonment. The names of the persons banished are not yet published, and surprise will probably be felt that the number is so small. But the police doubtless know exactly what they are doing, and in a case of such emergency, are not likely to err on the side of undue clemency. Of course we cannot but regret that a crisis calling for this extreme course should have arisen; but, on the other hand, we are sincerely glad that the Government has at last made up its mind to deal with the *soshi* resolutely and radically. If Ministers themselves had been exposed to violence or molestation at the hands of these misguided youths, the case might not be so clear; but when it becomes necessary to attach a strong escort of constables to members of Parliament on their way from the Chamber to their homes, it is time to take a decisive step, nor will the nation be able to complain that the object of this exceptional legislation is to prolong the Government lease of power, since it is simply to guarantee the people's representatives against physical danger in the discharge of their parliamentary duties. It is a somewhat singular freak of fate that within a few days of the Lower House's almost unanimous vote for the rescinding of the Peace Preservation Regulations, their renewed operation should have become necessary to insure the security of the members themselves.

## *THE "JAPAN GAZETTE" AND TREATY REVISION.*

IF we employed the epithet "disappointing" with reference to the first article published by the new *Japan Gazette* on the subject of Treaty Revision, with still greater force does the same adjective apply to our contemporary's second essay. The first was disappointing because it attached paramount importance to a phase of the question which, in our opinion, is far-fetched if not chimerical. The second is disappointing for another reason, namely, that it displays the old spirit of misrepresentation which has embittered every discussion of this important topic and contributed materially to prevent an amicable understanding. "Nothing," says the *Japan Gazette*, "nothing that does not advocate Treaty Revision, with or without conditions, as the Japanese may be pleased to decide, will ever appear other than disappointing to our morning contemporary." It would have been impossible to compress into the compass of a single paragraph falser or more unfounded accusations than are here preferred. Never once have we used language capable of being twisted to signify advocacy of Treaty Revision without conditions, whereas on repeated occasions we have declared, in the most emphatic and distinct terms, that the unconditional abolition of Consular Jurisdiction is a course of which we could not possibly approve. There are two lines between which a newspaper may choose on entering the arena of Treaty-Revision controversy. The first is the honest and conscientious line; the second, the prejudiced and commercial. A journal adopting the former, takes some pains to interpret its opponents correctly and to refrain from attributing to them arguments which they not only have never used but have even frequently condemned and repudiated. A journal choosing the second line sets out by a flaunting display of sparious patriotism; suggests and fosters the notion that Treaty Revision is in some way a test of the superiority of Occidental races to Oriental, and urges the public to conclude that everyone advocating Revision on liberal bases is a renegade, a truckler to Japanese sentiment, and a foe to his own countrymen. We call this second line "commercial" because its plain purpose is simply to make capital out of a discussion which, from its nature, ought to be raised far beyond the range of sensationalism and perversion. Our confident expectation was that the new *Japan Gazette* would have adopted the former line, and we are correspondingly disappointed to find that it appears to be drifting towards the latter. We say "appears," being loath to deduce so unwelcome a conclusion from permises admitting of any doubt. Nevertheless, it is beyond question that the *Japan Gazette* has now accused us directly of advocating Treaty Revision without conditions, which is flagrantly false; and indirectly of moulding our advocacy in strict subservience to Japanese fancy, which is a contemptible libel. If these are the weapons which the new *Japan Gazette* intends to employ, the public will be reluctantly obliged to conclude that even under its altered editorship the paper has no strength to raise itself from the mire of its old wallowing. Yet, despite the force of this testimony, we still hope that our contemporary will choose the better route. A cause is irrevocably damned in the opinion of all unprejudiced persons so soon as its advocates begin to impute motives to their adversaries and to misrepresent the arguments of the other side. This is a rudimentary canon of controversy. If its persistent neglect by the opponents of Treaty Revision in Yokohama has not utterly discredited them, the reason is to be sought in the prejudices which they have succeeded in exciting and to which they habitually appeal. No phase of the discussion seems to be secure against the intrusion of this

Digitized by Google

evil element. The particular point of controversy in the present instance was whether England ought to withhold her recognition of Japan's claims through fear of ruffling Chinese sentiment. To that question and to that question alone we addressed ourselves in reply to the *Japan Gazette's* original article. Our contemporary's irrelevant and bitter answer is that the *Japan Mail* advocates Treaty Revision without conditions and that its opinions are moulded strictly in accordance with Japanese caprice. It is impossible, apparently, for our opponents to confine themselves to the point at issue. Some attempt to stir up prejudice, some bandying of false charges, some ascription of servile motives, seems to thrust itself imperatively into the forefront of their argument. The loss is their own. If such methods be inseparable from the cause they champion, so much to worse for the cause.

## *THE SILK MERCHANTS.*

SINCE last autumn the silk-merchants of Japan have been growing more and more pursuaded that the Government ought to assist them to place their staple of trade in the American and European markets without the intervention of the foreign merchants at the Treaty Ports. At first the movement did not attract much notice, but it has now assumed considerable dimensions, and will undoubtedly force itself upon the attention of the Authorities as well as of the Diet. The principal promoters of the idea are Messrs. OZATO CHIUICHIRO, KAWASE HIDEHARU, KAZAMA KIMPACHI, and HOSHINO CHOTARO. On the 12th instant these merchants organised a meeting of men engaged in the silk trade at the Nagoya-ro, in Kanagawa-machi. Over sixty persons attended, representing no less than sixteen localities, in the following proportions, namely, Gumma Prefecture, 13 delegates; Nagano Prefecture, 12; Miyagi Prefecture, 6; Kyoto City, 6; Gifu Prefecture, 6; Oita and Tochigi Prefectures, 3 each; Yamagata, Yamanashi, and Kanagawa Prefectures, 2 each; and Shizuoka, Shiga, Okayama, Fukushima, and Aichi Prefectures, and Tokyo City, 1 each. The meeting was addressed by Mr. OZATO and others, the speakers setting forth the present depressed condition of the silk trade and maintaining that the only hope of improvement lay in inducing the Government to make such arrangements as would enable holders of silk to export their parcels directly to Europe and America, without recourse to foreign merchants in Japan. The promoters submitted to the meeting a written scheme which they proposed to embody in a memorial to the Authorities and to the Diet. The scheme provides that the Bank of Japan and the Specie Bank be officially authorised to purchase the bills of Japanese exporters of silk, the Treasury guaranteeing the banks to the extent of from one million to two and a half million *yen* against such purchases. It is not suggested that the Treasury should actually put up this guarantee fund, but only that it should pay interest on it at the maximum rate of ten per cent. Various details are added with respect to the date of maturity of bills, the rate of discount, the re-payments in New York and Lyons, Consular supervision, and so forth, but the broad outline of the plan is that the State should empower the two leading banks in the empire to make large advances for the purpose of facilitating the direct export of silk, and that from one million to two and a half million *yen* of the public funds should be employed to guarantee the banks against loss in respect of these transactions.

Now the first question that suggests itself in connection with this project is, why Japanese silk-men should be so anxious to eliminate the local foreign merchant from their dealings. The crisis that had led to this agitation is due primarily to the action of an entirely exceptional cause, namely, a sudden rise in the gold price of silver owing to the capricious legislation of the United States Government. Omitting minor incidents of demand and supply, or temporary disturbances of the market, the great and overshadowing factor is that the gold pieces obtainable for a bale of silk in New York or Lyons will not purchase as much silver as they formerly purchased, and that, consequently, the foreign merchant at this side can no longer afford to pay the old number of silver *yen* for the bale. How is this difficulty to be overcome by direct export; in other words, by export carried on without the intervention of the foreign merchants of Yokohama? Most assuredly silk sold by Japanese agencies in New York or Lyons will not fetch a higher gold price than silk sold there by foreign agencies. Neither can the gold proceeds of the sale be converted into silver at a better rate by the agents of the Bank of Japan and the Specie Bank than by the agents of a foreign Bank. How then, we again ask, can the situation be in any way bettered by entrusting all the steps of the transaction to Japanese hands? Are the Japanese more skilful men of business than foreigners? Do they understand the European and American markets more thoroughly? Have they more convenient access to shipping facilities, or do they command cheaper machinery for inspection, packing, placing, and delivering? There is, we are well aware, an element of sentiment in the matter. The Japanese wish to conduct their foreign trade generally without the aid of foreigners on this side of the water. They imagine that the necessity for such aid throws a certain slur upon their own business-capacity, and their impatience is accentuated in the case of silk by the peculiar conditions under which trade in that staple is carried on in Yokohama. Here, however, we do not discuss questions of sentiment. Though by no means disposed to underrate the force of such considerations, or to deny that the anxiety to be independent is natural and praiseworthy, we cannot forget that frequent attempts have been made by competent Japanese, commanding ample capital, to establish "direct export," and that in every instance the result has been disastrous failure. It may be assumed, therefore, that the projecters of the new scheme do not intend to appeal to the Government and the Diet on sentimental grounds, but that their petition will be founded on the great embarrassment now existing in the silk trade, and on the hypothesis that deadlocks like the present would not arise if the channels of export were in Japanese hands. Will Parliament or the Authorities endorse such a view? We cannot for a moment believe it. To every open-eyed person it must be perfectly plain that what the silk-men are asking the State to do is to step in and take the risk of moving westward a large quantity ot silk which cannot be moved by foreign agency at ruling rates. There are living in Yokohama a number of foreign merchants who have made the export of silk their study and profession for many years. They have ample command of capital. They know how to take advantage of every favourable condition. Their business machinery is of the most efficient and economical character. They have every inducement to offer liberal terms, because unless transactions can be concluded their income is cut off. And finally, they are competing with each other so keenly that they work on an almost infinitesimal margin of profit, and will even take risks demanding no little courage and resolution. These men cannot discern any possible means of moving at Japanese rates without heavy loss the large quantities of silk now lying in Yokohama. Thereupon the Japanese silk-merchants petition the Treasury to stake a couple of million *yen* of the public money in the desparate game of sending the silk to Europe and America, and putting it on the markets of New York and Lyons at prices which there is now no reasonable prospect of realizing. That is the scheme in a nut-shell. Will it receive the approval of the Cabinet and the Diet? Surely not.

---

Mr. W. Renshaw, says a home paper received by the last mail, has been distinguishing himself in another field of amusement. His capabilities as a player of lawn tennis are well known. He has recently taken to golf, a game which is rapidly gaining in popularity in many parts of the country. A few days ago Mr. Renshaw brought off a magnificent drive. Playing off from the teeing ground, he holed the ball in one stroke—a feat which has seldom been achieved.

## *IMPERIAL PARLIAMENT.*

HOUSE OF PEERS.—FRIDAY, JAN. 9TH.

The House met at 11.15 a.m. The President announced that a message had been received from the Government desiring the return of the Advocates Bill for amendment, and that, under these circumstances, the order of procedure must be changed. The next business to be taken by the House would be the Weights and Measures Bill, but as this was now in the hands of the Special Committee, the debate on it could not be immediately opened. Steps would, however, be taken to have the Committee's Report printed and distributed as quickly as possible. Meanwhile, the President explained that he wished to call the attention of the House to the question of electing an Acting President. The 14th Article of the Law of the Houses provides that in the absence of the President and Vice-President, the chair must be taken by an Acting President. The necessity of applying this rule was not immediately pressing, but might at any moment become so, since Count Higashi-kuse, the Vice-President, had been for some time prevented from attending by sickness. With regard to the method of appointing an Acting President, the House might adopt the course of leaving the nomination to the President, but if it did not approve of that plan, the alternative course was to resolve the House into Committee of the whole and debate the matter. The President thought that the former plan would be the more convenient. Viscount Tani supported the President's suggestion. Mr. Hozumi, premising that no one was so competent to interpret the Rules as the President, asked whether it was within the competence of the House to alter the provisions of the 14th Article of the Law of the Houses. Questions of this nature had already been raised in the Lower House, and an authoritative decision was much to be desired. The President explained that the 14th Article possessed no practical value except in the event of the President and Vice-President being both unable to perform their functions. It prescribed no course to be pursued in electing an Acting President, and the opinion that he—the President—had expressed on the subject was based not on the provisions of the Law, but on his own idea of what seemed expedient. Mr. Shimauchi said that, according to his view, the House was not called upon to put the 14th article into practice until the emergency contemplated in the article arose. The Vice-President's illness was known to be mending, and consequently no reason was apparent for proceeding at this stage to the nomination of an acting President. Mr. T. Hosokawa supported the President's view. Mr. K. Murakami sought permission to put a question about the withdrawal of the Advocates' Bill, but the President pointed out that it would be useless to do so inasmuch as, in the absence of any Government Delegate, no satisfactory answer could be given. Mr. Yamaguchi and Mr. Miura having expressed the opinion that Article 14 could have no operative effect until the emergency contemplated in it actually arose, and that, therefore, to elect an acting President under its provisions beforehand would be *ultra vires*, the President asked the House to consider the matter a little more carefully. According to the arrangements now in force, the House could not even come into session until it received a signal from the President, in the form of ringing a bell or some kind of summons. Thus, should both the President and Vice-President be absent through illness, the 250 odd members might find themselves waiting aimlessly in the precincts of the Chamber and unable to proceed to business. No such difficulty could occur in the Lower House, since special provision to meet it had been made; but it might very well occur in the Upper House unless an Acting-President were appointed beforehand. Marquis Hachisuka supported the President's view, but Mr. T. Miura objected that to elect an Acting President under the 14th article before the conditions mentioned in that Article occurred, seemed a decided interference with the Law. He deemed the matter of sufficient importance to warrant the House's electing a committee for the purpose of considering it fully. Several members continued the debate. Mr. Miura explained that he did not oppose the President's view, but that, in his opinion, the Acting President referred to in Article 14 could only hold office during the continuance of the emergency which had caused his appointment, and that, consequently, to elect a permanent Acting President would be contrary to the spirit of the Law. It being now noon, the House adjourned.

* * *

The House re-assembled at 1.20 p.m. The President read out the names of certain members who had applied for leave, and also announced that he had received an intimation from the Government requesting that the debate on the Weights and Measures Bill should be postponed until the 12th. The House would therefore continue the debate of the forenoon. Mr. Miura proposed that as article 14 did not prescribe any method of electing an Acting President, the following rule should be adopted, namely, that if the President or Vice-President were present on the occasion, he should nominate an Acting President, and in the event of neither the President nor Vice-President being present, the House should resolve itself into Committee of the whole, and elect an Acting President by ballot. Mr. Murata pointed out that rules already existed with respect to the House resolving itself into Committee of the whole, and that it would certainly be improper to make a regulation such as that proposed by Mr. Murata authorizing the House to go into Committee of the whole without observing any of the forms prescribed as necessarily precedent to such a course. The debate was continued by several members. The President explained, in reply to one of the members, that the House was not following any Orders of the Day. The Orders had been disturbed by the withdrawal of one Bill and the postponement of another. The question before the House had been suggested by the President himself, who was suffering from symptoms of the prevalent epidemic, influenza, not yet sufficiently severe to incapacitate him for duty, but inasmuch as he might at any moment find himself unable to take his place, he had thought it advisable to suggest the expediency of providing for a probable contingency. He added that Mr. Miura's motion, having found the necessary number of supporters, was now a subject of debate. Mr. Kioka Kocho moved, as an amendment to Mr. Miura's motion, that the nomination of an Acting President be left to the President, and several members supported the amendment. After some further discussion, Mr. Kioka's amendment was put to the House and carried. The President announced that, in accordance with this decision, he should nominate an Acting President in the event of being unable to attend himself, and the House then adjourned at 5.20 p.m.

HOUSE OF REPRESENTATIVES.—FRIDAY, JANUARY 9TH.

The House met at 1.45 p.m. The President announced that General Katsura, Vice-Minister of War, and Captain Honjuku Takumei of the Naval Department, had been appointed Government Delegates; also that certain applications for leave of absence had been received. The applications having been granted, the President said that the House would proceed to the Order of the Day, namely, to consider the Report of the Budget Committee. The expenditure side, he took it for granted, should be first debated. Moreover, as the Budget differed from an ordinary draft of law, it seemed essential that it should be examined at three readings, and the House would therefore consider that the debate of to-day was the first reading. Further, an amendment proposed by Mr. Kan Riyoho having obtained the due number of supporters, was before the House. At this point Mr. Tanaka Shozo rose and said that he had a pressing question to put. It appeared that certain persons harbouring evil designs were supported in the house of the Minister of State for Communications, and the speaker desired to take advantage of the Minister's presence to enquire about this affair. Mr. Tanaka was greeted with cries of "muyo, muyo" (needless) from all parts of the House, and was ruled out of order by the President. Mr. Takahashi said that he, too, desired permission to bring a motion of pressing importance. It referred to the bribery reported to have taken place among members of the House. He wished to move that a special committee be appointed to examine into the matter. The President ruled Mr. Takahashi out of order. The President then announced that before the debate on the Budget opened, the Minister of State for Finance wished to address the House. Count Matsukata ascended the tribune and said that having read the report of the special committee on the Budget, he wished to say a few words to the House. The Cabinet and the House were equally agreed that to secure public tranquillity and good order it was essential that the relations between the Executive and the Legislature should be smooth and without friction. Examination of the Report prepared by the Committee on the Budget of the 24th year of Meiji, showed, however, that the Government had the misfortune to be confronted by a situation in which the Executive could not agree with the Legislature. It was true that, since the Report had not yet been adopted by the House, no occasion for seeking the consent of the Executive had actually arisen, but the speaker did not think that it would be either premature or useless to bring to the notice of the members beforehand a fact which might assist their decision. He need scarcely say that the Government was most anxious to avoid any collision with the Legislature. It was the desire of the Government to go to the utmost length in complying with the House's wishes, and to endorse as far as possible any decision the people's representatives might come to after careful examination of actual facts. But there were strong reasons which prevented the Government from agreeing with this Report of the Committee. The President then announced that a motion for going into Committee of the whole House had been made by Mr. Suzuki Shigetoshi, and endorsed by over thirty members. Mr. Kudo asked permission to address the House, but was ruled out of order. Mr. Ishida Kannosuke stated that before the House went into committee he desired to seek an explanation from the Minister of State for Finance. After some hesitation, the President gave permission, and Mr. Ishida ascended the rostrum. Thereupon Mr. Inouye Kakugoro vehemently protested against this proceeding as out of order. The President, however, told Mr. Ishida to proceed. Mr. Ishida stated that he had been quite unable to gather from the speech of the Minister of State for Finance what were the points to which the Government radically objected in the Report. The Committee had done everything in its power to investigate the facts fully, and he thought that if the Minister had nothing more explicit to tell them, he would have done better not to address the House at all. As to the necessity of preserving harmony between the Executive and the Legislature, it was recognised fully by the House, and nothing calculated to disturb that harmony would be lightly undertaken. He trusted, therefore, that the Minister would afford them some more detailed explanation. Mr. Hashimoto Kiutaro argued that no necessity existed for asking the Minister of State for Finance to speak again. At this point the Minister of State for Communications came to the President's desk and began to converse in a low tone with the latter, whereupon Messrs. Yamada, Yamao, and others rose and called out that whispered conversations were not allowed in the House. Count Matsukata ascended the rostrum, and explained briefly that as the Bill had not yet passed the House, and consequently had not yet reached the stage when the Government's consent could be sought, he was unable to enter into any detailed explanations. Mr. Gamo said that he could not follow the reasoning of

Digitized by Google

the Minister of Finance. The only points concerning which the Government's consent need be sought in respect of the Budget were those enumerated in the 67th Article of the Constitution, whereas the Minister had told them that the Government would be unable to give its consent generally; in other words, that it disagreed with the whole Report of the Committee. He desired to know by what rule such a statement was made. At this stage the Minister of State for Communications rose and asked permission to reply to the remark that had been made about him a short time previously. Cries of "unnecessary" were uttered in various parts of the House. The President said that he had ruled the member out of order who wished to speak about the Minister of State for Communications, and he was therefore unable to permit the latter to reply. The House was called upon to decide the question of going into Committee, and a majority voted for the proposal. Mr. Shimada, President of the Committee of the whole House, took the Chair. The first four articles of the Budget were then read and the debate was about to be opened upon them, when Mr. Misaki rose and objected to that mode of procedure. He proposed that each article should be read separately so that the members might obtain from the Committee any information they desired about it. Mr. Suyehiro declared that the chief importance attached to the Committee's Report, which was the result of exhaustive inquiry, and he therefore proposed as an amendment that the report be read and discussed article by article. Considerable discussion ensued, the House seeming to regard the question as turning upon the relative importance of the original Bill and the Committees' Report, and several members expressing the opinion that the real object of Mr. Misaki's motion was to set aside the Report altogether. Finally the closure was moved and voted, whereupon Mr. Suyehiro's amendment being put, was lost, and the majority voted for Mr. Misaki's motion. The discussion of the Budget item by item then commenced. Mr. S. Sasaki asked what was the total amount of the salaries of *Chokunin*, *Sonin*, and *Hannin* officials. Mr. Tanaka replied that according to the calculations of the Committee it was about 6½ million *yen*. Some discussion occurred about this point, and certain members, having pointed out that the statements of members of the Committee might be mistaken, asked that information be given by the Government's Delegates. The Vice-Minister of Finance replied that documents containing full particulars had been laid before the Committee, but that as he did not have those documents by him at the moment, he could not give exactly the figure sought for. Mr. Takagi asked for information as to the factors by which the pay of the officials of the various Departments were determined, as to the manner in which travelling expenses were assessed, and as to the reasons of the great differences observable between the appropriations for the various Departments. Mr. Watanabe, Vice-Minister of Finance, replied briefly that the first point depended on the numbers and offices of the officials, the second on the distances travelled, and the third on the actual needs of the Departments. Mr. Inouye Kakugoro asked for a detailed account of the various companies receiving Government subsidies, and for a statement of the obligations devolving upon these Companies. Mr. Suyehiro said that if this plan of putting questions now to the members of the Committee, now to the Government Delegates, were pursued, the debate would be confused and interminable. He moved that the Committee of the whole House should close its sitting. Mr. Tanaka said that doubtless the Committee had fully entered into this question of subsidies and would offer an explanation. He was going on to state that he had overheard the Minister of State for Communications make use of the expression "demented talk" or "mad remarks" in conversation with the President, and that he wished for an explanation, but the House silenced him by cries of "unnecessary." Mr. Shoma Shiku gave an explanation of the conditions under which a subsidy was granted to the Japan Mail Steamship Company. In the 18th year of Meiji the Government had pledged itself to make good any deficiency in the Company's receipts, so that it might clear a net interest of 8 per cent. on its capital, but in November of the 20th year this engagement had been altered, and the Government had pledged itself to give a regular yearly subsidy of 880,000 *yen*. There was no doubt that the Government could revise its promise to the Company, but whether revision must be limited to the one article of the subsidy, or whether it might extend to the whole charter, the Committee had not been able to decide and therefore no report had been made. The subsidy had been granted for a fixed term of five years from November, 1887. Mr. Shiota Okuzo, after pointing out that the right to deal with the Budget was one of the most valuable privileges enjoyed under the representative form of Government, for which they had so long struggled, and after emphasizing the consequent necessity of the utmost care and research, said that many items in the Budget were simply replicas of the items in the preceding year, and that he therefore found it needful to revert to the Budgets of ten years back and to ask for an explanation of them. Mr. Ishida Kannosuke raised a question as to the relation between the Budget and Laws and Ordinances. Mr. Suyehiro again remonstrated against the method of procedure. He said that no precedent existed anywhere for such disorderly questioning, and he begged the members to support him in bringing this Committee of the whole House to an end. The President ruled that Mr. Suyehiro's proposal was out of order, and could not be entertained. Mr. Suyematsu Kencho imagined that when the House went into Committee on the Budget it must have foreseen a long debate. He was surprised to find that ere little more than an hour was past, signs of impatience were being manifested. It was true that the proceedings were not well organised, but the remedy for that lay with the President, and with the members themselves. Several members expressed approval of Mr. Suyematsu's view, but Mr. Suyehiro objected to the ruling of the President, and desired that the House be asked to decide whether or no he was in order in moving the termination of the Committee's session. Mr. Takanashi said that Mr. Suyehiro had spoken several times, but the upshot of it all was to show that he had not studied the rules. If he had studied them he would understand that since a Committee of the whole House had not power to postpone its session, still less could it bring it to an end. He thought that if members would think less of displaying their learning and ability, and more of the business in hand, the House would make better progress. Mr. Ooka said that if Mr. Suyehiro was so solicitous about avoiding confusion and waste of time, he had better set the members a good example by refraining from making useless speeches. The President, on the motion of several members, announced that if no one expressed a contrary opinion, he should consider that all the needful questions had been put. The House rose at 5.20 p.m.

HOUSE OF PEERS.—SATURDAY, JANUARY 10TH.

The House did not meet, as owing to the postponement, by official desire, of the discussion on the Weights and Measures Bill until the 12th instant, there was no business to be transacted.

HOUSE OF REPRESENTATIVES.

The House met at 1.30 p.m. The President announced the death of Mr. Hoki Hatsu, one of the members for Hyogo, and asked what steps the House proposed to take with reference to his funeral. He suggested that a message of condolence should be sent by the House. Mr. Shiota Okuzo argued that such a step would be unnecessary. The President put the question to the House, and it was decided by a unanimous vote that a message of condolence should be sent. Mr. Suyematsu Saburo suggested that the composition of the message should be left to the President, and the latter read out the following form:—"This House learns with sincere regret the decease of its member, Mr. Hoki Hatsu, and offers its condolence to his relations." The President said that the message should be telegraphed to Hyogo. The President then announced that Mr. Suyematsu Saburo was prepared to inform the House of the result of the investigations conducted by the Committee appointed in connection with the arrest of Mori Tokinosuke. Mr. Suyematsu explained that after full deliberation the Committee had decided to memorialize the Throne. There had been two proposals; the first, that the House should enact a law to secure the privileges of the members in the future; the second, that a petition be presented to the Emperor. The majority had decided in favour of the second course. Mr. Yamada Toji, by permission of the President, then read out certain petitions which had been received, namely:—A petition from the Buddhist Priests of Komiyoji, urging that since priests pay the same taxes as other folks, the Law of Election should be amended so as to confer the franchise on them. Secondly, a petition from Yamagata Prefecture praying that the office of *Guncho* should be made elective, and that other changes be effected in the system of local government. The President said that there being no further announcements to make the House might now go into Committee of the whole, and resume the debate on the Budget. Mr. Tanaka Shozo rose and said that he wished to make some remarks of a personal character. On the preceding day, when he had put a question to the Minister of State for Communications, various epithets had been applied to his proceeding, namely, that it was "demented," that he was "beside himself," that his question was "mere raving." So far as he individually was concerned, he could afford to pass these epithets by, but since they had been addressed to him as a member of the House in open session, he must call for an inquiry. The President signified that such an inquiry could not be allowed, but several members urged that as the matter had a direct bearing on the status of a member, permission should be given. Mr. Otsu said that when the Minister of State for Communications, in conversation with the President, had employed the epithets complained of, the President's reply had been too low for the House to hear. Rumour said, however, that the President had endorsed the Minister's remarks, and it therefore seemed advisable that the House should be informed what the President really said. The President replied that as both Mr. Tanaka's question of the preceding day, and the answer which the Minister of State had sought to make, had been ruled out of order and were therefore not before the House, he must decline to offer any explanation. The House would therefore proceed with the orders of the day. Mr. Shimada Saburo, President of the Committee of the whole House, then took the chair and the House went into Committee. The President announced that the order of procedure would be to discuss the expenditure side of the Budget presented by the Government, beginning with the portion relating to the Foreign Office; after which the House would consider the amendment proposed by Mr. Kan Ryoho. Mr. Yamaguchi asked to have a copy of the short-hand report of the Budget Committee's proceedings distributed among the members. Mr. Inugai said that he wished to put a question with reference to the Foreign Office appropriation. The question related to the current fiscal year, but had an important bearing on next year's Budget. In the income of the Foreign Office he found an item of 41,800 *yen* for the sale of certain lands at Tameike, Akasaka, and at Yenoki-machi, and in the expenditure he found an item of 80,000 *yen* for the purchase of Legation grounds at Tameike. He wished to know the reason of this great difference, considering that the market value of the land in both cases should have been the same. He also wished to know the area of the lands referred to, and whether any buildings had been

Digitized by Google

attached. Mr. Yasuda Yuitsu wished to ask a question about the pay of *Chokunin* officials, but the President ruled that that part of the subject had been brought to an end the preceding day. Viscount Okabe, Vice-Minister of Foreign Affairs, replying to Mr. Inugai's question, said that he had not the necessary documents at hand to give an answer, but would explain the item on a subsequent occasion. Mr. Nasugawa Koho complained that a Government Delegate had made a similar answer the preceding day, and he hoped that care would be taken to have the needful documents at hand in future. Mr. Yasuda Yuitsu said that the Government had made frequent changes in the organization of the Administration, but he observed that whereas, on these occasions, reductions of the salaries of *Chokunin* and *Sonin* officials were very seldom made, reductions in the case of *Hannin* officials were not infrequent. It seemed as though the weak were attacked, and the strong spared. Looking at the estimates for next year he found increases of 40,000 *yen* in the appropriation for the Foreign Office, of 3,535 *yen* for Foreign Legations, of 11,000 *yen* for the Home Department, but no increases in the cases of the chiefs of the Railway Bureau, of the Police or of the Hokkaido Administration. The only reduction was one of 2,000 *yen* in Prefectures and Cities. Again there were increases of 25,500 *yen* in the case of the Department of Finance, of 13,500 in that of the Cabinet, of 25,500 in that of the Privy Council, of 1,000 *yen* each in the cases of the House of Peers and House of Representatives, of 3,000 in the case of the Board of Audit, of 6,125 in that of Administrative Courts, of 5,000 in that of the Army Department, of 2,525 in that of the military outlay of the Naval Department, of 8,500 *yen* in the Department of Justice, of 10,750 in that of the Courts, of 7,500 in that of the Department of Education, and of 1,000 in that of the Department of Agriculture and Commerce, but no increase or decrease in the Department of Communications. The total net increase was 134,462 *yen*. The greater part of this seemed to be due to augmentations of the salaries of *Chokunin* officials. Had these increases been made on the mistaken supposition that the Diet could not interfere in questions of administrative organization, or had there been good and sufficient reason for making them? Mr. Murota, Chief of the Finance Bureau in the Foreign Office, explained that the increase in the item of salaries was because the Heads of Bureaux had been raised to *Chokunin* rank, and the increase in the item of Foreign Legations was due to an increase in the staff of the Legations. Mr. Akagawa Reigan called attention to the question of the Secret Service Fund. The Budget included forty thousand *yen* under this heading in the Foreign Department, and two hundred and seventy or eighty thousand *yen* altogether in the various Departments. The Budget Committee had been told that detailed explanations of this item must not be sought, but as they were dealing with money earned by the sweat of the people's brows, they called for a full explanation. Mr. Murota, Head of the Finance Bureau in the Foreign Department, said that, so far as concerned that Department, the expenditure in question arose in connection with the country's foreign policy, and could not be publicly explained. It was chiefly incurred on account of agreements entered into. He pointed out, however, that whereas 45,335 *yen* had been required in the Department's last estimates, 40,000 *yen* would suffice for this year. Mr. Otsu Junichiro thought that the Government Delegates should explain why it had been deemed necessary to raise Heads of Bureaux to *Chokunin* rank. Viscount Okabe replied that this being a question connected entirely with administrative organization, no explanation was called for. Mr. Otsu protested against the theory that the House could not interfere in matters of administrative organization. If the Government Delegates refused to enter into the question, there was no resource except for the House to open a debate. Viscount Okabe still declined to give any explanation. Mr. Ishida Kannosuke said that according to the 64th Art. of the Constitution, the expenditure and revenue of the State require the consent of the Imperial Diet by means of an annual Budget, and according to the 2nd Article of the Law of Finance, all receipts from taxes and all other resources had to be treated as revenues, and all expenses as expenditures; and revenues and expenditures had to be embodied in the general Budget. It was evident from these two articles that expenditure of every nature, whether it concerned administrature organization or no, came within the purview of the Diet. The only exception was that provided in the 66th article of the Constution, where it was laid down that the expenditures of the Imperial House did not require the consent of the Diet unless an increase in their amount was contemplated. It was therefore not only the prerogative of the House but also its duty to examine every item of the Budget, and to fail in discharging that duty would be to violate the Constitution. Viscount Okabe's refusal to give the explanation sought showed a flagrant want of respect for the House, and must not be passed over. Mr. Fujita Magohei pointed out that the Vice-Minister of Foreign Affairs could not properly be called on to answer a question which applied to the policy of the Government in general. Mr. Taketomi urged that the point was one of little importance. The Government's reasons for raising Heads of Bureaux to *Chokunin* rank seemed simple enough and there was no occasion to waste time pressing questions on this subject. Mr. Murota, Head of the Finance Bureau in the Foreign Office, in reply to a question by one of the members, said that the number of *Chokunin* and *Sonin* officials in the Foreign Office was 50 in the last Budget against 37 in the next; the number of *Hannin* officials, 100 in the last Budget against 91 in the next, the number of *Chokunin* and *Sonin* officials abroad, 47 in the last Budget against 62 in the next; the number of *Hannin* officials abroad 72 in the last against 55 in the next; the numbers of students abroad were, 5 in Persia, 2 in Italy, 7 in China, 1 in Korea, and the yearly allowance to students in Europe was 1,200 *yen*, the allowance to students in China being 420 *yen*. He also gave an explanation of expenses connected with funerals and graves abroad. Mr. Otsu recast his previous question so as to be in order, and said that as there appeared to be a considerable increase in the item of salaries for *Chokunin* officials and a decrease in that of salaries for *Hannin* officials, he wished to know whether this was owing to a difference in the number of officials or to a difference in the amounts of their salaries. Mr. Suzuki Manjiro put another question about the grouping of the salaries of Ministers and Consuls under one heading, whereupon Mr. Murota protested against several questions being put before the first had been answered. Mr. Suzuki rose and began to remonstrate vehemently against this objection, when the President stopped him, and turning to the Government Delegates, explained that the course pursued was in accordance with what seemed most convenient, and that if any questions put by members could not be answered off-hand, they might be answered the next day. Various questions were then put and answered, when Mr. Orita Kenshi rose and said that if the members had read the short-hand report of the Budget Committee's proceedings, all these questions would not be put. He proposed that the House pass from the Foreign Office item to that of the Home Department. A member of further questions were then put and answered. Among them was one embodying a suggestion that the number of Japanese Representatives abroad might be diminished. Viscount Okabe warned the House that this being a matter of grave import to the foreign policy of the country, ought not to be lightly meddled with. The President announced that the questions on this particular section of the Budget being now ended, the House would proceed to debate Mr. Kan's amendment, but objections being raised to the intrusion of any outside matter into the Debate on the Budget, a vote was taken, and the majority decided against bringing on Mr. Kan's amendment. The House then proceeded to the Home Department item. Mr. Kudo Kokan asked what method the Government pursued in granting subsidies, first in Hokkaido, and secondly in Osaka and Tokyo: whether, in return for granting subsidies, official supervision was exercised, and with what objects the subsidies were granted. Mr. Shirane, Vice-Minister of Home Affairs, answered that full supervision was exercised, and explained that the grant in Tokyo was for the sake of city improvement in the interests of public sanitation, and the grant in Osaka for the sake of waterworks in the same interest. A number of minor questions were then put, and the House rose at five minutes past six o'clock.

HOUSE OF PEERS.—MONDAY, JAN. 12TH.

The House met at 10.40 a.m. Marquis Hachisuka, President of the Committee for Memorials, announced that a memorial had been received from a number of Priests of Wakayama Prefecture, praying that the Law of Election might be amended so as to extend the franchise to Priests. The Memorials Committee had, however, decided that this matter should not be submitted for the House's decision, inasmuch as, in the first place, the extension of the franchise to Priests would lead to confusion between religious and administrative affairs, and in the second, it was not advisable to make any change in the Law of Election at this early date. A memorial had also been received from over a thousand confectioners of Osaka, praying that the tax on confectionary might be lightened or abolished, as being extremely injurious to the trade. This Memorial, the Committee had decided, should be submitted to the House. The President then announced the resumption of the debate on the Weights and Measures Bill. Viscount Yuri, a member of the Special Committee on the Bill, explained the necessity of a uniform system of Weights and Measures. The Government Delegates had informed the Committee that the system proposed by the Bill took the French metre as the unit of length, and that by doing so the closest possible approximation to uniformity as between Japan and Western countries would be obtained. With regard to the alterations suggested by the Committee, some of them were merely for the purpose of rendering the terms of the Bill plainer. They had retained the catty (*kin*) of 160 *me*, on account of its wide use. They had also struck out the kilolitre as unnecessary. They had further reduced the penalties attaching to the crime of tampering with weights or measures, because such penalties were not in accord with modern ideas of justice. Numerous questions were then put to the Committee and answered. At 12.30 the House adjourned for the mid-day recess, and on its re-assembling at 1.20, the President announced that as no more questions remained to be put, the House would proceed to debate the Bill. Mr. Murata Tamotsu spoke at some length in support of the Bill. No special inconvenience, he said, had resulted in practice during the many years of the old system's employment, but it was absolutely essential, for the sake of the operation of the new Civil Codes, that a strict and accurate system should be introduced, and for that reason he was entirely at one with the objects of the Bill. He also explained that the people must be able to place no less reliance on their weights and measures than on the coin of the realm, and that the penalties contemplated by the Bill for all tampering with weights and measures were in full accord with the spirit of modern civilization both in Japan and abroad. Mr. Obata supported the spirit of the Bill, but strongly urged the expediency of having all weights and measures constructed under official supervision. He submitted a motion, duly supported, that the Special Committee be asked to amend the Bill in that sense before the second reading. Mr. Shimauchi endorsed Mr. Obata's view, and in support of it pointed to the frequent tampering with weights and measures resorted to by dishonest merchants in Yokohama. The best way to restrain such people was to make them use weights and measures bearing official stamps. Viscount Tani opposed the Bill. He could not see the necessity of

Digitized by Google

changing the system which had been so long in force and had worked well, neither could he appreciate the advantages of the new system. He reminded the House that there was still much uncertainty on this subject in foreign countries, and argued that to adopt foreign weights and measures under the circumstances would be unwise and premature. Mr. Watanabe Kiyoshi entirely disagreed with Viscount Tani. Everybody admitted the faultiness of the present system and desired its reform. The speaker was of opinion, however, that the manufacture of weights and measures ought not to be left to private enterprise, but should be subjected to official supervision. He therefore supported Mr. Obata's motion. Mr. Kikuchi Dairoku supported the Bill in an able speech. Several other members having spoken in favour of the Bill, Marquis Hachisuka moved the closure. Mr. Obata's motion was then put and lost, after which the House, by a large majority, voted the first reading of the Bill. The President said that an interval of two days should be left before proceeding to the second reading, unless the House wished to dispense with that delay, and commence the second reading the following day. Marquis Hachisuka requested the House to debate the Registration Bill on the afternoon of the following day, as the delay in passing that Bill caused much inconvenience. The President announced that the business for the following morning would be the second reading of the Weights and Measures Bill, and the House rose at 3.30 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.55 p.m. Mr. Suzuki Shoji said that before resuming the debate on the Budget, he wished to call attention to the importance of deciding that no members not duly qualified were present. He moved that the necessary steps be taken to change the orders of the day, so that the House might proceed at once to discuss this point. This motion, being duly supported, was put to the House and the President declared that a majority had supported it, but his decision being challenged, a vote by balls was taken, when 99 members cast for the motion and 124 against. Mr. Nishi Kiichi asked permission to address the House before it went into committee. In an eloquent speech he gave a brief retrospect of the stages through which Japan had passed to reach constitutional Government, and reminded the House that now, for the first time in the history of the world, was an Oriental country trying the experiment of representative institutions. It was commonly held in the Occident that such a form of Government was impossible in the East, and Japan had now to show whether that verdict was true or false. This being the first parliament ever assembled in the country, they could not possibly expect to escape errors or to attain anything like perfection. But they had to remember that the prime object of representative institutions was to secure harmony between rulers and ruled. If that could be accomplished, the national strength was enormously increased. It seemed to him that this Budget question was a test of the situation. The Budget was incomparably the most important measure the House had to discuss, and its effects upon the people's pockets and on the administrative efficiency of the State were very large. To deal lightly with such a measure would betray a marked want of the sense of parliamentary responsibility. The Committee recommended a sweeping reduction of ten million *yen*. Surely it would be wiser and better to extend such a reform over three or four years, thus attaining the end in view without sacrificing the still more vital object, harmony between the Legislature and the Executive. He moved that the Report of the Budget Committee be rejected. A lively debate ensued, some members contending that Mr. Nishi's motion could not be put or was not urgent, others taking the opposite side. The President finally announced that he should ask the House to decide the question of urgency. Cries of "vote by ballot" being raised by many members, a vote by ballot was taken, when it was found that 120 balls had been cast in favour of regarding Mr. Nishi's motion as urgent, and 104 against. The House then took a recess at 3.50 p.m., and reassembled at 4.40. The President announced that Mr. Nishi's motion was now before the House as one of urgency, and that the Government had agreed to the change of order. The debate would therefore be opened. The House showed much excitement, and many points were raised, some members asking permission to put questions, and others claiming to bring forward urgent motions. The President ruled that questions might be put, whereupon a number of queries were addressed, some to Government Delegates, some to Mr. Nishi. The House again fell into a state of confusion and excitement, and after much discussion of a hot character, Mr. Takanashi rose and said that he was strongly opposed to the Report of the Committee but also strongly opposed to Mr. Nishi's motion. He thought the House was not showing a due sense of its responsibility or of the gravity of the situation, and that the proper course was to go carefully through the Budget and the Report, and adopt what might be found good in the latter, rejecting what was bad. Mr. Minami Isoichiro said that the Special Committee has exceeded its functions and interfered with the administrative organization. It had recommended the abolition of the Metropolitan Police Bureau, but in these turbulent times when *soshi* abounded, the members found themselves seeking the protection of that very Bureau. To vote such changes might bring about a state of affairs similar to the French Revolution. At this point Mr. Inugai sprang to his feet and called out excitedly that Mr. Minami should be required to withdraw his statement. Several members supported the suggestion, and the President, calling for a vote, a majority rose in favour of the motion. Mr. Inugai then moved, further, that as Mr. Minami's words were disrespectful to the Throne, his case should be submitted to the Committee of Disciplinary Punishments. Mr. Minami attempted to explain, but his voice was drowned in cries of "divide, divide." Mr. Itakura Naka protested against taking additional steps in respect of a member concerning whom the House lead already given its decision. At this point the greatest confusion prevailed. Mr. Takagi Masatoshi said that only the paltriest reasons had been advanced for rejecting the Report. Members had talked of the abolition of the Metropolitan Police Bureau as if that proposal covered the whole ground. The broad fact was that the Committee, in preparing its Report, had been actuated by the desire of lessening the people's burdens, and that to effect this they recommended a reduction of the number and pay of officials and a lengthening of office hours so that a smaller number of officials might be able to perform a larger amount of work. He waited for any argument from the opposition bearing upon the real facts of the situation. Mr. Kudo Kokan, as a member of the Special Committee, said that the Committee had been charged with violating the laws and the Constitution. If the majority of the House decided that this was so, the Committee must acceept the rebuke. But the point was one of the greatest importance, since it touched the dignity and reputation of the House. He therefore called upon Mr. Nishi to show how and in what respects the Report of the Committee was was at variance with the law and the Constitution. Mr. Nishi said he should ask Mr. Tanaka Gentaro to give the required explanation. Mr. Inouye Kakugoro said that no explanation was necessary. Mr. Kan Riyoho supported Mr. Nishi's motion. It had been stated that the country was in a state of poverty, and that measures to relieve the people were essential. Granted that they were—though upon that point he pronounced no opinion one way or the other—was that any reason why the Legislature should exceed its functions and interfere with the organization of the Executive? He argued this point at some length, demonstrating that the course recommended by the Committee was distinctly *ultra vires* of the House, and urging that a very evil precedent would be established if the first Parliament deliberately set at nought the limits assigned to its functions by the Constitution and the law. The President announced that a large number of members had declared their intention of speaking to the motion, and that a long session would be necessary to conclude the debate. He should therefore adjourn the House, as it was then 6 o'clock. Mr. Takanashi moved that the House continue in session two hours longer, so as to arrive at a decision that evening. The President said that two hours could not possibly suffice to finish the debate, and as it rested with him to fix the hour of adjournment, he declared the session at an end for that day.

HOUSE OF PEERS—JAN. 13TH.

THE House met at 10.40 a.m., and proceeded to the second reading of the Weights and Measures Bill. Mr. Hosokawa Junjiro opened the debate by a speech urging that no necessity existed for the adoption of a foreign system of weights and measures, and that public convenience would be better consulted by adhering to the Japanese syetem hitherto in force. He moved the excision of all the clauses of the Bill that provided for the replacing of Japanese weights and measures by the metrical system. Mr. Mutsu, Minister of State for Agriculture and Commerce, warned the House against falling into the mistake of supposing that the Bill aimed at the abolition of all the Japanese weights and measures hitherto in use. It had no such object, being drafted simply for the purpose of amending the Japanese system. The number of countries already using the metrical system was no less than 13, and he failed to see any reason why Japan should shrink from joining this comity. He could not tell what might be the practice with semi-barabarous peoples inhabiting the deserts of Arabia and similar places, but he could say with confidence that virtually all the civilized nations of the world employed the metric system. Mr. Miura Yasu said that the House having passed the first reading, was evidently disposed to favour the Bill, but for his part he should vote for the amendment of Mr. Hosokawa. The Minister of State for Agriculture and Commerce had explained that the object of the Bill was not to change Japanese weights and measures but to improve the system. As he understood the case, however, the chief argument advanced was that owing to defects and diversities in the weights and measures now employed, much confusion resulted, and the main end to be achieved was the substitution of such accurate weights and measures that all uncertainty should be removed. Surely to achieve this it was not necessary to pass a law directly providing for the introduction of a foreign system. Such a law affected the dignity of the Empire. Mr. Hosokawa's idea was that a scientific system should be devised in the Department of Agriculture and Commerce, and the details of the system embodied in the law, a course to which the Minister of that Department took exception. He did not himself advocate anything so detailed. If it were deemed necessary, the bases and methods of the new system might be set forth in an explanatory appendix. But he thought that Japanese usages and customs should be taken as guides in this matter, and that every clause of the proposed law referring to foreign weights and measures should be expunged. It was all very well to make Japanese things the standard of comparison, but so soon as foreign things were made the standard they found themselves in the position of rejecting what was Japanese for the sake of adopting what was foreign. He had heard from scholars that there was no instance in the West of the customs or systems of an alien country being made the basis of legislation. In the French Chambers a member who spoke of the English mile, had been greeted with cries of "traitor." Everywhere it was the prime endeavour of each State to preserve its own nationality. He trusted that the House would take this view, and vote for the elimination of all the clauses of the Bill that affected the question of Japan's nationality. Mr. Hosokawa enquired whether his motion had received sufficient support to come before

Digitized by Google

the House and was in order. The President repeated an explanation given by him on a previous occasion, namely, that a motion for the excision of clauses differed from an ordinary amendment. If an amendment as well as the original measure were rejected by the House, then and then only the measure became excised. This followed by Article 11 of the Rules of the House. Mr. Hosokawa then withdrew his motion. Mr. Hozumi Chincho said that by passing the first reading of a bill the House signified its agreement with the general object of the bill, and consequently sweeping alterations could scarcely be proposed with propriety at the second reading. Still, in this particular case, the House had voted the first reading owing to its conviction that some reform of the present system of weights and measures was necessary, reserving to itself the function of deliberating upon the exact nature of the reform at the second reading. It seemed to him that unless motions for the excision of clauses were permitted at the second reading, the aim of the House might be defeated. He did not question the ruling given by the chair, but he desired to ask the President's opinion on this point. Mr. Shigeno ridiculed the notion of saying that the adoption of foreign weights aud measures affected the dignity of the nation. Weights and measures were classable with utensils. People employed whatever utensil was convenient, wherever and by whomsoever it was made. If this punctiliousness about the national dignity were to be humoured, they must proceed to abolish railways, telegraphs, and steamers, which were all imported from abroad. The President called the attention of the House to the fact that the first clause only of the Bill had been read at the commencement of the debate, and that, consequently, no other part of the Bill was now under consideration. Baron Senge wished to put a question to Messrs. Hosokawa and Miura. The point made by them was that if a foreign system were openly taken as a basis in the body of a law, the national dignity would suffer. Did they mean to imply that it would be right to throw dust in the eyes of the nation by adopting a foreign system, but concealing the fact by excluding it from the text of the law? Mr. Miura declared that he meant nothing more than to point out the inexpedency of inserting in the text of a law the various steps that had been taken in framing it. Neither was he opposed to the employment of foreign weights and measures in Japan. What he objected to was that foreign weights and measures should be made the basis of the Japanese system. He protested strongly against the imputation that he, or any member of the House, could advocate a course calculated to throw dust into the eyes of the people, and he begged Baron Senge to withdraw that remark. Mr. Kikuchi Dairoku said that, in the absence of any intelligible reasons for the proposed erasure of articles, it was impossible to reply intelligently. He then entered into an explanation of certain technical points which Mr. Hosokawa had evidently failed to grasp. Marquis Daigo argued against the propriety of expunging the first and second articles, as proposed, and declared that the national dignity was not at stake at all. The President announced that he should consider the debate on the first clause closed, and called upon the House to vote for that clause with the Special Committee's amendments. A majority voted for the clause. The House adjourned for the mid-day recess, the President having announced that Marquis Konoye would take the President's chair in the afternoon.

* * *

The House re-assembled at 1.20 p.m. Marquis Konoye took the chair and declared the debate open. A Secretary read out the second clause of the Bill. Mr. Furuichi Kintake, in an able speech, combatted the notion of excising this second clause, as had been suggested, and denied that the national dignity could be impaired by substituting a scientific system of weights and measures for the admittedly imperfect or unscientific system now in use. He entered into a lengthy explanation of the scientific bases of the proposed changes, and said that science acknowledged no differences of race or nationality, but offered herself freely to all who had the sense and ability to receive her. Marquis Daigo suggested a verbal alteration for the sake of greater perspicacity. Mr. Hosokawa again spoke in favour of excising the second clause. Mr. Itakura Naka replied at same length, emphasizing the necessity of an accurate system of weights and measures, and ridiculing the idea that Japan should be deterred by so-called patriotic considerations from adopting whatever was intrinsically best and at the same time most convenient. All sensible nations supplemented their owu deficiencies by borrowing from the fullness of their neighbours. Mr. Kikuchi Dairoku reminded Mr. Hosokawa that they were debating a question which concerned the accuracy of the commercial transactions of forty million people, and that Japan was one of the very few nations of the world still labouring under the reproach of not having a scientific system of weights and measures. It was rather late, too, to object to the use of foreign measures and weights, considering that all those used in the Imperial Mint at Osaka were English. Viscount Tani supported Mr. Hosokawa, his chief argument being that once the country began to change, no end could be foreseen. Possibly their foot of to-day might be fourteen inches hereafter. Marquis Hachisuka explained that he too would be in favour of using Japanese weights and measures and employing foreign for purposes of comparison only, if it were possible thereby to develop an accurate system. But it was not possible: the country had no choice. Baron Ozawa followed in the same sense. Mr. Miura repeated his protest against embodying foreign standards in Japanese laws. Mr. Okauchi protested against the extravagance of calling the metrical system a foreign system. To which of the seventeen countries using it did it belong, and to which of them would it belong any more than to Japan if she adopted it? He was surprised that Mr. Miura did not abandon his foreign costume and return to the genuine Yamato dress. Viscount Matsudaira moved the closure. The Acting President called upon the House to vote whether the 2nd clause with the Committee's amendment should be passed. A majority voted in favour of the clause. The House passed to the 3rd clause. Mr. Mutsu announced that the Government accepted the Committee's amendments to this clause. Mr. Shigeno argued against retaining the catty of 160 *me*, and urged the expediency of adopting the *kin* of 100 *me* as recommended in the Bill. The acting President announced that as a quorum of members was not present, the debate would stand adjourned until the 15th instant, the Minister of State for Agriculture and Commerce being unable to attend on the 14th. The House rose at 3.35 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.50 p.m. The President announced that a Bill had been brought in by Mr. Soma Shiku for rescinding the charter of the Japan Mail Steam Ship Company; a Bill by Mr. Takatsu relating to the grant to the Japan Railway Company; a Bill by the same member for establishing a local assembly in Hokkaido; a Bill by Mr. Noguchi for altering the 15th and 16th articles of the Rules of the House; and that Mr. Miyazaki Yeiji would inform the House of the results of the investigations of the Committee on the Political Parties Bill. Mr. Miyazaki explained that the Bill had been placed in the hands of the Committee on the 23rd of December, and by the 25th the investigation had been concluded, only a few amendments being deemed necessary. These amendments were, first, that teachers in preparatory schools, who had not attained the age of 20, should not be allowed to join political parties: secondly, that when the Minister of State for Home Affairs ordered the dissolution of a party, he should accompany the order with a statement of his reasons, and in the event of those reasons being deemed unsatisfactory, the party should be given a week to appeal to the Administrative Court. There were other minor amendments but he need not go into them in detail. Mr. Suyematsu Saburo then gave a brief explanation of some points connected with the memorial to be addressed to the Throne in the case of Mori Tokinosuke. The House then resumed the discussion of Mr. Nishi's motion. Mr. Inugai opposed the motion. Two arguments had been advanced in its favour, as he understood: first that the Report of the Committee violated the Constitution; secondly, that the reduction recommended was excessive. The charge of violating the Constitution, or in other words, interfering with the Imperial Prerogatives, was expressed in the form that the House was advised by its Committee to change the administrative organization. He could not followed such reasoning. If they referred to the 14th Article of the Constitution, they would find it laid down that whereas the Emperor declares a state of siege, the conditions and effects of a state of siege are to be determined by law. Again, the 13th article provides that the Emperor declares war, makes peace, and concludes treaties. Here undoubtedly were Imperial Prerogatives of the most explicit nature. Yet how were they to be put into operation without the consent of the Diet? Money was needed to carry on war or enforce a state of siege, and if the House were asked to vote money for such purposes, could any one pretend that to withhold or reduce the supplies asked for was not within its competence? By analogy the House plainly had power to deal with the supplies necessary for giving effect to any other Imperial Prerogative, such as the organization of the Administratton. No law was violated by a reduction of the items in the Budget referring to administrative organization. If again, the charge of illegality was founded on the 67th Article, which provided that already fixed expenditures based on the Constitutional prerogatives of the Sovereign, could not be touched by the House without the Government's consent, then there was simply a question of seeking that consent. The mere presentation of a Committee's recommendation could not possibly be regarded as a violation of this provision. The motion before the House involved a contraction of its own competence by the act of the Diet itself. The financial functions of the House were exercisable through all time. Were they to be lightly lessened by a vote of the kind proposed? Again, it was claimed that the Committee's Report recommended a course which would impair the efficiency of the Executive, owing to the sweeping reductions suggested, Such a question seemed scarcely worth arguing. The mover of the proposition had asserted that the contemplated reduction might be extended over a term of three years without inconvenience. That showed his ignorance of administrative affairs. Frequent changes were more than anything calculated to impair administrative efficiency. There need be no difficulty in accomplishing this reform all at once. How had it fared with the administration on the occasion of the sweeping changes in 1877 and 1880? Had its efficiency been impaired? The policy of the Government at the beginning of the Meiji era might be summed up in the one word "economy." Expenses had been reduced all round, and public works of every kind postponed. It was not so to-day. All round them, on carefully selected sites, rose handsome edifices, the dwellings of Government officials. How would administrative efficiency be impaired by stopping supplies for such extravagant purposes? It was said that in order to assert the national dignity, the House should be ready even to increase the Budget. He did not object to that, but he failed to see how the national dignity could be vindicated or the country's resources developed by ministering to official luxury. It was a gross mistake to suppose that the magnitude of the estimates furnished any test of administrative efficiency. Skilful administration could conduct the affairs of State efficiently with a small appropriation. The smaller the appropriation, the greater the skill.

Digitized by Google

They wanted to reject this Report and have another compiled by another Committee. Probably that too would be rejected, and they should find themselves at the end of the session without having passed the Budget, in which case the Budget of the preceding year would go into operation. Did the House think that by such a course it would have discharged its duty, or did it imagine that future generations would hold it exempt if it deliberately passed a measure providing for the curtailment of its own competence? Mr. Suyehiro Shigeyasu said that he supported Mr. Nishi's motion. He did not purpose to dispute Mr. Inugai's arguments with some of which the House might agree, while others were distinctly beside the issue. Neither did he raise any objection as to the amount of reduction recommended by the Report. His point was that the methods of the Report were illegal. This House could not convert the Budget into a legislative machine. It possessed certain legislative powers, the proper method of exercising which was duly defined, but when it employed the Budget as a means of interfering with or altering the laws, it not only confounded its legislative and its financial functions, but also violated the Constitution. Passing to details, what had become of the six million *yen* appropriated in the Home Department for railway construction? It had disappeared in some unaccountable manner. As for the suggested reduction of salaries, that was obviously a matter with which the House could not deal in passing the Budget. If reduction seemed advisable, the plainly proper course was a Representation to the Government. He should therefore vote for the rejection of the Report as exceeding the powers vested in the House and encroaching upon the Imperial Prevogatives. He added that he was entirely opposed to the present Cabinet, but that he could not approve of the Committee's Report. Mr. Ishida Kannosuke opposed the motion. He thought that the question of exceeding or keeping within the competence of the House was purely one of opinion, and he condemned the idea of granting urgency to such a motion. Here he was interrupted by members who said that the point of urgency had already been decided, and by cries of "unnecessary." He went on to explain that if the House could not deal with the salaries of officials, there was very little in the Budget that it could deal with. Mr. Sakata Yoshikazu thought that the thanks of the House were due to the Committee for all the trouble it had taken, but at the same time condemned its Report entirely. The Committee, in recommending the reduction of salaries and other sweeping administrative changes, had added a note disavowing any idea of interfering with the Executive. No one was deceived by such a note. What could it be called but interfering with the Executive if the Metropolitan Police Bureau were to be abolished as a separate section and amalgamated with the Municipality, and if the Upper Middle Schools in the Educational Department were to be done away with? He considered the Report opposed to the law, injurious to the organization of State, and wanting in reflection and moderation. Mr. Kozato said that Mr. Suyehiro had criticised Mr. Inugai's remarks as beside the issue, but the criticism seemed to apply with more force to the critic himself. He then argued at some length in opposition to the motion, the gist of his remarks being that in order to abolish the system of *mombatsu seifu* (oligarchical government) and to replace it by constitutional government, the sweeping reduction proposed was an excellent lever. Mr. Koretsune Shinyu pointed out that to put the recommendations of the Committee into force, the organization of the Government must be altered and the laws changed. The House could not hope to see all that accomplished. There were means of reducing the Budget to the extent of some six million *yen* without touching the administrative organization or revising the laws. He thought it most imprudent that the House should deliberately pledge itself to a measure which it could not hope to see carried out. Mr. Abe Yojin, a member of the Committee, spoke at same length in opposition to the motion, his chief arguments being that greater reductions than that recommended by the Committee had been made in previous years by the Government without affecting the efficiency of the Administration, and that in suggesting reductions the Committee was only obeying the policy which the Emperor himself had recommended and by which the Cabinet had always declared itself actuated. Mr. Horiuchi moved the closure of the debate for the first time. Mr. Kan Riyoho said that allusion had been made to an Imperial Message, and that he thought the House should be very careful about introducing such a matter into its debates. Mr. Shimada Saburo denounced this notion, but was interrupted by loud cries of "needless, needless." Mr. Inouye Kakugoro opposed the Report He said that happily there were many items of useless expenditure in the Budget which might be reduced without touching the administrative organization or exceeding the province of House. The great object to be achieved was the diminution of the land tax by one-half per cent., and fortunately some six million *yen* might be cut off the Budget in perfectly legitimate ways. Some members had asked what laws would be violated by adopting the Committee's Report. He should tell them. The Law of Finance would be violated; the Educational Regulations would be violated; the Law of the Houses would be violated; the Constitution would be violated; and the Pension Regulations would be violated. He could not support such a measure. The Committee had recommended a reduction of nine million *yen*, whereas six million was all that was possible. Mr. Shimada Saburo ascended the rostrum to speak in reply to Mr. Kan Riyoho, but was again interrupted. The President said that as Mr. Shimada's subject was not directly connected with the question under debate, he should ask the House to decide whether it would hear Mr. Shimada. A majority voted against hearing him. Mr. Shimada then proceeded to speak in opposition to the motion. He expressed astonishment that the House should think of rejecting a Report which it had not been discussed, and denounced such a course as opposed to all proper rules of procedure. At this point much interruption occurred. Mr. Shimada rebuked the members for not giving him a fair hearing. He argued that the Committee's Report was nothing more than a basis for the House's deliberations and that to reject it at this stage was a singular and most ill-judged step. How did the House intend to proceed if it voted to reject the Report? Would it appoint another Committee, or would it direct the same committee to prepare another Report? He saw no hope of arriving at a decision on the Budget if Mr. Nishi's proposal were approved. Mr. Hamano Noboru moved the closure of the debate for the second time. The President put the question to the House and said that a majority voted for the closure. This decision was challenged, and a vote by ballot was taken. The result was 163 for the closure and 92 against. It was then proposed that a vote on Mr. Nishi's motion be taken by blank ballots, but some members asked for ballots with names. The President said that the Rules did not provide for this point, and sought direction from the House. Several members advocated leaving the question to the President. The President said that, for the sake of securing a fair decision, he should take a vote by blank ballots. The result was that 266 ballots were cast by 264 members, but as 141 black balls and only 125 white were cast, the difference of two did not affect the result, and the motion was lost. The House rose at 6.40 p.m.

JAN. 14TH.

The House met at 1.50 p.m. The chair was taken by the Vice-President, Mr. Tsuda, who announced that Mr. Itakura Taneomi had moved for the appointment of a Special Committee to investigate the subject of forests and moors; also that Mr. Suzuki Shoji had presented a proposal to rescind the operation of the Peace Preservation Regulations, the latter motion being brought forward as one of urgency. Mr. Suzuki said that the enforcement of the Peace Preservation Regulations when a Bill for abolishing them had passed the Lower House and was now actually before the Upper, seemed a questionable proceeding. No reasons for such a step were apparent. If a disposition existed among certain folks to resort to acts of violence, the best way to restore order was to allow these people to come and listen to the debates in the Diet. The arbitrary expulsion of a number of men from the capital could not fail to offend public feeling, and was calculated to eventually accentuate disorder instead of quelling it. Further, the duration of the Diet's session had been fixed as the period of expulsion, and this circumstance made it all the more necessary for the Diet to take the matter up. He moved that permission should be sought to change the Orders of the Day, so as forthwith to debate the advisability of appointing a Special Committee to inquire into this question. A majority voted for the the proposal to change the Orders of the Day. The House took a recess in order that the consent of the Government to the change might be sought.

* * *

The House re-assembled at 3 p.m. The Vice-President announced that the consent of the Government having been obtained, the proposal of Mr. Suzuki might now be debated. Mr. Kanno Riyo argued against the necessity of going into this question. There could be no doubt that an exceptional state of affairs existed, and resort to exceptional measures seemed perfectly proper. If it was within the prerogative of the Emperor to issue special ordinances for the preservation of the public peace, still more was it within His Majesty's prerogative to enforce a law already in existence. Mr. Inugai Ki supported the motion, but dissented from the views of its proposer. It was perfectly right and proper that the strong arm of the law should be employed to restrain persons who disturbed the public tranquillity. But he objected to the act of putting into operation a law which the Diet had just voted to repeal. At the same time, he trusted that the supporters of the motion now before the House, would be careful not to suggest the misapprehension that they approved of the *soshi* or regarded their conduct as capable of exculpation in any respect. Mr. Hashimoto Kiutaro failed to follow the reasoning adopted by the supporters of the proposal. It was true that the House had voted for the repeal of the Peace Preservation Regulations, but the Upper House had not yet passed the Bill, neither had it received Imperial sanction. The Regulations were just as much in force as they had been before the House debated them. They had to remember, too, that these Regulations had been put into operation, not simply to protect members of the House, but for the sake of general tranquillity and to ensure the Imperial Diet against all derogatory interruption. Many days had elapsed since the Budget was submitted to the House, yet no prospect could yet be seen of a decision being arrived at. He deprecated frivolous delays like that now contemplated. Mr. Shirai Zenyemon moved the closure, but was greeted with loud cries of "No, no." Mr. Shiota Okuzo thought that by giving effect to a law which the House had just voted to repeal, the Government showed want of consideration for the Diet's wishes. There were other ways of restraining riotous persons. After all, this commotion was not prompted by any desire to disturb good order or rebel against the Government. It was due entirely to the strength of the sentiments prevailing against the Budget. Mr. Amano Jakuyen spoke strongly about the disturbances that had arisen within the past few days in the capital, and declared that however regrettable it might be, the enforcement of the Peace Preservation Regulations was a proper method of dealing with the situation. He emphasized the fact that the Emperor had power to resort to exceptional measures for preserving public peace under exceptional circumstances, and he told the House that it would be discharging its functions better if it attended to the all-important

Digitized by Google

measure which had been in its hands for so long, the Budget, instead of forgetting its purely legislative capacity and interfering in executive affairs. Mr. Matsumoto Kanaye moved the closure, and a majority voted for his proposal. The motion was then put in the usual way, but there being some uncertainty as to the numbers voting, the Vice-President announced that an unsigned ballot would be taken. Some commotion occurred here, Mr. Suzuki insisting that the ballots should be signed and other members opposing him. The result of the ballot was 109 against the motion and 84 in favour of it. The House then went into Committee. Mr. Shirane, Vice-Minister of Home Affairs, ascended the rostrum to answer a question previously put by Mr. Kajita, but the latter said that he had obtained information which made an answer unnecessary. The President ruled that as the question had been placed on the records, it could not be withdrawn without the House's permission. Mr. Aoki pointed out that though a question might be put by only one member, the answer was given to the whole House. He thought it desirable that the Government Delegate should proceed with his explanation. Mr. Shirane proceeded to say that Mr. Kajita had asked the reason for planting trees on the hills in Hokkaido. The reason was that the hills had been stripped bare by woodcutters, and hat unless afforestation were undertaken, the climate would be affected, the water-supply impaired, and the anchorages rendered insecure. Mr. Kudo Kokan said that a sum of ten million *yen* was put down under the heading of the Tokyo Water works, six millions to be actually spent on them. He wished to know in what annual proportions the money was to be raised and what interest was to be paid on it. Mr. Shirane replied that the money was to be raised in five annual instalments, namely, 2 million *yen* the first year, 3 the second, 2 each the third and fourth, and 1 the fifth. As for the interest, the case being different from that of a private company no percentage was fixed. There was to be a regular appropriation of 150,000 *yen* yearly on this account. Mr. Tachiiri Kiichi enquired about the appropriation for the residences of local Governors and Prefects, and wished to know whether it referred to the 24th year of Meiji only. Mr. Shirane explained the reasons for building residences for these officials, and said that the necessity was not limited to the 24th year. In answer to other questions, he explained that the utmost economy and deliberation were observed in building these houses, and that no luxury of any kind was permitted. Mr. Shimada asked why the repairs of a number of rivers' banks were charged to the State instead of to the localities concerned, and was answered that the control of rivers was by no means as efficient now as in feudal days. Owing to the neglect of the provincials, great losses had been caused, and the authorities deemed it advisable, for the sake of protecting life and property, to undertake radical works of repair in connection with a number of important rivers. Accurate surveys had been made and careful distinctions established between rivers to be thus treated and rivers to be left to local control. The works were to be of a thorough character, and the assistance of foreign experts was to be employed in carrying them out. Mr. Asano Kimpei asked what limits were applied in making grants for road construction and repairs. Also, with regard to the Secret Service Fund of 180,000 *yen* which appeared in the Department's appropriations, doubtless a part of it would be employed in a case like that which had just occurred, namely, the expulsion of disorderly persons from the capital. But the *soshi* must have employers, and he had not heard that any employers had been expelled. Were these employers to be sought among the members of the House or among the Ministers of State? It might be necessary to increase the Secret Service Fund in connection with this affair, and therefore he thought it right to put questions. Mr. Shirane answered that the Department proposed to limit its Secret Service Fund to the amount shown. As to grants for roads, they were made in cases of special necessity, and after full investigations had been conducted. Mr. Higashio Heitaro asked why a subsidy was given to the Hokkaido Sugar Manufactory Company and what the present condition of the Company was; also whether the Coal-mine Railway, upon which very large sums had been spent, had been sold for 350,000 *yen*, payable in annual instalments. Mr. Shiota Mokuzo supplemented this question by asking whether it was true that the capital of the companies subsidized by the Government was payable in six years, and whether, further, it was true that most of the holders of the stock were either former officials or relatives of officials. The companies he alluded to were the Sugar Company and the Hemp Company. Mr. Shirane replied that he could not immediately give information as to the quantity of sugar refined or the profits made by the Sugar Company, but that there could be little doubt as to the expediency of such an undertaking in Hokkaido, the facilities there being good, and there being a large demand for sugar in Japan which had to be supplied from abroad until steps were taken to encourage the native manufacture. He could not immediately answer the question as to the Hokkaido Railway. In answer to further questions, he said that the Government had been glad to grant a sum of money to Osaka in order to encourage a praiseworthy sentiment which had developed itself there in favour of sanitary reform. If other cities and prefectures showed a similar disposition, the Government would be equally ready to help them, provided that Parliament approved of such a course. He promised to examine accurately into the figures relating to the cost of the Hokkaido Railway, the sum for which it had been sold, and the manner of payment, Mr. Inugai having pointed out that this matter had given rise to much doubt and discussion. He could not at the moment explain why supplementary estimates had been found necessary in certain cases, neither could he say under what circumstances the land on which the Imperial Hotel stood had been acquired. As to the 14 rivers requiring State aid for their repair and control, they did not represent the whole but only the most important: the others could not be undertaken for several years. With regard to the Secret Service Funds of the Cities and Prefectures, their expenditure varied. Ample means were taken, however, to supervise the expenditure. The President of Committee announced that the questions relating to the Home Department were now concluded. The Vice-President resumed the chair. Mr. Yasuda Yuitsu, as a point of urgency, drew attention to the fact that a police guard had been given to some of the members. This was doubtless a matter to be grateful for, but as it involved the State in additional expenditure, he thought the guards might be dispensed with, and moved that the sense of the House be taken on the subject. The Vice-President said that as this was a matter for invidual members to decide, he should not put it to the House. He then read out the Orders of the Day and declared the session at an end. Mr. Yasuda pressed his motion, but the House dispersed without paying any attention to him at 6 p.m.

HOUSE OF PEERS.—THURSDAY, JANUARY 15TH.

The House met at 10.50 a.m. The Acting President, Marquis Konoye, announced that Marquis Hachisuka having resigned his position on the Budget Committee, it would be necessary to elect a successor. The House then continued the debate on the second reading of the Weights and Measures Bill. Viscount Itakura opposed the Committee's recommendation to preserve the catty (*kin*) of 160 *me*. The only reason given for preserving it was that it had been so long in use, but that argument would apply with equal force to other weights and measures. He suggested that the clause bearing on this point be separately discussed. Baron Watanabe argued in the same sense. Marquis Daigo contended that as the *kin* was mentioned in the old Japanese code, the *Taiho-rei*, and as no valid objection existed to retaining it, the House should endorse the Committee's suggestion if only for the sake of conserving a weight sanctioned by long usage and honoured by mention in the country's most ancient laws. Mr. Hozumi took the same view. The catty was so widely used both in domestic and foreign trade that he altogether doubted the expediency of abolishing it. Viscount Naito pointed out that the Japanese *kin* could easily and conveniently be expressed in terms of foreign weights, since it amounted to four-thirds of an English pound, and about four-fifths of a French kilogram. He was decidedly in favour of retaining it. Mr. Hosokawa Junjiro argued strongly in favour of making the *kin* consist of 100 *me*, as provided in the original bill. He saw no advantage whatever in making it 160 *me*. The former division concurred with the decimal system, and the *kin* of 100 *me* could be expressed in terms of foreign weights even more easily than the *kin* of 160 *me*. Several other members spoke for or against the Committee's amendment, and the question being put to the House, a majority voted for the amendment, namely, the retention of the *kin* of 160 *me*. The House then took a recess at 12.10 p.m.

* * *

The House re-assembled at 1.30 p.m., and proceeded to discuss the 4th clause of the Bill, which was passed unanimously, with the Committee's amendments. A Secretary read the 5th clause. Mr. Miura Yasu moved that the clause be omitted, as it distinctly provided for the adoption of a foreign system and was therefore hurtful to the empire's dignity. Moreover, its excision would not in any way affect the remainder of the Bill. Mr. Furuichi opposed the motion. The metre could no longer be called French. It was used in Germany, Austria, Italy, Sweden, and other countries, and partly in England and America. Mr. Furuichi's arguments were a repetition of the points advanced with respect to the same subject on the 13th instant. Mr. Choyo Junsai said that, so far from Japan's dignity being impaired by adopting the system of weights and measures employed in the leading Western countries, the act would redound greatly to her credit. Speaking as a physician, he dwelt upon the vital importance of a more accurate system than that now used in Japan. Mr. Okauchi Shigetoshi was not an admirer of foreign systems *en bloc*, but he reminded the members who objected to the metric system, that the clothes they wore, the chamber in which they were debating, and the medicines they used, were all measured according to that system. It was absurd to gird at a thing merely for being foreign when its adoption meant a national benefit. Mr. Hosokawa Junjiro did not object to the metric system, but he did strongly object to the fact of its foreign origin being put on record in the body of a Japanese law. Such a proceeding might be compared to the notorious policy of employing foreigners in the capacity of Japanese Judges, and organizing in this country a bench of mixed nationalities. Mr. Kikuchi Dairoku said that it seemed hopeless to bring about a clear perception of the truth of this matter. He again reminded the House that no less than thirty States had adopted the metric system, some *in toto*, some in part. England belonged to the latter category, and this Bill only proposed that Japan should do what England had done. It was a flagrant misapprehension to draw any comparison between such a proceeding and the establishment of mixed tribunals like those of Egypt. England used the metric system in coujunction with her own, because it suited her commercial convenience to do so. A country isolated from the rest of the world might stand aloof in this matter, but a country having relations with the West could not help itself. The mere item of posts showed the impossibility of adhering to a special system. The President stopped the discussion, saying that as Mr. Miura's motion had not found a sufficient number of supporters, it was not debatable. The House then voted the passage of the 5th clause with the Committee's amendments, a ballot being taken, and the "ayes" numbering 66, the "noes" 37. The House proceeded to the 6th

Digitized by Google

clause, and passed it with the Committee's amendment. Similarly as to the 7th and 8th clauses. On coming to the 9th clause, the Committee's amendment was rejected and the first part of the clause passed in its original form. The House then proceeded to discuss the second part, but the discussion had not ended at 5.30 p.m. when the House rose.

HOUSE OF REPRESENTATIVES.

The House assembled at 1.20 p.m. The President announced that Mr. Kawashima Jun had presented a series of questions relating to the rescinding of Law 15 of the 23rd year of Meiji and the reform of Law 21; the settled accounts of revenue and expenditure from the 1st to the 23rd year of Meiji; the foreign debt; the resumption of specie payments; the national banks; the funds advanced to the Shizoku; the sale of public properties; the amount of the present public property; the subsidies to the Sanyo, Kiushiu, and Japan Railway Companies, and the Government's debt to the 15th National Bank. Also that Mr. Okada Riyoichiro had presented a Bill for reforming the system of registering lands and houses. The House then went into Committee on the Budget, and the President announced that the questions relating to the Home Department in the Budget itself having been concluded, the Report of the Committee on this portion would now be considered. Various questions were put by members and answered by the Committee with reference to the distribution of the funds employed for lock hospitals and *police de mœurs* purposes. The Committee explained that while reducing the salaries in the Home Department generally, they had been unable to make any reduction in respect of the Yokohama Harbour Works Office, several foreigners with salaries fixed by contract being employed there. Mr. Takata Sanai pointed out, that if the House continued its present method of procedure, it would have to give three days to every one of the Departments of State. He moved the closure of the debate on this section. Several members having supported Mr. Takata's motion, it was put to the vote and lost. Mr. Abe Oki, on behalf of the Committee, explained that they had struck out the item for the official dwellings of Governors, Prefects, and Chiefs of Police because they thought such dwellings unnecessary. After several minor questions had been put and answered, some delay occurred owing to a quorum not being present. The Secretaries having summoned the members from the waiting-rooms, the House passed to the Committee's Report on the Departmenf of Foreign Affairs. Mr. Murota, Chief of the Finance Bureau in that Department, replying to questions put the preceding day, gave particulars of the land purchased at Yenokizaka, Akasaka, namely, that it contained over 3,000 *tsubo* of land, new buildings, partly in foreign style, covering 680 *tsubo* and worth 25,000 *yen*, and old buildings covering 459 *tsubo*. It had been bought for 80,000 *yen* and sold to the American Legation for a price which the Department considered proper. Mr. Inugai said that the lot in Aoicho had been sold by the Department of Agriculture and Committee six months previously for 10,000 *yen*, and the Yenokizaka lot for 30,000 *yen*. The prices paid by the Foreign Office in buying them back seemed very high. Mr. Murota answered that when the Government wished to get rid of things, it had to sell them cheap: when it wanted to buy them, it had to pay high. Every one knew that. He could only answer for the Foreign Office's purchases, knowing nothing about sales made six months previously by the Department of Agriculture and Commerce. Replying to further questions, he said that the Foreign Office was under a moral obligation to provide a site for the American Legation; that the obligation had existed for four or five years, and that the land had not been purchased directly from the Department of Agriculture and Commerce because, at the time of its sale by that Department, there was no idea that it would be selected as a suitable site. With regard to the nature of the obligation, he could say nothing, that being a point of foreign policy. The reason that the site had been selected was that the American Representative had had the buildings made to suit his convenience. The land had been bought from Mr. Okura Kihachiro. Mr. Miura said that the Foreign Office should have been able to find a site for the Legation without any transaction of such an uneconomical nature, but the President called him to order, pointing out that the business before the House was to ask questions not to debate. Mr. Inugai repeated his enquiries as to why the Department of Agriculture and Commerce had sold for 30,000 *yen* land which the Foreign Department bought six months afterwards for 80,000. Mr. Ashiwara, Delegate for the Department of Agriculture and Commerce, explained that the Department had not wanted the land, and that it had been sold privately through the Tokyo Municipality. Asked why it had not been sold by public tender, and whether there was any special reason for private sale, he said he was not in the Department at the time, an answer which elicited severe comments from Mr. Inagai and other members. The Delegate explained that he had meant to say that he could not reply without making inquiries. Several members insisted on obtaining information as to why the method of private sale had been employed in respect of this land only, and desired to see the application made by Mr. Okura Kihachiro. The House then passed to consider the Committee's Report on the Department of Finance. Mr. Watanabe, Vice-Minister of Finance, replying to questions previously put, explained that special note-issuing power had been given to the 15th National Bank in return for the accommodation given by the Bank to the Government, in lending 15 million *yen* at the time of the Satsuma Rebellion, at a rate of interest much below the rate obtainable elsewhere. When the National Bank Regulations were amended it was not possible to continue this exceptional treatment of the 15th Bank. Accordingly, five millions had been returned to it, and the remaining ten had been put at an interest of 7½ per cent. This sum had not been redeemed with Consolidated Bonds, because the period of the Bank's agreement had still some years to run. Mr. Miyazaki Yeiji said that seven years ago the 7 per cent. Bonds were at 80, whereas now they were at 100. Under such circumstances the Bank should of itself offer to reduce the rate of interest, its capital having appreciated so largely owing to official operations of finance. If it made no such offer, the Government was entitled to suggest a reduction. Mr. Watanabe said that nothing of that kind could be done unless both parties to the agreement consented. Mr. Yebashi Ko said that the Government had not hesitated to apply to the building of the Tokaido Railway the fund raised for the Nakasendo Railway, and as it showed so little punctiliousness concerning moral obligations in that case, he failed to see why it could not deal a little boldly with the Bank's interest. The President called this member to order. Mr. Gamo Sen, on behalf of the Committee, admitted that in reducing the salaries of the Presidents and Vice-Presidents of the Diet, they were going against the provisions of the Law of the Houses, but said that they proposed to amend the Law. The Secret Service Fund of the Cabinet had been abolished because the Committee saw no necessity for it. After some pressing from the members, it was admitted that the Committee's object in making the reductions had been to diminish the land-tax. Further, the changes they had made, did not, in their opinion, effect the efficiency of the Administration. Several members complained of the absence of the President of the Special Committee, inasmuch as no one else could give information as to the general ideas of the Committee. The House rose at 6 o'clock.

HOUSE OF PEERS.—FRIDAY, JANUARY 16TH, 1891.

The House met at 11 a.m. The Acting President announced the death of one of the members, Admiral Yanagi Yuetsu, and the House agreed to send a message of condolence to his relatives. On the motion of Baron Honda, it was decided that the same course should be pursued with regard to Mr. Kokushi Junsei, of whose decease the House had taken no notice. The House then resumed the debate on the second reading of the Weights and Measures Bill. Considerable discussion took place as to the expediency of limiting the number of persons authorized to make and sell weights and measures. The House ultimately voted in favour of the Committee's amendment, namely, that no limits should be imposed on the manufacture and sale. Marquis Hachisuka announced that the Committee on Memorials would hold a meeting in the afternoon and that the members of the Committee would consequently be absent from their places in the House. The House took a recess at 12.25 p.m.

* * *

The House re-assembled at 1.30 p.m. Proceeding to the 10th, 11th, 12th, and 13th clauses of the Weights and Measures Bill, some verbal alterations, suggested by Mr. Murata and approved by the Committee, were voted, but the Committee's amendments to the 14th and 15th clauses were rejected. The 16th clause was unanimously voted, and the 17th clause, with amendments by Mr. Murata, was voted by a majority. The House then passed the 18th clause with the Committee's amendments, and, on reaching the 19th clause, rose at 4 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.40 p.m. The President announced that eleven members whose names were originally sent in as supporting Mr. Suyehiro's Bill for amending the Publication Regulations, had withdrawn their support from the Bill. The House then went into Committee on the Budget. The President said that the House would proceed to the Army Department section of the Budget, and further, that certain members had asked to have printed copies distributed of the questions put to and the answers given by the Government Delegates, but as it was not possible to comply with this request, copies would be placed in the Waiting Rooms only. Messrs. Inugai and Arai wished to put some questions about the Finance Department, but the President ruled them out of order. Mr. Kato Katsuya called attention to the fact that whereas the establishment of the standing army was increasing, it appeared that the Shimonoseki Forts would not be finished until the 36th year or *Meiji*, and the Kannon-zaki Forts until the 62nd year. He wished to know why this great difference was observable in respect of the progress of the interior and exterior defences. General Katsura, Vice-Minister of War, said that this was a question of money. The War Department deeply regretted the delay, but without funds nothing could be done. They had only been able to spend a million *yen* on fortifications since the 20th year of Meiji, an obviously insufficient amount. Mr. Sasaki Zenyemon expresssed surprise that Mr. Kato, a member of the Budget Committee, should put questions at this stage. He ought to have obtained all the information he desired while the Committee was in session. Mr. Aoki Tadasu said that it did not fall to the lot of every member of the Committee to inquire into the whole Budget. Each member had a particular portion assigned him, and there did not appear to be any reason why he should not afterwards put questions about the other portions. Mr. Sasaki asked what portion had been assigned to Mr. Kato's Section, and was answered, the Army and Navy portion. Mr. Kato, with some warmth, enquired by what rule he was precluded from asking questions. Mr. Suzuki replied:—"You have a technical right to ask questions, but no moral right." Some commotion arose here and the President refused to allow the discussion to proceed. Mr. Tachiiri asked why the military survey of the empire proceeded so slowly, and to what point it had been carried. Also, whether the work on fortifications now in actual progress was deemed sufficient. The Vice-Minister said that this, too, was a question of appropriations. The Department had two hundred thousand (twenty thousand?) *yen* yearly to carry on the survey of the empire, and could not hope to complete it with such an allowance until the 94th year of Meiji. As for fortifications, work

Digitized by Google

was now going on in Tokyo Bay, in the sea adjacent to Kishiu and Awaji, and at Tsushima, but there were many other places that ought to be fortified. Mr. Suyehiro observed that the cost of clothing and provisions increased annually, and wished to know what was the increase in the establishment of the army and how the above cost was calculated. Also, the troops had formerly worn *kokura* of Japanese manufacture, whereas now they wore cloth made of wool imported from foreign countries. He understood that the former material was cheaper, and in time of war it might happen that owing to the interruption of trade, cloth would become unprocurable. He begged to receive some information on this point. Further, in the case of imported stuffs, the price would vary according to exchange, but he found no allowance for this in the estimates. General Noda, Government Delegate, replied that the cavalry of the four garrisons had been increased by 1,500 in the course of the past year. Rice was calculated at 6.53 *yen* per *koku* for next year, that being the average of several years back. As for clothing, every article of a soldier's kit being accurately known, there was no difficulty in determining the precise quantity needed for a given force. With regard to the question between *kokura* and cloth, experience had shown that though the first cost of the former was less, the latter was cheaper in the long run, besides being much better for sanitary reasons. The allowance for provisions, clothing, and all necessaries was as follows:—for troops of the Imperial Guard (infantry) 102.69 *yen* annually; for garrison troops, 99.38 *yen*; for first class cavalry, 115.26 *yen*, and for second-class troops 78 *yen*. He also explained the system pursued with regard to the allowance of provisions in the case of time-expired men. Mr. Otsu Junichiro asked whether the number of military manœuvres during the year was fixed beforehand, as it seemed that the expenses would otherwise vary considerably. He was answered that the number of manœuvres depended on the condition of the garrisons. After several minor questions had been put and answered, Mr. Arai asked whether it was true that there would be a difficulty in defending Tokyo Bay and whether its defence would be undertaken by the united services. Also, why the completion of the Tokyo Bay fortifications was to take place several years after that of the Kishiu and Awaji fortifications; and finally, whether forts upon the construction of which so many years were expended, might not be obsolete before they were finished. General Katsura replied that Tokyo Bay was perfectly defensible, but declined to say whether the defence would be undertaken by the two services. There were several reasons for the comparative lateness of the works in Tokyo Bay, but the principal reasons were the magnitude and difficulty of the works and the want of funds. In reply to another question, he said that the delay in arming the forts was due to the importance of the undertaking. The Minister of War, during his recent visit to Europe, had made careful investigations as to the best type of guns for the purpose, and these were now in process of manufacture in the Osaka Arsenal. It was hoped that the Shimonoseki, and part of the Tokyo Bay, armament would be ready this year. Questioned as to whether the changes of organization introduced from time to time would not interfore with the completion of the military system at the appointed dates, and as to the general sufficiency of the military equipment, he said that there were no changes of importance, and that, as Vice-Minister, he could not answer the latter question. He thought that the speech of the Minister furnished an answer. Reverting to Mr. Suyehiro's question about clothing materials, he explained that of the total of 102 *yen* per annum allowed for the maintenance of a soldier of the Guards, 31 *yen* was for clothing, and 34.40 *sen* for provisions, the rest being made up of minor items. Comparing *kokura* with cloth for clothing purposes, the dress suit of *kokura* costs 5.70 *yen* and lasts 7 years; the winter suit costs 4.20 *yen*, and 4 suits are worn out in 3 years. The suit of cloth costs 7.06 *yen* and 2 suits are worn in 3 years. Before the War Office took over the cloth factory, a yard of cloth used to cost 3.49 *yen*, but now it only costs 2.84 *yen*. It was true that the wool had to be imported, but that, though regrettable, was for the moment unavoidable. Several minor questions having been put, General Noda, in answer to Mr. Sato Shozo, said that, not being acquainted with Naval affairs, he was unable to say why the ratio of the cost of provisions to that of clothing was nearly three times as great in the Army as in the Navy. Further, it was quite untrue that horses were sold from the breeding stations to staff officers at less than cost price and bought back at cost price when they became unfit for officers' use. Horses were sold to officers of all grades and to civil officials, in the same way, namely, to the highest bidder, and when bought back, were taken at a price assessed by experts. Other questions of a trivial character having been answered, the House rose at 6.10 p.m., the Army Section of the Budget being still unfinished.

## *THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.*

The principal topics of discussion in the columns of the vernacular press during the week have been the Minister of Finance's speech in the Lower House on the Budget, Mr. Nishi Kiichi's motion to reject the report of the Budget Committee, the alleged relation between the *soshi* and some members of the Cabinet, the carrying out of the Peace Preservation Regulations, and the various phases of the Eastern Question.

* * *

Count Matsugata's speech in the House of Representatives, declaring the attitude of the Cabinet about the report of the Budget Committee, has been anything but favourably received by the native press. The general opinion seems to be that the results of the speech will be far from beneficial to the Ministry. The *Nippon* is, so far as we know, almost the only paper that speaks at all favourably of the speech. Now that the report of the Budget Committee is disapproved not only by the Government but by a large section of the public, our contemporary thinks that the Cabinet has taken a very opportune and politic step to declare to the Representatives of the people its opposition to the fiscal reforms proposed by the said Committee. The *Nippon* is also of opinion that the course adopted by the Minister of Finance is worthy of being made a precedent for all future occasions of a similar nature. The *Nippon* goes on to observe that the Government would do well to declare its opinion even when any important motion is made in connection with the Budget, and urges the Ministry, whenever such steps are taken in future, to frankly state the reasons for the declaration made by it.

* * *

The *Nichi Nichi Shimbun* remarks that Count Matsugata may have been prompted by kindly feelings towards the Diet in making his remarkable speech of the 9th instant, but that nevertheless such a speech is anything but proper and desirable. The Minister's declaration is scarcely incompatible with the independent character of the Legislature. In our contemporary's opinion, the effect of the speech has been, on the one hand, to make the "extremists" more radical than ever, and, on the other, to create fresh obstacles in the path of the "moderates." The *Nichi Nichi* concludes with these words:—"In the present session of the Diet, complications have several times resulted from some blundering statements made by Ministers of State or Government Delegates. It is consequently highly important for the Government to be cautious and deliberate in its announcements of whatever nature to the people's Representatives. Particularly when an announcement is likely to interfere with the decisions of the Diet, the Government ought to hesitate, for we can seldom approve such a step on the part of the authorities."

* * *

The *Kokkai* is of a similar opinion and fears that, as the consequence of the speech, "the relations between the Cabinet and the Diet will become more strained than ever." Our contemporary fails to recognise the wisdom of the step taken by the Minister of Finance.

Party organs like the *Mainichi Shimbun*, the *Jiyu Shimbun*, the *Rikken Jiyu Shimbun*, and so forth, all unite in denouncing the speech. The *Mainichi* describes it as "nonsense" (*guchi*), and strongly repudiates the charge usually brought against the report of the Budget Committee that the reduction therein contemplated is destructive in tendency. The *Jiyu Shimbun* is convinced that, "had the Minister of State been frank and sincere enough to show to the Representatives the reasons why the proposed reduction is unworthy of their approval, every member of the Diet who loves the country and the people would have been amenable to reason. "But," continues our contemporary, "the Minister of Finance, instead of taking such a course, tried to denounce the report by the one word *fudôi* (not consenting). Is that the language of a statesman who really loves morality and desires smooth and friendly relations between the Executive and the Legislature?" The *Rikken Jiyu Shimbun* is angry that the Cabinet assumed by the speech a dictatorial attitude towards the Diet, and advises the Ministers to resign bodily if they think themselves unable to carry on the affairs of the State with the sums that may be voted by the Diet. Mr. Nakaye Tokusuke, a distinguished member of the Constitutional Liberal party, writing in the same journal, observes that what the members of his party desire on the question of the Budget is the approval of the nation and not of the Cabinet.

* * *

At the meeting of the Lower House on the 12th instant, the supporters of the report of the Budget Committee were taken completely by surprise by a dexterous move on the part of the *Taisei-kai* members. It appears that the *Taisei kai* members had been waiting for a favourable opportunity to introduce a motion for the rejection of the Report, and they kept the secret wonderfully well, for none of the *Kaishin to* and the *Jiyu to* members seem to have been aware of it until the motion was unexpectedly made on the 12th instant, by Mr. Nishi Kiichi, a *Taisei-kai* member from the Prefecture of Okayama. The supporters of the radical plan of reduction were simply thunderstruck. Before they were able to collect their senses, the motion was taken into consideration. The choice of Mr. Nishi as the introducer of the motion is considered to have been a stroke of deliberate policy on the part of the *Taisei-kai*; for he is an old scholar of unstained character and is respected by men of all parties. Meanwhile, the leading members of the *Kaishin-to* and the *Jiyu-to* held a hasty consultation in the room of the Budget Committee as to the course of action they ought to take under the circumstances. As the result of this consultation, the supporters of the Budget Committee's report propounded endless questions to Mr. Nishi, and in this way tried to defer the final decision to the next day's deliberation. These tactics proved successful, and the House rose without coming to any decision on the matter. The extreme members on leaving the Diet held a conference and sent round special messengers to *Kaishin-to* and *Jiyu-to* members who had absented themselves from the debate of that day, requiring them to attend the next day's meeting. *Jiyu-to* members whose attitude on the Budget question was doubtful, were also requested to declare their determination, and they were, it is said, even threatened with expulsion from the party if they voted for Mr. Nishi's motion. The *Taisei-kai* members seem to have been confident of success. At all events they did not apparently take any step to secure any further converts to their views. On the 13th, after an aminated debate, the motion was finally rejected by the 142 against 125. It was observed that several members who were suffering from influenza attended the meeting to cast their votes on one side or the other.

* * *

The failure of Mr. Nishi's motion is attributed to the inconsistant conduct of some of the *Rikken Jiyu to* members who support the moderate scheme of reduction. Confronted by the alternative of either voting against the motion or leaving their party, they decided to take the former course. These members are believed by the *Nippon* to be still in hopes that some happy method may be found of voting against the report of the Budget Committee, without severing their connection with their party. Meanwhile, the *Taisei-kai* members of the Diet and other supporters of the moderate scheme of reduction, are understood to be actively engaged in divising a scheme that will obtain the support of all the moderates. We may, therefore, expect stormy debates before long.

* * *

The *Nichi Nichi Shimbun*, writing about the debate on Mr. Nishi's motion, observes that it is too early to take the failure of that motion as an evidence of the final triumph of the "extremists." Our contemporary is of the opinion that it is not necessary to reject the Budget Committee's report

Digitized by Google

as a whole in order to carry out the object of the "moderate" members, for they can attain their purpose as well when the Budget is to be discussed item by item. The *Nichi Nichi* repeats the warning—already noticed in these columns—that should the "extremists" be able to carry the day, it would be impossible to obtain the concurrence of the Upper House, and cautions the Representatives not to commit themselves to a course of action that can only involve them in defeat.

* * *

The vernacular press is still devoting the greater portion of its attention of the estimates, but having already reproduced enough to show the points at issue, we refrain from alluding to the countless number of other articles on this subject. So far as the journalistic world is concerned, the forces are about equally balanced as to the Report of the Committee on the Budget. The papers in favour of the report are the *Mainichi Shimbun*, the *Jiyu Shimbun*, the *Rikken Jiyu Shimbun*, the *Yomiuri Shimbun*, the *Kokumin Shimbun*, and the *Mimpo* (People's News), a new paper started by the former writers on the staff of the old *Choya Shimbun*, Messrs. Inugai Ki, Ozaki Yukio, and others. On the other side are found the *Fiji Shimpo*, the *Nichi Nichi Shimbun*, the *Nippon*, the *Kokkai*, the *Tokyo Shimpo*, the *Toyo Shimpo*, the *Choya Shimbun*, and the *Chusei Nippo*. The *Hochi Shimbun* apparently maintains an independent position, but we may perhaps regard it as well disposed to the Report. Among the periodicals, the *Kokumin-no-Tomo* alone supports the radical plan of reduction. All the others, as the *Keisai Zasshi*, the *Nippon-jin* and the *Koku-Hon*, are more or less opposed to the Committee's Report. It is a significant fact that, as may be seen from this classification of papers and magazines, none of the independent journals are favourably inclined to the "extremists," those supporting them being only the organs of the *Kaishin to* and of the *Rikken Jiyu-to*.

* * *

The expulsion of 56 *soshi* from the Capital during the present session of the Diet, under Art. 4 of the Peace Preservation Regulations, has been either approved or acquiesced in by the majority of the metropolitan papers, the measure being condemned by only two journals, the *Nippon* and the *Choya Shimbun*. The *Kaishin-to* and the *Rikken Jiyu-to* organs write in a very ambiguous and, in some cases even mysterious manner, but the general tenor of their utterances leaves a strong impression that their reluctance to make an open acknowledgment, they all recognize the necessity of enforcing the Peace Preservation Regulations. We proceed to give a few specimens of their writing on this subject.

* * *

The *Mainichi Shimbun* is apparently unwilling to recognize the propriety of the measure, but it incidentally approves it, as it remarks that when scarcely two months have passed since the Constitution was first carried into practice, the Authorities have been confronted by a state of affairs necessitating the re-enforcement of the severe Regulations of 1887. Our contemporary then goes on to congratulate the "extremists" on the circumstances that the *soshi*, who have been marched out of Tokyo, belong in the majority of cases to the parties opposed to them, namely to the moderates whom the Tokyo paper style the supporters of the Government. In conclusion the *Mainichi* cautions the extremists to take care not to imitate the conduct of their opponents but to keep in strict check all the young bloods under them.

* * *

The *Jiyu Shimbun* writes in a mysterious manner. It is careful not to commit itself to any expression implying direct approval of the Government's action, but it is equally careful not to say a word that can be construed as condemning the expulsion of the *soshi*. It denounces in strong terms the conduct of the young men, and concludes with these mysterious words:—These young men are indeed to be considered the cause that compelled the Metropolitan Police Inspector-General to carry out the Peace Preservation Regulations whose abolition had already been voted by the Diet. But they are simply the direct cause; we know that there is an indirect and primary cause." What our contemporary means we can only surmise; but it may be of some interest to allude in this context to another of its articles on the subject of the *soshi*, entitled "The Shinsen Gumi of the *Keio* Era." It is scarcely necessary to state that the *Shinsen Gumi* was the name of a band of soldiers—mostly composed of young adventurers of various classes which the Tokugawa Government maintained at Kyoto, shortly before the war of the Restoration, by way of defence against the rebellious adherents of the Imperial cause. Our contemporary compares to this body of troops the *soshi* who have of late been active in assaulting the supporters of the radical plan of reduction. The evident implication is that these *soshi* have been acting under the direction, mediate or immediate, of some statesmen in power. Thus the *Jiyu Shimbun* seems to be a believer in the rumour, the publication of which in an extremely offensive manner brought the ban of suspension upon the *Kokumin Shimbun*.

* * *

It will be interesting to read, in conjunction with the above mentioned articles, the utterances of the *Choya Shimbun*. That journal is opposed to the enforcement of the Peace Preservation Regulations, on the ground that the expulsion of the *soshi* is a poor guarrantee for the safety of the members of the Diet, so long as the statesman—which it is difficult to tell from the Japanese text—who secretly directs these *soshi* are not at the same time expelled from the capital. Our contemporary seems to think that this statesman—for we are inclined to believe that the word is used in the singular—has caused all the disturbance for the purpose of creating a situation of affairs in which he may be able to place himself at the head of the Administration. "The *soshi* and the Government," we are told, have both been duped by this crafty statesman, who is now smiling at the success of his plan."

* * *

The *Nippon*, as already stated, is opposed to the measure. It holds that the Criminal Code and the Law of the Protection of Legislative Assemblies would have been amply sufficient to protect the threatened members of the Diet, without having recourse to the Peace Preservation Regulations. It also ridicules the inconsistency of some of its contemporaries which opposed these Regulations when they were employed to protect Ministers of State, but now approves them when they are used for the protection of the members of the Diet.

* * *

It had been our intention to reproduce here some of the interesting articles appearing in the Tokyo press with regard to the Eastern Question and other problems concerning the future of this country—But we defer the task, having no space here to do justice to the subject, and because a series of articles appearing in the *Jiyu Shimbun* is not yet concluded.

* * *

The *Fiji Shimpo* devotes two articles to urging politicians of the present day to show more self-respect. Several essays have also appeared in the columns of the vernacular press from the pen of no less authorities than Professors Toyama and Yatabe and Mr. Nakamura Masanao, strongly urging the importance of maintaining the Higher Middle Schools, the School of Music, and the Higher Female School. The Budget Committee propose to abolish these educational institutions. The *Nichi Nichi Shimbun* is engaged in reviewing the year 1890. The *Yomiuri Shimbun* has finished its long series of articles on the responsibility of Minister of State, and has commenced to discuss the question of the national defences. The *Hochi Shimbun* has examined at great length Article 67 of the Constitution.

## *REPRESENTATIVES OF THE STATE.*

IMPERIAL ORDINANCE No. 3.

In pursuance of Article XIV. of the Law of Civil Procedure, We hereby give Our sanction to the present Ordinance relating to the Regulations regarding the Representatives of the State, and order the same to be promulgated.

(His Imperial Majesty's Sign-Manual.)
(Privy Seal.)

Dated January 6th, 1891.

(Countersigned)

Count YAMAGATA ARITOMO,
Minister President of State.
Count OKI TAKATO,
Minister of State for Justice.
Count SAIGO TSUKUMICHI,
Minister of State for Home Affairs.
Count MATSUGATA MASAYOSHI,
Minister of State for Finance.
Count OYAMA IWAO,
Minister of State for War.
Count GOTO SHOJIRO,
Minister of State for Communications.
Viscount AOKI SHUZO,
Minister of State for Foreign Affairs.
Viscount KABAYAMA SUKENORI,
Minister of State for the Navy.
YOSHIKAWA AKIYOSHI,
Minister of State for Education.
MUTSU MUNEMITSU,
Minister of State for Agriculture and Commerce.

Article 1.—The respective Ministers of State shall represent the State in civil cases as to matters under their respective superintendence.

Article 2.—The Chief of the Hokkaido Administration Board, and the Governors of *Fu* and *ken* shall represent the State in evidences as to matters within their competency or under their control.

Article 3.—Any Minister of State possessing a special local office or offices may, by a Departmental Ordinance, delegate to such office or offices the power of representing the State in civil cases.

Article 4.—The present Ordinance shall not apply to cases in which the representation of the State has been entrusted to a definite functionary by the Official Organization, or by special Imperial Ordinances.

## *CORRESPONDENCE.*

### THE CITY OF NAGOYA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In my last letter from this place concerning the garrison festivities, I did not enter into any details about the city; but, as I then remarked, it is so rapidly becoming an important commercial centre, that I think a full account of the town and its inhabitants may not be unacceptable to your readers. Nagoya numbers about 130,000 inhabitants, and in formation the City may be compared to a monster spider. The body of the town is, on a rough average, about 1½ miles square, and bounded on one side by the station, on another by the castle, on a third by the Kencho, and on the fourth by Atsuta on the Gulf of Owari, in which province it is situated. From this main body, four or five straight narrow streets stretch away into the rice land that completely surrounds the raised plateau on which the town is built. These streets give rise to the spidery appearance before alluded to. The town, being thus slightly raised above the level of the rice fields, enjoys a natural drainage, and is consequently unusually clean and healthy; indeed it is popularly considered the healthiest and cleanest city in the interior. The principal public buildings are the Post Office, a substantial brick building of two stories, ornamented by a large clock. Its cool stone interior makes postal transactions a delightful occupation in the dog days. After the Post Office comes the Kencho, situated at the end of the principal street, or "wide road" as it is named, and not far from the Post Office, which it by no means rivals in substantiality of appearance. This, like most of the other public buildings, is of white plaster, relieved by touches of brown wood work, and flanked on either side by smaller editions of itself, one of which is the House of the Local Assembly. The other Government buildings are the Gendarmerie; the two Court houses; the Hospital on the bank of the Canal, and the Medical school; the Normal and Middle schools, all of which are built on similar lines, and all white. The Commercial School, although one of the most satisfactory, I am told, after the Higher Commercial School in Tokyo, has, at present, a very inferior building, wholly unworthy of a commercial city of growing importance, as Nagoya undoubtedly now is. Last year, however, money was voted for the erection of a more suitable building to the amount of $20,000, and the first piles are now being driven for its commencement. Besides the Post Office there is one other brick building situated in a charming nest of beautiful pine trees near the castle walls. This is the Staff Office, where, amongst other business, all matters connected with the ancient and stately home of the Daimyo are attended to, including permission and cards to view, a privilege never denied to foreign visitors, when application is made at a reasonable hour. The Staff Office and the extensive Barracks of the Third Division of the Army which almost adjoin it, are lighted at the entrance gates by electricity, which modern innovation, with its usual disregard for sacred antiquity, has even invaded the castle itself. Needless to say, all the important shops and principal buildings are also lighted in the same way, but not with the same power, in many cases prosaic oil supplementing the illuminated pear drop of the electric star. Before dismissing the subject of buildings I must not forget to mention a most astonishing rush on three storied bazaars which has taken place during the last twelve months; each of them with the persistent determination of a rival endeavouring to outwit the other in height or architectural adornment. About midway down, the Broad Street—or Hirokoji—is intersected by one a little narrower, which is the chief business

Digitized by Google

thoroughfare, and just at the juncture where these two roads meet, the bazaar competition has taken place. Almost within touch of each other stand seven of these ambitious erections, the largest presenting a perpetual warning to speculators in the form of an entire storey unoccupied, and a really artistic little turret ornamented by cranes energetically on the wing, which also remains unlet. With this exception, the bold and lofty enterprises appear to have been successful, and the different methods they have chosen to demonstrate worthiness of public patronage are very characteristic of Japanese ingenuity in business. One has instituted a clock tower which reflects convenience on the multitude as well as credit on itself; another has faced its front with an exceedingly clever imitation of red brick and invariably sports an abundance of little red lanterns; a third has bestowed upon itself the distinction of being the "Principal Nagoya Bazaar," and so on, while within these palaces of delights for juveniles both native and foreign, the commodities are so identically similar as to preclude bigoted preference, unless it may be on a slight variance of prices. A very noticeable change has been taking place in private dwellings as well as in the gay bazaar, an increasing appreciation of an "upstairs," if only one small room, being prominent, also an almost universal adoption of glass, from one little square pane to entire *shoji* and shop fronts. Even the tiny *Kashi* stalls proudly display their dainties behind this superior substitute for paper, and foreigners renting houses find little or no difficulty in having glass substituted for the melancholy and unsociable paper *shoji* of old Japan. All this window glass, as well as the lamps, shops for the sale of which abound, are made in small factories dotted here and there throughout the neighbourhood. So small are some of these that, to cite an instance, one in which excellent lamps, chimnies, bottles, etc., are made, consisted until recently of a wretched shed and a "job made" chimney, the working staff comprising three lamentably poor men and a boy. On one occasion a severe storm nearly wrecked the chimney and engaged two of the men all the afternoon trying to patch up with odd material the breaches caused by the unceremonious elements; but brighter days appear to have dawned for this particular factory at last, and a more substantial shelter has taken the place of the old shed. This is but one instance among many of the poor but self supporting little industries which are scattered throughout the interior, winning one's admiration for the plucky toilers, yet making one wish that their labours could be lightened and their profits increased by a little well invested capital and amalgamation. That time will greatly improve the condition of these scattered foundation stones of commerce is most probable, nay certain; numerous large and well organized manufacturing industries are rapidly springing up elsewhere; and Nagoya is by no means lacking in the more important elements of successful trade. There are no less than five or six large cotton mills, including dyeing and weaving branches, each employing on an average some 150 to 200 hands, if not more. But of course the great feature of Nagoya is its porcelain. All the way from Seto comes the peculiar white earth so deftly wrought into the delicate wares in which we delight so much, the means of transport being long hand-barrows, entailing a very great expenditure of manual labour, which might have been greatly decreased had an application to form a tramway between Nagoya and Seto, made some year or two back, been granted. Seto is the home of the larger and cheaper classes of pottery, and but very little artistic ornamentation is done there. In Nagoya, however, a much finer class of porcelain is manufactured, and a high standard of decoration attained, yet falling far short of the Kyoto art. In one of the numerous porcelain factories the delicate frosted china known as Shippo Yaki is made. This place is the favourite resort of the foreign residents when desiring to send some dainty keepsake to friends at home. This year another of the factories largely patronized by foreigners, presented an elegant teapot to each lady of the small community, a pretty compliment which will no doubt reap a rich return during the year.

The embroidering of handkerchiefs is now another considerable item in Nagoya industries, the handkerchief silk being manufactured in Gifu and brought here for ornamentation prior to being despatched to the ports for exportation. In nearly all the minor streets large rooms may be seen full of quite small girls, and occasionally boys, plying with deft little fingers the silken thread over patterns whose fanciful lines are traced by an older hand with brush and paint. Even late at night these littles ones are still working, though it must be admitted that with true Japanese instinct, they often pause to rest and play during the day. So much for the major branches of trade, in which this very noticeable alteration has to be recorded. In the retail houses many changes have taken place in the last two years. New shops have opened in all directions, and old ones have so completely changed as to defy recognition. Walking down the chief business street before alluded to, named *Honmachi*, visitors must be greatly impressed by the immense number of clock shops, all the more remarkable to those who are aware how an exact estimation of the value of time is not a Japanese characteristic. These clock shops are all very modern, both as to the actual date of their establishment, and the lines of their formation. Most of them have counters and seats, and all uniformly display the same make of clock. The fashion most in favour appears to be the pronounced, round, gilt-rimmed, mahogany framed clock of the kitchen species; and rather neat, very moderate, little American carriage clocks; while almost the only other fancy variety is a small clock under which a tiny China figure unceasingly bobs up and down on a slender gilt swing, or a cheaper species whose only adornment is a grotesque representation of the human face that rolls its eyes, and is doubtless regarded as the height of mechanical genius by the country folk who are generally to be found in more or less numbers "having a look round." There has also been a large increase in the number of book-shops. At many of them stray copies of English works may be met with. The foreign library and chemist shop combined is a branch of Maruya & Co.'s business, and is generally in great request either for drugs or literature.

There are several large *saké* destilleries, which, since the Osaka innovation of distributing carts, and since a reduction was effected in the price of the liquor, have largely inceased their business. The town is perambulated by hundreds of little covered hand barrows ringing a species of muffin bell, which penetrate far into the country around and unfortunately convey the *saké*—not always of a good and wholesome quality—to those who would otherwise perhaps never taste it. Being so near the coast, Nagoya is well supplied with fish, brought up from Atsuta partly by the jinrikisha which come in every morning to occupy city stands, and partly by some very unconventional waggonettes which run between that port and the town, and convey passengers to the outskirts of Nagoya in various direction. Nagoya is by no means a show place for Temples, but there are at least two among its some hundred and fifty odd shrines which are worthy of mention. One is the Honganji at which His Imperial Majesty stayed during his visit last Spring. It is a fine specimen of wood carving, and is said to be about 80 years old. The other is smaller and less important, but by far the more pleasantly situated, and has moreover extensive grounds and avenues and tombs which lend at once a wierd and picturesque effect, especially by moonlight. It stands, too, on one of a range of low hills from which the Bay of Owari can be distinctly seen gleaming in the distance dotted by sails. It commands a complete view of the glorious panorama of mountains that encompass the city on every side, and finally a birds' eye view of the city itself. To return once more to the beautiful hills, I must not forget to mention that the most majestic and prominent feature in the range is O Hakisan, whose formation is remarkably similar to Fujisan. I am told that it ranks next to Fuji in altitude, but unlike Fuji it is only at this season covered with snow. On all sides white peaks can now be seen which a week or so since were scarcely noticeable, and bitter winds are sweeping over the plains, giving promise of sharp weather for the next three months. Yet Nagoya is a mild spot in winter and something a little more than hot in summer.

I think it is not generally known that Nagoya possesses a Museum, which, as a collection of all the various manufactures of Aichi Ken, is very interesting, but leaves room for regret in that it partakes so realistically of the having-been-buried-and-dug-up again air generally considered essential in Museums, and also in that porcelain is not more worthily represented.

The foreign community here has been gradually and steadily increasing, till in all there are now 33, including children, and with their number has also increased the spread of the English language till in many stores, and two of the hotels, young men can give information and receive orders from foreign travellers in the latter's language. Six different denominations and missions are represented here, and the amount of education that each is providing in its individual school is of very considerable importance; moreover from its low charge, it reaches a class of girls and boys not in a position to pay the fees of the Government Schools, or too old and too well born to frequent the Common School. The Canadian Church and the Roman Catholic Mission are working almost side by side in one of the quietest parts of the town. The latter, having been in the field considerably longer than the former, has lately been enabled to build a substantial school-house, and a belfry with a brightly tinted cross surmounting it, whose clear deep toned bell clangs cheerfully at certain hours and brings a thrill of "home" in its familar sound. The Canadian Missionaries hope to have their unobtrusive but earnest labours rewarded by a church and school-house before long, but as is too often the case, funds are not at the moment forthcoming. However, without either of these aids the work is going on, and much is being acheived with but little show.

Another successful but churchless band of workers represent the Southern Presbyterian Mission of America, and they also look to being able to build in due time. For the present, however, they are carrying on a boy's and girl's school, the latter presided over by a lady formerly many years in China, and both including on their staff first class teachers from the Capital and Kyoto, besides foreign instructors, and comprising in their edutional programme all the studies considered desirable for a thorough practical education apart from the teaching of Christianity, which of course pervades the whole. The American Methodist Episcopal Church, an ably supported and apparently thriving Mission, has, happily, for its representatives in Nagoya a doctor, not of divinity but medicine, who but recently came to supply the place of the late Dr. Long, D.D. This Mission built a church some eighteen months ago, its spire being a landmark for miles round. It will not be the only landmark of the kind, however, for very long, for the Protestant Methodist Mission is just completing a very fine building as school-house and missionary dwelling, which when finished will be succeeded by a church. If this latter is on the same substantial lines as the school, it will prove a handsome addition to the town. Both these latter missions have growing schools, for girls and boys, from whom they glean much encouragement that their labour is not in vain. As it is with the Nagoya mission field, so it is doubtless with all the foreign communites throughout the country. The amount of English instruction scattered by their means alone must be far greater than is generally supposed.

Your obedient servant, A. M. S.

## *LETTER FROM SAN FRANCICO.*

(From our Special Correspondent.)

San Francisco, December 18th.

Congress has been two weeks and a half in session, and present indications point to a fruitless session. The Republicans are driving the Force Bill through the Senate with whip and spur, but it is hardly thought it will command a majority in the House; the latter body wrestled for a while with an apportionment bill, and as there was a disposition among the majority to meet the views of the minority, it commanded a large vote. Unlike the President, many administrative leaders in Congress are disposed to admit that the recent elections meant something, and that politicians who expect to live cannot afford to disregard so emphatic an expression of the popular will. Mr. Harrison sits serenely aloft, unconscious of the ebb and flow of public opinion; his course is sped; but gentlemen who have a future are disposed to trim sail when the wind changes. It was perhaps a happy thing for his party that the President should have proved his indifference to passing events. He set his followers an example to avoid. A man of larger calibre might have suggested a plausible course, which led to danger. Mr. Harrison merely ignored the popular verdict, and went on with his quips and his conceits as if no rebuke had been administered. The result is that his own party realises how unfit he is to lead them, and they treat him with contempt.

There is a possibility that the steamship subsidy bill may be taken up, and passed in some shape or other. A committee of the House recommends a subsidy to be paid for each mile sailed by vessels which, in case of necessity, might be used as a supplement to the national navy, either as cruisers or transports. This is in imitation of the English plan, and in opposition to the plan of those who hold that any aid extended to steamships should take the form of pay for carrying the mails. It is not unlikely that such a measure might pass both Houses. If would naturally commend itself to the protectionists, and the example of Great Britain would reconcile a number of free traders to its support. The broad fact that Great Britain has got three-fourths of the foreign trade of the South

Digitized by Google

American and Asiatic countries on the Pacific, while the United States, which have a seaport far nearer these countries, have less than one fourth, is worth, to most men, a bushel of theories. Meanwhile, pending our consideration of the subject, Chile has incorporated a company with a large capital which proposes to run steamers northward from Valparaisó, probably as far north as San Francisco; this will make five steamship lines between the capital of Chile and the isthmus of Panama, not one of which flies the American flag.

Since I wrote, we have had a war. It is not absolutely certain that it has ended, though it probably has. I alluded, in my letter of Nov. 29th, to the restlessness of the Indians in the country lying between the Rocky Mountains and the Missouri Valley. Some ten or fifteen days ago, the military authorities became satisfied that the dances and the inflammatory appeals of the medicine men would end in bloodshed, and the sooner a blow was struck the better. General Miles, who commands the Department, felt convinced that the head and front of the movement was Sitting Bull, the Sioux chief, who commanded the Indians at the Custer massacre. He made his capture his objective point. Sitting Bull was known to be encamped with a considerable force of bucks on the bank of the Grand River, a confluent of the Missouri, a few days march south of Bismarck, Dakota. Miles concentrated a force of mounted Indian scouts, cavalry, and infantry, and started them from Fort Yates. They marched at midnight; the night was dark and bitterly cold. It was all the men could do to keep their feet and hands from freezing. Shortly after dawn, the Indian scouts reached Sitting Bull's camp. They charged into it, made for the chief's teepee, tore him out of bed, and set him on a pony. The old chief roared to his young men to rescue him, and a shot laid low the scout who held his horse. Then the scouts opened, and a number of Indians, including Sitting Bull, fell at the first fire. As the smoke rose, the Sioux discovered that they out-numbered their assailants, and began to use their Winchesters with effect. But at that moment the cavalry, which had come up at the gallop at the sound of the firing, made their appearance on the scene, and they quickly routed the enemy. The Indians ran up Grand River in the direction of the Bad Lands—a lava desert spreading over part of Montana and Dakota—and there the inclement weather and the want of food will end their struggle.

The financial trouble at the East is not over, and every day brings a longer list of failures than is pleasant to contemplate. Among the chief sufferers are the woollen and steel manufacturers who reckoned to make fortunes out of the McKinley Tariff. Ammidown, the President of the Manufacturers Protective League, who begged Congress for a little more protection to enable American labour to hold its own against British pauper labour, and to off-set the baleful effects of British gold, has no longer any reason to use his name as an interrogatory. He is down, and no mistake. So is Delamater, who ran for Governor of Pennsylvania, and declared that he would stand or fall by the new tariff. He has fallen, and his bank is expected to pay twenty cents on the dollar. The East is full of manufacturing concerns which owe more money than they can pay, and which were bound to fail sooner or later. They put up the cash to elect Harrison, and pooled their issues with politicians to get a tariff which would legislate coin into their pockets; and now they are going where such schemers always go.

The transcontinental railroad companies have taken another step toward consolidation. They propose to place all the companies west of the Missouri under the control of an advisory board. The plan will probably fail, as all voluntary compacts between rival enterprises fail. Somebody will cheat, and the advisory board is clothed with no authority to call him to account. But the new arrangement is a step toward the consolidation which is inevitable. Sooner or later, all the main lines of railroad will pass into one ownership, and then there will be no more railroad wars, and no fluctuations in freights to upset the calculations of merchants. But that is a long way ahead. The first thing an American community wants is a railroad to supply it with transportation; when it has got it, the next thing it wants is to rob it. For many years the test of patriotism and public spirit in this, as in other States, was animosity to the transportation interest.

Mr. Harrison has at last plucked up courage enough to remove Mizner, the U.S. Minister to Central America, who authorized the capture of Barrundia under the American flag. Mizner has been recalled and his successor appointed. Commander Reiter of the Navy, who was in command of the *Thetis* and *Ranger* at San Jose when the outrage occurred, has been invited to return home and account for his conduct. He will probably be court-martialed. The American people have always been sensitive on the subject of outrages to the flag. When the President took no steps in the Barrundia affair, it began to be feared that the Republicans were as deficient in pluck as they are in honesty. We now note that this opinion did them injustice. Mr. Harrison has done at last what he ought to have done at first. True to his theatrical instincts, he kept his intention to remove Mizner a profound secret; the first the public heard of it was the announcement in the message that he had been removed. Thus little Benny got "a scoop" on the newspapers.

Another verdict in a seduction case shows that the market for feminine purity continues firm, if not buoyant. A servant girl in a Los Angeles hotel allowed herself to be led from the path of virtue by a wealthy cattle dealer. She brought suit, and although the defendant proved that he was as much sinned against as sinning, a jury gave the plaintiff $25,000 damages, with which she can make a fresh start in life under agreeable conditions. I am filled with admiration when I record these evidences of our high morality. Hardly a week passes that some vile seducer does not pay the penalty of his crime either in person or in purse. The other day two young people, a girl named Panhorst and a Jew named Goldberg, who had been loving not wisely but too well, quarrelled, and the lady perforated the gentleman's stomach with a 32 calibre bullet, whereof he died incontinently. She was brought to trial, and though it was proved that she had been in the habit of absenting herself for a week at a time from the parental domicile to share her lover's room, she was triumphantly acquitted, and sent forth to ruin other men.

Impurity, or the semblance of it, even in art, makes one's blood boil. At Kansas City, last week, an indignant moralist destroyed a fine painting by Bouguereau, because the nymphs were inadequately supplied with petticoats. In New York, Authony Comstock, who has charge of public decency, announces that he is going to undertake a crusade against improper books. He proposes to begin with some of the writers of erotic novels, who are chiefly women. Most of these persons have already undergone their punishment, in the neglect which is bestowed on their works. Such writers as Mrs. Atherton have learned that impropriety will not redeem dullness; they are not likely to sin any more, simply because they will find it difficult to obtain a publisher. Whether we are destined to follow the French in their extraordinary development of macaronic literature is an undetermined question; but the chances are against it. The question is going to be settled one way or the other. Within the past year, translations of "Madlle. de Maupin," "Madame de Bovary," and similar books, adhering closely to the original text, have been published in this country, and are for sale at the book-stories. "La Terre" was expurgated in the translation; but Boccaccio is for sale everywhere; every library contains the works of Defoe, and several spicy tales by Guy de Montpassant have appeared in English. If the crusaders against licentious books are in earnest, here is plenty of opportunity for their work. There is, moreover, every chance that a jury would deal severely with writers who transgress the limits of good taste. Whether the American people are moral or not, in their heart of hearts they certainly object to ostentatious immorality. There never has been an instance of a licentious newspaper succeeding in this country, though a number have been started. And it is safe to say that the last Christmas edition of *La vie Parisienne*, which had such an enormous sale in France, would have been seized by the police in this country before it had been on sale for an hour.

## *THE ALLEGED MISCONDUCT OF A FOREIGNER AT YOKOHAMA STATION.*

Joseph Gama was accused on Monday before E. J. Pereira, Esq., Portuguese Vice-Consul, at the instance of Shimidzu Oshu, station-master at Yokohama Station, with having unlawfully entered the ladies' waiting-room at the Yokohama Station on the 15th Nov. and indecently addressed a lady there waiting, requesting her to accompany him to Hodogaya in a first class railway compartment, and promising if she would accede to give her a certain sum of money and certain gold ornaments; with having, instead of leaving the room as requested, caught hold of one of the lady's hands and endeavoured to force upon her a certain number of bank bills, thereby infringing the railway regulations and insulting and indecently assaulting the lady aforesaid.

The accused pleaded not guilty.

Mr. Litchfield and Mr. Uchiyama were for the prosecution, and Mr. Lowder defended the accused.

Shimizu Oshu deponed that on the 15th of last month Mr. Yoshino called him and told him there was a foreign man in the ladies' waiting-room, who refused to leave. He asked witness to go with him to the waiting-room. Witness did so, and saw the accused standing outside the general waiting-room. Witness asked him (Mr. Yoshino interpreting) why he did not leave the ladies' waiting-room when requested. The accused answered that he had business at the railway station and that he knew all about the regulations, but would do as he liked. Witness did not understand what he (the accused) said, as he spoke in English. He only understood what Mr. Yoshino interpreted. Witness, through Mr. Yoshino, asked the accused for his card, but he refused to give it to witness. Witness then went away, having other business to attend to, and could not say what the accused did after that. Witness did not see any indecent act on his part.

Cross-examined—The seventh article only provides that a person entering the ladies' waiting-room shall be expelled. In the case of foreigners we have the power to eject them, but the rule is not generally enforced. We usually ask for their card and address.

Yoshino Kinosuke deponed that shortly after noon on the 15th November he met in the station Shirokura-Cho, who was then coming back from the platform. He had known her for two or three years. She lived at Negishi. He asked her how she had not gone to Hiratsuka by the last train, and she said she had got into the Tokyo train by mistake, and asked what she should do. Witness said she had better wait in the waiting-room, and he would send a telegram to the gentleman who was waiting for her. He sent the telegram, and then caught the 12.45 train for Tokyo. As, however, he had seen the accused following the girl before he left, he thought the matter over, got out at Kanagawa, and returned to Yokohama. The girl seemed excited when he left. On returning he went upstairs to ask the servant what had transpired during his absence, and just then the girl sent for him. He went to the waiting-room, where he saw the accused sitting on the same bench with the girl, his left arm towards the girl's leg, and the girl looking down. He did not notice whether accused had anything in his hand or not. As soon as witness entered, the accused sat up properly, but did not leave his seat. The girl was not speaking to him. The girl at once rose and went with witness to the fire-place. She told witness she was in trouble, and had asked the servant to call him some time ago. The foreigner had bothered her by offering her money to go with him to Hiratsuka. Witness turned to the accused and told him to leave as this was the ladies' waiting room. The accused left the room. Witness went to report the matter to the station-master, but could not find him, and on returning to the waiting-room found the accused again there, but this time sitting apart from the girl. He again reminded accused that the room was only for ladies, but accused said he was waiting for ladies and would not go. On witness asking why he did not leave, accused said it was no business of witness, and he would do as he liked. Witness stated that he was a railway official, and required him to leave under the railway regulations, but he still refused. Witness then called the station-master, who went with him. They found the accused standing outside the general waiting-room. The station master, through witness, asked him why he went into the ladies' waiting-room: accused answered that he was waiting for ladies; that he knew all about the railway regulations, and that he should do as he pleased. He refused to give his card or name. Witness afterwards went with the lady to Hiratsuka to protect her.

Cross-examined—I know that the girl is the kept mistress of Mr. Aldrich. She has been so during the three years that I have known her. I am a railway official attached to Mr. Aldrich's office, but I am not employed in any way at his house. I did not at first know that the girl was employed by Mr. Aldrich. I know that she was going to Hiratsuka. Mr. Aldrich himself went by the train that she missed. I telegraphed, not to Mr. Aldrich, but to the Hiratsuka station master. Up to the time I got into the Tokyo train the girl had not made any complaint to me. When I entered the waiting-room the accused's elbow was on the girl's knee; she did not answer the accused when he spoke. I reported the matter to Mr. Aldrich, but did not at first tell him who the molested lady was; afterwards I did. He knew the lady was his own mistress. I took the girl to Hiratsuka out of private friendship, not in an

Digitized by Google

official capacity. The regulation preventing men from entering the ladies' waiting room is the 7th. Men have entered the room with their wives or sisters, but on being asked have always left.

Here the following letter was read by Mr. Lowder:—

IMPERIAL GOVERNMENT RAILWAYS,
Secretary's Department,
No. 228. November 17th, 1890.
THE DIRECTORS, GRAND HOTEL, LIMITED,
Yokohama.

GENTLEMEN,—I regret extremely to have to prefer a serious complaint against a person in the employment of your Company, who is in the habit of coming to the Yokohama terminus to meet the up mail train from Kobe. It appears that being known as the representative of your establishment, he has been permitted to go upon the platform, without being provided with a ticket, and on Saturday the 15th instant, he attended and went upon the platform as usual. Just prior to the departure of the 12.45 p.m. up train for Tokyo, he took his seat in a second class carriage, and placed himself beside a Japanese lady who had apparently attracted his attention; and proceeded to annoy her with his undesired conversation, to which she paid no heed. Just as the train (12.40 p.m.) departed for the Tokaido line, an official asked your man for his ticket, upon which he said he was going to Shimbashi, and would pay upon arrival there, which was acquiesced in; but this attracted the notice of the lady, who then discovered she was in the wrong train, and at once alighted; after conferring with an official, she decided to wait and go by the next train to Hiratsuka, for which place she held a ticket, and proceeded to the ladies waiting room, whence she was followed by the man in question; who had also alighted, and abandoned his projected journey to Tokyo. The man also entered the Ladies' Waiting Room, and proceeded to inflict upon the lady the most offensive attentions and solicitations, offering her money, and asking permission to travel with her as far as Totsuka in a first class carriage, for which he desired to exchange her ticket. To what length he would have proceeded it is impossible to say, but fortunately a gentleman employed in my office happened to pass, and observed the man in the Ladies' Waiting Room. Suspecting something, and observing the obvious distress of the lady, he interposed and ordered the man out, which request the person slowly obeyed. Shortly afterwards passing again he observed the same man resuming his former importunities, and again requested him to leave, but he then declined to do so, and an appeal was made to the Station-Master, who came and found your porter just outside the room door. The Station-Master requested the man to leave, which, however, he refused to do, and my Japanese clerk had to remain for the lady's protection until the 3.25 p.m. train left for Hiratsuka.

Such scandalous and outrageous conduct as this cannot of course be tolerated, and I fear there is no alternative but to prosecute this man for his brutal misconduct, but I am unwilling to drag the name of your Hotel into a police court in connection with such disgraceful behaviour if it can be avoided, and I therefore offer you the alternative of summary dismissal with the understanding that he is not to be re-employed by you.

I will thank you for an early reply, and the full name and nationality of your man, if I am to prosecute him.

I am, Gentlemen, yours faithfully,
(Signed) A. S. ALDRICH, Secretary.

Ogura Michimasa, an office boy in Mr. Aldrich's office, deponed that he was working upstairs on the 15th November, when the porter told him that a lady wished to see him. Witness went downstairs and met the girl outside the waiting-room. She asked witness to call Mr. Yoshino. Upon asking for Mr. Yoshino at the station master's room he was told that he had gone to Tokyo. Witness told the lady where he had gone and went away. He was, however, again called by a porter and this time he met Mr. Yoshino at the top of the stairs, and told him about the lady. Mr. Yoshino went down to the waiting-room, and witness followed him to the door of the waiting-room. He did not hear what was passing between Mr. Yoshino and the lady, and left shortly after. He did not at a previous examination state that he had gone before Mr. Yoshino to the waiting-room. There were two sofas, continuous in one, in the waiting-room.

Shirokura Cho deponed that none of the previous witnesses were related to her. She was employed as a maid servant. On the 15th November she was going to Oyama by way of Hiratsuka, and left No. 70 to go to the station. She made a mistake as to the trains; this was the first time that she had gone to Hiratsuka, and she knew nothing of the Tokaido trains. At the station she saw the accused, who, while on the platform, asked her where she was going. She did not answer but entered the train. The accused followed her, looked in her face and smiled. She found she had mistaken the train and went out again, going to the station-master's office to send out a telegram. She had said nothing to accused, but sent for Mr. Yoshino. She had known Mr. Yoshino for three years; made his acquaintance at Negishi. She did not know him previous to entering her present employment. She first knew Yoshino four years after she entered her present employment. She was 20 years of age. She had been over seven years in her present employment. Two telegrams were sent; the first being to the effect that she had missed the train. She did not know whether accused followed her, but he left the train soon after she did. Yoshino told her to go to the ladies' waiting-room. When she went there the accused was in the general waiting-room, but he followed her into the other room. He asked her where she was going and she answered Hiratsuka, and said she had missed her train. He said he would go as far as Totsuka with her. She told him she had a second-class ticket, but he said he could get it changed for a first-class ticket. She then left to send off another message and accused followed her. She sent for Yoshino, but, learning that he had gone to Tokyo, went back to the waiting-room, the accused following her and asking her to go to Totsuka. She asked him who he was, and he said he belonged to the Grand Hotel. She then asked if he had not a mistress named O Waka San. He said no. She then said he belonged to No. 20, but he said he belonged to No. 5. As he would not go she told him her master was Mr. Aldrich, and he might not like to see him there, but accused said he did not known him and it did not matter. She told him she did not desire his company, on which he pulled out his pocket-book and took out four dollars, which he offered to her. She told him she was not a prostitute or a tea-house girl, and could not take his money. He said he understood that, but still pressed the money on her. He also offered her some rings which were on his watch chain, and while she was refusing these Yoshino came in. She informed Yoshino what had taken place, and accused in the meantime left the room. Yoshino left her for a few minutes, on which accused came up smilingly and asked her where she lived. She said Kitagata, near the butcher's. He asked her to write out her address, but she refused, alleging that she could not write. She asked him for his address, but he would not give it to her, and she snatched the Grand Hotel card from his hand, with the intention to give it to Mr. Aldrich. Yoshino came in while he had the pencil and paper in his hand and said something to him. In the waiting-room accused caught hold of her hand and stroked her face. Her reason for not making a complaint at once was because she wanted to do so to Yoshino.

Cross examined by Mr. Lowder—Yoshino does not dress in uniform. When he came into the room Yoshino did not say anything to him (accused) as he was speaking to me at the time. I am employed by Mr. Aldrich. By saying that I am employed as his servant, I do not mean that I am his mistress.

Mr. Lowder here asked a question as to whether witness was the mistress of Mr. Aldrich.

To this Mr. Uchiyama Rossetsu objected.

Mr. Lowder contended that it was extremely relevant to the defence to show whether this was an honest virtuous girl in the position of a maid servant, or was a kept mistress. It made all the difference in the world as to the amount of credibility to be attached to her evidence and to the evidence of the accused.

Witness (to the Court)—I declared at a previous examination that I was the mistress of Mr. Aldrich. I now say that I am not.

Question by the Court repeated—I have told the truth now. I am not called Mr. Aldrich's mistress, but I sleep there.

To Mr. Lowder—I sleep with Mr. Aldrich.

Have you not been in the habit of sleeping with Mr. Aldrich since you were 13 years old?—I went there in December, when I was 14 years old.

If you were 14 years old in December, how can you be 20 next February?—I was born in the 3rd year of Meiji, in the month of February. I am therefore twenty years and a little over. I was twenty in February last year.

What age were you when you first went to live with Mr. Aldrich?—I went in December in my 14th year.

You have been living with him in adultery as his mistress all that time?—For one year, while Mr. Aldrich went home, I went to a school.

Had you ever seen the defendant before the 15th of November?—That was the first time I had met him. As soon as he told me he belonged to No. 20 I knew that he was the master of O Waka San. I knew from a servant who had gone from me to O Waka San that her master was a runner of the Grand Hotel and I guessed the accused to be her master. When I went into the train the accused came and sat close to me and smiled. I did not smile in return. He followed me and asked me what was the matter, on which I told him I wanted to send off a telegram. He did not offer to send it for me. I did not think it was very kind of him. I did not understand whether he meant it as a kindness or not. I did not think whether it was a kindness or not, but I thought it very queer that a person I had met for the first time should act so. I did not think him unkind, but thought him rather funnny. I thought he was going to insult me. I believed he thought me a prostitute or a tea-house woman, and I was therefore excited.

Did you not say to the accused that your only objection to entertaining his proposal was that Waka might be jealous?—I told him that as he had a mistress called Waka and I had a master called Aldrich, it would not be right to go to Totsuka with him. Apart from Waka's jealousy, I would not go to Totsuka in a first class carriage with a stranger. I did not tell the prisoner where he could find me. When I am not at Mr. Aldrich's house I live at Negishi. The accused came to my mother's house at Negishi in my absence and asked for me. I only told the accused that I lived at Kitagata. I did not tell him my name. He found out from the *jinrikisha* men near No. 70 where I lived. I suppose the accused and I would be together in the waiting-room for about one hour.

Did you during that time cry out to attract the attention of people?—I pretended to cry, and said, "*iya, iya, desu*," and hid my face in my sleeves, on which he begged my pardon. I did not call out. I was not quite one hour there. I told him all the time that he had better get out. I went out twice to call Yoshino and on each occasion I went back to the waiting-room. The accused went out after me on each occasion. I did not tell him I was going out to call Yoshino. I know that the prisoner is accused of having indecently assaulted me. I now say that I was put to shame.

Will you swear that you were indecently assaulted by the defendant?—He annoyed me. My feelings were wounded. I am not a prostitute or tea-house woman, and I was excited.

Mr. Uchiyama asked that the word *hadzukashi merareta* should be put down.

Mr. Lowder had no objection to that, but pointed to the difference between an indecent assault and the witness's feelings being simply wounded.

Cross-examined—I was not indecently assaulted (*gōkan ga nai keredomo*) but as he offered me 4 *yen* I was annoyed and wounded in my feelings.

To the Court the Interpreter stated that *hadzukashimerareru* meant indecent assault.

Mr. Lowder—Oh, no. It is to cause to be annoyed.

Mr. Uchiyama concurred in this, and pointed out that the witness did not know what was the Japanese equivalent for an indecent assault.

Considerable discussion followed, in the course of which Mr. Litchfield and Mr. Uchiyama both stated that they appeared for the Railway Department, the Court stating that the complaint by the Public Prosecutor was signed by him while the complaint of the station-master was simply a translation forwarded by the Public Prosecutor. The Court could not make two distinct cases of the charges. The accused was charged with infringing regulations No. 7 and No. 8.

The case was adjourned till on Tuesday at 1.30 p.m.

---

The hearing of the charge against Joseph Gama, before E. J. Pereira, Esq., Portuguese Vice-Consul, continued.

The cross-examination of Shirokura Cho was resumed. In answer to Mr. Lowder witness stated:—

I have a license to live with a foreigner. I do not know whether I had a license when I went to live with Mr. Aldrich. I was told by the registration authorities that I must have a license to live with a foreigner. I don't remember the date, but it was after I went to live at No. 70. My license to live with a foreigner was taken out when I went to live with Mr. Aldrich. I took out the license myself.

Re-examined—I was born in the 3rd year of Meiji, in the month of February. I was not acquainted with the accused's mistress.

Some discussion arose as to the question of whether the counsel for the prosecutor could examine the witness as to the *jinrikisha* man who was stated to have informed the accused as to her mother's residence.

Digitized by Google

Re-examination continued—When accused spoke to me I thought him troublesome. I was not pleased by his conversation. This closed the case for the prosecution.

The defendant then stated—I saw the girl at the Railway Station on the 15th November. I did not speak to the girl at first. At length I said *Konnichi wa*, and she replied *Konnichi wa*. I asked where she was going and she said Shinokura or Hiratsuka, I dont know which. I asked if I should go with her, and she gave an evasive answer. The Kobe train came in and there being no passengers I prepared to return home, when, passing her carriage, she looked out and laughed. I went in and spoke to her about various things, about the Tokyo Races, when the Tokaido train went, and she then said that she was a *baka* for having allowed the train to go. We went together to the ladies' waiting room. I asked if I could go to Totsuka with her, and offered her money. She said she did not require money for sending a telegram. I offered to change her ticket, but she said she was afraid to go as I would not keep her. I said we would see about that afterwards. She said I could not keep her because I had a girl; and I said I had done. She spoke of O Wakasan, and I then lost all interest in her. Yoshino coming in and going out again I asked her what was the trouble. She said nothing. Yoshino came back and asked me what I wanted. I said nothing particular. He told me to get out, and I said I had done nothing wrong. He then threatened to call the police and went out. I went out after him. He brought the station master, who said he did not want to talk to me at all, but I followed him to his office and begged his pardon. I told him Yoshino seemed to be jealous. He laughed, and said "That's all right; don't fool with the girl and go home."

To the Court—I did not assault the girl at all. When I asked for her addess she said if I wanted her I could go to her mother's house opposite the Rifle Range. Afterwards, having received instructions from the directors of the Grand Hotel, I went to her mother's house, and, describing her, asked where she was in order that I might apologise to her. A *jinrikisha*-man told me she was living at No. 70, with Mr. Aldrich, and that gentleman being pointed out to me one day, I went up to him to apologise to him, but he ordered me away.

Cross-examined—I was in conversation with the girl for about an hour. I had not met her before to my knowledge. She looked at me and laughed and I therefore spoke to her. I have been more than 16 years in Yokohama I have never been in this Court before. Aldrich's name was not mentioned at the Station. I had no idea when I spoke to her that she was Mr. Aldrich's mistress. She did not seem annoyed with me at all, but on the contrary left her bag with me. The door was open all the time, no one came in while we were there. She was quite pleased with the conversation, but said if any one saw us going out in the train I would have to keep her. She never spoke to me about Waka being jealous; but she spoke of Wakamatsu, my girl. She herself said I could not keep her. She proposed that I should keep her, but I said I should see about that by and bye. Yoshino was not in uniform when he came in. He gave one the impression of being a friend of the girl.

To the Court—The Station Master told me that the witness Yoshino was an interpreter. The witness Yoshino seemed to be a friend of the girl, and I asked the Station Master who he was. I do not know about the Railway Regulations. I have seen gentlemen often going into the Ladies' Waiting Room. I have never seen gentlemen prohibited from going in by railway officials.

To the Court—When Yoshino came the second time he did not tell me that he was a railway official. He told me to get out; and said if I would not go out he would call a policeman. I had never seem him before. I have been going to the railway station for six months more or less punctually.

To Mr. Lowder—I have never read the railway regulations at all. I don't know about Regulation No. 7 or No. 8. I have never seen them in Portuguese and my notice has never been called to them. I have always been allowed to go on the platform. I have even gone to Totsuka, paying at the other end. Up to this time I had never any trouble with the officials. I am allowed to go on the platform, because I am known as belonging to the Grand Hotel. I first saw this girl on the platform. I did not know her before. I can read a little English in print. I did not see any notice in the ladies' waiting-room "For Ladies only." I did not take much trouble to go to Totsuka with her. She told me I could not keep her, as I had a girl. She was not the seducing party. I made her offers. When I say that I had all my trouble for nothing, I mean that I found that she knew me. I had thought she did not know me.

Mr. Lowder then addressed the Court. Quoting Article 7 of the Regulations he said there were three offences specified there; being in a state of intoxication, committing a nuisance, or an act of indecency. Neither of those offences had been committed by the accused. The fact of the case so far as he could gather from the way in which the prosecution had been conducted was that the person whose mistress the witness Cho was, finding that the threatening letter he addressed to the Grand Hotel Directors was not acceded to, cast about to find if there was not something in the regulations on which he could hang this case. It was a forced construction of Art. 7 to try to bring any act that his client had committed under it. The witness Cho said that as for being indecently assaulted she was not indecently assaulted, but she was annoyed and made to feel ashamed. That could not by any construction whatever be brought within the purview of this regulation, and even if it could the testimony of Cho was not entitled to any credit in view of the defendant's evidence, which was not shaken in cross-examination. Her conduct reminded one of the famous riddle in Shakespeare. There were three daughters of a King, and they were neither wife, mistess, nor maid. What credence was to be put in a statement of that kind, whether it came from the daughter of a king or the daughter of a woman who, when her child was at the tender age of 13 or 14 years, sold her into prostitution? How could they credit the statement of a girl who had such an education, such a bringing up, and such a mother? Counsel did not blame her for any of the evidence that she had given, but he did blame that person who had instructed her to give the evidence that she had given. If she had been allowed to tell her own story he was certain it would have been found that the story of the defendant would have been found to be correct and she would have been found to be one of that class of women with whom people in Japan were familiar by reading about them, who were to be seen in the streets plying their trade and whom the prosecution had the impertinence to describe as a "lady." Since her fourteenth year she had not been a lady; her mother was not a lady, and yet the prosecution came forward and complained that a lady had been insulted. Let the Court just look to what this might lead in the present state of agitation in the minds of the Japanese against foreigners. Just consider the anti-foreign feeling existing throughout the country; was it not apt to be strengthened by these exaggerated charges. And all this was done by whom? By an employé of an employé of the railway station, Mr. Aldrich, one in Japanese service, in order to stir up bad blood and strife against foreigners. He called it nothing less than disgraceful that upon the evidence before the Court such a complaint as this should have been based. Counsel held that it had not been proved that Art. 7 of the Regulations was applicable to Portuguese subjects, or that it had been published at the Railway Station. He described Yoshino as the surreptitious lover of the witness Cho, and contended that if Cho had not happened to be the mistress of the foreign secretary of the Railways, it must be evident to every one now listening to him that the case would never have been dug out or attempted to be put in force. It seemed very hard indeed that this honest man, against whom nothing had ever been brought, should be made the victim of the spite and jealousy of this foreigner who chose at this late hour to try to enforce rules which for twenty-eight years had not been enforced to Counsel's knowledge. If the directors of the Grand Hotel had dismissed the accused everybody would have been satisfied, but as they would not do so Mr. Aldrich lost his temper and found himself in the position he now occupied. Having pointed out that under the 8th regulation the railway officials who permitted the offences therein described were really the blameworthy parties, Counsel went on to contend that Yoshino was not in uniform, and there was nothing to show that he was in any way connected with the railway, and in conclusion asked for the acquittal of the accused.

Mr. Litchfield said attempts had been made in an inflammatory harangue against the powers that be in Japan to bring them into ridicule in the same way that the other side had thrown broadcast during the case accusations of immorality against persons who really were not the complainants in this case and strictly speaking were not the prosecutors. If there was one admitted thing that redounded to Japans' credit it was that natives as well as foreigners could travel safely through its length and breadth without danger of insult or of improper importunity. His learned friend had tried to throw it in the teeth of the Railway Department that this regulation No. 7 had not been enforced. It had not been enforced, because no person had up to the present time attempted to use the waiting-rooms for improper purposes. Once let it be known that the Railway Department assented to the use of its rooms or its carriages as places of assignation, where women might ply their trade, and men meet or insult women with impunity, and there would be gone for ever all hope of ladies, or women, or young girls travelling free from insult or unseemly importunity. He submitted that every woman was entitled to protection from importunity unless she was actually plying her trade as a common woman. Much had been said as to the witness Cho's relations with Mr. Aldrich, but it had not been suggested that she was on the station premises for improper hire. As to the insinuation that if the witness Cho had been other than she was this would not have been brought, on that point he asserted positively that if any such complaint had been made, no matter by whom, the same course would have been taken by the Railway Department, and so far as he was concerned the same course would have been taken by him in bringing this complaint. Mr. Litchfield therefore asked for a conviction under Arts. 7 and 8 of the Railway Regulations.

Mr. Uchiyama Rosetsu was about to address the Court, but Lowder objected.

In the course of the discussion which followed, the Vice-Consul remarked that the man Yoshino was, in the petition sent to the Court, described as a railway employé.

Judgment was reserved.

## *THE BURNING OF THE STEAMER "SHANGHAI."*

The news, says the *Celestial Empire*, of the total destruction by fire of the well known river steamer *Shanghai*, belonging to the China Navigation Co., has been confirmed and supplemented in an appalling manner by the steamers that have since arrived in port from the scene of the occurrence. The ill-fated vessel left Shanghai on the 24th inst. for Hankow and the River Ports, reached Chinkiang late on the same night, and proceeded again at 4 a.m. on Christmas morning. According to the account of Mr. Kniffler, who was the only European passenger on board, all went right till about 7 o'clock on the morning of the 25th. At that time Mr. Kniffler went out on deck, clad in a loose dressing gown, to call his boy, a Japanese, and look after a couple of sporting dogs he had on board with him. He had scarcely roused the boy, and liberated the dogs, when he saw a great crowd of Chinese passengers, of whom over 400 were on the vessel, and some sailors, rushing along the deck in an apparently frantic state. Two of the sailors jumped down one of the hatches, from which one of them immediately reappeared, dragging the fire-hose after him. Mr. Kniffler's first impression was that the Captain was exercising the men with the fire apparatus, and it did not strike him that anything was really wrong for some moments, until he saw the Captain rush out of the saloon in his pyjamas, and call something excitedly into the engine-room. The hose was by this time stretched along the deck, but there was no water in it. Turning quickly to speak to the Captain, Mr. Kniffler next saw dense smoke issuing from the after-hold, and then realised that the ship was on fire. He called out to the pilot, who was on the bridge, to beach the ship, but the pilot replied "It's all right, sir," and before Mr. Kniffler could say anything else, the Captain rushed up to him again, and shouted "Save your life! save your life!". Mr. Kniffler ran to rouse another Japanese attendant he had with him, and to secure some valuable papers relating to the estate of the bankrupt Krips, of which Mr. Kniffler is the liquidator, but he could not succeed in the latter, for although it was only a few minutes after he saw the first signs of alarm, the hatches had fallen in, giving air to the smouldering mass of cargo in the hold, and the ship was fairly ablaze. Mr. Kniffler says the two Japanese were panic stricken; he had to carry one of them out of his bunk in his arms, and drop down a line which was hanging overboard into the water, calling on the other Japanese to follow. By this time the vessel had been beached near a place called E Ching (not Ichang as was first stated here), about 30 miles above Chinkiang, and the water where Mr. Kniffler got into it was three or four feet feet deep. He half swam, half waded ashore, carrying the inanimate Japanese, and on landing was surrounded by a crowd of Chinese who were lining the beach, evidently intent on plunder. The steamer was now one mass of flames from stem to stern, and all who could manage to do so had quitted her; but the Chinese passengers appeared to be paralyzed by terror, and could not do the slightest thing to save them-

Digitized by Google

selves. A great number of them had gathered on the paddle-box, where they could be seen from the shore, standing motionless, and dropping one by one into the seething flames. The conduct of the Chinese spectators was dreadful. While these on the river in boats, of which these were a great number, including a mandarin gunboat, a steam-launch, flying the Imperial Dragon flag, and a couple of dozen fishing boats passing the burning steamer, made not the slightest effort to help the poor wretches on board, or save those who had been happy enough to be able to choose death by drowning to death by the flames, and had gotten into the water, where they were helplessly drifting; the villains on shore, who appeared to be instigated in their behaviour by the district soldiery, plundered those who reached the land, stripping them of their very clothing, and in some instances, it is alleged throwing them back naked into the water while alive. Mr. Kniffler was surrounded by a swarm of those heartless villains, one of whom caught hold of his dressing-gown and endeavoured to tear it from him, while another tried to serve the Japanese in the same way; but Mr. Kniffler struck out right and left, and upset two of the ringleaders. The others then were closing in, and there would probably have been bloodshed, had not Mr. Kniffler and those with him been drawn away by some of the *Shanghai's* firemen, who had swam ashore. Some time after Mr. Kniffler and his two attendants, in company with the Second Officer and Third Engineer of the *Shanghai*, got a boat and set out for Chinkiang, but the boatmen put them ashore at a small village a couple of miles from where the *Shanghai* was beached, and left them. Here also there was some disposition to plunder shown on the part of the villagers, but the castaways got into a house, the door of which they secured, and after a little the inhabitants of the place quieted down, and even supplied their unexpected visitors with a little food, of which they were greatly in need, it being now well into the afternoon of Christmas Day, and they had having nothing to eat or drink since dinner the previous evening. In a couple of hours the *Taiwo* was seen passing up, and they got into a boat, followed her, and were taken on board, where they were treated with every possible kindness.

The *Taiwo* then steamed up to the *Shanghai* and dropped her anchor close to the burning steamer about 2.30 p.m. Captain Friend rendered all the assistance in his power, and got about 30 of the native passengers on board. When she left in about an hour the hapless ship was completely gutted, and burned down to the water's edge, presenting a far more terrible spectacle, it is said, than even did the *Paoching*, at the burning of which it will be remembered the *Taiwo* was also present, and rendered invaluable aid in the work of rescue.

The fire first appeared when the *Shanghai* was about six miles below Mud Fort, and is supposed to have originated among the cotton, which formed a considerable part of the cargo. It was by the directions of the second mate, Mr. Nicholson; that the hose was got out, and the fire pumps set working. Captain Martin appears to have done everything possible, when he was informed of what had happened. The water was kept playing on the hold, through the main hatch, until the hatches gave way, and the people were driven back by the dense smoke that issued from the hold. The Second Officer then attempted to go forward, but could not get through the dense mass of the panic-stricken Chinese. Captain Martin beached the ship as soon as he saw there was no chance of getting the fire under, and was the last European to leave the ship. The Chinese on board appeared to have first endeavoured to save some of their effects, and then, seeing how the flames had gained on the ship, behaved like panic stricken sheep, huddling together in the alley-ways, trampling each other under foot, and preventing all chance of escape for any of them. It is difficult to arrive at an estimate of the loss of life, but it is even greater than was at first supposed, for not more than seventy at the outside have been acounted for.

The *Taiwo* took off about 30, and the *Kiangyu*, which passed the *Shanghai* on the 26th ult., brought down about as many more, in addition to the compradore, who is suffering from a hurt to the ankle, and some of his staff. At that time the *Shanghai* was still smouldering.

During the next couple of days the Chinese Telegraph Office was besieged by anxious friends of the passengers in the unfortunate steamer, and the operatives have had a lively time transmitting messages.

The wreck was towed into port yesterday morning by the *Tungchow*, and is now lying alongside Boyd's New Dock.

## COURT OF ENQUIRY.

On January 5th a Court of Enquiry, consisting of Lieutenant J. Stuart, H.M.S *Severn*, President; Captain P. Harris, of the *Pekin*; and Mr. G. M. H. Playfair, H.B.M.'s Vice-Consul, was opened at H.B.M.'s Consulate-General, to investigate the circumstances of the destruction of the *Shanghai* by fire on 25th Dec. last. Mr. Tsai, the Mixed Court Magistrate, occupied a seat in Court.

The first witness examined was David Martin, captain of the ill-fated steamer, who in reply to the President stated—I was captain of the *Shanghai* on Dec. 25th. We had one steam and two hand-pumps on board for extinguishing fire. The steam-pump was connected with the engine-room. One of the hand-pumps was on the forecastle and the other was aft. The connections of the steam-pump opened on the saloon and cargo decks. The crew were exercised at fire stations once a month. They were last exercised on Dec., 1890, while at Hankow. The pumps gave a good flow of water on that occasion. We had four boats. They were ordinary ship's life-boats and quarter-boats. The life-boats would hold 80 people each, and one of the others would hold 30 and other 26, They were all stowed in crutches, except the starboard quarter-boat which always swung out on davits. The tackles were always kept rove. It would, under favourable circumstances, take about five minutes to get them out. We were not in the habit of working our boats at regular intervals. They were last tried about a month before the fire. They were only lifted out of the chocks and put back. We have special regulations regarding inflammable cargo; we don't carry it at all. When the fire bell is rung the crew go to the boat stations; some of the officers and spare men are then stationed at the pumps. If the pump is a steam-pump, four men and an officer are stationed at it. One engineer and firemen are stationed at the starboard fire main. One or two sailors and the compradore's people are stationed to run the hose along. None of the Europeans are stationed at the hand pumps. With the exception of the men who are stationed at the pumps, all the remainder should go to the boats when the fire bell is rung. No European officer is responsible for stowage of cargo. The chief officer was present when the cargo was taken in. Coolies who are working cargo on board are not allowed to smoke. There were notices posted to this effect, both in Chinese and English. This order was enforced by the chief officer. The cargo was put on board by coolies and stevedores, who live on shore. At the time of the fire, cargo was in the lower hold and between decks (cargo-room). The cargo consisted chiefly of cotton, piece-goods, sugar, oil, opium, etc.—ordinary river cargo. On the last occasion of stowing cargo before the fire, at Shanghai, the chief officer was present. At Chinkiang cargo was put out, but none was taken on board. The hatches were not secured. The cargo room had doors which were shut and locked. There was no cargo which was not locked up. The ship was drawing 10ft. forward and 11ft. aft when she left Chinkiang. The deck crew were two officers, fourteen sailors, a carpenter, and four quartermasters. There were three engineers, and fourteen engine-room hands. At the time of the fire there were on board 450 Chinese, one European, and two Japanese passengers. There is no restriction of the number to be carried. The Chinese passengers were in the Chinese saloon on the upper deck, from the after part of the engine-room bulk-head to the taffrail. There were some inside the cargo room, but none below hatches. It is usual to carry them in the cargo room when the Chinese saloon is full and when there is space in the cargo room. Manchester bale goods were in the cargo room. There was no cotton in the cargo room aft, in which the Chinese passengers were. No passengers were ever carried in the forward cargo room. The passengers in the cargo room were not allowed to smoke. Two of the compradore's staff were set to watch the passengers and prevent them from smoking. We left Chinkiang on Dec. 25th at 4.15 a.m. The alarm of fire was first given at 7 a.m., when we were 25 miles above Chinkiang. The second pilot and an apprentice pilot were then on watch on the bridge. The chief pilot was a Chinese, but the second was a European. I first became aware of the fact that there was a fire through one of the sailors coming forward to the hose. I told the pilot to signal to the engine-room to stand by. Then I went aft to the fire. The bell had previously been rung, and as I went aft the hose was being taken along. No water was procured through the fire-main, because the Chinese passengers was standing on the hose, and the water could not get through the hose without going through the Chinese saloon. There is one steam connection on the cargo-deck, one on the alley-way of the Chinese saloon, and one on the upper deck. The hoses were kept on reels close to the connections. The hoses were attached and led along the alley-ways every morning. They were of sufficient length to reach to the ends of the ship. We could not get at the connection in the cargo-room, on account of the fire. The Chinese passengers were not in this part of the cargo-room. There was no time to procure water from the upper deck connection. It takes two minutes to get water from that connection, if there was no obstruction. The hose from this connection could only come through the Chinese saloon. We did not use the hand-pumps, because as we could get no water through the steam fire hose, which was much more powerful, we could not hope to get any from the hand-pump. We could have unscrewed the hose of the upper deck connection, and screwed on another, but we should still have had to take it through the Chinese saloon, and we should not have been able to get water through it. There was not time to take it over all, or outside the ship. The hand-pumps were not manned. There were two dozen firebuckets. They were not used, because there was such a crowd of passengers that the buckets could not be got at. The stern of the ship was about 20 feet from dry land when beached. At the time of the fire the ship was heading W.-S.W. The wind was strong from E. People could wade ashore from the weather side of the ship when she was beached. The crew remained obedient to orders. When the ship was beached, the order was given to lower boats. The order was not carried out, because the two after-boats were in flames and the life-boats could not be approached owing to smoke. The passengers were very much excited after the alarm was given. The fire first broke out in the after cargo-room, where Chinese passengers were. When I first saw the fire, a single steam hose would have been sufficient to extinguish it. The officers had orders to visit the Chinese passengers every two hours during the night. The compradore did this at half-past five and the second officer at six. In about fifteen minutes from the time of the outbreak the ship was in flames fore and aft. Ropes were put over the bow, on both sides, and some of the crew were sent on shore to receive the passengers as they came down the ropes. All the people forward and on the upper deck got over the bow. The people aft could have come forward and been saved, if they had not stayed aft to save their luggage. Many of them threw themselves into the water aft, hoping to be saved by several junks which were coming up, but they were not saved and their luggage was looted. There were about twenty big salt-junks and about thirty smaller craft in sight. None of them rendered any assistance. Every one could have been saved if they had helped. The men in the small craft lowered their sails, looted the baggage, and left the people to drown. I got on shore about ten minutes after the ship had been beached. At that time I could see no one on board. About fifty people were drowned to my knowledge in trying to get ashore. There was about 15 feet of water under the wheels, and six fathoms under the stern. The dead bodies which came ashore were stripped and the living beaten, by the inhabitants. I think the fire was caused by passengers smoking. I do not think the ship could have been set on fire intentionally. The fire might have been burning for about five minutes before it was discovered. I should think about six lives were lost by fire, and about 220 by drowning. I can suggest no means by which such a great loss of life could have been prevented in the case of a similar accident occurring on board a similar ship under similar circumstances.

At the conclusion of the witness's evidence, the enquiry was adjourned till to-morrow at two o'clock.

---

The *Shen Pao* of Tuesday has a long leader commenting on Mr. Kniffler's narrative of the *Shanghai* disaster, published in these colums, in which our contemporary expresses the greatest horror at the barbarous conduct of the inhabitants of the villages in the vicinity of which the steamer was burned. It says:—It was bad enough for the ruffianly boatmen and dwellers on the river banks to strip and rob the poor people who escaped from the burning ship, and then cast them back, naked and helpless, into the water, but worse is still to be told of those inhuman wretches. We are advised that when the local benevolent societies recovered the bodies from the water, and laid them out in rows to await possible identification, a number of soldiers who were either on the active list, or but recently discharged from the army, came in the night and stripped the bodies of their clothing and valuables, an act in every way as bad as the rifling of graves by professional body-snatchers. It is impossible to exaggerate the atrocity and fiendishness of such conduct, and no punishment could be too severe for it. For

Digitized by Google

the first offence, robbing the unfortunate passengers of the steamer, and then throwing them into the water, from which they had just emerged, the barbarians are undoubtedly murderers, and should be punished as such, by decapitation. As to the second offence, coming in the night and plundering the bodies recovered from the river, none but the basest scum of the earth could desecrate the sanctity of death in this manner, and no pen could adequately express our abhorrence of the monsters, especially when we remember that they were soldiers, supposed to be guardians of the law and upholders of the honour of the Empire. They are not men, they are inhuman ghouls, and no punishment could be devised too severe for them. If they are caught they can only be disposed of by summary decapitation, and we urge that no steps be overlooked that may lead to their apprehension and consignment to this fate. Of course, there are good people and bad people in every country as well as in China, and in contrast to the atrocities we have just referred to, we are glad to be able to point out the noble action of the various benevolent societies of the district, who are employing great numbers of people to drag the river, and have provided grave-clothes and some 60 coffins for the interment of those that may be recovered. We venture, however, to suggest that the societies, in addition to these commendable acts of charity, cause photographs of the deceased to be taken, and nailed to the coffins, as a means of identification. It would be, we think, a good plan, and would give the relatives of those who lost their lives in the calamity a chance to carry out the proper funeral rites at the graves of their ill-fated friends.

---

The Court of Inquiry into the burning of the *Shanghai*, says the *N. C. Daily News*, resumed its sitting yesterday (8th instant).

John Sharples deposed—It was chief engineer of the *Shanghai* on December 25th, 1890. For extinguishing fire by steam we had a donkey engine. It was used every day for washing the decks, etc. In case of fire the hoses were not worked by men of my department. In the event of fire the regulations of the engine-room were to get the doney ready as soon a posible. This would not take more than two minutes. I was in bed at the time of the fire. The second engineer was on watch in the engine-room. I became aware of the fire by the ringing of the fire-bell, and the rushing of the passengers past my room. I got out of bed and ran to the engine-room to see if the donkey was working. On my way to the enigne-room I saw signs of fire. I saws smoke in the alley-ways, the engine-room, and Chinese saloon. The donkey was at work on the fire main when I arrived in the engine-room. I cannot say how long it was possible to remain in the engine-room after the commencement of the fire. The donkey was left working on the fire main. I left the engine-room in two or three minutes because I could not stop, on account of the smoke. No water was procured through the fire main to my knowledge. After leaving the engine-room, I went to my own room to save my papers. I got on shore over the bows. I think the fire originated in the after part of the ship, but I cannot say whether it was in the cargo-room, saloon, or hold. I was in the engine-room when the ship took the ground, which occurred in about 7 or 8 minutes after the ringing of the fire bell. When I got on deck I could not see whether the boats were on fire or not, on account of the smoke. When I got on shore there were about 70 or 80 natives, not belonging to the ship, on the beach, and more kept arriving every moment. I think everything possible was done to save the passengers. I saw no passengers pushed back into the water by the natives. I saw some passengers looted. The crew attempted to save the passengers from drowning on coming ashore. It took about two minutes to get ashore from the fore part of the ship, by sliding down the ropes and wading on to the beach. The reason why so many were drowned was that no help was given by the native boats in picking the people out of the water. Smoke and fire prevented the passengers from getting forward. From the time I saw the fire, no boats could be lowered. I do not think it would have been possible to work the hand pumps after I saw the fire.

By Mr. Playfair—I cannot say how long the fire had been burning when I first was at my post, in a few seconds after I heard the bell rung. From what I saw of the fire after reaching the engine-room, I think it was already impossible to do anything to save the vessel. Between hearing the alarm and going on shore I saw the captain. He was coming back from where the fire was. There were people left on board when I left the steamer. The captain was one of them. The chief officer was also left on board. I saw them both leave the steamer. I could not say whether they were the last to leave the ship. Between the after cargo room and the hold below it there are hatches.

By Captain Harris—When the ship was beached the second engineer stopped the engines. The boilers were left as they were. There were no steam fire annihilators in the ship. My log was burnt.

By the President—The captain and officers were strictly sober at the time of the fire.

James Frank stated—I was second pilot of the *Shanghai* on December 25th last. When the fire broke out I was on the bridge and in charge of the ship. I became aware of the existence of fire by the ringing of the fire-bell. I cannot say how long after the fire broke out the bell was rung. I saw the captain about half a minute after the bell was rung. He ordered me to head the ship for the shore. She took the ground about five minutes after the bell was rung. She took it by the head. The bow was about forty feet from dry land when she grounded. Her head was north by the compass. The wind was strong from N.E. When she was on shore the wind was on the starboard bow. I cannot say how long it was after the bell was rung that the boats caught fire; I could not see the boats for smoke three minutes after the alarm. The smoke prevented me seeing them on the starboard or weather side. The wind could not get clear across the ship, but came back in a draught from under the upper deck, and consequently the ship was enveloped in smoke. I do not think it would have been possible to lower any of the boats; there was no time. I could not see the flames reach the starboard quarter-boat, on account of the dense black smoke. I saw the starboard quarter-boat on fire about four minutes after the bell was rung. After the ship had grounded I went overboard. There was deep water under the stern. At the time of the fire a number of native craft were in sight, but they rendered no assisance. I did not see them prevent any passengers from reaching the shore. I cannot say what was the cause of the fire. The captain and officers were strictly sober at the time of the fire.

George Austin deposed—I was chief mate of the *Shanghai* on 25th December. The crew were last exercised at fire stations in December at Hankow. All the officers were present on that occasion. We got water from each of the fire-mains, and from the hand-pumps. We last turned the boats out, ready for lowering, in the beginning of December at Hankow. The general regulations for the crew on the fire bell being rung were to muster at the boats. Some of the crew, compradore's staff, and cooks were then to be stationed at the hoses. When the fire-bell was rung it was my duty to go to the pumps and fire mains. I was present when cargo was received at Shanghai before leaving for Chinkiang. The cargo was put on board by the stevedores and coolies in charge of the compradore. I have had occasion to find fault with coolies for smoking in the cargo-rooms, but not frequently. I had not occasion to do so when the cargo was last put on board at Shanghai. The hatches where in tolerably good condition. There were no crevices of any appreciable size between the different sections of the hatches, but in one place there was a crevice sufficiently large to allow tobacco thrown from a Chinese pipe to get through. No cover was put over the hatch in Shanghai. The after cargo-room was lighted by globe lamps when the Chinese passengers were on board. The lamps burned tea oil, and were secured in their places to a beam. I was in my room at the first alarm of fire. I was informed by the carpenter of its existence. The fire-bell was rung about the same time. On the alarm of fire I took steps to get down the hose in the alley-way. We did not succeeded in getting water through this hose on the fire because the Chinese were standing on it. We then tried to get water on by buckets. We could not use the connection in the fore cargo room, on account of the cargo. The connection on the upper deck was not used because the middle one was the nearest to the fire. When we found we could not use the middle connection, we did not attempt to use the upper deck connection, because there was not time. The articles I first saw on fire were passengers' luggage and bale goods. The fire might have been burning for a quarter of an hour before it was reported. If the fire was only a small one when it was first seen, the Chinese passengers would not give the alarm. The suffocating nature of the smoke drove the crew away from the boats. The people on shore made no opposition to passengers landing. Men in boats dragged some of the passengers off the paddle-wheels (to which they had floated), took all they had and dropped them in the water. I think the fire was caused by passengers smoking.

By Capt. Harris—No attempt was made to flood the hold after the ship had been beached.

Howard James Nicholson deposed—I was second officer of the *Shanghai*. When the fire broke out I was in my bunk. I was called by the chief officer. I went to the after cargo-room, where I saw fire on the forward part of the hatch. Passengers' luggage and bales were burning. I did not notice whether the hatch was burning. At the time, I thought a few buckets of water would suffice to put the fire out, but afterwards I did not think so. I do not think we could have got water from the hand pumps in time to put the fire out. Under favourable circumstances it would take two or three minutes to get water from the upper deck connection over all.

The proceedings were then adjourned till next morning at 10.30.

On resuming next day,

At the opening of the Court, Mr. Kniffler, the only European passenger on board the *Shanghai* at the time of the fire, voluntered to give evidence. He deposed as follows:—When the fire-bell was rung I was in my cabin. I rushed aft to get my Japanese boy out. On my way aft I saw a dense volume of smoke. I brought the boy forward to the second pilot and called out to him to put the ship ashore. He replied, "All right, sir," and I was reassured partially by this statement. The ship was then heading towards Wuhu. I went back to my cabin to get on some clothes and save some valuable papers. As I was going aft the captain, whom I had previously seen coming out of his cabin in his pyjamas, shouting "Fire," came along and said "For God's sake, save your lives." I then dragged one of the Japanese passengsrs to the port side, and catching him in my arms let myself down a rope into the water and waded ashore, calling out to the other Japanese to save himself. I then went into the water again on the starboard side of the ship, and called out to the Captain, who was standing with the chief officer, to throw the box I wanted overboard; but they threw some other parcels instead. Then I heard a loud detonation and the Captain and chief officer lowered themselves into the water on the port side. The Chinese ashore were looting people right and left, and had it not been for the Captain and officers, and especially the sailors and firemen, I do not think we should have escaped with our lives. There was a Chinese steam launch, flying the Imperial flag, and a gunboat under sail, but neither of them assisted either us or the drowning people, or the people still on the burning ship. Then the Captain procured a small sailing craft, in which he ordered the second mate and third engineer to proceed to Chinkiang, and kindly offered a passage to me and my Japanese attendants. I think the dense black smoke I observed on leaving my cabin came from the fire in the after-hold or cargo-room. I do not know what material was burning at the time. I thought the detonation was caused by the bursting of the boiler, but it might be caused by the cotton exploding. After I left the ship it would have been possible to remain two or three minutes at most on the upper deck; it would have been possible to remain about the same time on the fore part of the ship. The rapid spreading of the flames was the principal cause of the great loss of life. When I left the ship there were a large number of passengers left in the after part. I do not think they could have been brought forward by a party from the bow, on account of the dense smoke and flames. The wind was blowing on the starboard side, and the forward part of this side was comparatively clear from fire and smoke. After the alarm of fire I do not think it would have been possible to lower a boat. The boat that Captain Martin procured was not used to assist passengers in reaching the shore. It was procured about an hour or an hour and a half after the alarm of fire. There were still passengers on the burning vessel about half an hour after I left the ship. I do not think it would have been possible to procure a boat before this time. I do not know to what cause to attribute the fire.

By Mr. Playfair—Between the time of leaving my cabin and getting on shore I did not see what the captain and officers were doing. It did not occur to me that anything else than what was apparently done could have been done in order to save the ship, and in my opinion the captain and officers did their duty.

P. Williams deposed—I was second engineer of the *Shanghai* on December 25th last. When the fire bell was rung I was on watch. I smelt something burning, which I thought was hot bearings in the engine room. I assured myself there was nothing wrong in the engine-room. As I was passing the shaft, volumes of smoke came up. I then rushed to the speaking tube and shouted out "Fire," and at the same time the bell rang. I then went and put the donkey on. About four minutes after, the chief engineer came on the top platform and asked me if the donkey was on. I replied, "Some time ago." The engines were stopped about twelve minutes after the first alarm

Digitized by Google

of fire, and I left the engine-room about fourteen minutes after the bell was rung. I can form no idea from the nature of the smoke that I first saw in the engine-room, what material was burning. When I left the engine-room I left the donkey going on the fire-main. The engine-room communicates with the cargo-room by a grating-bulkhead. I saved my papers from the ship.

By Captain Harris—It would not have been possible to play on the fire through the grating.

Lee Koktsai deposed—I was the compradore of the *Shanghai* on 25th December last. I saw the cargo stowed at Shanghai. I had to warn one of the coolies, who was smoking while passing through the cargo-room. He was not a coolie belonging to or working on the ship. In the after-hold cotton and piece goods were stowed. The hatches were not taken off the after-hold at Chinkiang. Before they were put on at Shaeghai we examined the hold. At 7 o'clock on the morning of the 25th I heard the passengers making a noise. Two watchmen were stationed in the cargo-room to prevent passengers smoking, and notice in Chinese and English were posted up to prohibit passengers smoking. When I got to the cargo-room I saw smoke there. It was issuing from the passenger's baggage, between the hatches and the mast. No smoke was coming from under the hatches. The hatches were covered with canvas, and no cargo was on top of them. When I saw the fire I called out to the passengers to remove their baggage from the place, and I brought in a hose. Ten or twenty packages were on the fire when I first went in. It was all passengers' luggage. The fire had already caught the cotton yarn. About 200 packages of cotton yarn were stowed in the after cargo-room. Water was procured from the engine-room pumps to put out the fire, but it was not very effectual, for the fire increased rapidly with the wind. I do not think the fire originated below hatches. I escaped by a rope over the fore part of the ship. There was no time for all the passengers to escape by the same means, the fire spreading very rapidly. I shouted till I was hoarse to passing boats to rescue the passengers from the after part of the ship. The passengers called loudly also. I do not know why the boatmen would not help. It is not the usual conduct of Chinamen. I saw some of the natives on shore take a packet of dollars from a body that drifted on to the beach, and I saw some luggage looted. I think the fire was due to a charcoal stove belonging to some of the passengers. Their cotton clothes were very inflammable. Their luggage is not examined when they come on board. I do not think the fire could have begun in Shanghai and smouldered until it broke out. The two cargo rooms are connected by grating bulk-heads. Cotton was stowed in the forward cargo-room on both sides, and piece-goods in the middle. The cotton was stowed close up to the grating bulk-heads.

Ah Fu deposed—I was on watch in the cargo-room of the *Shanghai* on 25th Dec. last. The first sign of fire I saw was a little smoke, proceeding from ten or twenty bundles of bedding. I don't know what set them on fire; they were burning from inside. The bundles were lying near the mast about two feet from the hatchway. I did not see any smoke coming from the hatchway. The bundles were stowed up against some yarn. I shouted out to give the alarm. I don't know how long the bundles had been burning when I noticed the fire. Having given the alarm I went on deck to get water and on returning saw fire there. If the bundles had been thrown overboard when I saw them first there would still have been a large fire in the cargo-room. Two of the cargo-room doors were wide open and one party open.

By Captain Harris—The passengers were not sleeping on the bedding when I noticed the smoke issuing from it. Some of the burning bedding was thrown overboard, by the passengers themselves and the second officer. There were a lot of people there, sailors and others, in the cargo room by this time. I cannot say how the fire originated, but I first saw the smoke coming from the luggage. Some of the passengers were sleeping on the baggage. I did not notice any smoke coming from the cargo at first, but when I came down the second time the cargo was on fire. I think it was set on fire by the burning baggage. I think the baggage was set on fire by the passengers smoking while they lay down as if they were asleep, so that I could not see them. The officers and sailors came down immediately after the alarm was given. I first saw the smoke about 7 o'clock.

Another Chinaman who was on watch in the cargo-room corroborated the last witness' evidence with the regard to smoke being first seen issuing from bundles of luggage, close to passengers' beds.

Philip Williams, recalled—I first saw smoke coming into the engine-room from the starboard side. I heard no explosion before leaving the ship. The boilers did not burst.

Captain Martin, recalled—The chief officer should have been on deck at the time of the fire. I heard no explosion.

The Chief Officer, recalled—There might have been cotton yarn in the after cargo-room without my knowledge. Cotton yarn was not specially classified, and came on board as piece-goods. The reason for my not being on deck was that I was preparing to collect the passengers' tickets, the ship being in the meanwhile in charge of the pilot.

At the conclusion of the evidence the members of the Court retired, and after two hours' consideration returned with the following finding:—

From the evidence the Court is of opinion that the cause of the fire is not clearly proved, but it is of opinion that it must have been burning or smouldering for a considerable time before it was discovered and that it then burst out suddenly into flames and in the space of about a quarter of an hour completely destroyed the upper part of the ship.

That the master adopted the proper course by promptly beaching his ship.

That partly from the steam fire connection being badly situated and partly from the fact that no hands attempted to make use of the upper deck fire connection on the fire-bell being rung, no water was procured. That every possible effort was made by the master, officers, and crew to save the passengers, having been prevented by the rapid extension of the fire from lowering the boats. That the crew had been recently exercised at fire and boat stations, but that chiefly depended for water on the connection by a steam fire main situated in the Chinese quarters, where confusion would be expected on the alarm of fire. The court desires to call the attention of the Board of Trade to the fact that ships carrying a large number of passengers should be provided with steam fire connections at both ends of the ship and in places easily accessible and that the lodging of Chinese passengers in compartments intended and used for the stowage of cargo which can be easily ignited, without the interposition of partitions, is extremely dangerous.

In the opinion of the Court the attention of the Chinese authorities should be called to the inhuman conduct of the natives in the neighbourhood whether on shore or in boats, on the occasion of the fire.

No blame being attributable to the master and officers, their certificates are handed back to them.

The expenses of the Court, fixed at £11 11s. od., are approved.

Dated at Shanghai, the 7th day of January 1891.

J. F. STUART,
Lieut. R.N., President of the Court;
G. M. H. PLAYFAIR,
British Vice-Consul at Shanghai;
P. HARRIS,
Master of the British steamer *Peking* of Greenock.

## *LATEST COMMERCIAL.*

### IMPORTS.

There is little change to report on the position of the Import Market. A few small sales of Yarns have been reported at a trifle higher than the prices realized at the beginning of the month, but there is no demand in the market, for nearly all descriptions of goods are as flat as ever. Sales for the week amount to 275 bales English Yarns, 45 bales Bombays, and 4,500 pieces Shirtings.

METALS.

No change for the better in this market, and prices are tending downwards. Buyers are quite inanimate and the outlook is by no mean bright.

| | | | |
|---|---|---|---|
| | | | PER PICUL. |
| Flat Bars, ¼ inch | $2.65 | to | 2.75 |
| Flat Bars, ½ inch | 2.75 | to | 2.85 |
| Round and square up to ½ inch | 2.65 | to | 2.85 |
| Nailrod, assorted | | Nom. | |
| Nailrod, small size | | Nom. | |
| Iron Plates, assorted | 2.80 | to | 3.00 |
| Sheet Iron | 3.20 | to | 3.40 |
| Galvanized Iron sheets | 5.80 | to | 6.00 |
| Wire Nails, assorted | 4.40 | to | 4.90 |
| Tin Plates, per box | 5.00 | to | 5.25 |
| Pig Iron, No. 3 | 1.25 | to | 1.27½ |

KEROSENE.

Position practically unchanged and the trade is slow. Some enquiries are made, but with without leading to any sales of importance. No fresh arrivals to note.

QUOTATIONS.

| | | | |
|---|---|---|---|
| Chester | $1.70 | to | 1.72½ |
| Comet | 1.67½ | to | 1.70 |
| Devoe | 1.65 | to | 1.67½ |
| Russian | 1.60 | to | 1.65 |

SUGAR.

Sugar continues to be slow of sale, there being scarcely business enough to make quotations.

| | | | |
|---|---|---|---|
| | | | PER PICUL. |
| Brown Takao | $4.10 | to | 4.15 |
| Brown Daitong | 3.10 | to | 4.20 |
| Brown Canton | 4.80 | to | 5.90 |
| Brown Java and Penang | 5.00 | to | 5.60 |
| White Refined | 4.55 | to | 7.50 |

## EXPORTS.

### RAW SILK.

Our last issue was of the 9th instant; since that date settlements in this Market amount to 503 piculs divided thus:—*Hanks*, 39; *Filatures*, 234; *Re-reels*, 169; *Kakeda*, 25; *Oshu*, 36. Direct shipments have been 47 bales, making a total export business of the week 550 piculs.

During the first few days a fair amount of trade was done which was then stopped by a rise in in Exchange. Now that Silver is lower again buying has recommenced.

Buyers both for Europe and America are in the field to some extent, and at closing dealers show some disposition to meet buyers, so that it is probable more business may be done in the near future. Holders, however, will not give way very much, being strongly of opinion that trade will yet improve in foreign countries during the next few weeks.

A large meeting of native Silk-men was held on the 11th instant, at which they decided to petition the Government for assistance either to carry their stocks or to send them forward to foreign Markets as direct export. Some of them pin their faith to such a course, while others of them think it will be better to sell their goods gradually on this Market, if they can do so without incurring too great a loss.

Arrivals from the interior are scanty just now, and the stock list shows a further reduction on the week. There is no doubt some quantity of Silk remaining in the interior belonging to wealthy merchants who do not need to send it forward at present; how much, or how little there is of this we cannot exactly tell; but it looks now as though the available supplies for the season will be considerably less than last year.

There have been two shipping opportunities this week, the English and American mails both taking silk. The former, *Verona*, which sailed on the 10th, had 339 bales for Europe, while the latter, *City of Rio de Janeiro*, on the 11th, took 564 bales for the New York trade. These departures bring the present export figures up to 14,071 piculs, against 29,340 piculs last year, and 31,712 piculs at the same date in 1889.

*Hanks.*—Some little business has been done in *Shinshu* for Europe at $485. Enquiries are in the Market for *Hachoji*, but prices do not meet. *Chichibu* is reported at $460.

*Filatures.*—Some little business has been going on all the week in fine sizes: *Miharu*, $590; *Yenshu*, $585; *Bushu*, $580; with lower grades at $570, $560, and $552½. Trade in full sizes has been slack, although, during the last two days, one buyer has paid $570 for *Kaimeisha* and $560 for *Tokosha*.

*Re reels.*—Business in these has fallen off, the trade done being limited by the firmness of holders. Some of the well-known marks in *Joshu* kinds being held off the Market entirely. The purchases made would seem to be chiefly for Europe, and consist of the lower grades, costing from $520 to $500.

*Kakeda.*—A small business, and nothing done for the last 3 or 4 days: holders are firm and refuse the offers which shippers make.

*Oshu.*—Two or three parcels of *Hamatsuki* have been sold, buyers paying $527½ for best, and $510 for medium.

### WASTE SILK.

Business in this branch has fallen off a little, total settlements being 520 piculs, divided thus: *Noshi*, 126; *Kibiso*, 370; *Neri*, 24.

There does not seem quite so much life in this Market, and the stock list has increased a little during the week.

Purchases made appear to be for Europe, as before, and quotations are a little easier, although perhaps there is not much real difference when quality is taken into account.

The English Mail steamer *Verona* carried 370 bales, making the present export figures 18,457 piculs, against 17,019 piculs last year and 21,134 at same date in 1889.

*Pierced Cocoons.*—No business at all and the Market remains in exactly the same position; prices nominal in the absence of any transactions.

*Noshi.*—Some business at a slight decline in quotations, but the quality is beginning to fall off and the cream of the crop has been apparently skimmed.

*Kibiso.*—Buyers are turning their attention now to medium and common sorts and several large parcels of *Joshu* have been done at prices ranging from $33 to $35. One lot of *Mino* also noted at $46 and there has been a little business in *Filatures* at about $110.

*Sundries.*—Two or three transactions in *Neri* at $9 and $10 for the rough stock.

CONTRACTORS TO THE ADMIRALTY, LEADING STEAMSHIP COMPANIES, AND YACHT OWNERS.

STEAM LAUNCHES & YACHTS,

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 10 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for Copy to

SIMPSON, STRICKLAND & CO.

WORKS:
DARTMOUTH, SOUTH DEVON (ENGLAND).
LONDON OFFICE:
181, QUEEN VICTORIA STREET, E.C.

MACHINERY.—Mr. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated) — the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one or two good firms in Japan desiring to deal with a reliable house. Registered address for telegrams—"Wadham, London." 1y. June 28, 1890.

KEATING'S COUGH LOZENGES.

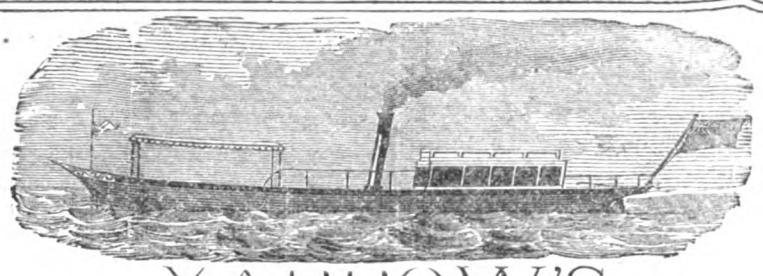
COUGHS, ASTHMA, BRONCHITIS, DIFFICULTY OF BREATHING are speedily cured by KEATING'S COUGH LOZENGES (recognised and recommended by the Medical Faculty). No other remedy is half so effective. One Lozenge alone gives relief. They contain no Opium, Morphia, nor any violent drug, and may be taken by the most delicate. One or two at bed-time ensure rest when troubled by the throat. Sold by all Chemists, in Small Tins. Dec. 27th, 1890.—21ins.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In I short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."



SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1890.

YARROW'S
SMALL STEAMERS AND STEAM LAUNCHES.

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.
PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER.
Stern Wheel Steamers with very shallow draft especially suitable for river navigation.
MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.

YARROW & CO., POPLAR, LONDON, E.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JAN. 24, 1891.

BIRTH.

On the 17th instant, at No. 144, Bluff, the wife M ENGERT, of a Daughter.

DEATH.

At Toronto, Canada, on December 5th, 1890 CONSTANCE HARU, youngest child of the Rev. Arthur Lloyd, of Trinity College, Toronto, aged 10 months.

## *SUMMARY OF NEWS.*

MR. MOTODA, a Privy Councillor, died of influenza on the 20th instant.

MR. TSUJI, Vice-Minister of the Educational Department, is suffering from influenza.

MR. OKAMURA TERUHIKO, President of the Yokohama Law Courts, resigned his post a few days ago.

COUNT SAIGO, Minister of State for Home Affairs, left the capital on the night of the 19th instant for Oiso by train.

COUNT GOTO, Minister of State for Communications, intends to enter an action for libel against the editors of the *Kokumin Shimbun*.

THE election to fill the vacancy in the House of Representatives for the third district of Hyogo Prefecture resulted in Mr. Ta Teikichi being returned.

THE two Houses of Parliament were destroyed by fire in the early morning of the 20th instant, the fire having its origin in the electric lighting apparatus.

ACCORDING to returns received by the Sanitary Bureau in the Home Department, the numbers of persons who suffered from dysentery in Fukuoka and Nagasaki Prefectures, from the commencement of the epidemic to the 31st of last month, were 25,340 and 3,969 respectively, and the deaths resulting were 4,685 and 949.

REAR-ADMIRAL YANAGI YUYETSU, a member of the House of Peers, who had been suffering from inflammation of the lungs, died on the 15th instant.

THE construction of the railway between Oji and Takada on the Osaka Railway is sufficiently advanced for a trial run before the end of the present month.

COUNT YAMAGATA proceeded to the Palace on the morning of the 24th instant, and reported to the Emperor as to the burning of the Houses of Parliament.

DURING last year, the quantity of herrings caught by the fishermen of Hokkaido (except Hidaka) was 937,574 *koku* (one *koku*=2½ piculs) valued at about *yen* 6,539,079.

THE First Higher Middle School was closed on the 19th instant for about a week in consequence of the prevalance of influenza among the teachers and students of the school.

MR. NISHIYAMA, a secretary of the Upper House, was despatched from the House on the 19th instant to attend at the funeral of the late Rear-Admiral Yanagi, a former member of the House.

H.I.H. PRINCE KOMATSU returned to the capital on the night of the 18th instant from Numazu. On the following day, H.I.H. Kitashirakawa started from the Shimbashi Station for Yokosuka.

DURING last year, 125,000 cases of matches were exported into China from Hyogo and Kobe, the value of which was *yen* 1,350,000, showing an increase of about *yen* 250,000 as compared with the previous year.

Two hundred and seventy three thousand one hundred pounds of melted copper (refined) of *bunkyu*, *tempo*, and two sen copper coins will be offered for sale by public tender on the 28th instant in the Osaka Mint.

A SPECIAL meeting of the Cabinet was held on the afternoon of the 19th instant, at which Counts Yamagata, Saigo, and Goto, Viscount Aoki, and Messrs. Yoshikawa and Mutsu were present, the proceedings lasting till 4.30 p.m.

INFORMATION was received by the Government on the 16th instant from the Russian Legation to the effect that the Prince of Greece will visit Japan with the Russian Prince who is expected to arrive here about the end of next month.

THE 19th instant being the day appointed for the funeral of the late Rear-Admiral Yanagi Yuyetsu, this Majesty the Emperor despatched Viscount Ayanokoji, Chamberlain, to the residence of the deceased officer with presents for the family.

COUNT ITAGAKI resigned on the 19th instant his membership of the *Rikken Jiyu* party. On the same day Mr. Kurihara Ryoichi, a leading member of the *Rikken Jiyu* party, sent in his resignation of membership. These resignations were subsequently withdrawn.

THE Minister of State for the Navy has notified the Governors and Prefects of the Empire to the effect that whenever any vessel (war-vessel or trading-vessel) of any nationality shall meet with an accident near the sea coast of Japan, the event must be at once reported to the Naval Department through its respective Admiralty Stations, or through District Offices or Police Stations, and also that application for aid may be directly made to any Japanese war-vessel that may be near to the scene of the disaster.

A LETTER received in the capital reports, that Mr. Hijikata Hisa-akira, a son of Viscount Hijikata, Minister of State for the Imperial Household, has been specially selected for a commission in the artillery (Guards) of the German Army, by the German Emperor.

A GENERAL meeting of shareholders of the Osaka Shipping Company was held on the 18th instant at the Sakau-ro. The receipts of the company during the whole of last year were *yen* 918,028.67, of which *yen* 27,000 were devoted to a dividend for the year.

TELEGRAPHIC information has been received by the Goverment to the effect that Mr. Tateno Gozo, Envoy Extraordinary and Minister Plenipotentary to Washington, who started from Japan on the 16th ultimo for his post, was received in audience on the 17th instant by the President of the United States of America.

AN ordinary meeting of the Cabinet was held on the 16th instant, at which there were present Counts Yamagata, Saigo, Goto, and Oyama, Viscount Aoki, and Mr. Yoshikawa, who had a conference in regard to the Budget, which was not concluded till late in the afternoon. Mr. Ito, Vice-Minister for the Navy, was also present.

A NUMBER of residents of Hokkaido propose to despatch a representative to the capital to inform the members of the Imperial Diet that the reduction of over *yen* 200,000 from the estimates for the Hokkaido Administrative Board for the 24th fiscal year is not a wise plan, inasmuch as the colonization of Hokkaido is one of the most important works in the Empire.

MESSRS. TANAKA YOHIO, Sekizawa Meisei, and several other members of the Japan Marine Products Society, propose to collect public subscriptions for a fund for establishing a school of marine products in recognition of the services of the late Rear-Admiral Yanagi, Manager of the Japan Marine Products Society. Several hundred *yen* have been collected already.

AN ordinary meeting of the Cabinet was held on the afternoon of the 20th instant, at which there were present Counts Yamagata, Oyama, Matsukata, and Goto, Viscount Aoki, and Messrs. Yoshikawa and Mutsu. The proceedings lasted till a little past 4 p.m. Count Ito, President of the House of Peers, and Mr. Sone, Chief Secretary of the Lower House, were also present at the meeting.

THE position of the Import market is without notable alteration, and Yarns and Shirtings have only been taken in quantities to meet immediate requirements. Metals are without much demand, buyers making low offers for anything they want, and but few transactions have resulted. Quotations for Kerosene are quite nominal in the absence of enquiries. There has been a small business in Sugar—Browns at a reduction of 15 cents and Whites at a decline of 30 cents per picul. The Silk trade has received quite an impetus during the last few days of the week, and over 2,000 piculs have been sold. Waste Silk has also been active, and several large parcels have been taken. The Tea trade is now practically over, the remaining leaf in stock being of no consequence, and no more is expected to come in. Settlements to date have been 215,000 piculs, against 183,000 piculs at same date last year. Exchange has followed the downward course of silver, and closes fairly steady.

## *EDITORIAL NOTES.*

### COUNT INOUYE ON DIET VERSUS GOVERNMENT.

COMMENTING on the rumour that Count Yamagata had despatched Mr. Tsuzuki, his private secretary, to Yamaguchi, with an invitation to Count Inouye to come to the capital, the *Hochi Shimbun* remarks that when any person engaged in the settlement of an affair finds his progress stopped by some difficulty or other, he usually appeals to the bystanders for advice. This seems to indicate the circumstances, in the *Hochi's* opinion, under which Count Yamagata has despatched his emissary to Count Inouye. Our contemporary recalls that one day in the early part of 1889 Count Inouye, after his failure to carry out the negotiations as to Treaty Revision, invited to his house at Toriizaka four or five of his friends—men of great influence but not holding Government offices. To these he gave expression to his views as to the relations likely to exist between the Diet and the Cabinet. Having predicted that the opening of the Diet would be followed by friction between the Diet and the Ministry, the Count asked:—When, then, a majority of the Diet is found to be adverse to the Government, how will the latter act? If the Ministry stick to their policy with unflinching firmness and dissolve the Diet, the elections will certainly lead to the return of many of the old members; another conflict will follow and another dissolution, the only result of which will be to awaken against Ministers the opposition of the whole nation. If, on the other hand, the Cabinet decide to concur in the views of the Diet, whether these be in reference to the reduction of state expenditure, reforms in the system of administration, or any other subject, then the Ministry will find themselves in the position of having tacitly consented to the assumption by Parliament of the important rights and duties of administration. With the dangers of either of these courses apparent, then, the only means by which the safety of the nation may be assured will consist in the coming forward of men of property and experience to take the places of the members of the Cabinet." At the time Count Inouye was charged on one hand with having made those remarks to carry out designs of his own as to the Government, and derided on the other hand as having become weak-hearted and timid in consequence of his failure in diplomacy. Yet, the *Hochi* points out, what he then predicted has come to pass.

### THE UNITED STATES LEGATION.

SOME of the members of the House of Representatives appear to have been studying the proceedings of the British House of Commons, and to have taken for models to be imitated Mr. Bradlaugh and other snappers up of unconsidered trifles. The importunate inquisitiveness shown by Mr. Inugai and his supporters in the House on Thursday, with reference to the story of the ground at Yenoki-zaka, now forming the compound of the American Legation, reminds us of the questions occasionally put in the House of Commons about the postage of members' letters or the rates allowed for cab hire in the schedule of official travelling expenses. Mr. Inugai became quite elated over the Yenoki-zaka land. When he discovered that it had been sold by the Government for forty thousand *yen* and bought back afterwards for eighty thousand, he metaphorically rubbed his hands and told the House that they were going to have a pleasant interlude cross-examining the Government Delegates on this point. Nor was he wrong, if the bandying of frivolous questions and incomplete answers tickles the House's fancy. But the impression left on the minds of people outside the Diet is that if Mr. Inugai took a little pains to study his subject before standing up to discuss it, and if the Government Delegates could persuade themselves to be a trifle franker and fuller in their explanations, much friction and trouble might be avoided. Nothing could be simpler or more intelligible than the story of the Yenoki-zaka land. It was sold by the Department of Agriculture and Commerce for forty thousand *yen* to Mr. Okura Kihachiro, who bought it, apparently, as a speculation without any immediate object in view. The price was low; but on the other hand, land was comparatively cheap at the time (1888); and no Government ever gets the full market value of anything it has dispose of, and, further, the sale of a large area of land in one lot is an operation of great difficulty in Tokyo. Buyers are few and far between. Fifty thousand *yen* would have been a handsome price for the land; a price which the Government could not reasonably have hoped to realise. After the lot came into Mr. Okura's possession, he entered into an agreement to put up buildings there for the United States Legation, the compound hitherto occupied by that Legation in Tsukiji having been sold on the expiration of the lease. The new buildings with their appurtenances and furniture were supposed to be worth some thirty thousand *yen*, and thus the lot, when the Foreign Office came to buy it could not possibly have been acquired for less than sixty-five or seventy thousand *yen*, even supposing that its owner had been content to dispose of it without any profit whatever, which would have been a very weak proceeding on his part, considering that land had appreciated considerably during the eighteen months of his tenure, and that he had not purchased the lot with the idea of making nothing by it. He probably realized a profit of from ten to fifteen thousand *yen*, which was by no means excessive. It strikes us as decidedly unfortunate that these vital points were not fully explained to the House by the Foreign Office Delegate. The whole question turned upon the fact that in the interval between the sale by the Department of Agriculture and Commerce and the purchase by the Foreign Department, buildings costing twenty-five or thirty thousand *yen* had been erected on the land. Had this been made clear, it is inconceivable that the House would have consented to have its time wasted by further inquiries. But it was not made clear, and strange to say, Mr. Inugai seemed to know nothing about it; a state of ignorance not at all consistent with the functions of inquisitor arrogated by him. Elsewhere members of Parliament who undertake to put questions to the Government are generally expected to post themselves in the details of their subject, but this theory does not seem to hold in Japan, and the consequence is that the House of Representatives occasionally finds itself betrayed into the unprofitable employment of scrutinizing mare's nests

* * *

This case presents an interesting point, quite apart from the reasons that induced the Diet to consider it. The policy of the United States Government in the past has always been to refrain from owning land outside the limits of the Republic. In pursuance of this policy, legations have been rented at very high rates in all Oriental countries. Thus, for many years, a sum of some four thousand dollars (gold) has appeared in the yearly estimates on account of the Legation in Tokyo. Lately, however, there appears to have been a departure from this exceedingly uneconomical course, for in Sōul the United States Government has purchased a plot of land and in Siam has accepted a suitable site from the King. The strong probability is, therefore, that when the Authorities in Washington are invited to turn their attention to Japan, they will appreciate the advisability of purchasing the present Legation instead of paying a rent of about 4,700 *yen* yearly for it. Meanwhile, the Foreign Office in Tokyo has a very fair investment, since it is receiving nearly six per cent. on its money.

* * *

Not the least amusing incident of the above affair is that a local English journal holds it up as a proof that the Japanese Government Departments are "an Augean stable requiring a modern Hercules to clean them out." One of the first things that Hercules would throw into the dirt tub would be the silly sheet indulging in such slanders.

### MUTUAL CONFIDENCE.

IN Yukawamura, Iwate Prefecture, says the *Yomiuri Shimbun*, there lives a certain Sasaki Gimpei, who recently had the misfortune to be drawn for a conscript. Sasaki did not object to don uniform and shoulder a rifle in his country's cause, but his domestic affairs weighed heavily upon his patriotic spirit. He possessed a young wife so beautiful in his eyes that everyone must inevitably lose his heart to her. Could he trust this lady in his absence of three years, and not trusting her, could be not devise some means of strengthening her fidelity? A bright thought struck him. He summoned all his relatives, and having regaled them sumptuously, asked them to be witnesses to a covenant which he was about to conclude with his wife; a covenant of four articles, for the better understanding of which it should be premised that Sasaki's occupation is that of bath-house keeper. Here is a translation of the document:—"Art. 1. Should I meet a handsome man during my husband's absence from home, I promise not to exchange a syllable with him. Art. 2. Whenever I am obliged to leave the house, I promise never to go alone but always in company with my mother-in-law. Art. 3. Should a good-looking young man happen to be among those taking the hot baths, I promise never to go outside the kitchen of our house during his stay in the place. Art. 4. Until my husband's return, I promise never to speak to a man who is not a member of our own household." Then follow the signatures of the wife, the father-in-law, the mother-in-law, and the husband. Poor Sasaki!

### TELEGRAMS.

THE question still continues to perplex the *Japan Gazette* whether a telegram supplied directly by Reuter in English to an English newspaper and published by that newspaper with a minimum of expansion, is more or less trustworthy than a telegram expanded by a Japanese editor, translated by him into Japanese and then re-translated into English by an English editor who has never seen the English original. Without considering the obvious superfluity of such an inquiry, we should have thought that the blunders into which the *Gazette* itself has been betrayed by its third-hand process sufficed to settle the question. In the space of a very few days our contemporary has converted "Pine Ridge" into "Pine Reach"; has made swift cruisers" into "fast sailing vessels"; and has represented the British Foreign Office as "disavowing" Sir Julian Pauncefote; whereas the truth, as telegraphed, is that the Foreign Office "denied" the story of a bellicose message having been delivered to the U.S. Government by Sir Julian. We should have thought, we say, that to be convicted of these flagrant mistakes would have taught the *Japan Gazette* how little it can rely on its present roundabout way of borrowing telegraphic news. But no. The *Gazette* has discovered a little heap of sand to hide its discredited head. The *Japan Mail* published a telegram saying:—"In consequence of the severe weather which has thrown thousands of men out of employment, terrible distress prevails in the East end of London amounting almost to a famine." Where did the *Mail* obtain authority to connect the distress with severe weather, asks the *Gazette*. Simply, answers the *Mail*, by consulting telegrams which arrived simultaneously in Indian papers, explaining that, on account of the snow, frost, and dense fogs prevailing in London, work in the Docks had been seriously interrupted, thousands of people had been thrown out of employment, and much misery prevailed. What the *Mail* has done is to assist its readers to a sound and correct view: what the *Gazette* has done is to mislead its readers in three several cases. These are plain facts. Equally plain is the statement of the Editor of the *Official Gazette*, that with the one exception of the message about the weather and the distress, he has never discovered a Reuter's telegram in the *Mail* the meaning of which differed from the Reuter's telegrams received by him. Yet the *Japan Gazette* quotes his statement as a proof that the *Official Gazette's* telegrams "are certainly more precise" than those of the *Mail*. Excellent *Gazette!* Continue, as you say you will,

Digitized by Google

"with a quiet mind to pursue the course of translating literally from the *Kwampo* telegrams," "trusting to the knowledge and memory of your readers to supply "the missing links." It is very convenient for a newspaper to trust to the knowledge and memory of its readers, but the plan is too unusual to be appreciated, and moreover no effort of knowledge or memory can enable a reader to discover that "fast sailing vessels" are identical with "swift cruisers," and that to deny the delivery of a message is to disavow the Plenipotentiary supposed to have delivered it.

### THE RADICALS.

A MEETING of the Radical Party (*Rikken Jiyu-to*) was held at 10 o'clock Tuesday forenoon. Two hundred and thirty members were present. The chair was taken by Mr. Hoshi Toru. The meeting decided that no representations should be accepted unless presented by at least five members; that the decision of a majority of those present at a meeting should be final, one hundred members forming a quorum; and that a meeting should be held every day at 9 a.m. and closed at 1 p.m. Mr. Sakurai Heikichi moved as a point of urgency, that steps be taken for the withdrawal of the leading article published in the *Jiyu Shimbun* of the preceding day. The article complained of is a somewhat remarkable effusion. Its object is to urge the conquest of Korea by Japan. After referring to the spirit of enterprise and the love of brave adventure that existed in Japan three centuries ago, and showing how greatly the Tokugawa system of Government and the enforced seclusion of the country had the effect of blunting and deadening these fine qualities, the writer goes on to point out that the administrative tendency of the *Meiji* era is to develop men's love of liberty and their appreciation of personal rights. Something of the spirit which in ancient times made Japan the England of the Orient, has doubtless—says the *Jiyu Shimbun*—been revived in these modern days, but to restore it to its old proportions, no tonic could be so effective as that of a military expedition. On this ground, in great part, but also for the sake of establishing Japan's position in the Orient and raising her prestige in the eyes of the world, the *Jiyu Shimbun*, in language well calculated to awaken an echo in the hearts of the *Samurai*, advocates the military occupation of Korea. Evidently the Radical Party is unwilling that such an aggressive policy should be regarded as the Party's programme, a mistake into which the public is not unlikely to fall seeing that the newspaper suggesting the invasion of Korea is the recognised organ of the *Rikken Jiyu-to*. The meeting decided that a Committee should be appointed to approach the *Jiyu Shimbun*. It is known that, immediately after the appearance of the article in question—which was published in two parts—steps were taken to induce the editors of the paper to modify their views, but they declined altogether to be dictated to, Count Itagaki himself answering for them.

* * *

This affair of the *Jiyu Shimbun* subsequently led to a remarkable and momentous result, namely, the retirement of Count Itagaki from the *Rikken Jiyu* party. The Count appears to have taken his resolution on the evening of the 18th, after the first remonstrance had been made by members of the Party. The opening part only of the criticised article appeared on that day, and not till the following day, when the second part had been published, did an opportunity occur of taking the sense of the Party at a general meeting. Count Itagaki, however, did not wait for the decision of the meeting. While Mr. Sakurai and his friends were drafting the resolution to be submitted to the meeting for a Committee to approach the editors of the *Jiyu Shimbun*, the old universally respected leader of the Radicals was on his side drafting a document that should sever his connection with the association he had founded and fostered. It was a manly and plain-spoken document, the greater part devoted to the obnoxions article, but a brief paragraph at the end containing statements which showed that the relations between the Count and his followers have not been entirely amicable of late. The manifesto protested in the strongest terms against the attempt made on behalf of the Party to interfere with the freedom of speech of its members. The article in question had been written by one man, Mr. Kurihara. Though Count Itagaki did not profess to approve of its sentiments, he could not for a moment consent to take part in muzzling its author. For many years he had been engaged in promoting the principles of liberty and building up a party which should devote all its energies to securing for every unit of the nation the rights belonging to free men. Foremost among those rights was freedom of speech and pen. Count Itagaki could not continue his connection with a party which assailed that right. For some time back, too—and perhaps in this paragraph is to be sought the real text of the pronunciamiento—he had observed much that he disapproved of in the conduct of the Party, and though he had hitherto kept silence, the time had now come when he must remove his name from its roll.

* * *

In such terms the Count turned his back on his Party. With him stepped out of the ranks Messrs. Kataoka, Kurihara, Yeguchi, and Uyeki, and it is expected that a very large number of seceders will pass from the *Rikken Jiyu-to* to join the banner of their old chief. By the light of this important event it will be re-called that Count Itagaki has taken little share of late in the deliberations and movements of the *Rikken Jiyu-to*, and that such marked isolation could not but be deemed significant. It may be that his secession will be the signal for a general retirement on the part of all the moderates, who see quite plainly that the action taken by a section of the Party with respect to the Budget must ultimately lead to a severe collision between the Government and the Diet, and is already distinctly unconstitutional. Strange it is how persistently fate links Count Itagaki's political career with the history of Korea. Seventeen years ago his aggressive policy towards the little kingdom was generally supposed to have contributed materially to his retirement from the Cabinet, and now he turns his back on his Party for the sake of asserting the right of free speech in the case of a man who advocates the military occupation of the peninsula by Japan.

* * *

No developments of a conclusive character have occurred in relation to the retirement of Count Itagaki from the ranks of the *Rikken Jiyu-to*. The manifesto sent by him to the Committee of the Party, announcing his resolve to sever the connection, was returned by the Committee on the ground that a portion of its language did not convey a clear meaning, but in reality for the purpose of opening a path for mediation. Mr. Kono Hironaka, one of the most respected members of the *Jiyu-to*, undertook the office of mediator, but his efforts met with no success whatever, Count Itagaki explaining that though the incident of the newspaper article was the proximate cause of his retirement, there had been of late many reasons influencing him in the direction of separation, and his mind was now made up beyond the possibility of change. When the daily meeting of the *Rikken Jiyu-to* took place on Wednesday morning, at 10 o'clock, one of the hundred and eighty members present asked the President, Mr. Hoshi Toru, whether the alleged receipt of Count Itagaki's resignation was true. The President replied in the affirmative, but added that the document had been returned, and beyond this meagre information the meeting did not seek to penetrate. Later in the day, Count Itagaki sent back the document of resignation with a very brief covering letter, in which he stated, with reference to the objection as to want of clearness, that what he had intended was to express his intention of leaving the *Rikken-Jiyu-to* and getting up a party of his own. It is probable, therefore, that we shall see the *Aikokuko-to* resuscitated, though only by way of preliminary to some more comprehensive association. The defection of Count Itagaki will be a severe, if not fatal, blow to the *Rikken-Jiyu-to*. That Party possesses no one upon whose shoulders the mantle of the veteran liberal can rest for an hour. Through many changes of fortune and despite of associates not always calculated to enhance his reputation except by contrast, Count Itagaki has never for a moment forfeited public respect and esteem, and we must frankly confess that we are sincerely glad to see him sever his connection with a party having for its apparent mainspring of action, unscrupulous opposition to the Government. In the face of such kaleidoscopic changes as mark the present development of political organizations in Japan, it is idle to speculate about the future, but assuredly Count Itagaki's new attitude is a hopeful element in the situation.

* * *

The *Rikken Jiyu-to* appears to have been greatly disturbed by the receipt of Count Itagaki's letter of resignation. After the Committee's vain attempt to induce the Count to withdraw the letter, a consultation of the leading members was held, the decision arrived at being that the retirement of the founder of Liberalism in Japan could not fail to produce a most serious effect upon the prospects of the *Rikken Jiyu-to*, and that every effort must be made to prevent such an unfortunate consummation. In pursuance of this resolve, a number of the most influential men of the Party, acting as delegates, waited on Count Itagaki and begged him to re-consider his decision, urging that a newspaper article should not be suffered to be the cause of a catastrophe so injurious to the prospects of Japanese Liberalism. After long consultation and a display of great reluctance, the Count consented to recall his resignation, but this happy ending of the present complication is not expected to be more than a temporary settlement. Count Itagaki is emphatically opposed to many fundamental features in the methods of the *Rikken Jiyu-to*, and though he may be willing to stave off the disruption of the Party for as long a time as possible, there is a very slender chance of his becoming reconciled to permanent cō-operation with it.

### THE "KOKOMIN-NO TOMO" ON THE BUDGET.

THE *Kokumin-no-Tomo* writes very strongly in support of the report of the Budget Committee. Now that the report is before the House of Representatives, the Tokyo journal wishes to reminds the members of the fact that at the time of the election last July they pledged themselves, either directly or indirectly, to lessen the burdens of the people. Are they prepared to fulfill the solemn pledge to their constituents? Our contemporary thinks that it is idle to ask such a question, became they are morally bound to support the extreme plan of reduction. As to the contention put forth by some persons that the "extremists" vote for a reduction practically incapable of being carried out, the *Kokumin* is only astonished that the so-called "extremists" are satisfied with the reduction of no more than about nine and a half million *yen*. Moreover, about a million and a half of that sum is represented by interest on deposits, so that the real reduction is little over 8 million *yen*. It is absurd, continues our contemporary, to pretend that the loss of such a paltry amount could seriously interfere with the smooth conduct of the administration. The items of expenses in which reduction is intended to be made relate to the salaries and members of officials, to travelling expenses, and to expenses for the maintenance of the Higher Middle Schools, the Metropolitan Board of Police, and so forth. What the "extremists" desire is simply to bring the income of officials to the level of men engaged in other walks of life out of the Government, and to either abolish or lessen in magnitude those institutions, educational and otherwise, whose functions can better be discharged either by private enterprise or by institutions organized on a different plan. The Metropolitan Board of Police is

Digitized by Google

described by our contemporary as an imitation of a similar institution existing in France, a reminiscence of the horrible days of the Revolution, and its absorption into the City Government of Tokyo need not be looked upon as a measure in any way injurious to the conduct of the administration. Neither is the existence of the Higher Middle Schools calculated to favour the development of private educational enterprise. With regard to the objection that the "extremists" contemplate an encroachment upon the prerogatives of the Emperor, the Tokyo journal retorts by saying that the "moderates" are equally open to the same charge, for they too propose to reduce the salaries of officials and office expenses, the only difference between the two sets of reformers being that the one set does not proceed in so thorough a manner as the other. In short the difference is one of degree not of kind. The "moderates" are accused by the *Kokumin* of being merely the mouthpiece of the Government. They propose a reduction of 5 million *yen*, because they are assured by the Cabinet or at least by some of the Ministers that the Government would be willing to accept such a reduction. In other words, they strive to carry out not the will of the Diet but the will of the Cabinet. "In order," the *Kokumin* continues, "to cut the enslaving ties of personal interest (*jôjitsu*) which have during the last twenty years entwined themselves round this question, the Diet must keep itself above the level of conventionalities and aim above everything at promoting the interest of the country and the well-being of the people. Should the Diet be, on the contrary, restrained by the very ties of personal interest to sever which is its bounden duty, and should it behave to the Government as a maid would behave to her mistress, by anticipating the wishes and consulting the convenience of the Executive, thus failing to accomplish its original object—should the Diet act in such a manner, it may be said to have died in spirit, to have become the slave of the executive." In conclusion, our contemporary exhorts the members of the *Rikken Jiyu-to* and the *Kaishin-to* not to be betrayed into the fatal error of internecine division on this important question, for on their firm union depends the fate of the struggle in which the Opposition is engaged against the Government. But the exhortation has already proved abortive.

### THE MINISTER OF STATE FOR FOREIGN AFFAIRS.

RUMOUR have been busy lately with Viscount Aoki's affairs. It having been more than once stated that the Viscount contemplated the resignation of his portfolio, a friend of the *Jiyu Shimbun* has interviewed him and obtained a very distinct statement which appears in the columns of that journal. The Minister is represented as saying that he has not the least intention of resigning, nor could be see any reason for adopting such a course. Had he made a failure in foreign policy, or did he find himself in serious disagreement with his colleagues in the Cabinet, or were public opinion evidently opposed to him, he should not hesitate to resign. But none of these conjunctures had arisen. Nay more, the present time was one of great importance in respect of the empire's foreign affairs. The Minister was actually now engaged conferring with his colleagues on the subject of Treaty Revision, a problem which all his strength should be devoted to solve, and the Cabinet's deliberations as to the policy to be definitely pursued were at a vital stage. Should it unfortunately happen that the policy of the Cabinet encountered opposition, or that the Cabinet itself failed in unanimity, the contingency contemplated by rumour might occur, but for the rest the Minister had no idea of resigning.

* * *

It is of course impossible to be quite sure how much of this really came from Viscount Aoki and how much from the imagination of his supposed interviewer. But on the face of it, there is nothing in the account that the Minister might not have said. Not a shadow of discernible reason exists for the suggested resignation. The rumour arose, so far as can be ascertained, in connection with the postponement of the Commercial Code by the Diet, and subsequently in connection with a baseless story that Viscount Aoki's attitude towards the Budget question was not in accord with the attitude of some of his colleagues. We believe that no foundation whatever for the story was furnished by either phase of politics, and that the report had its origin in idle gossip. Viscount Aoki is not likely to betray the Cabinet into the evil course of changing pilots when the boat of Treaty Revision is in mid-stream.

### DEATH OF A PRIVY COUNCILLOR.

MR. MOTODA YKIFU, a Privy Councillor, expired on the 21st instant. He was attacked by influenza on the 13th instant, and two days later high fever supervened, the patient gradually sinking and finally succumbing. Mr. Motoda enjoyed a high reputatation as a scholar. For several years he held the important post of First class Instructor to the Emperor, and when the serious character of his illness became known, His Majesty directed that Drs. Ikeda and Baelz should attend him. The day after his death he was Gazetted a Baron, and a sum of ten thousand *yen* was granted his family. The funeral will leave the deceased statesman's residence in Urasarugakucho, Kanda, on the 27th instant, and the interment will be in the Aoyama cemetery.

### UNEASINESS IN TOKYO.

SOME uneasiness prevailed in the capital on the 18th instant. A rumour got abroad that the general meeting of the Radical Party, to be held the next day in the Koseikan, Kobikicho, would be taken advantage of by a body of *soshi* to make a demonstration of a very determined character. This idea may have been suggested by the fact that the *soshi* made the recent meeting of the Party in the Yayoisha the occasion of an attack which nearly cost Mr. Uyeki Yemori his life. At all events quite an excitement prevailed, and towards evening it began to be whispered that another forced exodus of *soshi* was likely to take place during the night under police auspices and by the authority of the Peace Preservation Regulations. For this latter report two incidents were probably responsible: first, that a meeting of twenty-three police inspectors had been held during the day, and secondly that Viscount Tanaka, Chief of the Metropolitan Police, instead of travelling about the various districts of the city and visiting the stations, as is his wont, had spent many hours at home writing. The public's expectations were disappointed, however. No one received marching orders during the night of the 18th, and the Radical meeting on the 19th passed off without disturbance of any kind. Moreover, it became known on the 19th that those in a position to speak had denied the existence of any intention or apparent necessity to take further steps under the Peace Preservation Regulations. The city therefore drew its breath quietly once more.

### JAPANESE WOMEN IN THE UNITED STATES.

ACCORDING to an extract published in the *Joyaku Zasshi* (Woman's Magazine) from a recent work by Mr. Nitobe Inazo, who lately married a Philadelphian lady, it appears that there are many Japanese women receiving education in the United States of America. Miss Kato Kin is staying at Salem, Massachusetts, and Miss Kôda Nobu is studying music at Boston. They were sent by the Department of Education. Miss Hishikawa Yaye is studying medicine at Chicago, while Miss Hirata Tsune is at the West Maryland University, and Miss Miyakawa at Mount Holyoak. Mrs. Tamura is at New York, fitting herself for the duties of a pastor. Miss Sono is attending the law lectures at the Pacific University of California. She means to be called to the bar on her return. There are also several Japanese female students at Washington, Chambersburg, Overbrook, San Francisco, Aucland, and so forth. Miss Tsuda, one of the five Japanese girls who were sent twenty-one years ago to America by Count Kuroda, has again crossed the Pacific for the purpose of completing her education. As to those who have already returned to Japan, the extract enumerates Misses Yoshimatsu, Uyeda, Yamagawa, and Nagai, who together with Miss Tsuda were the first to go abroad for educational purposes, and Mrs. Okami Kei, who studied medicine and is now the Superintendent of the Female Department at the Tokyo Charity Hospital. Miss Yamagawa is now Countess Oyama, while Miss Nagai is the wife of Lieutenant Uryu, of the Navy.

### THE "SOSHI."

THE head-quarters of the *soshi* in Tokyo have hitherto been in the Kyobashi district. It was in that quarter and in Shiba that the great majority of the youths recently banished under the provisions of the Peace Preservation Regulations resided. It would seem now, however, that the *soshi* left in the capital have settled in the Kanda and Shitaya districts, and that, so far from being intimidated by the fate of their fellows, they have developed new resolution and given themselves the title of "true *soshi*" (*shinsoshi*). They declare that they will take measures to punish or restrain all who promote improper political principles, or advocate the reduction of the Budget in such a manner as to violate the law, or secretly move the Authorities to put the Peace Preservation Regulations into force. It appears to have escaped the attention of these saviours of society that the Peace Preservation Regulations are already in force, and that anybody attempting to carry out a mission of reform by violence may find himself shot out of the capital at a few hours' notice. There is no need of secret memorials to the Government on the subject.

* * *

In connection with this matter, it may be well to notice an error committed by a local English journal. Several of the *soshi* expelled from Tokyo having come to Kanagawa and settled there pro tem., their presence in the neighbourhood of the foreign Settlement had betrayed our local contemporaries into expressions of alarm which do not appear well considered, inasmuch as the *soshi* have not exhibited any disposition to molest foreigners, except in connection with the Anti-Revision, or Pro-Revision, Meeting of last September, now a thing of the past. Apart, however, from the general question, it has been asserted that while, on the occasion of the enforcement of the Peace Preservation Regulations in 1887, the *soshi* who took refuge in Kanagawa were compelled to proceed to the provinces, they have on this occasion been allowed to remain in Kanagawa. Reference to the Peace Preservation Regulations will show that they confer upon the police no such power as would have been necessary to pursue the former course. All that can be done under the Regulations is to banish men, for a period of not more than three years, to a distance of 3 *ri* from any and all of the Imperial Palaces in Tokyo. Once beyond that radius, there is complete security against the operation of this special clause of the Regulations. Even if a district outside the capital be proclaimed under the Regulations, no power to remove its inhabitants is vested in the police. It is therefore entirely a mistake to say that the *soshi* who came from Tokyo to Kanagawa in 1887, were obliged to "move on." On the contrary, they remained there unmolested, just as they are remaining now, and there is no more reason for foreign residents to apprehend annoyance at their hands on the present occasion than there was in 1887.

* * *

Among the *soshi* staying in Yokohama are two, by name Namba Tohatsu and Shiga Sukegoro. They have taken up their abode at Tsukiya, in the 5th ward of Honcho, and there they are very closely guarded by the police. For it seems that they are men who hold physical violence and extreme measures in special esteem, and that for this reason they have incurred the enmity of the more moderate section of their fellows. The fear is that an encounter may take place between the two ex-

Digitized by Google

tremists and the other side, and to prevent such a conjuncture the police are on the alert. Perhaps it might he well to put the whole party into a dark room and let them fight it out. However the issue went, the public could not lose much.

### OFFICIAL ECONOMIES.

It is stated that the sweeping reductions recommended by the Committee on the Budget have already begun to produce a disquieting effect in official circles and among the companies which receive subsidies from the Government. By way of example the case of the Railway Bureau is quoted. In that Bureau it has hitherto been customary to pay a suitable travelling allowance to officials sent to distant places on business, but the theory has now been put into force that, as railway officials can seldom have business at places not accessible by means of their own lines, travelling allowances need not be granted. Farther, whereas extra pay has always been given in the past for over-time work, it is rumoured to have been decided that no extra pay shall be allowed in future, even though officials have to work the whole night. The latter of these statements seems to be decidedly incredible. Whatever may be the nature of the economies suggested by the Budget Committee, they certainly cannot be suffered to extend to withholding fair remuneration for work done.

### CURRENT TOPICS.

Mr. Taguchi Ukichi, editor of the *Keizai Zasshi*, who returned about a month ago from a voyage to the South Sea Islands, has had several conferences with the delegates of the Tokyo *shizoku*—the former retainers of the Shogunate—as to the proprietorship of the *shizoku* industrial fund, with part of which he had formed the South Sea Trading Company. It is reported that Mr. Taguchi has consented to hand over to the *shizoku* the right of ownership of the fund; but as to the manner of using the money, it is probable that he be entrusted with it, and permitted to invest it in the development of trade with the Pacific Islands recently visited. Indeed, whatever some of the *shizoku* might have said of him in moments of excitement, the majority of them are no doubt glad that the fund fell into the hands of a man of such high integrity and honesty of purpose.

* * *

Mr. Hoshi Toru, who, having been abroad at the time of the election, has no seat in the Diet, is reported to have a near prospect of obtaining one, Mr. Mutsu, his intimate friend, being, according to rumour, desirous of resigning his seat and giving it to Mr. Hoshi. Another report regarding Mr. Hoshi is that he contemplates the formation of an emigration society for the purpose of enabling *soshi* to obtain some sober means of livelihood abroad. It would be a great thing for the country if his plan should succeed.

* * *

Mr. Hayashi Yuzo's Bill for the equalization of the assessed value of land throughout the country, has roused the members from the North-East Provinces to an extraordinary degree of activity and excitement. At present, the assessed value of land is abnormally low in the Prefecture of Yamaguchi, in the City of Kyoto, and in the Provinces of the North-East, and the object of the bill is to raise the value of land in those localities to a level with the rest of the country. The members from the North-East claim that the assessed value of land in their districts is not actually low, because land up there is very poor in its productive capacity, and because its value is further decreased by the absence of proper means of transportation. They are reported to have issued a circular among their constituents, exhorting the latter to stand up for the defence of their threatened interests.

* * *

Viscount Torio, who lately astonished the public by resigning his membership of the Upper House, has not by any means risen higher in popular estimation as a practical statesman. Men regard his extraordinary behaviour as another proof—if proof were needed—that his genius is too eccentric and ill-balanced for practical statesmanship. It is reported that his resignation will not be accepted by the Emperor, and assuredly he will be the last man to disobey the Sovereign's wishes.

* * *

The *Kokkwa Shimbun*, which, after appearing only a few weeks, lately stopped publication on the pretext of intended improvements, has at present little prospect of coming out again. The promoters made, as we then noted in these columns, a fatal error in the selection of their editors. A more suitable editor than Mr. Tatsumi it would have been easy enough to procure at a moment's notice. Further, it is rumoured that the promotors have been unable to obtain the support of the aristocratic society whose interests they professed to represent; though we are not in a position to declare precisely why they failed in this part of their programme. It may be that the aristocracy of Japan do not see the expediency of being dragged into active political warfare and having their interests taken charge of by an organ strongly suspected of maintaining close relations with a certain political faction.

* * *

Prison reform is making steady progress in Japan. The *Kangoku Hyoron* (*Prison Magazine*) tells us that the Prefectural Government of Shimane has taken the lead in putting female convicts under the charge of female jailers. Four women, all of them wives of prison wardens, have already been appointed to superintend prisoners of their own sex.

* * *

The movement for the abolition of licensed prostitution seems to be steadily gaining ground. The local assembly of Okayama voted on the 22nd ultimo for the abolition of public prostitution after five years from that date. Petitions on the same matter have been received by the Diet from Gumma, Okayama, Niigata, Yamanashi, Osaka, and Gifu, while several other localities are reported to be shortly about to follow in the same track. The bazaar lately held at the Ginza Kwaikan, Tokyo, by a number of ladies, for the purpose of adding to the fund for the abolition of licenced prostitution, is said to have been a great success.

### HOIST BY HIS OWN PETARD.

On the 9th instant, when the House of Representatives met, and after the usual announcements had been made from the Chair, a member rose in his place, and pointing to his head, which though very artistically bandaged, nevertheless looked exceedingly unlike the head of a respectable member of a respected assembly, explained that he had already apologised to the President for presenting himself in such a plight, and that he now desired to apologise to the House. This courteous harangue was received in silence, and the House proceeded to the Orders of the Day. The member was Mr. Suzuki Shoji. Last year, when the organization of the *soshi* assumed a more vertebrate form than it could previously boast, Mr. Suzuki was generally regarded as a General, if not the Generalissimo, of the band of club cavaliers. Of his exploits in that capacity we know little or nothing, nor can we tell by what strange freak of wayward fortune he was transformed from the captain into the foe of the *soshi*. Yet it will be fresh in the minds of our readers that the vigilance of the police alone saved him from a rough if not fatal encounter in the vicinity of Count Goto's residence on the 7th instant, and when next the public heard of him, he was apologising to the House for coming before it with a broken head. Mr. Suzuki is to be congratulated on having cut the ties that bound him to his turbulent associates, but for the moment people talk of him as of one hoisted with his own petard. Nor has he altogether forgotten the old association. He it was that made the motion on the 14th instant, asking the House to condemn the action of the Government in putting the Peace Preservation Regulations into force. He thought that to expel a number of youths from the capital without any form of trial, would offend and excite public opinion much more than any act of which the youths might be guilty. But the House looked on the linen bandages that encircled Mr. Suzuki's cranium and voted against him.

### THE PESSIMISTS.

Sensationalism is a mischievous rôle for newspapers to play, however trivial and insignificant their writings. It is an easy rôle, we grant, By an unfortunate dispensation of Providence. slander and exaggeration come readily to the least gifted of mortals, and since slander and exaggeration possess piquancy of their own, their journalistic expression is usually good for a certain number of dollars and cents. But how wearisome and contemptible they grow after a time! The interest they excite at first is soon succeeded by ridicule and ultimately by disgust. At this juncture, for example, when an editor, heading his article "Under the Shadow of the Assassin's Sword," devotes two columns of dreary blundering English to prove that we are living under a reign of terror in Japan, and that security of person and property does not exist, what can his readers do but pity him as the victim of wild hallucinations, or despise him as a poor scribbler careless how much he disturbs or deceives the public mind provided only that he creates a demand for his unsaleable sheet? Any one having command of newspaper columns, who deliberately sets himself the task of writing down Japan and the Japanese, of representing them in the worst possible light, of persuading the public that the country is in an uncivilized condition and that its institutions are quite untrustworthy, can achieve a measure of success by pertinacity and unscrupulousness. But in the eyes of all sensible people he cuts a ridiculous and contemptible figure. Children may grow pale at the buzzing of a blue-bottle fly, and school girls tell each other terrible stories about bold bad men hid in cupboards, ruffians concealed under beds, or mad dogs lurking at corners, but one's sense of congruity is a little shocked when grey-bearded editors begin to prattle nightmares and whisper sensationalism like small urchins or short-dressed misses. There is nothing to disturb the even tenor of our way or the quiet security of our life in Japan unless we are silly enough to be deceived by doting alarmists, or unless the unceasing stream of malicious abuse and slander that flows through the columns of the local Thersites does ultimately rouse the active resentment of some hot-hearted Japanese. The public is utterly weary of all these appalling phantoms and unending men in buckram. If we cannot have sense and sobriety, let us at least have silence.

### THE CABINET AND THE BUDGET.

The *Tokyo Shimpo* says—with how much truth we cannot tell—that the Cabinet is divided into three parties with respect to the question of reducing the Budget. The first party is that of Count Yamagata. It holds that a reduction of one and a half or two millions is the utmost possible, and that nothing above that can be seriously thought of. The second party consists of Count Goto, Viscount Aoki, Mr. Mutsu, and Mr. Yoshikawa. These four statesmen are in favour of making the utmost reductions that can possibly be effected, but they maintain that so far as concerns any reduction which cannot be put into effect without injuring the public interest, the Government must put its foot down firmly even in the face of both Houses. The third party is called the Satsuma Section. It consists of Counts Matsukata, Saigo, and Oyama and Viscount Kabayama. It holds that although a small reduction may be made, the Cabinet must resolutely decline to follow the Diet into any measure of economy involving several million *yen*. We do not clearly perceive the difference between this third view and that attributed to Count Yamagata, but the *Tokyo Shimpo* evidently thinks that there is a material

Digitized by Google

difference. Our contemporary adds that the policy advocated by the Second Section has most strength, but that the last Section urges its views with the greatest earnestness. Considering that each section contains the same number of Ministers, we fail to appreciate this distinction also.

### THE SCHOOL OF MUSIC AND THE HIGHER FEMALE SCHOOL.

THE Budget Committee's proposal to abolish these two institutions has elicited much adverse comment from persons interested in education. The *Koku-Hon* is one of the many journals opposed to the proposal. Speaking first of the School of Music, our contemporary dwells on the importance of music from an educational point of view, and observes that, musical education in this country being still in its infancy, it is absolutely necessary that there should be an institution specially devoted to the training of musical teachers and to the reform of the national music. There might of course arise sooner or later a private school of music to take the place of the present Government establishment, if the latter were abolished; but since a musical school cannot at present be expected to be a paying undertaking, the Tokyo journal is sure that no private school will for some years undertake the important task ot reforming the national music. Our contemporary therefore fails to see any reason for abolishing the School of Music in order to save the paltry sum of about twelve thousand *yen* a year. As to the Higher Female School, the *Koku-Hon* alludes to the fact that female teachers are now in great demand in Japan. Under existing circumstances, female schools do not pay, as may be seen from the accounts of the various private institutions of that kind in the capital. Perhaps it may not be necessary to maintain a female seminary on a large scale, but the support of an institution like the present Higher Female School is, in the opinion of the *Koku-hon*, highly important at present. Various stories lately circulated about alleged immorality on the part of the students of some female schools may, the Tokyo journal goes on, have contributed in no small degree to the regrettable decision of the Budget Committee. But even granting that these stories had some foundation to rest upon, our contemporary sees no reason why that should necessitate the abolition of the Higher Female School, for the alleged evil can be easily corrected by improving the mode of management.

### THE RE-BUILDING OF THE DIET.

THE *Jiji Shimpo* recounts the loss inflicted on the country by the burning of the Diet. The buildings forming the two Houses covered 1,500 *tsubo* (1¼ acres), and their annexes covered 347 *tsubo* (more than one-fourth of an acre). They were commenced in June, 1888, and finished in November, 1890, the cost of the buildings without the furniture being 237,000 *yen* approximately, and the total outlay amounting to something like 300,000 *yen*. They were only temporary buildings, but their loss will doubtless postpone the commencement of the permanent edifice which the Government has in contemplation. The *Jiji* adds that the work of re-construction has been entrusted to the Temporary Building Bureau, the Chief of which, Viscount Yamao, has been requested to get the buildings ready for the second session of the Diet, in November of this year. If the buildings took nearly two years and five months to complete originaliy, we do not see how they are to be reconstructed in ten months.

### THE "CHOYA SHIMBUN" AND THE "SOSHI."

HERE is a bit of writing that does the *Choya Shimbun* much credit. If all the leading vernacular journals were equally courageous and outspoken, those wretched youths who are doing their best to disgrace Japan would soon receive short shrift:—"The 23rd year of Meiji was an exceedingly troubled time. Shortly before or after the organization of the *Rikken-Jiyu* party, so-called *soshi* began to assemble from all quarters in Tokyo, and with bared muscles and sticks in hand, set themselves to perform acts of violence in the political arena. This is the age when men eschew club government and advocate government by reason. It is strange that club folks should have made their appearance among parties avowedly labouring to bring about the reign of reason. Let us give a few instances of the doings of the *soshi*. On the 21st of last August, four or five *soshi* went to the residence of Mr. Inouye Kakugoro and behaved with great violence. On the 25th of the same month, at night, as Mr. Sugeno Michichika, an aged resident of Osaka, was passing out of the house of a friend, Mr. Koike Heiichiro, a number of *soshi* fell upon him, and give him a terrible beating, striking him on the back, on the stomach, and on the face, wherever they could get at him. On the 10th of September, several *soshi* proceeded to the *Yayoi-kan* and enquired for Mr. Kawashima. No sooner did the latter present himself than they fell on him and began to beat him, and when his brother came to succour the assaulted man, he too suffered severe injuries at their hands. Some two hundred members of the *Jiyu* party were present at the time, and witnessed the fracas, but not one of them made any attempt to assist Mr. Kawashima and his brother. Feeble curs truly! On the 13th of September, Mr. Kokubo Kihichi, a member of the *Jiyu* party, was cut down and severely wounded in one of the Kanda streets, by daylight. On the same day some thirty-five *soshi*, pretexting business, persuaded Mr. Kameno Shuichiro to accompany them, and when they get him into a lonely place at night, struck him down. Turning to the provinces, we find numerous examples of similar violence. On the 3rd of February, in Kochi Prefecture, in consequence of a dispute between the *Jiyu-ha* and the *Kokumin-ha*, some of the latter party cut down Mr. Sugiuchi of the former party, as he was passing along the road. On the 1st of the some month, a disturbance arose in Kumamoto Prefecture between the *Kaishin-to* and the *Kokumin-to*, in connection with the election of members of the Local Assembly, and one member of the *Kokumin-to* was killed and several wounded. The *soshi* of former times were actuated by motives of justice; the *soshi* of to-day obey the dictates of interest. The *soshi* of former times sacrificed their own lives for the sake of other people; the *soshi* of to-day sacrifice the lives of other people for their own benefit. The *soshi* of former times did not seek to escape the consequences of their deeds; the *soshi* of to-day, if they fall into the hands of the police, resort to all sorts of devices and excuses to clear themselves. The *soshi* of former times did not shrink from facing danger singly; the *soshi* of to-day, relying on the strength of number, attack the weak. The *soshi* of former times deemed it a disgrace to strike a man when he was off his guard; the *soshi* of to-day make it a habit to assault people unwares."

* * *

This is the sort of writing every respectable journal should address to the cowardly pests who are doing everything in their power to establish a reign of terror in Japan and to earn for their country the disgrace of barbarism. The *soshi* have been treated too gently. Transportation to Yezo or some other out-of-the-way region, amid the jeers of the whole nation, is the fate that ought to befall these demented youths.

### EXCITEMENT IN THE PREFECTURE OF GUMMA.

THE Prefecture of Gumma is at present in a state of great excitement. On the 17th ultimo, the local Assembly, then in session, voted, with not one dissentient voice, a motion calling upon the Governor, Mr. Sato, to resign his position. It appears that there had been for some time much complaint among the local population about the conduct of the Governor in connection first, with a convict prison at Mayebashi; secondly, with the sale of a Government forest at Kakiage mura; and thirdly with the measures adopted by him in the case of a certain corporation. The papers do not inform us as to the details of the charges brought against the Governor and we are consequently unable to form any idea whether or no the Local Assembly is justified in taking the extraordinary step above alluded to. The unanimity of the vote certainly indicates widespread dissatisfaction throughout the locality. On the following day, the 10th, a committee, consisting of ten members of the *Ken-kwai*, waited upon the Governor at his private residence, where he seems to have been confined by sickness. The committee explained the object of their visit, and advised him, in the name of the whole Assembly, to resign his office in compliance with the wish of the population of the prefecture. The Governor thanked the committee for their advice, but declined to entertain it, saying that he held his office in trust from the Sovereign. The same night the Assembly received an order from the Governor suspending its session. The suspension was removed on the 24th, and things went on very quietly for the first few days, but on the 29th Mr. Hosono Jiro, who is reputed to be one of the most eloquent members, again brought in the question of resignation and proceeded to make a violent attack on the Governor. Thereupon a Secretary of the Prefecture ordered the suspension of the session according to Art. 33 of the Local Assemblies Regulations. The members dispersed and went home to their villages, promising to confer about further steps to be taken after finishing the New Year's festivities. But on New Year's day they received notice from the Governor that the Local Assembly had been dissolved by order of the Minister of Home Affairs. The issue of this notice at once threw the inhabitants into a state of violent excitement. They held meetings at several places, and decided amid loud acclamations to return the same members at the time of re-election. They appointed delegates to present a memorial to the Governor, recommending him to take the advice given him by the former members of the Assembly. Some of the members, Messrs. Hosono, Miyaguchi, and Nomura, repaired to the capital and waited upon the Ministers of State to explain the reasons why they thought it necessary that Mr. Sato should resign. The new Assembly is to be summoned within 60 days from the date of the dissolution of the former Assembly, so the re-election will take place some time within next month. Meanwhile the people of Gumma, it is reported, are determined not to yield a step.

* * *

Writing on this subject, the *Keizai Zasshi* finds itself perplexed to reconcile the charges brought against Governor Sato with his known reputation for integrity and honesty. Mr. Sato was born of wealthy and highly esteemed parents in the former clan of Choshu, and he distinguished himself very much at the time of the Restoration in conjunction with his fellow clansmen, Counts Ito, Inouye, and Yamagata. He is, we quote from the Tokyo periodical, of a genial and quiet disposition, and having inherited a considerable fortune, is known to be free from any vices of a sordid nature. Such being the case, it is hard to believe that the present accusations against him are well founded, but at the same time our contemporary cannot but think that the local Assembly had some good reasons for its extraordinary conduct.

### BALL AT THE FRENCH LEGATION.

HIS Excellency the French Minister and Madame Sienkiewicz gave a most enjoyable ball at the French Legation on Tuesday night. Among the numerous company which assembled in response to the invitation were Prince and Miss Sano, Marquis Nabeshima, Viscount and Viscountess Aoki, Viscount and Miss Kagawa and Miss Kitajima, T.E. the Russian Minister and Madame Schévitch Dr. von Holleben, Baron Biegeleben, and Mr. and Mrs. Swift, Mr. and Mrs. Sannomiya, Prince and Princess Labanow, Mr. van de Polder, Mr., Mrs., and Miss F. Hannen, Mr. von Waldthausen, Mr. Stchéglow, Mr. Clarke-Thornhill and Mr. Gubbins, Baron von Siebold, Mr. Dun, Mr. and Mrs. Gardiner, the officers of the *Vipère*, General and Miss Palmer, the Ven. Archdeacon and

Digitized by Google

Mrs. Shaw, Mr. and Mrs. Piggott, Dr., Mrs. and the Misses Divers, Monsieur and Madame Revilliod, Lieut. James, R.N., and Mrs. James, Mrs. Pownall, Captain and Miss Münter, Mr. Nagasaki, etc. The feature of the entertainment was the cotillon which, under the leadership of Mr. Stchéglow, was kept up with great spirit until 3 o'clock in the morning. At one end of the ball-room was erected a daintily arranged stall, from which numerous and exceedingly pretty presents were distributed amongst those fortunate enough to be present at one of the most successful balls ever given in the capital.

### THE BURNING OF THE DIET BUILDINGS.

Upon further inquiry it appears that the electricity for lighting the buildings of the Diet was not generated by a special dynamo within the enclosure of the Houses of Parliament, but was supplied by the Tokyo Electric Light Company. The original plan of the buildings had included a special dynamo, but at the last moment a change was made, and the Tokyo Company received orders to effect the lighting. Such being the case, the Company is of course greatly perturbed by the official decision that the conflagration on the 20th instant had its origin in the electric apparatus, and a remonstrance is said to have been addressed by the directors to Mr. Sone, Chief Secretary of the Lower House, whose evidence went far to confirm to belief in the electric origin of the fire. The protest, as re-produced by the *Jiyu Shimbun*, objects *in toto* to the official decision, and advances two reasons in support of the objection. The first is that branch wires to the Russian Legation and the residence of Mr. Kuki, connect with the principal wire conducting electricity to the Diet, and that as the connections are between the dynamo and the Diet, the latter could not have been set on fire until the effects of over-heating had been previously felt at the Legation and at Mr. Kuki's. The second reason is that devices had been provided for automatically cutting the wire in case of excessive heat. The directors therefore call for a fuller investigation and take strong exception to official decision as calculated to inflict grave injury on their business. The *Tokyo Shimpo* also contains an account of an interview with Mr. Fujioka, an electrical engineer, who refuses to believe that the fire had its origin in the electric apparatus, basing his scepticism on the fact that automatic guards were attached to the wires in several places. All this, however, leaves the question in about as great obscurity as ever. The argument about the wires leading to the Russian Legation and Mr. Kuki's house is difficult to comprehend, except in so far as it establishes that no excessive current of electricity was sent along the main wire from the dynamo. Nobody attributes the catastrophe to the latter cause, however. The idea is that some accident or accidents happened to the wires within the Diet. The danger in using electric lighting apparatus is that a small fracture of the wire, or some other cause, may set up resistance to the even flow of the current, and the electric fluid, accumulating rapidly at the point of resistance, develops immense heat. This peril ceases, of course, so soon as the fracture is made wide enough to interrupt the passage of the current altogether, and the latter principle is taken advantage of in the construction of automatic guards, which, by the melting of a leaden button, sever the wire effectually. It is claimed that an abundance of such guards had been provided in the Houses of Parliament, and that even though one of them had failed to perform its function, the others must have averted danger. But this theory is evidently based on the hypothesis that the fittings and fixing of the apparatus were good in themselves and also secure against accident from extraneous causes. The Parliament buildings were hastily constructed and of somewhat flimsy character. Rough carpentry at the time of construction or changes of level afterwards may have produced one or more weak spots in the wires. Entirely independent witnesses speak of abnormal appearances in the electric lights round the circuit of the Diet on nights preceding the catastrophe, and it is proved that within the Diet itself the light behaved very fitfully in the evening of the 19th instant. As to the safety guards being absolutely efficient guarantees, that they certainly are not. A case conclusive of their inefficiency occurred last summer in the billiard-room of the Rokumeikan. Flame suddenly made its appearance at a spot where repairs had been effected the preceding day, and but for the prompt action of one of the members, a conflagration would probably have ensued. The automatic guards might have been quoted in that event with equal confidence after the destruction of the building, but the fact remains that they did not avert the generation of heat which, without speedy interference, might have proved fatal.

* * *

The answer of Mr. Sone, Chief Secretary, to the letter of the directors of the Electric Lighting Company, was sent in yesterday afternoon. Mr. Sone regrets that he cannot act upon the suggestion of the Company and move for a fresh investigation into the cause of the fire. He repeats the statements previously made by him, and says that there cannot be the slightest doubt about the conflagration having broken out under the ceiling of the corridor outside one of the Committee Rooms, at the place where the electric wire passed, or about a second flame having made its appearance quickly afterwards in the corner of the Government Delegates' Room just below the ceiling. He adds another point which we had not previously noticed. Being convinced, he says, of the electrical origin of the fire, he hastened off to the House of Peers and gave orders to have the electric light turned off, as it appeared to be burning in certain rooms there. The servants replied that the light was never turned on in the rooms referred to, and that the keys were not at hand. Mr. Sone directed a door to be broken in, when it was found that all the lights were burning brilliantly though the connection was not supposed to have been established. Thus everything goes to show that the apparatus was out of order on the night of the conflagration.

### PROVINCIAL CHARACTER.

The *Nippon-jin* of the 13th instant contains an interesting article about the influence of the character of the founders of the various clans on the character of the present generation of their clansmen. Having remarked generally on the strong tendency manifested by a community of men closely united to assimilate themselves more and more to the personal character of the leading spirits among them, the writer proceeds to illustrate this point by referring to the case of about half a dozen of the more important of the former clans. The clan of Satsuma, or Sasshu, as it is more commonly called, receives his attention before all the others. The genealogy of the Sasshu House is traced to Yoritomo, and the well known pride, stubbornness, uncompromising straightforwardness, and unflinching loyalty which characterised all the members of the great ancient family of Minamoto, do to this day constitute special traits of the Sasshu men. Again, just as in olden times men like Hôjô Tokimasa and Wada Yoshimori caused a serious quarrel in the household of Yoritomo, so among the present generation of the Sasshu clan there are persons open to a similar charge. In a later age, when the short-lived but splendid House of Hideyoshi was tottering to its fall under the hand of Iyeyasu, the head of the great southern clan behaved in a manner well illustrating another remarkable trait of the Sasshu race. At the battle of Sekigahara, the clan fought valiantly on the side of Hideyoshi's son, Hideyori, but subsequently at the siege of Osaka, the leader of the same clan, thinking that what he owed to Hideyoshi had been fully repaid by the sacrifices already made in Hideyori's cause, and that he was now free to take whatever side he pleased, concluded to cast in his lot with the rising House of Tokugawa. The writer thinks that the Sasshu chief thus showed, in a crude and superficial manner, the same sense of obligation manifested by the present generation of his clansmen. Though Sasshu formally forsook the cause of Hideyori, it was magnanimous and human enough to give safe shelter to the refugees from the Osaka Castle. Next, as to Choshu, its founder was the immortal statesman, Oye Hiromoto, who, as adviser to Yoritomo, established a system of Government which essentially continued in force seven centuries, until the Restoration of 1867. Choshu men of the present day, like the great founder of their clan, are more noted for policy and cleverness than for straightforwardness. Count Yamagata resembles Mori Motonari in valour, while the political sagacity of Count Ito has some affinity with that of Oye Hiromoto. Tosa men are a curious compound of boldness and faint-heartedness. The former trait they inherit from the House of Chosokabe, and the latter from that of Yamanouchi, for the clan was successively ruled by these different families. The present Count Goto at first opposed the Imperialistic movement, but afterwards did not scruple to abandon the cause of Tokugawa and join his former antagonists, thus exciting the contempt of the late Saigo. Even Count Itagaki, with all his proverbial purity of motive, is, in the opinion of the *Nippon-jin*, not free from a certain kind of baseness. In short, Tosa men are apparently brave, but they lack backbone. The men of Hiogo inherit the simplicity and valour of Kato Kiyomasa, and also the unscrupulous inconstancy of Hosokawa Tadaoki. The men of Chikuzen, as exemplified by Mr. Kaneko Kentaro and Mr. Suyematsu Kencho, are prone to indulge in big talk, true to the example set by the founder of their clan, Kuroda Yukitaka, who once boasted that he could easily conquer the country if he liked, but that he did not like. The clan of Saga owes its origin to a band of Chinese pirates during the *Yuan* dynasty, and the valour and enterprise of these worthy ancestors are found in the present generation. But the Saga men are narrow-minded, time-serving, and incapable of elaborating any large scheme. Sendai can boast of no less an ancestor than Date Masamune who seriously contemplated a career of foreign conquest. Like him, Sendai men have always been schemers, and have never shown competence to carry out their schemes. The writer refers to other localities, but we have quoted enough to give our readers the gist of his essay.

### THE STORAGE OF KEROSENE IN HYOGO.

We published in a recent issue a note from the *Shogyo Shimpo* with reference to the storage of kerosene oil in Hyogo, and placed side by side with it a version of the same affair given in the columns of the *Hyogo News*. Briefly summarized, the Japanese journal's story was that regulations issued by the Local Authorities to control the storage of Kerosene in the interests of public security, had been obeyed by the Japanese but demurred to by foreigners, the consequence being that the date of the regulations' operation was postponed, a result to which the *Shogyo Shimpo* took strong exception. The foreign journal's story was that the regulations had been issued in the interests of a godown company at Wadasaki, the intention being to compel holders of kerosene to place their oil in the company's keeping, despite the greater expense entailed and despite difficulties in respect of insurance. On inquiry we find the facts of the case to be these:—For several years the storage of kerosene oil in Hyogo was not controlled in any way. A year ago, however, regulations were issued by the Prefectural Office, directing that warehouses containing kerosene must be isolated from other buildings by an interval of forty yards on all sides, and surrounded by a fence and ditch of fixed dimensions. Immediately after the issue of these regulations a company was formed for the construction of warehouses complying with the conditions of the new law, and the result was that several suitable godowns were built at Wada-saki. Three foreign firms were then using godowns at Onohama for storing oil, having hired them on leases, two of which had still some years to run, while one was on

Digitized by Google

the verge of expiration. The lessees in the two former cases seem to have given themselves no concern about the new regulations or to have remained in ignorance of them; the lessee in the latter case renewed his lease until the close of the year, when the regulations were to come into force, and then, in the autumn, forwarded a protest through diplomatic channels against the necessity of changing the method of storage hitherto pursued. The result of the protest and of the plea advanced by the other two foreign firms (that they had received no notice and were consequently quite unprepared to forfeit leases having still a long period to run) was a postponement of the date of operation of the regulations, so far as concerned the protesters, until the 1st of next April. Meanwhile steps were taken by the Central Government to investigate the matter, and these inquiries we believe, established the facts that the old system of storing oil decidedly imperils public security, and that measures must be adopted to substitute methods similar to those recognised as essential and observed elsewhere. The incredible accusation that the Local Authorities acted in the interests of a private company throughout, scarcely deserves consideration, but is at any rate disposed of by the fact that the use of the company's godowns is entirely optional: nobody need send his kerosene there unless he pleases. It is is also stated that no transport difficulties are involved, as has been asserted, in using warehouses that compiy with the regulations; that although the cost of storage will be increased from 2.5 to 3 *rin* per case, it will still remain less than one half of the cost in Yokohama; and that insurance can be effected at Wadasaki just as easily as at Onohama. It appears to us that this is a matter in which the foreign firms ought to be found co-operating with instead of opposing the Authorities, if indeed they have really adopted an attitude of opposition. The Government is bound to see that the new regulations are carried out with a minimum of inconvenience to trade, but public security takes precedence of every other consideration, and if the present method of storing kerosene oil is pronounced unsafe, there can be no question about the duty and expediency of reforming it.

### DISTURBANCE AT A MISSIONARY MEETING.

THERE occurred a few days ago in Nagoya an affair indicating that the work of Christian propagandism in Japan is not without its perils. The Rev. G. L. Perin, being on a visit to that city, availed himself of the opportunity to organise a lecture meeting. The place chosen for the purpose was one of the theatres, and the arrangements were all made by a Japanese citizen of Nagoya, who subsequently delivered the opening address. The meeting commenced at about 6 p.m., and after the opening address, Mr. Yoshimura, a coadjutor of Mr. Perin's, was introduced, the audience, which numbered at first about 50, having meanwhile increased to about 500. Mr. Yoshimura's address occupied about 30 minutes. It was closely listened to but rather sullenly received. The Rev. Mr. Perin was then introduced, and had spoken for some two minutes in a general and conciliatory tone, when murmurs began to be audible, then talking which gradually increased, and then challenges to engage in discussion. The speaker paused for a time, and order having been apparently restored, resumed, only to be again interrupted by louder clamour and more peremptory demands that he should stop his address and answer questions. It was replied that anyone desiring to ask questions would be received at the lecturers' hotel the next morning, whereupon three or four youths rushed down the aisles, shouting loudly and gesticulating. With insulting language they demanded the privilege of asking questions, and finally, after an uproar of ten minutes, Mr. Perin agreed that if they would preserve quiet until he had finished, they might ask questions at the close of the meeting. To this they assented, and the lecture was resumed. But before three minutes had elapsed the ring leaders—who are strongly suspected to have been acting at the suggestion of Buddhist priests—came rushing towards the platform declaring that the speakers remarks were quite needless. Seeing that they had come predetermined to break up the meeting, and since they had instantly violated their recent promise to keep quiet, Mr. Perin took his hat and left the platform. Three or four policemen were present, evidently with kindly intentions to protect the lecturers, but making no effort whatever to prevent the mob from rushing upon the platform or even from following Messrs. Perin and Yoshimura into a small room in the rear of the stage, where for the next half hour they were pushed hither and thither, insulted, their lives threatened, and their egress prevented. After the mob had stormed for half an hour, preferring all sorts of unreasonable demands, but especially that the lecturers must resume the meeting, the latter course was agreed to, though it was pretty plain that the rioters only desired further opportunity to insult and humiliate the speakers. Before a word of the resumed address had been heard, loud hooting was again raised and some thirty of the youths, headed by about three leaders rushed upon the stage, surrounded the lecturers, forced them heavily against the raised platform, twice struck the interpreter and tore his clothes. Fortunately Mr. Perin seems to have kept perfectly cool, and was not actually assaulted. The policemen, including one or two inspectors who had by this time arrived, when the most furious rush occurred threw their arms about the lecturers to protect them. Though they mildly expostulated with the crowd at times, they did not once drive the rioters back, or attempt to eject or suppress the three leaders, whose prompt suppression would probably have prevented the riot in the beginning or restored order at any time. It was now half-past eight, and every avenue of escape was barred. The crowd still demanded that the lecture be continued, and threatened violence if their demand was not complied with. By and by, the stage having been partially cleared, the police formed a line, and advised the lecturers to retire. They accepted the hint, and under the guidance of the manager of the theatre, made their way to a little room behind the scenes. Here they remained perhaps an hour. The crowd finally dispersed from the theatre, but reassembled in front of the visitors' hotel. The police deemed that it would be dangerous for the party to go back to the same hotel. *Jinrikisha* were therefore secured, and under police escort the lecturers were taken to another inn at a distance, where they were received about 11 o'clock and remained for the night.

* * *

Doubtless the true construction put upon this affair is that it was an anti-Christian demonstration, organized by Buddhist priests, who in Nagoya are represented by a man of exceptional determination and activity. The lecturers gave no provocation of any kind. Happily the results were not serious, nor have we any warrent for supposing that the purpose of the rioters went beyond intimidation. But it certainly does seem as though the police behaved with much weakness. Due notice had been given of the meeting, which was of course held in the name and under the auspices of Japanese promoters, and the police were there for the purpose of keeping order, which they signally failed to do. It is possible, indeed, that the action of the constables was, to some extent, paralysed by the consideration that foreigners are not entitled to deliver lectures outside Treaty limits, and that the provisions of the Japanese law for preventing disorder at public meetings and extending protection to lecturers as such, do not at present apply to foreigners. Any license now enjoyed by missionaries in respect of propagandism by public addresses or lectures in the interior is a matter of courtesy. But though this consideration might influence the police to prevent the delivery of lectures by a foreigner, it ought out to weigh with them after a lecture has been suffered to commence in their presence. The violent proceedings of the Nagoya rioters were distinctly illegal, and it is very probable that a slight display of vigour on the part of the police might have checked the disturbance. At all events, the occurrence indicates that the Buddhist opponents of Christainity are beginning to tremble in their stronghold, and losing faith in their ability to conquer by appeals to reason, are driven to resort to physical violence.

### THE IMPERIAL PALACE AND THE ELECTRIC LIGHT.

IT may well be supposed that people whose residences are supplied with electric lights have been made uneasy by the fate of the Houses of Parliament, and that the loss to the Electric Light Company is likely to be most serious. The question of the Imperial Palace was of course raised at once. The Emperor is understood to have been reluctant from the outset to sanction the employment of such a system of lighting, deeming it unsuited to a wooden building. The destruction of the Diet has naturally confirmed His Majesty's objections, and an additional cause of apprehension was furnished on the 21st instant, when a portion of the electric wire in the Palace of the Prince Imperial became incandescent, and for a moment threatened danger. It is stated in well informed circles that the Emperor has consequently decided not to suffer the electric lights to be used any longer in the Palace. The electroliers and fittings will probably be left undisturbed for a time, and as no adequate supply of gas is now procurable in the capital, the lighting will doubtless be effected by means of candles. Should this decision be carried out, the use of electricity for lighting purposes must receive a serious check in Japan, for the example set by the Palace will have a powerful influence upon all classes of the people.

### THE "TOKYO MARU."

WE are happy to learn that hopes of floating the *Tokyo Maru* have not been abandoned, as was rumoured two days ago. The rumour had its origin in the fact that the men-of-war supposed to have left Yokosuka with the object of trying to tow the ship off, returned to port without making any attempt. The fact is, however, that though the Government had offered the services of men-of-war for this purpose, the Company has not yet availed itself of the offer, the present programme being to employ a powerful dredger to open a channel for floating the stranded ship. Vessels of war did proceed from Yokosuka to the vicinity of the place where the *Tokyo Maru* lies, and did return to port without essaying to move her, but they were there for naval purposes and not with the intention ascribed to them by rumour. The *Tokyo Maru* remains comparatively sound, and it is confidently hoped that should the weather continue favourable, with a prevalence of east winds, for a few days longer, the arrangements for floating her will be completed.

### TELEGRAMS.

HERR is another text for the *Japan Gazette*:—

REUTER'S TELEGRAMS PUBLISHED IN *Japan Daily Mail*.—Jan. 17th.

It is believed that under any circumstances President Harrison would veto a free coinage of silver bill if passed. The silver party is lobbying to obtain votes in the House in favour of the bill.

THE SAME TELEGRAM RE-TRANSLATED FROM THE *Official Gazette* AND PUBLISHED BY THE *Japan Gazette*.—Jan. 19th.

It is reported that President Harrison under no circumstances will give his consent to the passing of a Bill for the free coinage of silver. The silver-bill party are doing their best to obtain a majority in the House.

We invite the *Japan Gazette* to explain by what provision of the American Constitution the President's consent to the *passing* of a Bill by Congress is required; and also whether the "Knowledge and memory" of its readers can fairly be expected to supply the statement about "lobbying."

### MR. INOUYE KAKUGORO AND KOREA.

IT will be seen from the report of the proceedings in the House of Representatives on Saturday, that the Foreign Office has declined to answer the series of questions put by Mr. Inouye Kakugoro and other members about Japan's relations with Korea in the past. It has always been a matter of interesting speculation how far the Government would consent to allow the Diet to carry its investigations into past history. Already Ministers and Vice-Minister of State

Digitized by Google

have without demur or hesitation answered queries relating to the Budget of last year, or of the year before, and there is now before the Lower House an inquiry which will furnish a conclusive test, since it asks the Finance Department to make a statement of the settled accounts from the 1st to the 23rd year of Meiji. Mr. Inouye Kakugoro wanted to hear about things that occurred six or seven years ago, and on that ground we were disposed to imagine that he might encounter a rebuff. Not so, however. The refusal to answer is based on the form of his question; and, indeed, on reading the original inquiry we are not surprised at the fate it has met. Mr. Inouye and his supporters thought it necessary to append to their list of questions a statement that according to the answers given by the Foreign Office, the nation would decide whether the Government deserved or did not deserve public confidence. Naturally the Government declines to be cited to the bar of inquiry with such a threat brandished over its head, or by answering questions couched in such language to admit tacitly that any section of the House of Representatives can arrogate to itself the right of applying a test of the Cabinet's claim to national confidence. Mr. Inouye's queries were sufficiently interesting to make us regret their abortive ending, but this is by no means the first occasion on which the ex-member of the *Jiyu-to* has spoiled a shrewd conception by lack of moderation.

### TEMPORARY ACCOMMODATION FOR THE HOUSE OF PEERS.

THE Government, after much deliberation and inquiry, has determined, it is said, to make use of a portion of the Imperial Hotel as a temporary meeting place for the House of Peers. The ball-room will serve for the assembly hall, and the rooms on either side, together with other chambers in convenient places, will be taken for the purposes of Committees, the President, Secretaries, and so forth. This decision was arrived at yesterday, and it is expected that the necessary changes and preparations will occupy about a week, so that the House will be able to resume its session about the 28th or 29th instant. Presumably the Examination Hall of the former Engineering College will be put in readiness for the House of Representatives, but there cannot fail to be much inconvenience from having the two Houses separated by a distance of nearly a mile.

### DYSENTERY IN FUKUOKA PREFECTURE.

OFFICIAL returns have been received showing that the epidemic of dysentery which made its appearance in Fukuoka Prefecture last summer, assumed much larger dimensions than was generally supposed. The number of persons attacked by the disease from the commencement of the trouble until the 10th instant was 25,349, of whom 472 died. There were still 237 sufferers at the date (10th instant) of the compilation of the report. The death rate was consequently very low, but the number of sufferers very large.

* * *

It appears that, despite the cold weather, cholera still lingers in Kumamoto. Between the 1st and the 10th instant 3 cases were reported from villages in that district.

### THE ELECTIC LIGHT COMPANY.

IT is stated, with what truth we do not know, that when the Authorities decided to entrust the lighting of the Diet buildings to the Electric Light Company, the latter was required to undertake that it would be responsible for any loss caused by fire resulting from the use of the electric lights. The *Choya Shimbun*, which publishes this statement, says that it does not know exactly what office entered into the agreement with the company, but that the Government is now discussing whether legal proceedings shall be taken against the company in the event of its refusing to admit the fact that the electric lighting apparatus was the cause of the conflagration. The sum involved is a quarter of a million *yen*, so we may take it for granted that the Company will not be disposed to yield without evidence of a very conclusive character.

### ANOTHER NEWSPAPER.

A NEW journal called the *Mimpo* (The People) has just made its appearance. Its editor is Mr. Inugai, a prominent member of the *Kaishin-to*, and formerly one of the editors of the *Choya Shimbun*. In introducing the newspaper to the public, he says:—"Many politicians and many journalists now share our party's purposes. Many others have different programmes. Politicians that take the Government's side are our public enemies. Under peaceful exteriors they conceal the conduct of evil persons, and are criminals against morality. There is reason to fear that society may be diverted from the true path by the organs of such persons. For these reasons this new journal is published. The public is well acquainted with our sentiments and policy. They were fully explained and exhibited in the columns of the former *Choya Shimbun*. We pray all public-spirited men who share our views to assist us in the patriotic work we have in hand." If this brief manifesto does not convey to our readers a clear idea of the *Mimpo's* creed, they have only to refer to Mr. Inugai's speeches in the House of Representatives, as epitomized in our reports of the Diet's debates. They will see the editor there in his true colours, a conscientious and straightforward man completely carried away by the strength of his dislike for an oligarchical Government, of whomsoever formed or whatsoever its administrative record. It was Mr. Inugai who told the House, in the debate on the Budget Committee's Report, that he had yet to discover how the curtailment of official luxury would impair administrative efficiency, and who, in melodramatic style, called the attention of the members to the splendid edifices gracing the choicest sites on the highlands of Tokyo, the residences of Ministers of State. We read everything written by Mr. Inugai with attentive respect, but we remember at the same time that the spectacles through which he views Governmental doings have a very high refractive index.

### THE HOUSE OF PEERS AND THE IMPERIAL HOTEL.

GREAT activity is shown in preparing the Imperial Hotel for the temporary use of the House of Peers. At present the business of the House is conducted in the Rokumei-kan, where some rooms have been placed at the disposal of the officials of the House by the Nobles' Club. The Hotel and the Rokumei-kan being almost within a stone's throw of each other, this arrangement is very convenient. According to present expectations, the Hotel will be ready for the session of the Peers by the 26th or 27th instant. Count Ito, the President, who is now at his villa at Kamakura, is to return to the capital on the 25th. It is stated that the Government is to pay five thousand *yen* per month for the use of suite of rooms occupied by the Diet, and that the agreement will run until March 31st. The price seems reasonable, for it is plain that a large part of the Hotel will have to be given up for the purpose.

### THE ARCHITECT OF THE HOUSES OF PARLIAMENT.

IT seems advisable to correct a misapprehension published in the columns of the *Japan Gazette*. Our contemporary says:—"The Cerman Architect who superintended the erection of the Houses of Parliament, was so dissatisfied with the amount of liberty and money allowed him that, as is known to a few of his friends, he threw up his appointment and went home in disgust." This statement is incorrect. The German Architect who planned and superintended the construction of the Houses would doubtless have been better pleased had he been enabled to deal with buildings of a more artistic and imposing character. But being required to plan a temporary structure, fulfilling certain conditions as to capacity and involving a minimum of outlay, he made no attempt to produce an externally attractive or handsome edifice, but wisely devoted every available *yen* to interior arrangements. He succeeded excellently. The buildings were exactly what the Government wanted. They cost a comparatively small sum, and they answered all the required purposes admirably. The return of their architect to Europe was not in any way due to discontent connected with the building operations. His part was performed to the end without any special hitch. He left Japan simply because the work offered to him after the completion of the Diet did not appear of a desirable character, and being unwilling to remain for the remaining period of his agreement without employment, he arranged to return home at once, to the great regret of a wide circle of friends who appreciated his ability and admired his manly character. It is true that the hypothesis circulated by the *Japan Gazette* was currently believed for a time in Tokyo, but subsequent inquiry showed the facts to be as we have stated them here.

### THE GOVERNMENT AND ITS FRIENDS.

THE *Jiji Shimpo* devoted a leader the other day to the consideration of the question: who are the friends of the Government? Our contemporary finds that—owing chiefly to the haughty conduct of officials towards the people generally, and the existence of the feeling that those blessed with Government office are so much better than those who are not—the Administration can count very few friends. Politicians, who are in general a self-seeking, vain-glorious lot, are even eager to avail themselves of the opportunities which they find disclosed to them by the unpopularity of the Cabinet. Some say that this state of things has arisen in consequence of the Government's reticence on subjects regarding which it should enlighten the nation; but the *Jiji* does not believe that any good would be done in this direction even if the Government were more frank. Others hold that as the Diet has now been constituted, a Cabinet charged with the administration of public affairs in accordance with public opinion, and responsible for its actions, should have been appointed. But the *Jiji* thinks that though undoubtedly there will come a time when political parties shall have become so far developed that there may be Government by party, it is idle to expect that at present anything of the kind can take place. Speaking generally of the feelings of disdain and contempt with which the people are regarded by the official classes—which feelings are regarded as relics of the feudal time—our contemporaray says that until a different mood is introduced, any form of Constitutional Government must be impracticable. The Cabinet therefore is enjoined to strive for the cultivation among its adherents of an attitude towards the people generally of equality, without which there can be little sympathy between the rulers and the ruled.

### DEATH OF THE KING OF HAWAII.

TELEGRAPHIC news was received yesterday in Tokyo of the death of King Kalakaua of Hawaii. The King had gone to San Francisco to recruit his health, and his decease took place there. He was in the 55th year of his age and the 17th of his reign. His successor on the Thorne is his second sister, the Princess Liliokalani, who was acting as Regent during the King's absence. The new Queen is 53 years old and is married to Mr. J. O. Dominis, an American citizen. We shall not be at all surprised to learn that the result of this change of rulers is an appeal from Hawaii to be included in the territory of the United States.

### SILK.

QUITE a boom occurred in the local silk market on the 21st and 22nd, owing to the sudden commencement of large purchases by one of the leading foreign firms. Two thousand Japanese bales are said to have been moved at once, and the ball being thus effectually set rolling, a busy time ensued. Prices appear to have gradually dropped in the presence of stagnation until a margin of profit offers to exporters, and

Digitized by Google

not a moment has been lost in taking advantage of the improved situation. Of course if Japanese holders are foolish enough to be betrayed by this change into a return to their former totally impracticable attitude, the deadlock will soon be re-established, but we should hope that bitter experience guarantees them against anything so suicidal. The number of Japanese bales in stock in Yokohama on the 22nd instant, was said to be 24,964.

THE "NIPPON."

THE *Nippon* has gained its case against the Authorities. Last September it was punished for publishing an article said to be calculated to bring officials into ridicule. It availed itself of the right granted by the law and carried the case into the Tokyo Local Court, where it obtained a judgment reversing the sentence. Against this verdict the Public Procurator appealed, but the Appeal Court on Monday confirmed the decision of the lower court, so the *Nippon* has the pleasure of laughing in its sleeve at its official prosecutors.

THE DIET'S ARCHIVES.

IT is stated by the Tokyo press that all the archives of the House of Piers were saved, but that, in the case of the House of Representatives where the fire broke out, it was not possible to gain access to some of the rooms. The Chief Secretary, Mr. Sone, appears to have behaved with the greatest presence of mind and resolution. By his exertions chiefly the work of salvage was comparatively successful. Seven-tenths of the Lower House's archives are said to have been rescued, and as the portion lost was, without exception, lying in the Chambers of the Sections, it did not include any papers of importance.

FAREWELL DINNER TO MR. AND MRS. PIGGOTT.

ON Sunday evening the Minister of State for Foreign Affairs and Viscountess Aoki gave a farewell dinner to Mr. and Mrs. F. T. Piggott who are leaving Japan in a few days for England. Among the guests were Count Matsukata, Minister of State for Finance, Marquis Nabeshima, Lord High Chamberlain, and a number of other notables. The following evening a ball was given by the Tokyo Dancing Society at the Rokumeikan, also in honour of Mr. and Mrs. Piggott.

A VENDER OF JOURNALS.

"THE Imperial Diet burned to the ground by *soshi*. A full true and particular account, all for two *sen*." Such was the cry of a little troop of newspaper venders Tuesday morning. They were calmly confident of their facts, and they chose the vicinity of the smouldering remains of the Parliament Houses as the first scene of their peripatetic trade, tramping along the muddy streets, and vociferating their *soshi* story into the very ears of the numerous constables stationed to guard the ruins.

DR. MEACHAM will preach to-morrow morning in the Union Church on "Penticost."

## *THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.*

The burning down of the Parliament buildings, the threatened disruption of the Constitutional Liberal party, and the various outstanding questions bearing on the Budget, have been the principal topics of discussion in the columns of the vernacular press during the present week. As to the cause of the disastrous fire, various rumours are circulated, the latest being to the effect that it originated somewhere about the culinary department, but, in spite of the strong protest of the Electric Light Company, the general belief is that some imperfection in the electric light apparatus was the cause of the whole affair. The Peers have temporarily assembled at the *Rokumeikwan* and the Representatives at the Examination Hall of the former Engineering College. It has been arranged to fit up the former buildings of the said College for temporary occupation by the House of Representatives, and to use the Imperial Hotel for the Peers. All the preparations will be complete within a few days. Meanwhile, the Tokyo papers recommend a speedy resumption of the business of the House, and several of them make a further recommendation that steps be at once taken for the voting of the funds necessary for the erection of permanent buildings for the accomodation of the Diet. The *Mainichi Shimbun*, the *Kokwai*, and the *Tokyo Shimpo* are the principal journals recommending the last mentioned course. The *Mainichi* complains that the Government, while spending millions of *yen* for the construction of the Departmental buildings and official residences, had not provided for the Diet a better kind of building than that just levelled to the ground. The temporary structures were, in the opinion of the Tokyo paper, inconvenient in several respects. The seats provided for the members were excessively small; there was not space enough in the Strangers' Gallery; corridors in certain parts of the buildings were inconveniently narrow, and there were rooms which were evidently not necessary. These and similar defects ought to be avoided in the permanent buildings, whose erection our contemporary urges on the Government and the Diet.

* * *

The threatened disruption of the Constitutional Liberal party has been averted for the present at least by a reconciliation between Count Itagaki's section and the rest of the party. This question for a time absorbed the attention of the political world in the capital; for apart from the vital consequences which such disruption would entail on the future prospects of the great party, the event was fraught with serious bearings on the general political situation and especially on the present burning question about the Budget. The primary causes of the conflict between Count Itagaki's followers and the other members of the party we are not in a position to state with certainty, but the immediate cause of the explosion was a leading article in *Jiju Shimbun*, Count Itagaki's organ, of the 18th instant. We stated in a former issue that the article advocated a military occupation of Korea, but that information has proved to be incorrect, the really offending article being another one—two leaders appearing on that day—in which the writer recommended the Constitutional Liberals to devise such plans of reductian in the Budget as might bring into harmony the two sections of the party at present contending under different banners. The writer, Mr. Kurihara, observed that his party was in a grave crisis, and that, if its representatives in the Diet were to go on contending against each other, the party was plainly doomed to ignominous destruction. He, therefore, advised the members to reflect on the serious aspect of things at the present juncture and to reconsider their programme about the Budget, so that a middle plan might be devised which might reunite the "extremists" and the "moderates" of the party. He also hinted that the resolution which his party had taken to support the report of the Budget Committee, had been passed at a meeting attended by a comparatively small number of the members of the party. The whole tone of the article was a little in favour of the "moderates." Perhaps it was this circumstance that gave serious offence to the majority of the members of the *Rikken Jiyu-to*. A number of the principal members at once held a meeting, at which a resolution was speedily passed repudiating the sentiments expressed by the article in the *Jiyu Shimbun* and also appointing a committee who were to go to that paper and demand the withdrawal of the obnoxious article. On hearing of this proceeding, Count Itagaki at once sent in a notice to the administrative officers of the party informing them of his intention to sever his connection with them. Mr. Kurihara, the writer of the article in question, Mr. Eguchi, Mr. Ueki and other followers of the Count, followed his example. This unexpected move on the part of the Count seems to have sobered many who had in a moment of excitement voted for a censure of the *Jiyu Shimbun*'s obnoxious article. The motion to revoke the resolution embodying that censure indeed failed to obtain a majority at the next day's (19th) meeting, but it was finally carried by the unanimous votes of the members attending the meeting of the 21st instant. It appears that a reconciliation had been effected on the preceding night, Count Itagaki being waited upon by Messrs. Kono Hironaka, Hoshi Toru, Suzuki Shoji, Utsunomiya Hei-ichi, and Arai Shogo. It is stated that Count Itagaki is not at all satisfied with the manner in which the members of the Constitutional Liberal party have behaved themselves of late, and that he intends to address a frank admonition to them at a meeting which he desired the above named gentlemen to arrange in the interest of the party.

* * *

Though we cannot vouch for the truth of the report, it is stated that Count Itagaki's discontent with his party is connected with the manner in which the "extremists" of the party forced other members to sign a document binding them to support the report of the Budget Committee, a course of proceeding which the Count considers entirely at variance with the liberal principles of the party. At all events, the *Rikken Jiyu-to* has, like its progenitor the old *Jiyu-to*, has much of a militant air about its doings. The *Nippon* evidently has the Constitutional Liberal party in its mind when it enters strong protest against "the militant despostism of a party professing principles of liberty and freedom." Hitherto men have talked of "a despostic Government," but now "we are," says the Tokyo journal, "confronted with the strange sight of a despotic party"—a party which "undeavours to treat its members in the Diet like so many soldiers bound implicitly to obey every command from head-quarters, however contrary to the individual independence of such members." The present parties having been called into exisfence for the purpose of opposing a Government which is considered to be militant and despotic, these parties—continues the *Nippon*—may perhaps think it necessary to maintain an organization essentially militant in its spirit. "But that is to cope violence with violence." Our contemporary is sincerely sorry that such parties should exist at a time like the present, when nothing is more desirable for the progress and well-being of the country than that the nation should be united with the sentiments of mutual friendship and sympathy.

* * *

The *Kokkwai* also strongly criticizes the policy of the *Rikken Jiyu-to* in restraining the independence of its members in the Diet. As members of that party, they are, our contemporary admits, bound to remain constant to the essential principles of the party; but as Representatives of the people, they ought to exercise a certain degree of independent judgment. The editor of the paper, Mr. Suehiro, was recently compelled to leave the Constitutional Liberal Party, on account of his advocating the moderate plan of reduction. Hence the protest against the alleged despotism of the party.

* * *

Count Itagaki's action in sending in a notice of his intended separation from his party is characterized by the parties as unbecoming a statesman of his position and inflence. There is indeed, the journals remark, a section not at all well disposed towards him personally and towards all Tosa men in general. But still he is regarded as the virtual leader of the party, and as such he ought to have frankly spoken out his whole mind and warn the erring members of his party. Instead of doing so, he has abruptly and rashly declared his intention of leaving his party, as if he were nobody in it. Such in effect is the gist of the criticisms that have appeared in the vernacular press on the recent conduct of Count Itagaki. The *Mainichi Shimbun* even goes so far as to say

Digitized by Google

some unpleasant things about his lack of magnanimity, of the breadth of view and so forth. But other papers, while criticizing his conduct, show due respect for the purity of the noble-hearted old statesman.

* * *

The *Hochi Shimbun*, unlike other papers, approves the manner in which the *Rikken Jiyu-to* has recently expelled from its ranks some members who, in its opinion, had no right to belong to that party. The party is now holding a series of its general meetings to consider the general policy to be pursued with respect to the current political questions. Our contemporary thinks that the manner in which these meetings are conducted speaks for the increasing harmony and unity in the party.

* * *

The financial, political, and legal questions bearing on the Budget still continue to occupy the prominent position among the subjects discussed by the vernacular press. The moderates and the extremists are very active in their attempt to make converts among members of the Lower House who have not yet declared themselves for either party. The number of such members is about forty or fifty, and their attitude will decide the question. According to a report evidently emanating from a tolerably trustworthy source, the moderates are said to be confident of ultimate triumph, as they have already received the promise of a majority of these members to vote on their side. It is, however, stated that an uncertain element exists among the *Rikken Jiyu-to* members of the Diet, some of them having lately shown themselves capable of apparently inconsistent courses of action.

* * *

Meanwhile, the organs of the extremists and of the moderates are bandying charges of unconstitutionality. disloyalty, want of patriotism, and so forth. The extremists, especially those belonging to the *Kaishin-to*, are accused of sacrificing the interests of the country to those of their party; while the moderates are told that they are timid and spiritless flatterers of the men in power. There is, however, a tendency among the more sober of the journals on both sides to counsel moderation and suggest reconciliation between the contending parties. The *Yomiuri Shimbun*, though a supporter of the extremists, cannot understand why a compromise should not be possible between the two plans of reduction, the points of difference being not in the object to be attained but in the means of attaining it. The article in the *Jiyu Shimbun* which caused such a flutter in the ranks of the Constitutional Liberal party may be classed in the same category with the one just quoted. It is perhaps a significant fact that the papers recommending reconciliation are generally found on the side of the extremists, a fact, however, which will be differently interpreted by men of different opinions. To us it appears from the whole tone of such papers that the extremists are beginning to feel less confident of ultimate success.

* * *

The *Choya Shimbun*, writing on this subject, observes that the political discussions occasioned by the question of the estimates are producing one desirable fruit namely, the division of the politicians of the country into two large parties. Hitherto, political parties have been formed round some personal or local nucleus, but now the rise of practical questions is slowly but surely disintegrating the old sentimental ties and forming men into two opposing bodies each united by similarity of views on real and practical issues. Whichever side may be victorious in the present session, the other side is sure to renew the contest next session, and thus the gulf now separating the two camps will become a permanent boundary between the two great political parties, by whatever name they may hereafter come to be called.

* * *

The question of subsidies to private companies is receiving a considerable share of journalistic attention. There are nearly a dozen companies receiving subsidies from the Government, the most prominent among them being the Japan Mail Steamship Company, the Japan Railway Company, the Hokkaido Mining Railway Company, the Kyushu Railway Company, and the San-yo Railway Company. Public attention is specially directed to the first mentioned company, which is in recept of the largest subsidy. The *Mainichi Shimbun*, in a long series of articles on this question, recommends the reduction of this subsidy. Our contemporary is opposed to writers—they are few and far between—who clamour for the entire stoppage of the subsidy. Such a step would seriously damage the public credit of the Government and produce a grave financial disturbance. The *Kaishin-to* organ is, however, by no means satisfied with the way in which the Government has hitherto petted the Nippon Yusen Kaisha. Various questions are put to the Authorities. (1) Why is it necessary to bestow on the company a big sum of 880,000 *yen* annually? (2) Why did the Government of its own accord pledge itself, on December 30th, 1888, to pay an annual sum representing interest at the rate of 8 per cent. on the company's capital, irrespective of the income earned, whereas originally the Treasury's obligation had not extended beyond making good any deficiency between the net income and 8 per cent.? (3) Why did the Authorities, a few years ago, sell to the company at face value the shares held by the Crown, thus making the company a present of *yen* 200,000? (4) Why is not full control exercised over the construction of the vessels of the company? Finally (5). Why are not some limits put upon the salaries of the officers of the company? After dwelling at great length on these points, the *Mainichi* proceeds to consider the relation in which the Government ought hereafter to stand towards the company. Our contemporary's recommendatians are as follow:—(1) That the Government should require that any newly ordered vessels of the company be constructed in such a manner as to be of use in time of war; (2) that the guarrantee of interest to the company should be re-placed on the old basis, namely, what it had been prior to December 30, 1888; and (3) that certain restrictions should be put on the amount of salaries and rewards given to the servants of the company.

* * *

The *Choya Shimbun* and the *Tokyo Shimpo* take a different line of argument. They fail to see the wisdom of either abolishing or decreasing the subsidy given to the Japan Mail Steamship Company. While the geographical position of the country makes the development of navigation one of the most vital national concerns, there are several strong foreign companies against which any Japanese corporation aspiring to extend its lines in the Asiatic seas must contend, and consequently our contemporaries strongly advise the newly assembled legislators not to commit the grave mistake of cutting down the subsidy given to the only company that can be expected to undertake the difficult task of competition with foreign maritime enterprise. These papers are, however, at one with the *Mainichi* in recommending the authorities to exercise an efficient control over the business of the company. The *Chova* also urges the Government to make an arrangement for putting Naval Officers on board the Company's vessels, so that there may not be lack of competent officers in time of war.

* * *

As to the Japan Railway Company, all the papers seem to agree that the guarrantee of interest at present given for each section of the lines separately, should be given for the whole lines together.

* * *

We will now briefly allude to numerous articles which, as stated in our last weekly summary, have lately been appearing in vernacular papers on various questions relating to the position of Japan in the East and the future prospects of the Japanese nation. As we have remarked more than once, the growth of a spirit of enterprise and adventure is one of the most prominent features of the contemporary history of Japan. The movement began several years ago, and the late disastrous mining enterprise in Peru was among its results. But the current is, we believe, already strong enough not to be in any way retarded by such failures. Mr. Taguchi's recent voyage to the South Sea Islands has been on the whole successful, and his example will soon be followed by others. Schemes of emigration and colonization, are also under discussion, but of these these schemes nothing definite is as yet known. We will here give only the general gist of the articles above alluded to.

* * *

The *Kokkai* is very glad that the Government and the people, notwithstanding their reciprocal coldness on other matters, are now agreed in paying attention to the Eastern Question. Our contemporary is, however, afraid that some people may suspect the Government of ulterior objects in bringing forward the question of Japan's position in the Orient. Whether statesmen in power have really such ulterior object or not, the *Kokkai* advises its countrymen to study with a keen eye the opportunities which the turn of events in the East is placing at Japan's disposal for the development of her commerce and navigation, and for the promotion of her national prestige.

* * *

The *Toyo Shimpo*, in a series of about ten articles, describes the condition of the countries of Asia one by one, and observes that the eastern shores of the continent, together with Japan and the seas surrounding her, are fast becoming the field of international struggle for political, commercial, and industrial supermacy. Our contemporary warns the Japanese nation to be on the alert and to manfully strive for the splendid prize.

* * *

The *Choya Shimbun* publishes an article on the same subject from the pen of Mr. Hadano Shozaburo. He dwells on the adventurous and daring spirit of the Japanese of three centuries ago. Japanese pirates were long the terror of the coast of China. Japanese adventurers in Siam raised themselves to powerful positions in that country. Japanese colonists occupied the island of Formosa, while Japanese merchants were found in every important market on the eastern and southern coasts of the neighbouring continent. The present Japanese are apparently less enterprising, but that is only the effect of the peaceful policy of the Tokugawa Government. The writer believes them fully competent to attain their national ambition—to become the England of the East.

* * *

The *Jiyu Shimbun*, in a long series of articles believed to embody the views of Count Itagaki, writes on the importance of encouraging a spirit of enterprise. It recommends the emigration of labourers to foreign countries, where they will be welcomed by manufacturers and agriculturists. It also recommends young men of education to go abroad and employ themselves in money-earning pursuits. Lastly, it regrets that the Japanese Government did not carry out the invasion of Korea as proposed by some statesmen—Count Itagaki among the rest—several years ago. The writer is confident that such an expedition would have been very useful to stir up the enterprising spirit of the people, and that with the spirit of enterprise once awakened, it would have been possible to open a new chapter in Japan's progress as a militant, commercial, and industrial nation.

* * *

The *Nippon* writes on the Parnell Affair and regrets that the Irish leader does not quietly retire from public life. The *Hochi Shimbun* devotes a series of articles to a discussion of the silk-trade. The *Yomiuri* has just finished its long series of articles on the national military and naval defences, pronouncing them utterly insufficient for the security of the country in time of war. The *Jiji Shimpo* gives some advice to Japanese statesmen in power, bidding them be more far-sighted in their policy and conciliatory to those out of power.

## *THE WEIGHTS AND MEASURES BILL.*

THE Weights and Measures Bill now before Parliament is not likely, we hope, to be treated with the indifference feared by Professor KIKUCHI. When its details come to be understood by the public at large there will be, no doubt, more than enough said on the subject. We prefer to think that the silence hitherto maintained is due more to general incapacity to follow the complicated nature of the Bill than to any under-estimate of its importance. A recapitulation of its main features, translated from the *Mainichi Shimbun*, has already appeared in these columns. There can be no question, of course, as to the necessity for fixing the standards of the weights and measures of the country, the present law providing no such standard, but it would seem from some detailed criticism of the Bill which appeared in the Tokyo journals lately, at the competent hands of Professor SHIDA, that needlessly involved methods have been resorted to in order to attain that end. Professor SHIDA regards the subject from the purely scientific point of view, and it is somewhat surprising that his strictures have up to the presented met with no comment from any of those concerned with the fixing of the new standards. The Bill defines one *shaku* as ten thirty-thirds ($\frac{10}{33}$) of the distance between two marks made upon a rod of an alloy of platinum and iridium at a temperature of 0.15° C., and one *kwan* as fifteen-fourths ($\frac{15}{4}$) of the mass of a piece of metal of fixed nature and dimensions. In regard to this definition, Professor SHIDA asks why the temperature is fixed at 0.15° C. which is exceedingly difficult not only to produce but to maintain, while 0° C. has all the advantages of simplicity and easy maintenance. Besides the disadvantage of having the standard as a fraction of a distance is evident when it is borne in mind that each time a *shaku* has to be measured, a complicated calculation is necessary. The new *kwan* standard as a measurement of mass is also objected to on similar grounds, and the pertinent question is asked why a piece of metal whose weight is exactly one *kwan* has not been adopted instead of a piece weighing a fraction of one *kwan*. Professor SHIDA further maintains that with a standard of length, no need exists for a standard of volume at all. It cannot be said either that the two are alike, for it would be just as absurd to talk of the distance between Tokyo and Yokohama as so many *koku* or *sho*. The third point raised by Prof. SHIDA is that a distinction should be made between the unit and standard, the assumption of the framers of the Bill evidently being that the standards will serve equally well as units, while in reality they are entirely different things. The next point, being a matter of opinion, is not insisted on by the learned professor. He considers the *kwan* too large as a unit of mass, and suggests the adoption of the *kin* which has generally been accepted as the unit. All these are technical details into which we do not propose to go, but it seems to us that a simple definition of the standard is one of the most important points of this knotty question and is worthy of more consideration before the Bill is passed. Nothing appears easier than to fix the measurement of the *shaku* as a distance between two marks on a rod at a definite temperature. In framing the Bill, Professor KIKUCHI says that special care has been taken to guard against sudden changes in business methods. It is proposed that the new Bill shall come in force on 1st January, 1893, but that the official examination of the weights and measures will not take place until three years after that date. Liberal as the length of time may appear, this is considered by many a great hardship, as most of the weights and measures now in use are roughly made and will inevitably be thrown aside by the examiners. Could the old scales be adapted to coincide with the new standards, little objection would, doubtless, be made, but this saving clause is not provided for in the Bill. We have only to consider the effect of the introduction of the metric system into England in order to appreciate the trouble in store for those concerned with the operation of the new Bill. Indeed it is not too much to say that of all the measures hitherto submitted, or likely to be hereafter submitted, to the Diet, not one is of such importance or can have such wide-reaching effects as this Bill. The English nation, cursed by the possession of the worst system of weights and measures that exists, and fully cognisant of its misfortune, has for fifty years struggled to emerge from the slough of avoirdupois, troy, furlongs, roods, chains, and other arbitrary and utterly unscientific units. But so stupendous does the task seem of asking the people to change the system of measuring and weighing which for centuries they have employed, and in terms of which they are accustomed to express their products and manufactures and to conduct all the transactions of their every-day life, that no legislature has yet been found with sufficient strength or temerity to make the attempt. The leading scientific men of Great Britain have written volumes on the subject, and all educated persons are agreed as to the necessity of change, yet still Parliament hesitates. We cannot but admire the courage of Japan in placidly setting about a reform of such magnitude, but, on the other hand, we cannot but wonder that a Bill affecting the interests and convenience of every tradesman and manufacturer in the whole empire, from the pettiest *tofu-ya* or *karinto-ya* that perambulates the streets to the proprietor of a dozen warehouses and workshops, should have almost reached its third reading in the House of Peers without attracting any visible share of journalistic or general attention outside the Diet. In our opinion, the Diet will act rashly if it attempts to deal with this matter in one session. The prudent and proper course seems to be to appoint a special committee, comprising not only the best scientific experts procurable, but also leading men of business, and to ask the Committee to submit a full Report, if not at the next session of Parliament, then at the one following, or even at the one following that. The present method of procedure is altogether too light-hearted to be viewed by thoughtful foreigners without surprise and apprehension.

## *THE NEW "JAPAN GAZETTE" AND THE OLD STORY.*

WE have to thank the *Japan Gazette* and also to apologise to it: to thank it for a temperate explanation of the charges of inconsistency and subserviency preferred by it against us; to apologise for having betrayed it into a confession of remarkable ignorance.

There have been three programmes of Treaty Revision under official consideration during the past five years. The first, based on proposals advanced by England and Germany in 1886, "proved impracticable," as the *Gazette* truly says. The second, based on proposals advanced by Count OKUMA in 1889, sank under the weight of adverse Japanese public opinion in the close of the same year. All the important features of this second scheme were known to the world. The *Gazette* itself published the text of one of the Treaties concluded in accordance with the scheme, and gave its support frankly and fully to Count OKUMA'S programme. Yet now, after an interval of little more than a year, the editor of the *Gazette* tells us that he "knows little or nothing of the conditions that underlay Count OKUMA'S plan;" that he has "never been able to ascertain the precise nature of the preliminary (*sic*) Treaty signed by the United States Representative," and that "the general opinion among foreigners at the time was that the appointment of foreign judges was not stipulated for." He tells us this, though the text of the Treaty with Germany appeared in the local English press; though the *Gazette* itself supported the scheme throughout; and though the whole agitation that wrecked the Treaty rested on a diplomatic note providing for the appointment of foreigners in the capacity of judges. As for the third scheme, the *Gazette* confesses itself equally in the dark. It admits that its knowledge of the scheme is derived solely from the vernacular press, in which fifty different versions have appeared. It must be well aware that the scheme has

Digitized by Google

never been described or discussed in these columns. Yet it charges us with advocating all three schemes, and while confessing itself unacquainted with the features of two of them, does not hesitate to assert that each is at variance with the other, and that our advocacy of them all in the face of this variation convicts us of inconsistency.

There is no occasion to discuss such a strange display of ignorance and temerity. A critic who acknowledges himself an absolute stranger to the details of two out of three propositions which he undertakes to compare, and which he accuses a newspaper of advocating, can scarcely expect to be treated seriously.

So much for our contemporary's charge of inconsistency. One word as to its charge of subserviency. Its imputation is that we "advocate Treaty Revision with or without conditions, as the Japanese may be pleased to decide." There is no possibility of misunderstanding this. It means, and can only mean, that the *Japan Mail's* views about Treaty Revision are dictated by the Japanese and slavishly follow the changes of Japanese opinion. How does the *Gazette* support this accusation? It says that we are mistaken if we suppose that we "have always shown by our writings in the past eight years that we hold opinions entirely distinct and different from those advocated by the Japanese Government." So then, in order to avoid the imputation of writing to the dictation of the Japanese Government, we are bound to prove that we have consistently held opinions entirely distinct and different from those of that Government. Such is our contemporary's notion of fair and unbiassed judgment. In order not to be suspected of being the creature of a Government, one must openly disagree with it in everything. That is the creed of the Irish politician. His notion of independence is simply to be "agin the Guverment." It is also curiously like the creed obeyed in practice by our local contemporaries. Their idea of independence is to attack the Government at every point. We are not disciples of any such creed.

As to the general question, every clear-sighted observer admits, we presume, that Treaty Revision might long ago have been settled on lines fairly satisfactory to the foreign residents, and that the solution of the problem has now been greatly complicated by the introduction of a new and powerful factor, Japanese public opinion. Some critics profess to think that Japan alone is responsible for past failures. They blame her for allowing the bases of 1886 to be elaborated into an utterly impracticable labyrinth of complicated stipulations. But they do not blame the foreign negotiators who effected the elaboration. They blame her for withdrawing from her own programme in 1889. But they do not blame the Powers whose hesitation to accept her proposals placed a weapon in the hands of the equal-revision party. Such partiality can never promote an understanding. What is the use, what the sense, of complaining, as the *Japan Gazette* now complains, that "the present attitude of the country about Treaty Revision is eminently irrational," and that the Diet's ideas on the subject could not be entertained for a moment by a foreign Power? Does any reasonable person expect the Japanese nation to confess that its claims to exercise the sovereign rights of an independent State are incomplete, or the Japanese Diet to admit that this empire must concede the superiority of Western countries by furnishing guarantees of good behaviour if they consent to recognise its autonomy? When we find a people and a parliament ready to make such admissions, we may fairly extend to them the disdain they merit. There is nothing "imminently irrational" about the attitude of the Japanese nation. Any other attitude would be contemptible. Foreign writers will never inspire this country with a sense of humility by upraiding its self-respect. As practical men what we have to recognise is that this mood exists; that it is a perfectly natural mood; and that it has to be reckoned with in attempting to solve the problem of Revision. The time is long past when terms of settlement could be dictated by foreign Govenments. The temper of the nation, the very temper against which the *Japan Gazette* girds, proves this. To preserve a changeless attitude in the presence of radically changed conditions, may be called fine conservatism, but for all practical purposes is silly obstinacy. We do not aspire to such blind immutability. Every analysis that we have hitherto made of the growth of public opinion in Japan, and of the Government's increasing inability to ignore it, has been verified by events. The conservatives formerly claimed that the Japanese nation did not care two straws about Treaty Revision, and that the Government's demands might therefore be treated with scant courtesy. Confronted now by an inconveniently vehement and peremptory public opinion, the same conservatives call it irrational, and declare that it should not be listened to. If that be consistency, we have no ambition to be consistent. We take things as they are, instead of crying out because they are not what we should like them to be. The stream of Japanese national opinion, a comparatively feeble rill ten years ago, has now swollen into a strong river. We have noted and called attention to its flow, instead of standing vacantly on the bank and vainly trying to keep the old land-marks beyond the wash of the flood. To those who mistake inertia for consistency and scepticism for sagacity, we abandon the rustic's eternal task of waiting till the stream flows by.

## *THE CASE IN THE PORTUGUESE CONSULAR COURT.*

THE judgment delivered in the Portuguese Consular Court in the case of the Imperial Railway Authorities against JOSEPH GAMA, is exactly what the public had expected. There was no evidence to support either of the charges brought against GAMA. It was certainly shown that he accosted a Japanese girl whom he found seated in a second-class carriage, that he followed her into the Ladies' Waiting Room, made immoral proposals to her, and treated her in a manner by which any modest woman would have been bitterly insulted. But, on the other hand, the prosecution failed to prove that GAMA'S conduct was from the first resented by the girl with sufficient earnestness to indicate that she seriously objected to such attentions, and further, the evidence did not establish that the Railway bye-law interdicting the use of the Ladies' Waiting Room by men had been habitually enforced. It has never been the custom, so far as we know, to put this rule into strict operation in Japanese railway stations. At all the principal stations, Tokyo, Kyoto, Osaka, and so forth, gentlemen are suffered to enter the Ladies' Waiting Room freely, though of course they never make a habit of remaining there. The trouble in the particular case we are considering is that GAMA does not belong to the class of persons who would have access to Ladies' Waiting Rooms anywhere, and that, consequently, he was in no respect governed by the instinct which restrains men from entering such places whether the law permits or forbids them. A runner in the employment of the Grand Hotel, he had been allowed, by the civility of the railway officials at Yokohama, to enjoy exceptional privileges in respect of going on the platform without a ticket and generally doing what seemed desirable in the interests of the Hotel. Whether he was qualified for such a task, it is for the Hotel management to judge, but the evidence given at the trial in the Portuguese Court showed that he cannot read English without considerable difficulty, that he is consequently unable to make himself acquainted with the contents of the various notices posted in the station, and that he regards the Ladies' Waiting Room as a convenient, if not a proper, place for conduct particularly unbecoming in such precincts. All this, however, is beyond the purview of criminal law. GAMA cannot be said to have violated the law, and his acquittal followed as a matter of course.

It is plain to anyone reading the report of the trial that the conduct of the defence was more or less actuated by feelings quite apart from the merits of the case. On the other hand, the preliminary steps taken by the Railway Authorities are open to a similar charge. The Foreign Secre-

Digitized by Google

tary of the Railway, in a written communication, called upon the Hotel management either to dismiss GAMA summarily, or to brave the exposure of a legal prosecution; a peremptory choice of alternatives to which the management could not possibly have been expected to submit tamely. In the two coincidences—first, that the counsel defending Gama happened to be also the President of the Hotel Directorate, and secondly, that the Railway official instigating the prosecution happened to stand in a peculiar relation to the Japanese girl upon whom GAMA'S attentions had been thrust—in these two coincidences may be found material to account for the ill-judged persistence and vehemence of the Railway Authorities and for the rancour that disfigured an otherwise able defence. We refer to this phase of the miserable affair chiefly because of a singular statement into which the counsel for the defence suffered himself to be betrayed. He argued, with apparent faith in the truth of his words, that the object of the Foreign Secretary of the Railway Department in bringing the charge against GAMA was to "stir up bad blood and strife against foreigners." This is in accord with the maudlin and silly creed maintained by certain persons in Yokohama, that every charge preferred by a foreigner against a foreigner in support of a Japanese, is anti-foreign and unpatriotic. Apparently the counsel for the defence would have the public believe that the licence taken by a man like GAMA in contravention, if not of the Railway Regulations, certainly of the rules of ordinary decency, must be condoned and hushed up lest any public attempt to punish it be mistaken for an evidence of anti-foreign feeling. Such a doctrine would bring within the sphere of racial prejudice every question of right or wrong between a foreigner and a Japanese. The counsel for the defence in GAMA'S case is much too shrewd a man to be misled by extravagance of this kind. There is, therefore, all the more reason to criticise him for advancing a proposition so unreasonable and so entirely beside the mark. The real creators of bad blood between foreigners and Japanese are the persons who, for interested purposes, invest every dispute with an international character, and try to persuade the public that because a Portuguese hotel-runner is prosecuted for making indecent proposals to a Japanese girl in the Ladies' Waiting Room of the Yokohama station, anti-foreign feeling in Japan is likely to be generated or intensified.

Although, as we have said, the verdict delivered by the Portuguese Consul was generally anticipated, his decision possesses interest in connection with the question whether Japanese Railway Regulations are binding upon foreigners in Japan without re-enactment by the Representative of the nationality concerned. This, of course, is only a branch of the broader contention as to Japanese law generally. We ourselves have always believed and maintained that though foreigners in Japan are exempted by Treaty from the processes of Japanese law, they are by no means exempted from the obligation of observing its provisions, and this view is understood to be taken by several of the Western Powers, notably the United States of America. Evidently the Portuguese Consul is of the same opinion, for he based his acquittal on the fact that GAMA had not intentionally infringed the Railway Regulations, instead of basing it on the plea that a Portuguese subject is free from any obligation to observe them. He went further, too, for he warned the defendant against any violation of the Railway Regulations in the future. The Railway Authorities thus derive some consolation from a case which otherwise reflects little credit on their tact and judgment.

## *MORBID JOURNALISM.*

AMERICAN newspapers are developing a curious love of the horrible. A dreadful accident or a disgusting murder, anything that carries with it a fascinating "blugginess" such as the author of "Helen's Babies" made excellent use of, receives the place of honour on the first page; and the account is not only ren dered more startling by sensational paragraph and non-paragraph headings, but is also embellished with frightful woodcuts. This devouring of the horrible is one of the luxuries which religious people allow themselves, and is indulged in by the fair sex, who love to be scared. After the first Blue Beard page has been fully enjoyed, the rest of the paper is skimmed over, the really solid matter receiving but little attention. In some of the lager cities of the Continent, there seems to be little or no literature read outside of the journals. The press provides an *olla podrida* of information, especially on the Sundays, which if swallowed fills up the reading capacity of ordinary people. In St. Louis, for instance, the sale of books is relegated to an insignificant stall in the dry-goods warehouses, and it is impossible to find a well furnished book-store. Church societies step in, and supply religious books to the public, besides driving a small general trade. Otherwise the newspapers have it all their own way. Newspapers must interest and rouse their readers or they won't sell. Where politics fail to have a hold on the general mind, newspapers must fall back on horrors or on personal gossip. We fear this has happened in America, both British and Republican. The rank and file of ordinary well-to-do people keep out of the political world, which is left to a "ring"; the discussion of political questions thus becomes, not the paramount and absorbing thing, occupying the leading place, but one subject among many of equal interest. The Canadian press differs little in its characteristics from the American, and cannot for a moment compare with the excellent press of Australia. With the retention of "pennies" and "shillings" the Australians have kept up the solid traditions of the British press. The morning paper in Montreal is a flimsy, smutty sheet, feeble and flabby in grasp, uncertain in information, and showing few excellencies as an advertising medium. The leading Melbourne papers, on the contrary, are printed in good style on thick paper, and impress one with a sense of power, as soon as the reader opens the bulky mass. Political questions are discussed with a thoroughness and a grasp which leave little to be desired, and horrors are relegated to a subordinate place. The outside information is also solid and correct. Of all reporters in the world, globe-trotters have most to fear, we think, from the Canadian variety. He *will* not wait to receive correct information, he is in a greater hurry even than his Yankee confrère, and runs off incontinently after jotting down a hurried farrago of nonsense which one appeals in vain to him to correct. Next day the poor victim is horrified to see statements in the *Empire* or the *Mail* which he is represented as having uttered, and which bear the same relation to truth as a pantomime does to actual life. The recent BIRCHALL trial in Canada affords a text for much moralizing. The poor wretch has now suffered for his crime, the last act of a downhill career. Brought up with all the advantages of an English public school and University training, he ended by decoying a youthful countryman into a swamp in the neighbourhood of Niagara Falls, where he shot him and left him for dead. The motive of the crime was money. BIRCHALL hoped to obtain five hundred pounds from his victim's father, and had entered into partnership with young BENWELL so that he might be able to sign for the so-called firm. The crime was traced to him with deadly certainty by link after link of circumstantial evidence. It is impossible to describe the intense interest with which the trial was followed by newspaper readers. Every detail was commented upon, maps of the swamp, cuts of the murderer and his victim, of the witnesses, and of the judge and counsel, appeared day after day. Nothing else indeed was talked of, and special editions of the Toronto papers dealing only with the murder, kept coming out in quick succession. When the accused was condemned, a Toronto paper bought his autobiography for fifteen hundred dollars, hoping of course to make a profit on it. So much for the taste of the public in this direction. Not that we think the press is an infallible guide to the instincts or aspirations of a people. Undoubtedly where ordinary

Digitized by Google

folks are more interested in Church matters than in political and social questions, the press must appeal to them in the way of purveying to their naturally mobid craving after the horrible. In Australia political and social questions are paramount; in Canada and America, they are not. Hence the feebler grasp and less masculine nature of the daily press in the last named countries.

## *DESTRUCTION OF THE HOUSES OF PARLIAMENT BY FIRE.*

BOTH of the Houses of Parliament were destroyed by fire on Monday at 12.40 a.m. The fire originated in the House of Representatives and completely destroyed the whole of the Parliamentary buildings, the residences of the two Chief Secretaries alone escaping. When it became known that the Diet was the scene of the conflagration, all sorts of disquieting rumours began to circulate. No one imagined that the catastrophe could be anything but an incendiarism, and before long persons were found who asserted that they had seen the first flames issue from a heap of chips and shavings piled in an angle of the House of Representatives. Naturally, public suspicion fixed itself upon the *soshi*. They were supposed either to have taken this decisive method of resenting the enforcement of the Peace Preservation Regulations, or to have planned the conflagration in order to interrupt proceedings which they held to be contrary to the Constitution. But when the evidence of the police, clerks, and servants on duty at the Diet had been collected yesterday, it was established beyond all doubt that the fire had its origin in the electric lighting apparatus. The whole of the buildings were lit by electricity, the dynamo being placed in the Western part of the enclosure. At about 7 o'clock every evening, after the House of Representatives had risen, the greater part of the lights were shut off, and the speed of the dynamo was reduced proportionately, electricity being thenceforth required only for lighting the precincts of the Diet and the Chief Secretaries houses. Presumably the usual automatic devices had been adopted for severing connections in the event of the wires becoming over-heated, but whether this was not the case, or whether some other defect must be held responsible, it is not yet possible to say. A constable on duty at the main entrance to the House of Peers during the night of the 17th inst., has now reported that after the current of electricity was supposed to be shut off from the lights in the neighbourhood of his post, he observed that the arcs continued to give out a dull red glow for some little time. Having no knowledge whatever of the processes of electric lighting, he did not think of mentioning this fact in his report, or possibly attention might have been attracted to the subject in time to avert the catastrophe of the 20th instant. The first person who detected symptoms of fire was a constable, IMAI TETSUZO. At 12.40 a.m. he observed a slender bluish flame creeping along the edge of the ceiling in the corridor immediately outside Committee Room No. 41, which formed a portion of the southerly section of the House of Representatives. His orders being to rouse the watchmen and night constables in case of emergency, he hastened to do so, and then, in company with three or four men, ran to the spot where the flame and smoke were visible. So far as they could ascertain, fire appeared to be smouldering beneath the plaster of the wall just under the ceiling. While they were engaged in attempts to extinguish the still feeble flames, light was observed in the Government Delegates' waiting room, and running thither, they discovered that flames similar to those previously observed, were bursting out in the westerly corner of the room at the junction of the wall with the ceiling. IMAI now opened one of the doors of the Chamber of Representatives itself, and saw that the gallery was on fire in several places and that volumes of smoke were beginning to roll about the roof. Meanwhile, TAGAMI, one of the constables engaged in attempting to grapple with the fire in the Delegates' room, received such a severe electric shock that he almost lost consciousness, and stumbling into the corridor, fell down stairs; while SEKOTA, another constable similarly engaged, became insensible and had to be carried out. Both of these men are still suffering from the effects of the shock. It had now become apparent that all attempts to deal with the fire at close quarters within the buildings were fruitless, for not only did each jet of flame spread with rapidity far greater than the ordinary rate of combustion under such circumstances, but fresh tongues of fire burst out one after another in unlooked for places. Attention was therefore directed entirely to getting out the archives, those in the large store-house on the ground floor being carried to one corner of the compound, and those in the President's room and other parts of the second storey, being thrown out of the windows. A large proportion of the latter could not ultimately be removed. A policeman called HARADA remained so long in the chamber that he was obliged to leap from one of the windows, receiving severe but not fatal injuries. By this time the steam fire-engine kept in the compound of the Diet was in full play, an ample supply of water being procured from the moat. Fire brigades from various districts had also begun to arrive, and set in motion their hand pumps. The perfect stillness of the night and the vicinity of water suggested some hope of coping with the conflagration, for very few persons had yet realized that the electric apparatus was acting like a hundred small but inextinguishable torches applied to as many different points of the buildings inside. Among those who had appreciated the cause of the trouble was Mr. SONE, Chief Secretary of the Lower House. His residence is at the edge of the compound, and as he happened not to have retired to rest when the first alarm was given, he reached the scene quickly, and soon detected, from the behaviour of the flames and their peculiar character, that the electric apparatus was the root of the mischief. He attempted to shut off the connection with the House of Representatives, but the apparatus, evidently out of gear, refused to work. In the case of the Upper House, however, he met with more success, and for a very brief period it seemed as though this part of the buildings might be saved. But after a few moments, tongues of flame, not communicated from the adjacent conflagration but evidently having an independent origin, began to burst out here also, and ere long the doom of the House of Peers was sealed. Mr. SONE then organised all the constables and officials he could find into a band for carrying out the archives, and it was doubtless owing to his fortunate presence on the scene that so many important books and documents were saved. Apparently the dynamo must have been running all this time, its speed probably augmented to a high pitch by the heat playing upon the boilers. Whether any attempt was made to reach the engine building at an early stage, we have not been able to discover. Probably not, inasmuch as even after the discovery of the flames—which must have been smouldering for a considerable interval before they developed sufficient force to attract attention—the origin of the fire was not recognised for some time, and when it was recognised, the engine building had become inaccessible. The constable IMAI behaved with great courage and presence of mind. He managed to sever with his sword two of the principal wires communicating with the dynamo, and though his achievement did not affect the result, it merits none the less applause. Of course within half an hour from the time when the column of smoke first began to ascend from the roof of the House of Representatives, the whole of the Shiba and Nagatacho districts were in an uproar, fire-bells clanging in every direction, and thousands of people thronging to the scene. The width of two streets and the moat alone separated the burning buildings from the densely populated district of the capital lying on the south, between Shimbashi and the Tora-no-mon, and it seemed at first inevitable that the conflagration should spread in that direction. But if the numerous engines of the brigades could not produce any perceptible effect upon the

Digitized by Google

sea of flame raging within the compound of the Diet, they were at least useful for deluging its surroundings and opposing a wet surface to the passage of the fire southward. On the north there was nothing to apprehend, except that the conflagration might extend to the shells and scaffolding of several buildings in process of erection on the Hibiya Parade-ground, and this contingency was averted by the stillness of the beautiful moonlit night, the air not having motion enough to carry a single spark beyond the limits of the Diet's compound. Admirable order was preserved by the police. They managed to stop all traffic along the streets encircling the Diet, and though on the other side of the moat the people were packed so thickly that the whole district looked like an immense sea of upturned faces, no one crossed the bridges nor was any disturbance whatever perceptible. The conflagration raged fiercely for a little over three hours, and by that time nothing but two insignificant dwelling houses and a host of gaunt brick chimnies remained of buildings which had covered an area of half an acre. The two dwelling houses were those of Messrs. KANEKO and SONE, Chief Secretaries of the Upper and Lower Houses respectively. The three electric wires leading from the dynamo to each of these buildings were severed at an early stage, or there is very little doubt that they would have shared the fate of the big pile under whose shadow they stood. The loss of the country by this catastrophe is three hundred thousand *yen* in round numbers, to say nothing of the incalculable inconvenience caused by the interruption of the Diet's proceedings. Doubtless the Government will cause the buildings to be re-erected on their old foundations and in their previous temporary form. Nothing of a more solid character could be completed before the second session of the Diet next November. It is expected that arrangements can be made for the two Houses to resume their sittings, of course under circumstances of considerable inconvenience, in the course of a week, the Representatives meeting in the Examination Hall of the former Engineering College at the Tora-no-mon, and the Peers, probably, in the Kazoku Kaikan.

## *IMPERIAL PARLIAMENT.*

HOUSE OF PEERS.—SATURDAY, JANUARY 17TH.

THE House assembled at 10.50 a.m., and resumed the debate on the second reading of the Weights and Measures Bill. A proposal by Mr. Murata that each article of the Bill should be debated clause by clause was endorsed by a majority. Mr. Murata, speaking on behalf of the Minister of State for Agriculture and Commerce who was unable to be present, opposed the Committee's amendment of the 19th Article. The original bill provided that the first official examination of new weights and measures must take place within three years of the date of operation of the Bill, namely January 1st, 1893. The Committee recommended that the term of three years should be extended to seven, which would mean that the official examination of new weights and measures must be completed by 1900, whereas that of old weight and measures need not be completed till 1902. This difference might cause much inconvenience. Mr. Hara Chiujun, as a member of Committee, explained that this point has received the earnest attention of the Committee. The value of the weights and measures manufactured between March, 1880, and March, 1890, was 4,531,789 *yen*. Few of these were in household use. The great majority were used in trade. According to the Bill now before the House, all these weights and measures must be submitted for official examination in the interval between 1893 and 1896, and as the whole, or virtually the whole, must be condemned, it followed that the loss to the people would be over 1½ million *yen* annually, whereas, were the Committee's suggestion adopted, the loss would be only a million. A new set of weights and measures cost 3 *yen*, and to the lower middle classes such an expenditure signified no small effort. The conditions of laws must be adapted to the circumstances of the nation. Viscount Tani approved the Committee's amendment, and in connection with it wished to address a few words to the House. He did not know whether his remarks might not earn him the title of a distraught or demented person, but that should not make him alter his views. It was the duty of the House to consider with the utmost sincerity and care every Bill submitted to it in the discharge of the functions which His Majesty the Emperor had commissioned it to undertake. Keeping this in view, he regarded it as most extravagant that such a Bill as they were now considering should have been laid before them by the Government. In foreign countries the number of persons using weights and measures was comparatively small, but in Japan almost every household possessed a set. As a proof of this admirable custom, he might mention that during last year no less than 37,548 sets of weights and measures had been manufactured. What reason existed for attempting to change all these by a stroke of the pen? The well known Kiri no Toshiaki, had told him, years ago, that the Government of the day had learned how to bribe the people by fair speech. Were there no such persons among the present Government? Professor Toyama agreed with Viscount Tani so far as concerned the lengthening of the period for examination, but reminded the Viscount that many amendments of the Government's original Bill had been proposed by members and adopted by the House. He fully agreed that three years was too short a period. Five years would perhaps be the most suitable time, but, as between three years and seven, he had no hesitation in choosing the latter. Marquis Nabeshima supported the Committee's amendment. Mr. Murata had spoken, as he said, at the request of the Minister of State for Agriculture and Commerce, but if the Minister had anything to tell the House, he ought to come and tell it in person, or at least entrust the message to a Government Delegate. Mr. Murata had probably made a mistake in asserting that he spoke for the Minister. As to the question of period, the Marquis reminded the House of the very straightened circumstances of the agricultural classes, and urged the expediency of the utmost deliberation in introducing any change that affected their pockets. A *yen* or even fifty *sen* of additional expenditure might make a vital difference in the condition of a poor farmer, and great care should be taken by legislators not to run any risk of augmenting the people's difficulties and adding to the already heavy burden of keeping body and soul together and supporting a family. Mr. Watanabe Kiyoshi spoke in the same strain, pointing out that the prime purpose of the measure was to amend the system of weights and measures, not to inconvenience the people. He strongly condemned the fact that Mr. Murata had been conmissioned to speak in behalf of the Minister who had charge of the Bill. Mr. Ishida, Vice-Minister of Agriculture and Commerce, said that the Minister had not commissioned Mr. Murata to speak for him in his absence, but had merely explained to Mr. Murata, in conversation, that there were reasons for approving the three-years period of the Bill rather than the seven-years period of the amendment. Mr. Kikuchi Dairoku explained that Mr. Murata having pointed out that some of the amendments affected the drafting of the Bill, the Committee had consulted with him (Mr. Murata) and Mr. Hozumi on the subject, and they had come to an agreement. After listening to the debate, he (Mr. Kikuchi) approved the proposal to extend the period of three years to seven, because it appeared to him that in seven years after the operation of the Bill the old weights and measures in use would have served their time, and might be replaced by new without inconvenience. Viscount Itakura, in strong terms, denounced such a proceeding as that the Minister in charge of the Bill should entrust the duty of supporting it to a member. Mr. Murata might try to explain away what he had said, but his words were on record. Who and what was the Minister of State for Agriculture and Commerce? (Here the acting President called the speaker to order, but Viscount Tani protested against any interference with a member's freedom of speech.) The Minister had full competence to explain the Bill himself, and it concerned the dignity of the House to know why he had entrusted his duty to a member. Mr. Murata explained that he had not said he was commissioned by the Minister, but only that he wished to comply with the Minister's desire. It was very unfortunate that his remarks should have caused so much commotion (cries of "unnecessary," "enough"). Mr. Hozumi said that Viscount Tani had expressed some indignation because Mr. Murata had spoken of himself as commissioned by the Minister. Doubtless the use of the word "commissioned" was open to criticism, but the fact was that he had had some consultation with the Committee about the effect of their amendments, and the Minister had enlisted the aid of Mr. Murata's well-known erudition and experience. Mr. Murata had accordingly assisted in respect of the amendments of the preceding day, and was generally giving what aid be could in the best interests of the measure. The House took a recess at 12.05 and re-assembled at 1.20 p.m. Mr. Murata expressed regret that, without due consideration, he had in the morning used language to which the House took exception, and begged to be allowed to withdraw his words. Several members said that they had purposed speaking with reference to Mr. Murata's previous statement, but since he had withdrawn it, there was no occasion to trouble the House with further remarks. Mr. Miura proposed that all portions of the debate relating to Mr. Murata's statement should be expunged from the records. After some discussion this proposal was voted by a majority of the House. The Committee's amendments to the first and second clauses of Article 19 and Article 20 were put and carried after some discussion. The 21st Article was eliminated by a majority vote, it having been pointed out that matters bearing on the country's foreign relations need not be considered in framing a law like the present. The 22nd Article with the Committee's amendment was unanimously voted. A proposal was made that the House should proceed to the third reading without the prescribed interval so as to enable the Bill to reach the Lower House quickly, but in view of the importance and intricacy of the measure this proposal was negatived. The Acting President announced that the third reading would be opened on the 20th instant. The House rose at 5.20 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.40 p.m. The President announced that Mr. Sone, of the Accountants Bureau of the Finance Department, had been appointed a Government Delegate, and that in reply to the series of questions addressed to the Minister of State for Foreign Affairs by Mr. Inouye Kakugoro and a number of other members in respect of Korean matters, the Minister had stated that owing to the form

Digitized by Google

in which the questions were framed, he was precluded from giving any answer; that Mr. Tachiiri had brought forward a Bill for reforming the Regulations of the House, and Mr. Matsuda a Bill for the amendment of the Budget. The House then went into Committee. General Noda in reply to questions put the preceding day, said that 56 guns had been manufactured at the Osaka Arsenal during the preceding year at an average cost of 1,120 *yen*; that the cost of one round of ammunition for each was 2 *yen*; that 3,800 *kwan* weight of gunpowder had been made, and that four guns had been ordered from France at a cost of 4,000 *yen*. He also gave statistics as to the health of the army, namely: in 1886 there had been 34,049 invalids and 303 deaths; in 1887, 33,339 invalids and 319 deaths; in 1888, 26,600 invalids and 340 deaths; in 1889, 22,981 invalids and 284 deaths. General Katsura, in answer to questions, said that naval ordinance could be made in Japan, but that as very few guns of 27 centimeters calibre and upwards were required, it was found cheaper to import them than to build and maintain a special factory for their construction in Japan. The cost of a 13-centimetre gun with a hundred rounds of ammunition was about fifty thousand *yen*; and that of a 24-centimetre gun, 52,000 *yen*. Mr. Yebashi Ko inquired why the emoluments of foreign employés were greater in the War Department than in other Departments, and whether the Military Colleges could not dispense with foreign teachers altogether. General Katsura replied that it was the aim of the Department to be independent of foreign aid, and that the object had been attained at the Military College and at the Toyama Officers' colleges, except in the staff section, where the instruction being of a very high character, one foreign teacher was found necessary, and his emoluments had to be high as exceptional capacities were required. In answer to questions by Mr. Kawashima Jun and others as to the total outlay of the War Department during the *Meiji* era, General Noda said that, anticipating such a query, the Department had compiled a book called *Rikugun Yenkaku Benran*, from which all the required information could be obtained. Also that the number of troops with the colours on the 11th of December, 1890, was 54,248 men; the number of the First Reserve, 80,235; and the number of the Second Reserve, 54,498; the total being 188,981 men. The arms and ammunition were in proportion to these numbers, but he could not at the moment give exact figures with respect to this part of the inquiry. Mr. Yebashi Ko asked why the lands belonging to the War Department at Maru-no-uchi and the parade-ground of Misaki-machi, had been privately sold to Mr. Iwasaki; who had bid for them, what price per *tsubo* had been obtained, and what buildings were attached. General Noda replied that the lands in question had been received by the Department after the fall of the feudal system, and that the maintenance of the buildings standing on them involved a heavy yearly outlay. Further, the programme of the City Improvements Committee interfered gravely with the usefulness of the lands for military purposes. The Department, therefore, not specially needing these lands and deeming it desirable to reduce the number of parade-grounds within the city, had resolved to sell the ground publicly, but had hesitated to do so on account of the difficulty of dealing with the various buildings on them. It had been deemed advisable to try and dispose of the land to the City Improvements Committee, but the price offered by the Committee had been far below the money which the Department desired to obtain, namely, two million *yen*. Then the lands had been placed in the hands of the Municipality for public sale, but the best tenders had not exceeded 5 or 6 *yen* per *tsubo*, whereas the Department thought 18 to 20 *yen* per *tsubo* ought to be realized. Nevertheless, one piece of ground had been sold to the highest bidder. Just then, the failure of Treaty Revision became certain, and the price of land fell seriously. The Department was in considerable perplexity, when fortunately an application was received from Mr. Iwasaki, offering to purchase the remaining land for 1,800,000 *yen*. This offer had been accepted, but after all the items had been deducted relating to City Improvements changes, wear and tear of buildings between the date of sale and the date of delivery, moving of barracks and various other matters, the sum that came into the exchequer of the Department was 1,280,000 *yen*. The sale had been at the rate of 12.26 *yen* per *tsubo*. Mr. Yebashi Ko asked whether any agreement had existed which made it impossible to arrange with Mr. Iwasaki so that the barracks might remain undisturbed until the transfer of the gendarmes to another place could be effected conveniently and cheaply. General Noda said that, as already explained, the transfer of the land had been deferred until April, 1891, to suit the convenience of the Department, and that for that reason an allowance had to be made on account of the depreciation of buildings. This applied to all the barracks, and he could not understand why the member's question had been framed with regard to the gendarmes' barracks only. Mr. Yebashi expressed himself satisfied. Mr. Nagata complained of the exceeding minuteness of the questions put by members, and said that the debate on the Budget would never be finished at this rate. The House then proceeded to discuss the Report of the Special Committee relating to the War Department. Mr. Kato Katsuya, on behalf of the Committee, explained that, military and naval officers being regarded differently from civil officials, a different reduction had been made in their pay, namely, ten per cent. for all officers of and above the rank of Major, whereas the reduction in the case of civil officials had been twenty per cent. After a few minor questions had been put, the House decided that no further enquiry was necessary with regard to this part of the Report, and passed to consider the Naval Department section of the Budget. The Government Delegates explained, in answer to questions, that the greater cost of previsions in the Navy as compared with the Army was because the men were fed with bread to prevent the spread of *kakke*; that ampler dock accommodation was not provided on account of want of funds; that no traces having been found of the *Unebi Kan*, she had been given up for lost, though search was still made, and that the insurance money (1,245,309 *yen*) had been received; that although naval stations were needed at Maizuru and Muroran, no funds were available to construct them; that at the Yokosuka dockyard ships of large size could be built as well as in foreign countries, but at the Onohama dock small vessels only could be turned out; that ironclads were not made in Japan, and had to be bought abroad, for although it was not impossible to construct them here, the cost would be immense. The House rose at 6.10 p.m.

MONDAY, JANUARY 19TH, 1891.

The House of Peers did not meet.

HOUSE OF REPRESENTATIVES.

The House met at 1.40 p.m. The President announced that a Bill relating to Criminal Law had been received from the Government on the 17th instant. Mr. Tachiichi brought forward a motion of urgency for prolonging the debating hours of the House. He explained that more than half of the Constitutional period of session had already passed, and there seemed to be no hope of getting through the work already before the House unless the time of daily debate were extended. Mr. Kato Katsuya pointed out that according to the printed statement of Mr. Tachiichi's motion, the proposed change of hours was from 10 a.m. to 4 p.m. If the mid-day recess be subtracted from this time, he failed to see that anything would be gained. Mr. Tachiichi replied that a full hour's recess need not be taken; that, in the event of a long sitting being desired, the House could remain in session after 4 o'clock; that by meeting in the forenoon better work would be done; and finally that the cost of the electric lights, which he understood to be over 110 *yen* (per month?) would be saved. The motion being put to the House was voted by an apparent majority, but the result being challenged, a ballot was taken, when 86 "noes" and 78 "ayes" were found. The House then went into Committee. Mr. Sato Kinji asked why the cost of ink, stationery, pens, and such things was proportunately much greater in the Naval Department than in other Departments of State. Namely, for the office equipment of each *Hannin* official, 30 *yen* in the Naval Department; 13 *yen* in the War Department; 45 (?) in the Foreign Department; 9 *yen* in the Finance Department; and 9.90 *yen* in the Home Department. For stationery, ink, &c., 33 *yen* in the Naval Department; 16 *yen* in the War Office: 20 *yen* in the Foreign Department; 15 *yen* in the Home Department; 40 *yen* in the Finance Department; and 9 *yen* in the Prefectural and City offices. For wear and tear of office equipment, 80 *yen* in the Naval Department; 12 *yen* in the War Office; 12 *yen* in the Foreign Department; 19 *yen* in the Home Office; 12 *yen* in the Finance Department; and 4.90 in the Prefectural and City offices. For miscellaneous expenses, 103 *yen* in the Naval Department; 25 *yen* in the Home Office; 19 *yen* in the Foreign Office; 16 *yen* in the Finance Department; and 8 *yen* in the City and Prefectural offices. The Government Delegate replied that in compiling the Estimates a Department did not compare its outlay with that of other Departments, but simply put down its own expenses. He imagined, however, that there were two reasons for the discrepancy noted; first, that the number of *Hannin* officials was proportionately small in the Naval Department, and therefore a comparison taking the allotment on account of each of these officials was untrustworthy; secondly, that the Naval Department had an immense amount of work to do on paper, as drawing charts, maps, plans of ships, machinery, and so forth. Being pressed as to the item of wear and tear, he promised to reply after inquiries. Mr. Kawashima Jun asked some questions about the methods of dividing the various items of the accounts. The Government Delegate, in reply to further queries, explained that the number of invalids had decreased greatly since the adoption of a bread diet, and still more since the use of meat had been resorted to; meat and bread being found the best antidotes to *Kakke*. The average outlay per man on account of medical attendance and medicine was 6.3 *sen*. At sea in home waters the cost of maintenance was 16.5 *sen* per diem; in foreign-going ships the cost was 25.5 *sen*, and on the shore, 13.3 *sen*. With regard to the fact that the allowance for provisions in the Navy was 50 *yen* per head annually, against 34 *yen* in the Army, he explained that in modern sea-going ships of war the men had to be supplied with the very best provisions for sanitary reasons. As to the cost of medicines and medical expenses being 6.3 *sen* per head in the Navy against 5 *sen* in the Army, he was not in a position to speak at once. After some further questions of an unimportant nature, the House proceeded to consider the Report of the Budget Committee on the Naval Department. Mr. Inouye Kakugoro said that of the seventeen pages of the Committees' Report there was not a page without errors and corrections, and sometimes the corrections had been re-corrected. He wished to know whether he might consider the Report now in his hands as finally corrected, or as liable to further changes. It was explained that the copy of the Report in Mr. Inouye's hands contained three pages which ought not to have been put into circulation, whereupon Mr. Inouye said that his remark applied equally to the remaining fourteen pages, and that he wanted an explanation of all the corrections. A discussion on this point arose between Mr. Inouye and Mr. Imai, and ultimately the President called them to order. The President announced that since no further questions were put about the Committee's Report on the Naval Department, the House would proceed to the Department of Justice in the Budget. Mr. Tachiiri complained that the explanations appended to the items in this section were very brief. He asked for full information about the results of the Reorganization of the Law Courts. Mr. Mitsukuri, Vice-Minister of Justice, said that the re-organized system had only come into force in November last, and there were not yet sufficient *data*

Digitized by Google

to form an idea of its results. Several questions were asked about the position and numbers of the courts and the method of keeping the Great Ledger. With regard to the Ledger, the Delegate said that certified extracts from it served the purpose of title-deeds, and that, in the event of land being pledged, it was the business of those concerned to see that the person advancing the money was present when the transaction was entered in the Ledger. Mr. Kato Kokuzo wished to know why subsidies were given to the three Schools of English, French, and German Law, whether the subsidies might not be dispensed with, and whether the schools were needed. Mr. Mitsukuri replied that formerly there had been Schools of Law attached to the Department of Justice, but since the abolition of these, the Bench and the Bar would have to depend on the Imperial University alone for a supply of legal experts were it not for the three schools in question, which supplied an undoubted public need. He further explained that allowances for entertainment were made to Judges of Courts at the Open Ports for the same reason that such allowances were made to Prefects and Governors. Replying to Mr. Tasuda Yuitsu, he said that an allowance of 1,000 *yen* per annum was made for the three students sent abroad by the Department, and that the greatest care was taken to provide for the proper expenditure of the money. In answer to another member, he said that though the study of law had made great strides in Japan, it was not yet by any means perfect, and a necessity existed for sending students abroad. Nevertheless, the number sent had been gradually reduced, and in time the practice might doubtless be discontinued. The allowances for entertaining were 300 *yen* annually to the Supreme Court; 250 *yen* to the Tokyo Court of Appeal; to the Osaka Court of Appeal, 600 *yen*; to the Nagasaki Appeal Court, 290; to the Nagoya Appeal Court, 250; to the Tokyo Local Courts, 250; to the Osaka Local Courts, 670; to the Yokohama Court, 800; to the Kobe Court, 800; to the Nagasaki Court, 550; and so forth, the Courts at the Open Ports receiving a proportionately large allowance to enable them to establish social intercourse with the foreign residents. A proposal to postpone the rising of the House until the conclusion of the questions about the Finance Department was negatived, and the session closed at 6.10 p.m.

HOUSE OF PEERS.—TUESDAY, JAN. 20TH.

The House assembled temporarily in the ball-room at the Rokumeikan at 1 p.m. The President, Count Ito, caused a clerk to read to the members an accurate description of the fire by which the two Houses of Parliament had been destroyed early in the morning of the same day. The account was prepared from the reports of the police and of officials on duty at the time of the conflagration. It showed clearly that the fire had been caused by some defects in electric lighting apparatus, and that as the flames broke out simultaneously from several places all of which were difficult if not impossible to reach, no hope of subduing the fire existed from the outset. The President said that it was greatly to be regretted that the first Houses of Parliament constructed in Japan should have met with such a fate so soon after the Diet had commenced its sittings. It would of course be necessary to re-erect the buildings with all celerity, but as that must be a matter of months, some place had to be found where the House might sit until the conclusion of the present session. The room placed at their disposal to-day was plainly too small for the purpose. Application had accordingly been made to the Government to provide and furnish a suitable chamber as soon as possible, and he thought he could promise that in about a week the necessary arrangements would be completed. He had taken steps to report the matter to the Emperor. No questions were asked, and the House rose at 1.40 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 2.08 p.m. in the Examination Hall of the former Imperial Engineering College at the Tora-no-mon. The President announced that the buildings of the Diet having been destroyed by fire early in the morning of that day, it would be necessary for the House to adjourn until proper arrangements could be made for its session. In answer to inquiries by members, he said that the session could probably be resumed in about a week. He suggested that strangers should be excluded, and the House agreed, but subsequently, on the motion of Mr. Kikuchi, newspaper reporters were admitted. One of the Secretaries then read a number of reports received from officers of the House and others as to the fire. These documents were virtually of the same import as those laid before the House of Peers, the contents of which had been epitomized in our account of that Houses' proceedings. Mr. Sano, Chief Secretary, then ascended the rostrum and said that, just as he was about to retire for the night, the alarm of fire was given. Running out, he found sparks playing under the roof of one of the buildings, and he soon observed that something was wrong with the electric lighting apparatus. Hastening to the various points of connection, he tried to shut off the current, but found it impossible to do so. He then proceeded to the House of Peers, and succeeded in shutting off the electric light there, but in a few minutes it burst out again, setting fire to several parts of the building. It was evidently hopeless to think any longer of coping with the flames, and he therefore directed his attention to saving the archives. On entering the room where these were stored, he found it in darkness, but the crackling of electricity was heard repeatedly. Coming out quickly he obtained all the aid procurable, and ultimately succeeded in getting out most of the books and documents stored on the ground floor. Those stored upstairs were thrown down into the court, but not more than one half of them could be picked up. A member said, with respect to the archives, that even assuming the destruction of the copies of books showing the sums lent or granted by the Government to promote industrial undertakings during the *Meiji* era, the original records doubtless existed, and he begged to be allowed to inspect them. The President replied that there had not yet been time to ascertain what books and documents were burned and what saved. As to the question of original records, he should make inquiries of the Government and give a reply subsequently. Mr. Tanigawa, on behalf of the Memorials Committee, asked to be informed as soon as possible about the archives. Mr. Suyematsu Kencho said that the fire of that morning had been a great catastrophe. He undertood that officials connected with the Diet and members of the police force had shown remarkable resolution and courage in endeavouring to cope with the flames, and that one constable had risked his life by cutting two of the electric-light wires with his sword. He thought that the House ought to be informed of the names of the men who had thus distinguished themselves, in order that they might receive due recognition. Further, the fire had taken place in the near vicinity of the Imperial Palace, and doubtless as the Houses of Parliament were the scene of the conflagration, His Majesty the Emperor had been considerably disturbed. It seemed proper under the circumstances that the President should wait at the Palace to convey expressions of condolence in the name of the House. This proposal was generally approved. Mr. Yamada Yuizo said that Mr. Suyematsu had spoken only of thanking the officials and police, but it appeared right that they should be suitably rewarded. He suggested that the necessary representations be made with that view. The House decided in favour of Mr. Suyematsu's proposal. Mr. Ozaki Yukio said that although there appeared to be no doubt as to the cause of the fire, it must be remembered that much public excitement had existed of late, and that the proceedings of the Diet and the conflicts of parties within its precincts were watched with keen attention. He thought it scarcely necessary to point out the importance under these circumstances, of setting the mind of the nation entirely at rest as to the origin of the conflagration. Further, foreign countries also took no little interest in the result of the introduction of constitutional institutions in Japan, and such an incident as had just occurred might easily be misconstrued by persons at a distance. It was therefore desirable that telegraphic information should be sent abroad announcing the fact of the fire and explaining its cause. Doubtless the responsibility of the heavy loss would fall upon the Electric Light Company, but the injury done to the reputation of the system of electric lighting would not be confined to Japan: it would extend to all lands. No effort should be spared to prevent public prejudice from being excited against an invention which did such credit to the scientific ability of the century and conferred such a boon on mankind. He therefore proposed that a Special Committee of nine members be appointed to inquire minutely into the cause of the fire, and to report publicly to the House. Several members supported this proposal, but Mr. Hamano Noboru opposed it. He wanted to know how many members of the House were competent to conduct an expert inquiry into the subject of electric lighting, and he characterised the motion as absurd. Mr. Itakura also opposed the proposal. He said that such an inquiry fell within the province of the police, who were much more competent to conduct it than the House. Mr. Ozaki's motion was then put and lost. The House rose at 2.40 p.m.

## *CORRESPONDENCE.*

### A CORRECTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—With reference to your note on the New Japanese hymnal, permit me to make only one remark. The book may have all the possible merits you claim for it, except that of being "the pioneer music book printed in Japan with type made and set up in the country." The very same Seishi Bunsha printed in 1889 a hymn-book since in use in the Catholic Church.

Yours, &c., CUIQUE SUUM.

January 21st, 1891.

[Was not the hymn-book of 1889 printed from wooden blocks? The question is one of musical type.—ED. *J.M.*]

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Though I do not consider the question of the hymn-book as one of great importance, as you seem to call for an explanation, I beg only to state that the edition of which I sent you a copy was printed from *music type*, and not from *wooden blocks*. The correction had no other meaning.

Yours truly, CUIQUE SUUM.

January 22nd, 1891.

### THE RECENT CASE IN THE PORTUGUESE CONSULAR COURT.

TO THE EDITOR OF THE "JAPAN MAIL"

SIR,—In your comments upon the case of the Yokohama Station Master against Gama, I take objection to the following passage:—"In the two coincidences—first, that the counsel defending Gama happened to be also the President of the Hotel Directorate, and secondly, that the Railway official instigating the prosecution happened to stand in a peculiar relation to the Japanese girl upon whom Gama's attentions had been thrust—in these two coincidences may be found material to account for the ill judged persistence and vehemence of the Railway Authorities and for the rancour that disfigured an otherwise able defence. We refer to this phase of the miserable affair chiefly because of a singular statement into which the counsel for the defence suffered himself to be betrayed. He argued, with apparent faith in the truth of his words, that the object of the Foreign Secretary of the Railway Department in bringing the charge against Gama was to 'stir up bad blood and strife against foreigners.' This is in accord with the maudlin and silly creed maintained by certain persons in Yokohama, that every charge preferred by a foreigner against a foreigner in support of a Japanese, is anti-foreign and unpatriotic. Apparently the counsel for the defence would have the public believe that the licence taken by a man like Gama in contravention, if not of the Railway Regulations, certainly of the

Digitized by Google

rules of ordinary decency, must be condoned and hushed up lest any public attempt to punish it be mistaken for an evidence of anti Japanese feeling. Such a doctrine would bring within the sphere of racial prejudice every question of right or wrong between a foreigner and a Japanese. The counsel for the defence in Gama's case is much too shrewd a man to be misled by extravagance of this kind. There is, therefore, all the more reason to criticise him for advancing a proposition so unreasonable and so entirely beside the mark. The real creators of bad blood between foreigners and Japanese are the persons who, for interested purposes, invest every dispute with an international character, and try to persuade the public that because a Portuguese hotel-runner is prosecuted for making indecent proposals to a Japanese girl in the Ladies' Waiting-Room of the Yokohama station, anti-foreign feeling in Japan is likely to be generated or intensified."

I did not argue that the object of the Foreign Secretary of the Railway Department in bringing the charge against Gama was to stir up bad blood and strife against foreigners, as you allege; on the contrary, my contention was that this particular charge had already been seized upon by a portion of the press to stir up strife, etc.; and I alluded to the paragraph in *The Japan Daily Mail* of the 22nd November last, headed "*Improper Treatment of Japanese Female Passengers in Railway Carriages by Foreigners.*" Read it, and then put to yourself this question:—Who are "the real creators of bad blood between foreigners and Japanese?" Who are "the persons who, for interested purposes, invest every dispute with an international character, and try to persuade the public that" and the rest of it?

Yours faithfully,

THE COUNSEL FOR THE DEFENCE.

Yokohama, January 22nd, 1891.

[The words used by the Counsel for the defence, according to the short-hand report, were:—"And all this was done by whom? By an employé of an employé of the railway station, Mr. Aldrich, one in Japanese service, in order to stir up bad blood and strife against foreigners." We fail to see how this can have been intended to refer to the *Japan Daily Mail* of November 22nd.—ED. *J.M.*]

## *YOKOHAMA AMATEUR ROWING CLUB.*

The annual general meeting of the members of the Yokohama Amateur Rowing Club was held on Thursday in the Chamber of Commerce buildings. Mr. W. W. Till (Captain) took the chair.

Among those present were Messrs. G. Scidmore, C. Gibbens, A. Owston, G. W. Barton, K. F. Crawford, W. H. Telford, S. W. Kennaway, J. B. Coulson, H. C. Litchfield, Clarence Martin, M. A. Howe, E. P. Nuttall, W. W. Till, W. W. Campbell, A. H. Stewart, J. G. Boag, F. H. Hooper, W. Sutter, R. Abenheim, H. V. Henson, C. Abenheim, A. S. Robinson, Playfair, J. Walter, J. Berrick, G. E. Rice, &c.

The CHAIRMAN said the meeting was called in accordance with rule No. 13, and had been duly advertised.

Mr. ROBINSON proposed and Mr. BARTON seconded that the minutes of the last meeting be taken as read, which was carried.

The CHAIRMAN said the next business was the passing of the accounts. It was hardly necessary for him to read the accounts as the members had printed copies placed on their chairs. They would observe that there was a credit on the working account of $420. It was the second time there had been a credit balance.—(Applause.) The only other year when there had been a credit balance was in 1888, when there was a balance of $320. This year there was $100 more. The new oars which had been received from England and cost $192.94 had not yet been touched. The suggestion put forward by the committee as to the debentures would reduce the debt to $500. The debenture notes were at eight per cent., and the question was whether it would be better for the money to go in the bank, or to pay off the debentures with it. He thought the members who orginally took the debentures did not take them as an investment, but simply to start the club. Touching the rowing, there were certainly no great results. The younger members, he thought, had not been encouraged by the older members, and he certainly had not done his duty as he really had not time to attend to it as he could have wished.—(Hear, hear, and laughter.)

Mr. SCIDMORE said as there did not appear to be any disposition to critisize the report and accounts he would propose that the report be taken, and a vote of thanks to the officers and Committee for the able way in which they had carried out the work of the Club.—(Loud applause.)

Mr. BOAG seconded the proposition, which was unanimously carried.

The CHAIRMAN asked if the proposition meant that the debentures be taken as suggested.

Mr. SCIDMORE replied in the affirmative, and said he meant that the report be taken in total and a vote of thanks passed.

REPORT.

Your Committee's Annual Report, to which is subjoined the Treasurer's Statement of Account, is now placed before you.

The financial position of the Club is stronger than it has been for some years. The debt of $63.32 shown in the last report has been changed to a Credit balance of $1,010.87. Members' subscriptions during 1890 amounted to $2,735, as againt $2 261 for the year 1889.

The recommendation of the last Committee in respect to the ordering of new oars has been carried out, a fresh supply having been obtained from England at a cost of $192.94, as shown in the Treasurer's Statement.

The Club property, with one or two exceptions, is in good order. The stairs leading to the Boat-house balcony and the balcony itself are now under repair. The Bathing barge having been damaged during the gale of last August, will require extensive repairs, at a probable cost of $300. The Committee, whilst leaving their successors to decide what form these repairs shall take, would suggest that the old style of roof be restored for the use of diving members. The boats are all in good condition.

A carpenter was engaged at the beginning of the season to attend to the boats and do whatever odd jobs might, from time to time, be required of him on the property of the Club. This has been found so satisfactory an arrangement that it is recommended the new Committee retain the man in the employ of the Club.

Touching rowing, which in 1889 was said to be claiming more attention, the Committee are unable to make any very satisfactory report. They cannot but regard with regret the very faint interest manifested by members in rowing this season. Notwithstanding the liberality of individual members, and the very handsome prizes offered by the Club, the entries to the Spring Regatta were disappointing; whilst as regards the Antumn event, so little support was accorded to the programme that the regatta had to be abandoned. Very little rowing has been done throughout the year, the tendency of members to regard the Club as a social, rather than an athletic institution, being seemingly on the increase, which is to be deprecated.

Swimming Races and Diving Competitions were held during the Summer and proved entirely successful.

The Committee seek the sanction of the members to the appropriation of $1,000 for the withdrawal of twenty debentures. This will reduce the debt of the Club to $500.

The Committee tender their resignations, with best wishes for the future prosperity of the Club.

The following do not offer themselves for re-election:—Messrs. W. W. Till, F. J. Hall, J. Walter, and H. J. Gorman.

H. V. HENSON, Honorary Secretary.

Yokohama, January 22nd, 1891.

CHANDLER GIBBENS,
For F. J. HALL, Hon. Treasurer.

Examined with vouchers and found correct.

(Signed) C. L. ANDERSON.

The CHAIRMAN said the next business was the election of officers.

Mr. TELFORD asked if Mr. Rickett would stand as captain if he was elected.

The CHAIRMAN said he believed Mr. Rickett had consented to serve.

Mr. NUTTALL asked if the last paragraph in the report relating to certain gentlemen not offering themselves for reëlection was decisive.

The CHAIRMAN replied in the affirmative.

Mr. PLAYFAIR asked what lease the Club had the boat-house on.

The CHAIRMAN said they had no lease at present. They orginally took out a lease for seven years, but it expired in 1887. They might be turned out at any moment.

The ballot for officers was now announced and resulted in the following gentlemen being elected. Mr. Rickett (Captain), Captain J. Martin (Honorary Secretary), Mr. Rothwell (Treasurer). The committee was announced as follows:—Messrs. Campbell, Gibbens, Boag, and Barton.

Mr. LITCHFIELD said he wished to call a vote of thanks to the retiring committee, especially to Mr. Till.—(Applause.) In the year 1881 he had joined the committee of the Yokohama Amateur Rowing Club. At that time it was burdened by debentures to a large amount, and it was mainly due to his energy and to the care which he took with the finances and to his sticking to one straightforward course that the debentures of the Club were reduced, and on his retiring he handed over only a paltry debt of $500. That was a very satisfactory result of Mr. Till's work, and he (Mr. Litchfield) asked the members to vote him a very cordial thanks.—(Applause.)

Mr. SCIDMORE said he desired to second that proposition. He also remembered Mr. Till joining the committee. He did not do so readily. He said he preferred not to serve, and said he was too young, but the members decided that he would outgrow that and he had certainly done so.—(Laughter and applause.)

The CHAIRMAN asked that the gentlemen who voted for that proposition would kindly hold up their hands.—(Renewed laughter and all hands shown.)

No one having any other propositions, the CHAIRMAN declared the meeting closed.

## *LADIES' BENEVOLENT ASSOCIATION.*

We have been requested to publish the following annual report of the Ladies' Benevolent Association:—

Committee:—President—Mrs. Irwine, Vice-President—Mrs. Eldridge, Hon. Treasurer—Mrs. W. B. Walter, Hon. Secretary—Mrs. Brearley, Managers—Mrs. Brent, Mrs. Grösser, Mrs. Lindsley, Mrs. Mollison, Mrs E. Morriss, Mrs. Tripler.

Meetings of the Managing Committee are held on the first Monday in every month at the Parsonage, at 4.30 p.m. All members of the Association are entitled to attend these meetings and vote; also to introduce to the Committee any cases requiring assistance. Rules of the Association will be found in every collecting book, and can be obtained from the Secretary. The Committee wishes especially to call attention to Rule IV., viz., "The conditions of membership shall be a monthly subscription of *not less* than fifty cents."

As the Treasurer's Report hereto appended will show, the balance in hand is about the same as that of last year, thus proving that the objects and aims of the Association continue to meet with the approval and sympathy of the community. Cases are occasionally brought before the Society which cannot be strictly called deserving. Their misfortunes are often the direct result of their own misconduct, but as no one would wish to see their fellow creatures destitute and starving in the streets, the L. B. A., being the only charitable Socity here, is perforce obliged to take up these cases, deserving or otherwise. Fortunately, however, the Association has frequently more satisfactory applicants for help; those who, with large families and small means, struggle hard to keep up and pay their way. Fatherless children, and widows unprovided for, and those who, losing employment, became needy. To such money is never lent, but relief given for the time-being, and every effort made to provide them with work whereby they can help themselves.

Frequent applications having being made to the Association for help by able-bodied discharged seamen, it was thought advisable to call a Special Committee Meeting to consider what should be done in such cases, when it was decided that unless these applicants brought a medical certificate, stating that they were ill and unable to work, no aid should be given them.

Digitized by Google

Assistance has been given during the year in money and clothing to a Portuguese widow and family, and the Association is at present paying for the education of two of the children.

A sick nurse in Tokyo was helped with a small sum of money while ill and unable to work.

An English teacher out of and unable to obtain employment, was assisted for some months, and ultimately her third-class passage paid to England. A grateful letter of thanks has been received from her since her arrival there.

An American with five children, deserted by her husband, was allowed a sum of money for two or three months, and third-class passage of herself and family paid to San Francisco.

Steerage passage to Honolulu, where he had friends, was paid for a poor sick Englishman, and $5.00 given him for landing expenses.

A poor Indian was helped for a short time, but this proving a most unsatisfactory case, aid was discontinued.

Three destitute children are being maintained and educated by the Association, and the Committee has much pleasure in reporting that several boys formerly supported and educated by the L. B. A. are now in situations where they are giving satisfaction.

The special thanks of the Association are due to the Rev. E C. Irwine for his kind and ready help in many cases which the Committee found difficulty in dealing with, to those members of the community who have sent donations of money and clothing, to the various Steamship Agencies for having kindly granted passages at reduced rates, and to Mrs Pass for her kindness and forbearance towards the children placed under her charge.

Gifts of left-off clothing will be thankfully received at the parsonage by the President.

C. A. BREARLEY, Hon. Secretary.

Yokohama, 17th January, 1891.

## *ASIATIC SOCIETY OF JAPAN.*

A general meeting of the Asiatic Society of Japan was held in the Society's Rooms, No. 17, Tsukiji, on Wednesday January 14th, 1891, at 4 p.m. Rev. Dr. Amerman, Vice-President, in the chair.

The minutes of last meeting having been published in the *Japan Mail*, were taken as read.

The election was announced of the following gentlemen as resident members of the Society. Dr. J. Lönholm, L. Van de Polder, Esq., W. B. Mason, Esq , C. Meriwether, Esq.

The CHAIRMAN then called on Mr. Piggott to read his paper on "The Music of the Japanese." The extracts read chiefly referred to the construction of the scale; and Mr. Yamase Shoin illustrated practically the various tunings of the Koto—the *hirajoshi*, the *kumoi*, and *iwato*. The following is a précis of the contents of the paper:—

The first part of the paper consists of descriptions of ancient and modern Chinese and Japanese musical instruments, which are divided into the following classes:—I. Kotos. II. Biwas and stringed instruments with frets. III. Samisens, Kokyus, and stringed instruments without frets. IV. Bamboo wind instruments. V. Drums. VI. Gongs.

The points of chief interest occurring in the descriptions are first, a short description of the growth of Japanese Koto music out of the Chinese music which had come over to Japan with the Bugaku dances, and also of the work of Yatsuhashi, the inventor of the Japanese form of Koto, and the composer of the great majority of the classical pieces still performed. Secondly, an analysis of Chinese time which proceeds on a principle the converse of the Western, working up to its accent, or climax.

In the second part of the paper the technical terms used in Koto music are explained, and an illustration of Koto notation is given together with an English rendering of it. The notation gives the numbers of the strings to be played in parallel columns, the marks for the bars being placed at the side.

The examination of the Japanese scale follows next in order. The conclusions arrived at are, first, that the octave is divided into semitones: secondly, that the differences in the notes which Dr. Veeder has shown to be slight scientifically, are in practice barely recognizable. Thirdly, that although in the normal tuning of the Koto only five different notes are used, and although the simple and popular melodies are built almost entirely on these five notes, yet the classical composition of Yatsuhashi and the masters who followed him distinctly recognize the existence of two other notes, which come in the gaps between those of the five notes which are more than a full tone apart: that the sequence of these seven notes with the octave, if we start from the second string, is the sequence of the descending minor scale of the West: that this second string has always been considered by the Japanese as the 'fundamental note:' and that therefore the conclusion is almost irresistible that the Japanese have a diatonic scale composed of the same intervals as the scale of the West: the major lying between the fourth and ninth strings, the descending minor between the second and seventh. The test of harmony supports this conclusion, satisfying even Japanese ears though they are unaccustomed to harmonies. The contention receives its greatest support in a somewhat unexpected manner from the other tunings of the Koto. There are two other important tunings, *kumoi* and *iwato*. They are not perfectly understood by Japanese musicians themselves, but a close study of them reveals that they are constructed on the same principle as the normal tuning, *hirajoshi*, the same notes of the diatonic scale being omitted in the notes of the strings, but supplied in the music by double pressure as before. The study of them reveals too the remarkable fact that the scale sequence of Japan, though for certain practical reasons it is limited to three, is precisely the same as the sequence of the West, that is to say, it proceeds by fifths. Transposition of Japanese music from one tuning to another is therefore possible, and the best musicians can always do it easily.

The question of pitch is of great importance. It is admitted that the ratios of the Japanese intervals differ slightly from those of both the Pythagorean and the scientific diatonic scale. But these scales are not in practical existence. The equal temperament tuning of the piano governs all music in the West. The comparison of Japanese and Western scales resolves itself therefore into the practical question of whether Japanese music can be transferred to the piano without altering its character preceptibly. Now as the ratios of the intervals in different keys on the piano vary among themselves it is obvious that the ratio differences between the Japanese scale and the equal temperament scale will be greater in some keys on the piano than in others. The key giving the smallest differences is therefore the one in which Japanese music should be played, and this could be ascertained scientifically. The ear, however, suggests the key of F sharp minor as the one which most satisfactorily renders the plaintive character of Japanese music. On this point Japanese musicians concur with the conclusions of the author. The paper concludes with an analysis of the form or principle of construction of Japanese classical music, the tune *Umegae* being subjected to dissection.

The author then concludes: I have gone at length into the analysis of this piece because one such careful study at least is necessary to understand the Japanese idea of composition. I do not imagine that every composition when subjected to the same rigorous analysis would reveal so intricate a construction. But when we find it in the least advanced example of the severer music, we are certainly entitled to assume that the principles of construction are not ignored in the more elaborate compositions; a complete mastery of the science of 'form' must be in the East, as it is in the West, the corner stone of all successful composition. It seems fully in accordance with the Western idea, too, that in the elementary composition of a rigid or classical nature, the elements of the science should be easily discoverable, their clothing of phrases being only the thinnest of coverings.

What then is this Japanese idea as we see it after our analysis? A composition built on a principal theme, constantly recurring but in varied forms to the principal theme, subordinate themes added from time to time, then again recurring in varied forms: a gradual working up to a climax which is full of pleasant reflexion of all that has gone before, being in fact the themes and pretty phrases of the composition woven together. Surely the Western idea does not altogether differ from this. In means for carrying it out, for inventing grander themes, for elaborating them, for beautifying them, for involving them one with the other, for mystifying the clear vision of the brain by surrounding everything with a delightful mist of sound, yes: the music of the East cannot compare with the music of the West; but again I say, we must remember the few pitiful strings, the imperfect knowledge of the scale, the deficient knowledge of the capacity of some of their instruments, and then I think what has been done is a thing to wonder at and not to scoff at: and again I say we have no notion how far the modern Japanese music has gone, because we don't listen to it, and we wont listen to it, and as yet there is no means whereby we may study it for ourselves when the sliding doors have been drawn to, and the tea house candles have been extinguished.

The CHAIRMAN thanked the author in the name of the Society for his valuable and instructive paper. In the early years of the Society, Dr. Syle and a little later Dr. Veeder, had taken up some points in connection with Japanese music; and still earlier Dr. Muller had written in the *Japan Mail* on the subject. Nothing, so far as he knew had been done lately; and Mr. Piggott's present paper, which seemed much more technical and complete than any of its predecessors, cannot fail to be an extremely valuable addition to the Society's Transactions. He would also convey the thanks of the meeting to Mr. Yamase for his kindness in illustrating the different tunings of the Koto.

Mr. MILNE said that the President, by his references to the work of Dr. Syle and Prof. Veeder, had given to the meeting the early history of what had been done by the Asiatic Society relating to the Music of Japan. However, one more reference might be made, and that was to the discussion which took place some 15 years ago or thereabouts, respecting some metallic objects which looked like coal scuttles. These, which had been dug up in some parts of the Empire, were too old to allow the supposition that they were really what they looked like. But what were they? Were they ornaments for temples? Were they helmets, or were they bells? The bell theory might be considered as having a distant relationship with the subject now under discussion. Bells were musical instruments, and they had been spoken of as such by the author of the valuable paper the meeting had just heard. Just as Japanese music was difficult to reproduce on European instruments, Mr. Piggott told as that the music of our own bells was difficult to reproduce. This Mr. Milne regarded as being possibly a fault in our bells arising from the difficulties in manufacture—it being an unusually difficult matter to cast a bell free from beats and with the desired note. Referring to the work of Dr. Syle and Prof. Veeder, Mr. Milne was of opinion that this had been too lightly touched upon. If he remembered rightly these gentlemen showed that the number of vibra-

Digitized by Google

tions per second in any of the notes of the Japanese scale did not correspond with the number of vibrations per second in any of the notes in the European scale. What might this indicate? Possibly certain physiological differences between Eastern and Western organization. In the East and in the West the same emotions existed, but these were satisfied by different quantities. The Westerns for example satisfied this feelings of pleasure by combinations or the rythmical succession of one set of notes, whilst the easterns filled a similar gap with the combinations, &c., resulting from another set of notes. Another subject Mr. Milne said he would like to hear about, was the history of Japanese music. If you knew the history of a subject the better were you able to understand it—music had to do with muses, now who were the muses of Japan?—the Beethovens, Mozarts, and Handels for example? Has Japanese music been developed along the same lines as European music or along defferent lines? In all nations we first had the recitative, then let us say the *tom tom*, so that primitive music possibly began with one note. After that came instruments of a higher organization, with 2 or 3 notes, and now we had our pianos with 12 notes. Had Japanese music had an evolution along similar lines, and if it had, to what stage had it reached? Possibly it had been evolved in a manner totally different. Certainly as it stood, so far as Europeans were concerned, its functions were not the same. Europeans certainly derived pleasure from European music; but as the author of the learned paper had hinted it could not be said that when the lights were out and the *shōji* drawn Europeans derived pleasure from the twanging of the *samisen*. Japanese liked Japanese music, and Europeans liked European music, so whether the reason was a matter of education or physiological difference it was hard to say.

In reply to Mr. Milne, Mr. PIGGOTT mentioned, as among the great composers of Japan, Yatsuhachi and his pupils. After the first few generations, however, the names were lost. The music that is played at the present day is about 200 years old.

In reply to a question put by Dr. Du Bois, as to the character of the Gekkin scale, Mr. PIGGOTT said that the Gekkin was Chinese, and used fret notes depending on pressure, so that it was impossible to find any definite scale on it.

Captain BRINKLEY asked why, if Japanese and Western music could be represented on the same scale, it was so difficult for Europeans to remember Japanese tunes.

Mr. PIGGOTT said that was due to the prevalence of awkward intervals, to which the Western ear was not accustomed. Some of these intervals were indeed very extraordinary. Nevertheless, when one's attention was given specially to it, it was possible to remember Japanese tunes. He had himself been able to remember six times in one year. As Dr. Du Bois suggested, it was possible to play any Japanese tune on the piano.

Dr. DIVERS expressed his sense of the importance of the contribution which Mr. Piggott had made to the Society upon Japanese music. By its fullness of treatment from the artistic aspect of the subject it seemed to afford opportunity of studying the peculiarities and possibilities of Japanese music to an extent not hitherto within the reach of most persons. They were therefore greatly indebted to the author for his paper. He would have seen by the comments already made that he was not to expect general acquiescence in the soundness of all his views, but no doubt that would not disappoint so earnest a student of the subject provided that he saw his work become, as it probably would, the basis of further investigations by others along the same lines. Dr. Divers himself could not admit with the author that to the adoption of the system of equal temperament in instrumental music was due the recognition of the nature of the emotional effects of different music. The emotional effect was due to the nature of successive musical intervals in a piece, not upon the pitch of the notes. Equal temperament was an unnatural deviation from the natural scale, valuable only, though most highly so, because of the possibilities it gave to such a simple instrument as the piano of reproducing such elaborate harmonised effects. Now the author, adopting the equal temperament scale as the standard Western scale, and then submitting the Japanese scale to a similar smoothing-down or equalising process, could hardly have failed in making the two scales fit in or overlap as it were. But this, it seemed to the speaker, was setting aside the peculiarities distinguishing the systems rather than accounting for them. There yet remained, however, much in this part of the treatment of his subject that made the author's investigations very interesting and important. There was one other part of the paper Dr. Divers would be glad to be allowed to notice, in the hope of having it made clearer, which was that upon the fall of the accent in the bar of Chinese drum music. Mr. Piggott had stated the last note of the bar was the accented note. How could this be? Was not music measured by the recurrence of the accented notes and these notes conventionally made the first of the bars? A reporter of any music whatever which was capable of being taken down would always make the accented notes begin the bars, and therefore would treat Chinese drum music in the same way. Would, therefore, the author kindly explain how he had formed the opinion that the accented notes were last in the bars?

In reply to Dr. Divers' questions, Mr. PIGGOTT said that he laid so much stress on the equal temperament scale simply because it was the scale on which modern music was based. Practically there was now no such thing as the diatonic or the Pythagorean scale. As to the accent in Chinese music falling on the last note of the bar, it was certainly so, the preceding notes leading up to the accented note which ended the bar.

The CHAIRMAN, before declaring the meeting adjourned, drew the attention of members to the fact that there were now in Japan complete sets of movable music type, with which it was possible to get very good printing done.

---

## *A TOSA MONOGATARI OF MODERN TIMES.*

BY A. M.

We were sitting on the pebbly beach of Chinsenji,—or rather Webster was sitting, and I was lying spread out on the flat of my back with my wide-awake down over my nose. I don't mind a day's work when there is work to be done, but we were out for a holiday. Now if there is one thing more than another that I loathe, abhor, and inwardly detest it is that beastly unseasonable energy that was such an abominable flaw in Webster's otherwise perfect character. Here we had come for a quiet spell, and the very first thing he had done to begin it was to drag me about, prospecting all the accursed waterfalls from Kirifuri even unto Kegon, winding up the performance by bursting and breaking me all up in clambering up the Jacob's ladder sort of ascent that leads to the sky-scraping summit of Nantai! That was on the very first day after our arrival at Nikkô, and I had come to the conclusion that it was just about enough for a start. So next morning when Webster proposed to rush me off to Yumoto and from thence into the Phallic haunted-wilderness beyond, I simply struck and refused to budge. It was fine to listen to the bullock-driving vocabulary in which he expostulated and tried to convey an adequate sense of his disappointment. In a sort of fashion it brought back old times,—it recalled with a mellow and subdued hallowedness the gum trees and the ranges, the wild race after breaking cattle, the crack of the stock-whip, the damper, the Chinikie washerman, Crimean shirts and moleskins and—Oh! heaps of other things all more or less equally poetic and romantic. But move I would not; not even when he began to chivvy me with Komeya's pillows and cushions. However, I had consented to be rowed over to tiffin on the other side of the lake, and here we were quiet and happy and contented, feeling that there was no joy like calm. At least I did,—Webster as usual was energetic. He was pelting stones at an empty beer-bottle bobbing and floating in the water (its contents had just served to moisten our clay),—and pelting at it too as it he had taken a competition contract to smash it.

Apart from the splash, splash, splash, of his ineffectual shots, the silence was unbroken and profound. The sun had got away behind us and the pine-clad heights in our rear were duplicated in the waters below; across the lake the woods on Nantaizan were flushed with a glory of afternoon sunshine. But in the midst of it all there was an eerie feeling of depression and sadness; you somehow felt that the day was dying and that it was pathetically conscious of its doom. This is a feeling that is often thrust wonderfully strongly upon you in the solitude of the bush and the ranges of Australia; a feeling that is indescibable in so many words, but whose most marked characteristics are a melancholy yet peaceful resignation to the inevitable, and a conviction that you've had your day and that now you can but drift quietly on to the falls where everyone has to take the final plunge. It was perhaps some association of that sort that set me humming a snatch of Lindsey Gordon's "Sick Stock Rider":—

I've had my share of pastime, and I've done my share of toil,
And life is short—the longest life a span;
I care not now to tarry for the corn or for the oil,
Or for wine that maketh glad the heart of man.
For good undone and gifts misspent and resolutions vain,
'Tis somewhat late to trouble. This I know—
I should live the same life over, if I had to live again;
And the chances are I go where most men go.

"Hullo!" said Webster stopping his pelting, "You know the *Stock Rider*?"

There was a touch of inquiring wonder in his tone that I didn't at all like.

"What are you a givin' us?" I asked sarcastically, for there is not a larrikin in Australia between the Leeuwin and Cape York and from there round to Perth that doesn't know his *Stock Rider* as well as his multiplication table and a good deal better than his Lord's Prayer. It is perhaps the most distinctively Australian thing that has ever been penned. It catches the atmosphere of the country in a way no other piece of verse has ever done or will ever likely do. It is quite *sui generis*. You can't recite it; no more can you sing it. It sounds ridiculous in either way. But you can chaunt it,—in a slow, mournful, melancholy, jogging measure, just like the pace of a dead-beat horse after a round dozen hours after cattle. I have often heard strong, bearded-men chaunting it with the tears running down their faces. Even in our Bohemian Clubs, the Yorick in Melbourne or the Johnsonian in Brisbane, I have seen the room reduced to a lachrymose state by performers who knew how to handle the thing.

So I was a bit nettled when Webster asked me if I knew it; for every one who has been in Australia is supposed to know it like his alphabet. Therefore I answered crisply and crabbedly.

"Don't get on your ear, old man," expostulated Webster, "I meant no offence. Only it reminded me of one of the strangest things I have run across since I came up here. Did I never tell you about it?"

"No, but never mind, it isn't too late to enlighten me, you know. Heave ahead; this is just the spot for improving conversation."

"It was on the borders of Tosa and Awa—ever been there?"

"No, I ain't like you, a bloomin' peripatetic with an unappeasable itch for thrusting his nose into quarters hitherto untrodden by the white man's shoe-leather. But as I remarked before, heave ahead."

"Well! If you haven't been there, go! It is one of loveliest spots in Japan."

"Humph! Is there anything else to recommend it?"

"Well, the female portion of the inhabitants is quite in keeping with the scenery. The women are undoubtedly the loveliest girls in the country to the south and west of Kyoto. And they are kind too; in fact they are occasionally embarrassing in their devoted attentions."

"Poor martyr! I'm sorry for you!"

"At present *they* are neither here nor there; although I do have a yarn to spin about one of them. I was talking about the country. It is ravishing. You come up from the Kochi side some 9 *ri* or so and reach the top of Sui-tatte-toge. From the cabin beside the blasted pine tree at the summit of the pass you look down upon a sea of skeleton-like snags in the grey and leafless *buna* forest beyond.

"Ring barking?" I queried.

"Not a bit of it, he answered; "natural. They grew that way, as gaunt and scraggy as a bevy of unclad witches out for a spree. You plunge into the gloom of the wood and get the creeps and shivers instanter. By and by though this changes, and after ten minutes of plunging downwards three yards at a stride you strike what seems at first blush to be an extensive study in landscape gardening in fairy land. You come down upon the Yoshinogawa at Kuroishi, and meet with a streak of scenery that I would just like to see you trying to describe. You lay yourself out for impressionism, but that would take the starch out of you as sure as my name is what it is. The river runs in a regular gulch between walls of slatey-rock and over a bottom of the same material. From it the hills on both sides run up to 1,200 or 1,500 feet at an angle of something like 60°. To their summits, almost, they are terraced and tilled and planted in a fashion passing belief. White washed houses perched eagle-eyrie wise on their basements and retaining walls of slatey-gray, glint and gleam in the gorgeous Western sun-light that pours in a crimson-violet flood adown the glen. Anon they peep out from beneath clumps of shady *sugi* trees or feathery bamboos. The wealth of tints in the strips of maple wood is perfectly bewildering. Here and there waterfalls and cascades come dancing and tumbling down the mountain flanks. And below is the river, now quiet and still and deep and opalesque and anon roaring and foaming and tossing like a white maned war-steed as it sweeps in spray over a boulder-

Digitized by Google

strewn bed whirling huge pine and *sugi* poles adown its flood onwards to the timber-yards of Tokushima."

"I say, old man, it would take a lot to beat that bit of bathos. Why Claude Melnotte and Como shrivel into dwarfish insignificance!"

He shied the empty luncheon-basket at me and hit me, and then went on.

"The way winds down the valley, but it is only a bridle path, and it runs on as if it were drunk. It scrambles up and down the face of the cliffs like a love-sick spider chasing his sweetheart. It is first up and then down and *vice versâ* till you begin to anathematise variety in elevation as heartily as Job ever cursed the day he was born. At one moment you are 1,000 feet up in the clouds and at another you are within a fifty feet jump of suicide in the Yoshinogawa. Its beastly trying after you have been pumped by 30 odd miles on shanks's mare, as we had been that day."

"But there's a lot in Mark Tapley's philosophy and we thought it just as well to be jolly. Sasaki struck up a choice piece of metrical if not musical Nihongo, and I caught the effluvia of infection."

"Now although I know well enough that my singing is several lengths to the rear of the cawing of a rasping octogenarian crow yet I *do* have a very strong liking for music."

"The samisen for example?" I put it.

"Yes,—even for the samisen. There are many worse things than the music at a geisha spree, let me tell you! But to get ahead? I never make an ass of myself by braying out loud when there is any one within earshot. But when I get away on lone hillsides, beside mountain-tarns, in the woods, in short into the wilderness, I let the harmonies coursing about among my brain-convolutions have a show of expressing themselves. So as I was tramping along a level stretch of that confoundedly up and down *yama-michi*, I got humming the second last verse of the *Stock Rider* somewhat audibly. It harmonised with the dying glory of the sunset and the oncoming of the gloaming just to a nicety. I like to take my music in homeopathic doses—"

"It wouldn't be a bad thing if you could say as much of your whiskey," I interjected.

"No more it would, perhaps. But never mind that now. I had just stopped to catch my breath for a dash at the uphill pinch at the end of the stretch of level when I heard the air echoing away up among the rocks overhead. Naturally I was a bit surprised and paused to listen. At first I thought it was about the funniest echo I had ever listened to. It was a long way more musical than the original it reproduced. Of course it at once flashed upon me that there was money in the thing if one could only lay hold upon it and bottle it up like Edison's phonograph. I had just turned round to communicate this idea to Sasaki when something happened to flabbergast and lay me out flat as a pancake. The tune was reproduced—only as I said musically, and in the most approved Australian manner, but the *words weren't*. I caught the vocables plainly enough, *and they were not the same as I had chanted. They were the words of the following and final stanza!!*

"Stuff and nonsense, man; you had drunk too much *sake* and put away too many chunks of high smelling *daikon* at the last tea-house, and altogether it was that infernal cucumber you ate and couldn't digest!" I remarked unsympathetically, for the basket had really hurt me.

"Now then, you are just all abroad and out of it entirely! It was nothing of the sort! I was a good deal more awake than you are now, you bloomin' lazy lump of do-nothingness. But I felt creepy, and Sasaki seemed a bit staggered too, although he of course didn't catch the difference in the words. It was about the biggest knock I had got since the niggers stuck us up on the Palmer. I felt my hair almost rising as it went on, clearly and distinctly and in mellow tones that would have brought the house down in a mining-camp:—

The deep blue skies wax dusky and the tall green trees grow dim;
The sward beneath me seems to heave and fall,
And sickly, smoky shadows through the sleepy sun light swim,
And on the very sun's face weave their pall.
Let me slumber in the hollow where the wattle blossoms wave,
With never stone or rail to fence my bed;
Should the sturdy station children pull the bush flowers on my grave.
I may chance to hear them romping overhead.

Right through it went, and *ping overhead* was repeated over again! Then there was unbroken silence."

"I stood for a minute and then I thought I'd give it another trial, and hummed over another stanza. But barring the repetition of the last two words of the ultimate line, there was no response. Then I tried another with the same result, and then a verse of 'Scot's wha hae' the only outcome of which was the repetition of 'victory' by the craggy walls of the gulch. It was uncommonly eerie and creepy. I hurried on as fast as I could in the gathering gloom and was precious glad to reach the poor *yadoya*, a few miles below Kuroishi."

"About half-an-hour after supper, the landlord came and asked me for my passport to show to the policeman. I went out and gave it him myself, as I always make a point of making friends with the guardians of the peace. They are a real good sort in the main, and you bet it pays. A pressman can get many a wrinkle out of them. They usually carry all the scandal of the country side in their note-books and they are as often as not confirmed gossips. Anyhow, I have often got them to expand, and Ito San was no exception to the rule. But unfortunately he could not stay; he had just been sent for in haste by the *bonzes* of Burakuji as the Guwaikokujin monk called Kichioji, had just died. 'The Guwaikokujin monk? Ah! true I was only a traveller, but he thought everybody had heard of the foreigner who had come to Burakuji and had shaved his head. It was a thing of when? Five years ago, or perhaps six. But really he must be taking his honourable leave. Perhaps I should like to go along.' All this as he was lighting his lantern. Tired although I was, of course there was but one answer to his proposal. Sasaki rubbed his thighs and his calves ruefully, but got up and tied on his *zori*, while I got my cudgel and an extra *chochin* and off we set. There was a pale wan-like moon coldly shimmering in her first quarter away over to the west, while a raw biting wind had sprung up and was sighing and moaning among the waving tree-tops. We threaded our way in single file upwards along the face of the cliffs on the north bank of the river, and after three quarters of an hours' laborious climbing we saw the lime-washed walls of a court-yard gleaming white and ghastly from a surrounding clump of *sugi*. We went up to it and shouted. The policeman was evidently expected; when he explained who I was, I was also admitted with many bows."

"I needn't say that I was a good deal excited, and considerably on the tenter-hooks of expectation. I began to sniff a possible explanation of that seemingly eccentric and miraculous echo. Yet after all it was passing strange that any one in the wilds of Tosa should ever have heard of the *Stock Rider*. But in this life, as well as in that which is to come, you must be prepared for anything."

"Well, we were conducted into the chamber of death. I can't tell you exactly how I felt, and I shan't try, but on the whole I seemed to myself to be in a cross between a bad nightmare and a hopeless chaos of moral and intellectual pulp. The body was lying on a quilt robed in white, and a sizeable man it must have been, six feet on his stocking holes every inch of it. Although tonsured and shaved in the orthodox fashion it was easy enough to see at a glance that nature had never meant that corpse for a Japanese *bonze*. His features weren't Japanese one tiny little bit. The cut of his eyes was Caucasian, his nose eloquently so, while the tint of his complexion was north-European unmistakeably. I fancied I had seen a face like that somewhere before; possibly in some painting or photograph. Over the shaven eyebrow was the scar of a nasty contusion inflicted years before no doubt. It was a powerful face as it lay there in all the calmness of an eternal sleep. The forehead was broad and lofty, the jawbone heavy and massive. Only the lips perhaps struck one as somehow indicative of a weakness nowhere else detectable in the general physiognomy. Perhaps it was the lips that were answerable for the Reuben-unstable-as-water-thou-shalt-not-excel impression that somehow or other emerged from the midst of the otherwise strong and hardset features."

"What an artistic liar you are Webster." I remarked "Why don't you set up as a three volume novelist? You'd sell, old man, and no mistake."

"Believe it or not, as you like, but it is naked facts I'm telling you. Truth is said to be stranger than fiction, and, by the great Jehosaphat! I'm inclined to think it is."

"Well, then, it's all right. Go on. What next?"

"I asked how he had come here, and was told that he had first come to stay at the monastery five years before. He was a *gakushi*, and could read the Holy Books in Pali and also in the old language of Shakya. He had brought some volumes with him, and he had offered to teach the *bonzes*. And soon he had become a Japanese and had taken the vows, and since that time he had lived here observing all the requirements of the Canon. He was very quiet and sad, and prayed earnestly for Nirvana. And a fortnight ago he had got sick and ever since then he had been sinking. And this evening just between the 7th and the 6th hour (between 4 and 6 p.m.) some strange music came floating up from below, and filled all the room, and then he had started up with his face glowing like the face of an angel and after listening with head bent forward till it had died away among the cliffs he had also broken forth into the same tune and lifted up his voice in song. Then he fell back, and as life left him the music once more came streaming up from the river. He had died the death of a holy man and a saint."

"Of course you might have knocked me down with a feather at this, but I was wise enough to keep my own counsel. I looked at that face again and scanned every line and lineament of it. The more I looked the more the idea grew upon me that it was not in a photograph that I had seen it, but in the living flesh. A conviction too which the story I had just listened to tended to substantiate more and more."

I asked them to show me the books he had brought with him, and inquired at the same time if he had any papers besides. They said that he had no papers so far as they knew, but that they would bring the books. The first thing they brought was not Buddhistic at all; it was a copy of Max Müller's edition of the *Rig-Veda*. It was in two volumes; from the title-page of the first the right-hand corner had been cut away. An 'n' or may-be the two hind-legs of an 'm' indicated that it was a wish to obliterate the owner's name that had been the cause of the excision. However, when I came to the second it was different, and I started in spite of myself."

"What mare's-nest did you find there, you mad sensation-monger?"

"No mare's nest, by the living gods, but the name of L. F. Morrison! Yes, I thought that would make you jump, you lazy heap of inertness!"

It did make me jump and no mistake about it! Even a lazier and less imaginative man than I would have been galvanized into life and a perpendicular attitude by that assertion if he had known as much of the story as I did.

"Of course," he went on, "you knew Morrison didn't you?"

"Should rather think I did? Who didn't? Why man, I used to write editorials about him every week, and besides I once saw Spofforth knock him head over heels with a snorter when he played against the Australian Eleven."

"Yes, he was a rattling good bat among other things, I recollect."

"Yes," I interrupted, "Gregory was standing at cover-point and he caught the ball off Morrison's head; it was a miracle that he wasn't killed on the spot."

"And a worse thing might have happened to him too! And by that same token that contusion I spoke off was as likely as not caused by that self-same delivery of Spoff's."

I didn't sneer at Webster any more. This was altogether too circumstantial to be mere invention.

"You know," he went on, "there were many theories broached to account for his disappearance. Things did look black against him, as black as a chimneysweep or a sackful of soot. The Unions curse him up hill and down dale to this very day and swear he sold them, and then went and did the Judas Iscariot act when he repented."

"And didn't things look uncommonly like it?"

"May be, but don't you believe it. Did you credit it when you heard it first?"

"I didn't, and yet ——"

"Allow me, please! He rose like a political sun and disappeared like a busted meteor. If any man could have run socialism in Australia, it was he. You know what he did for Federation? Why man he, was the Australian Lassalle! The parallel is complete at almost all points. Lassalle was not of the people, yet he led them; and so it was with Morrison. Lassalle was one of the acutest scholars and metaphysicians in Europe. You know his 'Heracleitus' of course. Well, Morrison had unquestionably the biggest and the widest culture of any man yet turned out at the antipodes. His weakness was Madame Blavatsky, Sanskrit, and Buddhism. I have heard him expounding the Nyāya and Sānkhya and Vedanta systems by the hour and making folks fancy they understood him too. He was about the only statesman in Australia that knew what he wanted. And yet there was a strand of weakness in his otherwise strong and determined fibre. And that strand was just the same as it was in Lassalle. Countess Hatsfeldt? Yes, and no! You knew that little brummagen piece of sentimentality and worldliness that was for ever fluttering and floating round at Government House as long as De Ponsonby represented Her Gracious in the colony? Well, she could just wind him round her little finger. And it was she and nothing else that sent him to hell. Don't look incredulous man; I'll tell you how I know. At the bottom of the box in which he kept his books I struck a pile of documents, letters, diaries, and memoranda and

Digitized by Google

what not. I couldn't take them with me; they were relics, and as such were not to be parted with for either love or money. But I remained next day and the next and the next, and was allowed to copy them. And the result of it, my boy, is that I hold in my hands the key to a scandal of the very first magnitude. The little woman is now Countess So-and-so, with a subservient and toadying plutocray lick-spittling her even to the extent of nausea. And Morrison! Well, poor devil, he's dead and gone, vanished from the Antipodean firmament leaving not a trace behind! Would't folks be mazed to hear of him blossoming out as a Buddhist saint?"

"Will you make your 'find' public property?"

"Well, I don't know. I think I may, but why not invoke chance to decide. You see that bottle there; it is now a good forty yards away. If I hit that the yarn shall go no further, and the documents will never see the light!"

He picked up a beauty of a stone for chucking, and threw. By a miracle he hit the mark just on the spot where the label *used by the Emperor Court* goes round the shoulder, and it disappeared in the waters below, leaving only a train of bubbles on the surface to show that it had been.

## *RURAL LIFE IN EAST ABERDEENSHIRE.*

III.

Twenty or thirty years ago the children of an Aberdeenshire farmer attended the parish school. There, for the most part, schooling began and ended. An exceptionally bright boy might be pushed on through the University Course, and some would study for a year or two at the Aberdeen Grammar School, or the Gymnasium, but these were the exceptions. The daughters were "finished" at Miss Williamsons' School at Banff, which enjoyed a great reputation in the educational line in my day. There they were taught to write an angular hand, make stiff pencil drawings from a copy, or pattern, as I have heard it called, play dance music, and sing Scotch songs. The eldest son generally succeeded his father in the farm, the second one, if the father was well to do, might perhaps be established in another farm, but younger sons, as a rule, emigrated. The coffee estates of Ceylon, and the tea gardens of Assam are full of them. Still further east their fortune sometimes leads them.

In five or six years the wanderer comes home on leave. The raw lad is transformed into a man of the world, his shyness all rubbed off, and with plenty to say for himself. If the old place seems strangely small, the old folks a trifle dull and narrow in their views, and the fare old fashioned and homely, the young man has the grace to keep such thoughts to himself; and well he may, for dinners, suppers, dances, picnics are got up in his honour, and while his visit lasts he is the hero of the district. Driving about from farm to farm and being made much of by the girls, his holiday generally ends up with a wedding, and he carries off, it may be one of his cousins, or old school companions, but in any case a rosy, good-tempered young lassie to be mistress of his bungalow in a distant land.

Not always is the ending so happy, and many a family has to mourn the loss of a favourite son or brother dead of fever in Ceylon or China.

A good many farmers' sons now study medicine at the University of Aberdeen, and enter the army as surgeons, or obtain appointments in India.

The life at an Aberdeenshire farm is a simple, healthy, honest one. There are few excitements, little change except an occasional visit to Peterhead or Aberdeen, and the periodical attendance at the markets of the district. A good deal of social intercourse goes on, more especially during the winter, and nothing is thought of a three miles walk, or even a ten miles ride or drive, if only there be moonlight, which is always taken into consideration when setting a night for a tea party or a dance.

Tea is a regular sit-up-to-the-table meal. With it are served hot scones, eaten with butter and honey, home made jams of various kinds, short bread and numerous other cakes for which the farms are famous. It is a curious fact, by the way, that although tea is liked very sweet, cream, though it can be had in plenty and perfection (and perhaps for that very reason), is usually dispensed with. After tea comes whist, or a round game at cards, and if there be a piano, music. Reels and polkas for the most part, though here and there you may find a girl with a taste for something better. At nine o'clock comes supper. If it be a grand occasion, the feast is elaborate, and nowhere can be tasted more delicious chicken or more plump or tender turkey. If the party is a small one and consists of but a few intimates, probably new laid eggs, or a yellow haddock, with bread and butter and beer will serve the turn. But now comes the solemn moment when the table is cleared, the cloth removed, and the whiskey bottle, green or blue, and stopped with a silver mounted cork, is placed upon the table.

Each man of the party has a tumbler, wine-glass, and toddy ladle placed before him on a little mat, each lady a wine glass only; now comes the opportunity for the young men to show their gallantry to "the ladies." It is a point of honour to surround your tumbler with the wine glasses of as many of the ladies as you can persuade to share your toddy with you. And here the bashful young man goes to the wall, and has to stand some good humoured chaff from his bolder or more popular companions. The punch is brewed then by each man for himself, and a glassful ladled out for each of the ladies by her favoured swain, and a song is demanded. At first considerable shyness is evinced, but, the ice once broken, song follows song; there is no accompanyment and everybody keeps his place at the table. I have heard most of the old Jabcobite songs sung, and very well sung too, in this simple mode, which I dare say is out of fashion now. There were special favourites which were always called for and never in vain. Thus, one dear old farmer had but two songs in his *repertoire*, "The Barrin o' the door" and "Rabbie Tamson's Smiddy," but out they came, without fail, at every merry making, in a sort of genial roar. One very genteel lady always gave "The Rose of Alandale," and continued to gave it for thirty years or so, and was listened to with much consideration and pleasure. Each song was received with a round of applause, and when this had subsided, each individual gravely raised his glass to his lips and solemnly uttered "Health and song."

But now the evening is wearing late; skirts are tucked up, warm shawls and hoods are donned, and the young ladies are seen home by the young men, no such word, and no such idea as *chaperone* having occurred to one of the party. Beyond a goodnight kiss on the doorstep no harm cames of it. *Honi soit qui mal y pense.*

A dance about Christmas time, a picnic to the Bullars o'Buchan or the Braes o'Gight in the summer: these are the distractions of the young people.

The Bullars o'Buchan! The very name brings back a vision of high cliffs, mighty chasms, mysterious caves; breezy heights, covered with olive green bents, relieved here and there by the delicate rose colour of sea pink, or the pure white of the Grass of Parnassus. "Hell's Lum:" was there ever such a weird, eerie name? If you lie on the grass, and put your ear to the ground on this spot you will hear such a roaring as may well have given rise to the idea that all the fiends in the lower regions are blowing up their fiery furnace.

From here one has a view of Old Slains, the fragment of a ruin dating from the sixth century, and of the more modern though still ancient Slains Castle, seat of the Earls of Erroll, which is thus described by the great Dr. Johnson:—"We came, in the afternoon, to Slains Castle, built upon the margin of the sea, so that the walls of one of the towers seem only a continuation of a perpendicular rock, the foot of which is beaten by the waves. To walk round the house seemed impracticable. From the windows, the eye wanders over the sea that separates Scotland from Norway, and when the winds beat with violence, must enjoy all the terrific grandeur of the tempestuous ocean."

The Braes o' Gight introduce us to very different scenery. I quote the following from a volume lately published by Mr. David Scott of Peterhead, and entitled "Grass of Parnassus from the Bents o'Buchan":—

The castle of Gight is in the parish of Fyvie, on the north bank of the Ythan, and consequently in Buchan. It is very picturesquely situated on a corner of the Green of Gight, on the verge of a precipice overlooking the Ythan. This cliff is richly festooned with creeping plants, and trees that have cast anchor in the rifted rock. From the top of the Castle, now a complete ruin, matted with ivy and overgrown with vegetation, there is a splendid view of both the Braes of Gight on the north side of the Ythan and the Braes of Haddo on the south side, and of the river winding along the wooded gorge. The Castle is a grim old ruin, with very thick walls, and the usual collection of dark cells and tunnel like dens. Those who lived in the olden time in these dismal apartments were a doughty race, ever ready to busk up their plaids and cock their bonnets when any fighting was on hand. For generations Gight belonged to the Maitlands, but about 1479 it passed to W. Gordon, third son of the Earl of Huntly, who was killed at Flodden. In 1644 the Castle was taken and despoiled by the Covenanters. The Gordons held the property till Miss Gordon, the heiress of Gight became in 1785 the second wife of the poet Byron's father. He was deeply in debt, and the estate was in 1787 sold to Lord Haddo, third Earl of Aberdeen, for £17,850, almost all of which went to pay the debt.

When the heron leaves the tree
The laird o' Gight shall landless be.

The doves had left the Castle, and the herons the Hagberry Pot, the laird was landless, and the Rhymer's prophecy was fulfilled. Peter Buchan gives a balad of the period—

O, where are ye gaen, bonny Miss Gordon?
O, where are ye gaen sae bonny and braw?
Ye've married, ye've married with Johnny Byron,
To squander the lands o' Gight awa.

After the death of the Earl's son, Lord Haddo, who was killed on the green by a fall from his horse, the Castle fell into decay, but it was again looked after by the Premier Earl, and is still carefully preserved by the present proprietor, John Campbell Gordon, seventh Earl of Aberdeen.

Two men set down on Ythan brae
The one did to the ither say
An' what sic men may the Gordon's o' Gight *hae been?*

Of all the places to spend a happy day Gight is surely the favourite. The scenery has just a touch of highland in its character. From its braes one can see the low mountains of Donside, with the graceful peak of Benahie, a veritable Fuji in minature, in the distance. I cannot refrain from quoting here a pathetic little song, which I often used to hear sung in my childhood, but which, to the best of my knowledge, has never appeared in print:—

Oh! gin I were where Gaudie rins,
Mang fragrant heaths and yellow whins,
Or brawlin' down the bosky linns,
At the back o'Benahie.

Oh there, oh there on ilka nicht,
When baith our hearts were young and licht
We've wanderd by the clear moon licht,
At the back o'Benahie.

Oh, Fortune's flowers wi'thorns are rife,
And wealth is won wi'toil and strife.
Ae day gi'e me o'youth and life,
At the back o'Benahie.

Aince mair, aince mair where Gaudie rins,
Where Gaudie rins, where Gandie rins,
Let me dee where the Gaudie rins,
At the Back o'Benahie.

## *LETTER FROM NEW YORK.*

(From an Occasional Correspondent.)

New York, December 24th.

Christmas chimes fill the air and New Year greetings are about to be spoken. The old year is going, and it is a time of reminiscence. Journalists are making up their necrological lists, scientists recording the splendid leaps of thought and discovery, preachers repeating the sweet evangel of "Peace, good will to men," while the chorus of children is heard in happy acclaim in thousands of homes. The year 1890 has been *annus mirabilis* in not a few features. Civilization has made substantial advance. War is not as attractive as once. Aside from moral considerations, on purely pecuniary grounds arbitration is preferable. I read to-day in one of our city journals this paragragh which is significant of the trend of thought in these matters: "Which? It is said that the cost of firing one shot from a cannon of the largest size now made, is sufficient to maintain a missionary and his whole family in Japan for more than two years." Spike the cannon, then. Let the herald of peace be heard.

Ring out the thousand wars of old,
Ring in the thousand years of peace.
Ring out the darkness of the land,
Ring in the Christ that is to be.

Parnell is the name most constantly put in the head lines of the papers. It is not so much his personal fortunes the world cares for, but the question of character in politics. The unanimity of the press here and abroad is significant. The *Freeman's Journal* says of Parnell:—

When hopes were brightest, the trusted chief saw fit to depart from the path of virtue and to listen to the promptings of evil. He fell. The old tradition that it is not that Erin's sons do not

Love women and golden store,
But they do love honour and virtue more.

It is a hopeful sign when our secular journals reinforce the teachings of our ethical teachers and insist that skill in business and talent in debate or sagacity in administration shall not compensate for immorality in private life. Europeans at home and abroad will do well to heed the lesson of the hour. Their *modus vivendi* cannot be concealed. The standard of purity is not a sliding scale. The lord and commoner, the resident of London and Hongkong come under the same rule of chastity and uprightness of life.

Father Ignatius, the Welsh monk, is just now making a sensation in some of our Eastern cities.

He is an enigma. Not taking the name Protestant, he still acknowledges the authority of the Episcopal Bishops. Refused a license in Boston, he preached there in halls and church edifices other than Episcopal. Here Bishop Potter gives permission to him to preach, but the preachers of his denomination and their religious papers give him a cold shoulder. The ritualists do not relish his attacks on their worldliness and form, and the Low Church people dislike the popish flavour of his monkish life, his black robes bound by triple knotted rope, rosary blessed by the Pope, and his shaven pate. But if he be "a Jesuit in disguise," he is working hard to uproot the errors of Rome. It is another paradox of Satan casting out Satan. I heard him yesterday address six hundred men in the mart of trade, at the busiest hour of the day. It was a regular Methodist revival service. He led it alone. "Idle in the market place," was his text. He talked as he walked, he gesticulated freely and put his well trained voice to its best service, as well as his keen, expressive eyes. His style was as simple as that of Moody. He attempted no elaborate exposition or argument, made no division of his subject, but stood and talked to the people or started off and walked the platform when specially fervent. "Just as I am" was sung to close with. He knelt. He asked all to kneel as they sung it. The effect was deep and persuasive. There were some of the clergy and some well to-do merchants, but the bulk of the people were of the humbler labouring class. Methodist ejaculations punctuated the fervent eloquence of this Welsh orator and missionary.

The return of the "Grip" was promised. It has not returned. Wiggin's meteorological menaces are not the only things that come to naught by which the so-called scientists scare us. The early and austere advent of winter comes as a tonic and the fat graveyard after a green Christmas seem less likely this year. Last year the mild and unseasonable weather predisposed to disease.

Koch and his cure divide attention with Parnell. So far, much satisfaction is expressed. Deaths have occurred in cases when the injection was a *denier resort*, but these are to be expected. Meanwhile pathological study and general laboratory work receive a great impulse. The city of Broolyn is to have a new Medical College and Hospital called the "Post Graduate." The men at the head are eminent surgeons and physicians, and their reputation is a guarantee of success. The *Brooklyn Medical Journal* recently published this item, from the doings of the County Medical Society:—

"Resolved that in welcoming home one associate, Dr. E. P. Thwing, from his long absence in the East, we take occasion to express our cordial commendation of his efforts in reference to the projected Asylum for the Insane at Canton, the first in the Chinese Empire, not only for its humane purposes, but as opening a new field in the psychological study of Eastern life and in the application of Western science to the care and cure of mental disease."

A Boston paper says:—"It needs no advocacy. The statement of its purpose is all that intelligent, generous givers ask. It deserves and will receive the moral and material support of the English speaking race." The first money came from Yokohama and the next gift, one hundred dollars, from an octogenarian in limited circumstances in San Francisco who saw a notice of the interprise and gave unsolicited. The movement for the indigent insane at Tokyo is slowly taking shape. The urgent need of accommodations for these unfortunate and friendless lunatics is itself a sufficient appeal and must not go unheeded. It is hoped that during the coming year at least an annex will be added to one of the Tokyo hospitals where such patients can receive treatment. If Japan has some large-hearted philanthropist—like our Fayerweather who has just left two millions to hospitals and colleges—here is an opportunity to immortalise himself and bless his country. Twenty thousand dollars are ample means to start such an institution, and when its humane and beneficient aim is understood it will not lack the farther support which its enlarging work will demand.

FOR BRAIN DISORDER USE HORSFORD'S ACID PHOSPHATE.

Dr. M. J. CALAHAN, L.R.C.S.I., 55, Castlestreet, Nenagh, says:—"I gave it in a case of softening of the brain. The patient had much mental labour, and the whole nervous system was shattered. The effect was marvellous."

## *LETTER FROM SAN FRANCISCO.*

(FROM OUR SPECIAL CORRESPONDENT.)

San Francisco, December 30th.

Congress resolved, some days ago, not to adjourn over the holidays; but so far as the accomplishment of work is concerned, it might just as well have done so. At last dates, there were but seven Senators in Washington, prepared to take their seats. The body meets and adjourns merely in order to comply with the law which forbids an adjournment for more than three days.

It appears to be the purpose of the Administration party, when members return to work, to adopt an amendment of the rules similar to the previous question in the House of Representatives, and to the cloture in the French Chamber and the British Parliament, by which debate shall be brought to a close, and a vote taken on the main question. With the help of this check on filibustering, the Republican Senators expect to be able to put the Force Bill though the Senate. It is not quite certain that they will be able to rally their full party strength for the purpose. One or two Republican Senators from the West have announced their intention of voting against the bill when it comes up for final passage. It would seem that it would have been wiser not to have concentrated the remaining strength of the party on a measure which is odious in many parts of the country.

The President has issued his proclamation announcing authoritatively the opening of the World's Fair at Chicago. He says that proof having been furnished him that ten millions have been provided for the grounds and buildings:—

Now, therefore, I, Benjamin Harrison, President of the United States, by the virtue of the authority vested in me by said Act, do hereby declare and proclaim that such international exhibition will be opened on the first day of May, in the year 1893, in the city of Chicago, in the State of Illinois, and will not be closed before the last Thursday in October of the same year, and in the name of the Government and of the people of the United States I do hereby invite all nations of the earth to take part in commemoration of an event that is prominent in human history, and of lasting interest to mankind, by appointing representatives thereto, and sending such exhibits to the World's Columbian Exposition as will most fitly and fully illustrate their resources, their industries, and their progress in civilization.

The issue of the proclamation would appear to most people be a very simple matter—a mere matter of routine. But General Harrison is nothing, if not theatrical. When the proclamation reached him, on a goodly sheet of parchment, he grouped himself with the Secretary of War, the Assistant Secretary of State, and his private secretary as a warm background. He waited till the clock struck 1.30 p.m.: then, seizing a pen, he affixed his signature. Handing the pen to his private secretary, he commanded him to send it to Mr. Peck, of Chicago, to the end that it be preserved as a memento of a historical event.

Senator Stanford has been delivered of an elaborate speech in defence of his scheme for the issue of 2% treasury notes on the security of land. Secretary Windom, who is not devoid of wit, suggests that three amendments are required to perfect the scheme. The first is that loans should be made on all kinds of property, and not on land exclusively. The second is that the government should lend to people who have brains, but no property. And the third is that it should lend to those who have neither brains nor property, but only deserve encouragement by virtue of their American citizenship. The prospect of financial legislation this session is growing very small.

The Government of Columbia has passed an Act extending the life of the Panama Canal Company two years. For this privilege it is to pay 10,000,000 francs in cash, and 5 000,000 in preferred stock: it is also to pay for certain lands which were donated to it by the original concession. Judging from the present status of the company it hardly seems likely that it will be able to comply with these conditions. A Panama Canal is reasonably certain at some period in the future; but it looks now as though capitalists would hang back until the Nicaragua Canal is completed, and people can reckon up the volume of business which the enterprise would be likely to create.

A curious story, which recals a chapter in ancient history, comes from New York. An Italian named Carminetti, who had landed from a steamer from Naples, confessed to the Commissioners of Immigration that he had served a term of imprisonment in his native land, for the crime of mayhem committed upon a girl. His story was that he had loved a girl named Nannette Franciola, and that his love was returned. Her parents insisted on her marrying a more wealthy suitor, and she told her lover that the only way to defeat their object was to disfigure her. Accordingly at her request and with her assistance he slashed her cheeks with a knife, entirely destroying her beauty. On this, the rich suitor withdrew and Nannette married Carminetti. The only parallel to this was the custom of the ancient Scythians, who used to mutilate their wives' faces when they went on a campaign in order to render them less attractive to the men from the north, who were sure to swoop down on Scythia when they heard that the "rude barbarians" were away. But in this case, the ladies were not accessory or consenting to the burtal practice.

Some of these exiles from Southern Europe outdo the performances of the most savage bowie-knife wielders of the South-Western States. A sergeant of police in charge of a station on Coney Island was startled a couple of days ago by the appearance of a Hungarian covered with blood, who laid a human finger and an ear on the police officer's desk. In reply to inquiries he explained that he had had "a difference" with a fellow countryman about a girl; that he had killed his rival, and then cut off his ears and some of his fingers, and operated on his stomach in the fashion of Jack the Ripper. A policeman was sent to the spot indicated by the murderer, and sure enough he found the corpse, disemboweled and mutilated. The assassin received his imprisonment and his committal for trial with perfect composure.

The Indian war has nearly come to a close by the voluntary surrender of most of the fugitive bands. But another war is impending which threatens to shake the spheres. The belligerents are, on one side, Great Britain and France, and on the other, the island of Newfoundland, which at latest dates, had a population of about 180,000 souls. But what they lack in numbers, they make up in spirit. The leading organ of the present ministry thus apostrophizes an ungratiful mother country:—

We are struggling now for emancipation from the slavery under which we have groaned for half a century, and nothing can be more exasperating than Great Britain's temporizing policy. Under no *modus vivendi* will France retreat from the new and obnoxious pretensions which have so passionately excited the people of Newfoundland. The mere name is hateful to us, associated as it is with the most flagrant attempt which Great Britain ever made on the liberties of the colony. Great Britain must be answerable for the consequences of prolonging the *modus vivendi*.

What can avert bloodshed next spring now that this new attempt is made to prolong the period of our slavery? Where shall we find a man who will preach peace and forbearance to his fellow countrymen?

It is terrible to contemplate the prospect of bloodshed, if, in effect, no one arises to preach peace and forbearance.

In the meantime, among the aftermath of our war must be mentioned a skirmish which took place at a place called Wounded Knee in the Bad Lands. The troops had collected the fighting Indians in a cricle, and surrounded them, with a view to a march to the reservation; when, all at once, without a word of warning, each Indian threw off his blanket, pointed his rifle, and began firing at the soldiers who were barely twenty yards away. For some moments, the troops did not dare to return the fire for fear of hitting their comrades on the other side of the circle; and in that brief interval, some fifty men were killed or wounded, among the former being Captain Wallace of the Seventh Cavalry. An alignment was soon effected, and then the troopers got their innings. A correspondent significantly remarks that he does not think that any of Big Foot's young braves saw the sunset that day. Poor Captain Wallace was killed by a blow from a hatchet.

Movements are on foot in several parts of this country to provide homes for Russian Jews who are being expelled from their country by the recent edicts of the Emperor. Considerable sums have been collected in New York, and preparations are being made to locate the exiles in Dakota. Some money has been raised in this State, where the Jews are numerous and opulent, and the idea is to ship a couple of thousand Russian Jews to Mexico, where land is cheap, and can be bought in large blocks. The success of the experiment may perhaps be doubted. Whatever he may do elsewhere, the Jew in the United States never resorts to manual labour, and rarely becomes an agriculturist. He is a born trader, and inhabits cities. As a rule, he is a successful trader, being keen, energetic, and industrious: and when he has made money, he spends it liberally. He is prone to ostentation, and not as unobtrusive as good manners dictate. But he is a patron of art, music, theatres, and literature. He is a good father and a good husband. It is remarked of the California Jews that they have all large families, and that an example of a Jewess seeking a divorce is almost unknown.

## *THE ALLEGED MISCONDUCT OF A FOREIGNER AT YOKOHAMA STATION.*

The following is the translation of the judgment in the case of the Railway Authorities against J. Gama, which was delivered yesterday by E. J. PEREIRA, Esq., Vice-Consul, in the Portuguese Consular Court :—

JUDGMENT.

In the case brought by Shimidzu Oshu, Yokohama Station-master, v. José da Gama, Portuguese subject, employed in the Grand Hotel, for infringement of Railway Regulations, and for insult and indecent assault.

After having carefully gone through all the evidence adduced in this case, I find as follows :—That the prosecution has failed to prove in this Court the existence of the regulation which prohibits men from entering the Ladies' Waiting Room, or that this regulation is always well exhibited in the Railway Station, or that it has always been strictly enforced. That the Portuguese subject, Gama, did not, intentionally, infringe the regulations of Railway Company in the first place, bebecause he did not know them, nor had he ever seen them exposed to view; and in the second place, because, even if Gama had returned to the Ladies' Waiting Room after he had once left it, he could not be supposed to know that the witness Yoshino, who was dressed in plain clothes, and at first refused to divulge his identity when called upon to do so, could be an official or an employé of the railways, or had the right to expel the defendant from that room. Furthermore, Yoshino declared in the preliminary examination, that the reason why he had left the Ladies' Waiting Room for a moment was to go to the Station-master's office in order to ascertain the exact regulations relating to that room, which were unknown to Yoshino himself, although he is, as he says, an official of the railways. If Gama did for a moment hesitate in leaving the room at the time he was ordered to do so by Yoshino, and apparently in a rough manner, it is clear that according to the evidence of the witness Cho, in the preliminary examination, that the defendant and Yoshino left that room in company and were conversing outside of it. Nor is it proved that the defendant failed in respect to the Station-master, it being rather to be supposed that Yoshino was not absolutely faithful in his interpretation of the answers given by the defendant, but repeated what Gama had said to him (Yoshino) before they met with the Station-master. Considering that the conversation between Yoshino and Gama was in the English tongue, which both of them speak very indifferently, and which the Station-master knows nothing of, it is therefore most probable that there was some misunderstanding in the interpretation. Nor is it likely that the defendant, having been so courteously treated by the Station-master, as he (Gama) declared in the prelimary examination, and reiterated in this Court, should have shown disrespect when there was not the least cause for so doing. I, therefore, do not think it proved that defendant committed an infringement of any regulations when he entered that room, where he daily saw men enter, and knew the railway authorities had never expelled any one therefrom. The Station-master himself declares that during all the years he has been in charge he never had turned any man out of that room; a proof that, if a regulation prohibiting men from entering that room exists, it has never been enforced, nor does there exist any notice board of such, as are exhibited in the cars, which would make known to the public the existence of such a regulation and the corresponding penalty for infringement. I must, however, in view of what has occurred, warn the defendant Gama, that in future he will take every care not to trespass into any room or place within the railway station without being sure that the regulations permit of his doing so, and also that he must always treat with every respect, not only the railway authorities, but also all other Japanese authorities. With regard to the second charge of defendant having insulted and indecently assaulted the witness Cho, while they were in the Ladies' Waiting Room, it is proved not only by the evidence of the witnesses and defendant, but by the declaration of the woman, Shirokura Cho herself, that no such assault was committed. The woman made no complaint of having been insulted by anyone; and according to evidence and all circumstances connected with the case, there is not the least donbt that if Gama remained so long with the witness Cho in that room, it was because he received encouragement from her to stay there. Had she thought that defendant had been importuning her and had wished to get rid of him, there was nothing easier for her than to have immediately left the room, and requested any porter or railway employé to have had Gama removed from that room. Instead, however, of doing this, the witness Cho went out of the room on two occasions, each with the alleged purpose of despatching a telegram, leaving her hand bag and umbrella in charge of defendant; and when she met Ogura, the foreign secretary's office-"boy," and who is well known to her, she neither complained to this "boy" of having received any annoyance from defendant, nor that he (Gama) was still in the station. On the contrary, she returned to the waiting room, where Gama was, and carried on a long conversation with him. The door of the room was wide open, porters and policemen were walking about outside; therefore there was every protection within hail of needed without awaiting the return of Yoshino who had left for Tokyo half an hour before. So that it is not to be supposed that Shirokura Cho at the time felt that she was being annoyed by Gama. It is certain that the witness Yoshino declared having seen Gama sitting in an improper attitude beside the woman Cho, but the servant Ogura, who preceded Yoshino, or at least came to the room with him, saw nothing of this. Nor can the evidence of Yoshino be explained, to the effect that he had the time to talk with the woman Cho after she had left the Tokio train, to have been to the Station-master's office, from where he despatched a telegram to Hiratsuka, and then to have been able to catch the 12.45 train, which left for Tokyo immediately after the Tokaido train had departed. In view, therefore, of the statements of the witnesses and the defendant, and of the evidence adduced in this Court, I consider it not proved that Gama, intentionally and knowingly infringed the railway regulations relating to the Ladies' Waiting Room. From the fact that no notice is exhibited, and it is not publicly known, nor is it proved that Gama refused to leave that room, it is not proved that the witness Cho was insulted by Gama in the railway station, or that he intended to insult that female. It is clearly proved that there was no attempt whatever on the part of Gama to commit an indecent assault on the woman Cho. I therefore dismiss this case, without costs.

Given at the Vice-Consulate of the Portuguese nation at Yokohama, in public court, the twentieth day of January of the year eighteen hundred and ninety-one.

(Signed) EDUARDO PEREIRA, Vice-Consul.

## *SHANGHAI.*

Referring to the visit of the Czarewitch to China, the *Mercury* of the 13th instant says :—"From a very good source we learn that in all probability the Czarewitch will not come to Shanghai after all, in consequence of certain difficulties which have arisen in connection with his projected visit to Hankow to see the Russian factories there. It will be remembered that a couple of weeks since the Russian man-of-war *Bobre* went up to Hankow to prepare the way for the coming of the Czarewitch and arrange a day for the Viceroy Chang Chih-tung to receive him. But, to the astonishment of everybody, the Viceroy made various excuses, and finally point blank refused to see the illustrious visitor. In consequence of this, it is now believed that the Czarewitch will go direct from Hongkong to Japan." Three days later, however, the *N. C. Daily News*, writing on this subject, has the following :—"We learn that though acting Consul for Russia has not yet received any official or private information as to the expected visit of the Czarewitch to Shanghai, there is no doubt that he will call here on his way to Hankow. It is most probable that Mr. Olarofsky will not come here at all, but the new Russian Minister and some of his staff will meet the heir apparent, who is accompanied by his brother George, in Hongkong. It has been decided that the Czarevitch shall not visit Peking. The rule as to the admission of Russian ships of war into British colonial harbours has been relaxed for this occasion, and telegraphic orders have been sent by the British government, that the fleet escorting the imperial visitors is to be allowed to enter our Colonial ports."

The *Mercury* tells a capital story—a little adventure of Chief Inspector Cameron, of the Shanghai Police, in which a mob of Chinese got "bested" by the Inspector single-handed:—"Chief Inspector Cameron had a lively encounter with some pugnacious countrymen on Saturday afternoon, in which the aforesaid countrymen of course came off second-best, the canny Scot proving too much for the wily Chinese. The Inspector was taking a canter with the drag-hunt and had gone about 15 miles into the country beyond Hongkew, when riding past a large village, his nag stumbled, threw Mr. Cameron, and bolted. The Inspector and some villagers followed the animal into a kind of compound and captured it, not however, before it had overturned a table with some cotton on it, in front of a door of one of the houses, and also broken a water-kong. An old woman immediately rushed out and commenced to scream at a terrific rate, soon bringing about the Inspector's ears a couple of hundred Chinaman of all ages, who began without ceremony to belabour the Inspector, who was not in uniform. They tried their hardest to get him on the ground, and tie him up. Had they succeeded it would very likely have gone badly with our popular Chief Inspector, but the big Gael shook himself free of the swarm, giving two or three of them a few hard knocks with the handle of his riding crop, and caught his pony, which he had just remounted, when one burly fellow caught hold of the pony's bit with one hand, and tried to drag Mr. Cameron out of the saddle with the other. Mr. Cameron, however, quietly dismounted without any aid from the Celestial, whom he promptly treated to a right-hander under the ribs, which prevented John taking much interest in the subsequent proceedings. Mr. Cameron then remounted, and after warning the crowd that he would kill the next man that molested him, offered to give the old woman any reasonable compensation for breaking her kong and soiling her cotton. He said, however, that he had no money with him, and that someone must accompany him back to Shanghai to get the money. The old woman said her son, a young boy, would go with the Inspector, but that some of the men must also go to see the money duly paid. Mr. Cameron said as many as liked could come, and offered to walk his horse back, but refused to walk himself, as the country people wanted him to do. Then a happy thought struck the wily Inspector, and pointing out a dozen or so of the men who had been most active in the assault upon him, he asked them to go with the boy and him back to Shanghai to get the money. Four of the fellows took the bait, and with the old woman's son trudged every foot of the 15 miles into Shanghai beside the Inspector's pony. Mr. Cameron duly guided the lot to the Central Police Station, where he gave the boy the money demanded in the village by the virago, and sent him back to his mother. The four men were turning to go back also, but "no" said the Inspector, and calling some constables, he had the four worthies charged with assault and lodged in the cells. They were brought before the Mixed Court next day, and sentenced to a fortnight's imprisonment each, which will no doubt have a salutary effect in teaching them better manners when dealing with an unoffending and defenceless foreigner who visits their village on horseback and happens to come a cropper there.

| Brown Java and Penang | 4.85 | to | 5.45 |
| White Refined | 4.25 | to | 7.20 |

## EXPORTS.

### RAW SILK.

Our last issue was of the 16th instant, since that date settlements in this Market amount to 2,016 piculs, divided thus: *Hanks*, 44; *Filatures*, 1,373; *Re-reels*, 398; *Kakeda*, 175; *Oshu*, 26. In addition to these figures direct shipments have been 45 bales, making the export business for the week of 2,060 piculs.

Our Market continued without change, giving a fair daily business, until the afternoon of the 21st, when a large firm of exporters began to operate heavily, and the result was that during the last two days about 1,500 piculs of Silk have been settled, a portion of which has not yet been sent into godown. Prices, which had weakened slightly on last quotations, have strengthened again, and in some instances holders are very firm, even to the extent of withdrawing their silk from the Market. We believe, however, that for the moment prices are not unduly advanced, and that it will be possible to operate at about 2 per cent. from the lowest point.

There is a considerable under-current of business doing for Europe, and each weekly mail steamer takes a fair quantity.

Arrivals from the country are very small, and the stock list shows a reduction of 2,000 piculs on the week. Estimates of the total crop are still unreliable, but it is thought that the total yield will be at least 10 % less than last year's

There have been three shipping opportunities during the week, French, American, and Canadian Mails all taking cargo.

The *Saghalien*, on the 18th inst, took 397 bales for Europe; the *Gaelic*, 20th inst, 287 bales for the States; and the *Parthia*, same date, 195 bales for New York. These departures bring the export figures to 14, 973 piculs, against 30, 726 piculs last year and 32,298 to the same date in 1889.

*Hanks.*—Some fine sized *Shimonita* were taken for Europe at $495; and some *Shinshu* Hanks of good quality are offering at the same price, but, so far, without attracting buyers. Stock in this department is small and well held.

*Filatures.*—The great bulk of recent settlements has been in this class. Good No. 1 *Shinshu* filatures, 13-15 deniers and 14 16 deniers, being taken at $560. This was the lowest point, and holders are now asking an advance of $10. Even at this figure only a small portion of the stock is available, some of the large holders keeping aloof. A fair quantity of fine sizes for Europe have been taken at about previous rates.

*Re-reels.*—Business in these has been comparatively small and it would be just possible to go on at last week's rates, although sellers ask a slight advance.

*Kakeda.*—A fair amount of trade in these the last two days at quotations. The stock is small, and holders do not see any reason for accepting less money.

*Oshu.*—Some few purchases made for Europe; ordinary *Sendai* bringing $490.

| Available supplies to date | 30,000 | 36,600 | 40,650 |

### WASTE SILK.

Trade in this branch has recovered its activity and settlements for the week are 1,732 piculs, namely: *Noshi*, 369; *Kibiso*, 1,238; *Neri*, 125.

As will be seen from the above figures, buyers are in the Market operating freely and are now busy clearing off the stock of *Kibiso*.

Arrivals are small and the stock list shows a reduction of 1,250 piculs on the week, chiefly in *Kibiso*. The bulk of the trade is for Europe as in fact it has been all through the season.

The French Mail steamer *Saghalien* carried 307 bales of Waste for Europe; making the present export figures 19,448 piculs, against 18,307 last year and 22,452 on the 23rd January, 1889.

*Pierced Cocoons.*—Business entirely suspended; all prices nominal.

*Noshi*—A fair amount of daily trade at previous quotations, buyers leisurely selecting what suits them from the stock.

*Kibiso.*—Large business chiefly in medium and low curlies at from $30 to $40 per picul. Some few lots of *Oshu*, *Mino*, and *Shinshu*, have been done at prices ranging from $45 to $60 per picul. Some little business also in *Filature*, $118 being paid for best.

*Sundries.*—Several purchases of *Neri*, common at $10, with fair quality *Shinshu* at $13.

CONTRACTORS TO THE ADMIRALTY, LEADING STEAMSHIP COMPANIES, AND YACHT OWNERS.

STEAM LAUNCHES & YACHTS,

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 10 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for Copy to

SIMPSON, STRICKLAND & CO.

WORKS:
DARTMOUTH, SOUTH DEVON (ENGLAND).
LONDON OFFICE:
181, QUEEN VICTORIA STREET, E.C.

MACHINERY.—Mr. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated)—the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Mr. Wadham is open to act as sole Buying Agent in England for one or two good firms in Japan desiring to deal with a reliable house. Registered address for telegrams—"Wadham, London." 1y. June 28, 1890.

KEATING'S COUGH LOZENGES.

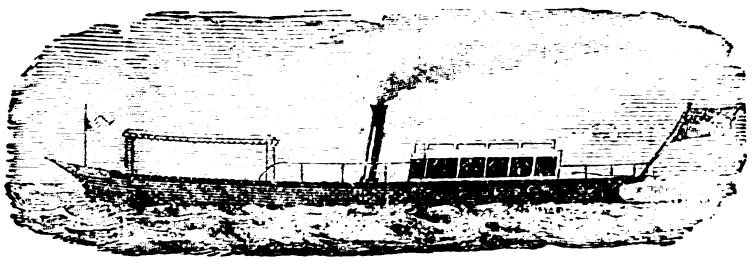
COUGHS, ASTHMA, BRONCHITIS, DIFFICULTY OF BREATHING are speedily cured by KEATING'S COUGH LOZENGES (recognised and recommended by the Medical Faculty). No other remedy is half so effective. One Lozenge alone gives relief. They contain no Opium, Morphia, nor any violent drug, and may be taken by the most delicate. One or two at bed-time ensure rest when troubled by the throat. Sold by all Chemists, in Small Tins. Dec. 27th, 1890.—21ins.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."



SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at least a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World. May 1st, 1890.

YARROW'S

SMALL STEAMERS AND STEAM LAUNCHES.

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER.

Stern Wheel Steamers with very shallow draft especially suitable for river navigation.

MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.

YARROW & CO., POPLAR, LONDON, E.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

## *SUMMARY OF NEWS.*

THE Diet resumed its sittings on the 28th instant, after an interval of a week.

HEAVY falls of snow and severe weather are reported from various parts of the country.

VISCOUNT KUKI TAKAYOSHI, a member of the House of Peers, died on the 24th instant.

THE Regulations as to Special Export ports will be put in force on and after the 1st of July next at Kushiro.

SOME 500 Japanese emigrants will start from Japan for the Hawaiian Islands about the middle of next month.

H.I H. PRINCE ARISUGAWA TARUHITO and Prince Sanjo were received in audience by the Emperor in the forenoon of the 26th instant.

AN action has been instituted by the Tokyo Electric Light Company against Mr. Soné, Chief Secretary of the House of Representatives.

THE annual general meeting of supporters of the Victoria School has been held. The accounts showed a further diminution in the capital fund of the school.

THE 27th instant being the Birthday of the German Emperor, a telegraphic message of congratulation was despatched by the Emperor to the Kaiser.

A TELEGRAM from Kobe, under date the afternoon of the 25th instant, reports that a special general meeting of shareholders of the Japan Tea Export Company was held on the forenoon of the 25th instant, at which 65 persons were present.

MR. TSUJI, Vice-Minister of the Educational Department, who had been suffering for some time from influenza, was able to attend business on the 27th instant.

ON learning of the death of Prince Baudouin, H.I.M. the Emperor despatched on the 26th instant a telegraphic message of condolence to the King of the Belgians.

MARQUIS HACHISUKA, Governor of Tokyo, and Mr. Watanabe, Vice-Minister of the Financial Department, who had been suffering from influenza for some time, were able to attend their offices on the 26th inst.

MR. WATANABE ITARU, Vice-Superintendent of the Yokohama Custom House, who was ordered on the 26th instant to proceed to the Ogasawara Islands, will start from Yokohama on the 5th proximo by the *Suruga Maru*.

AN outbreak of fire took place in the night of the 21st instant in the house of Saito Sashiro, Mihama-mura, Kamo-gori, Izu, and destroyed 93 buildings, including several Buddhist temples, godowns, and sheds.

A SPECIAL general meeting of shareholders of the Shinagawa Electric Company was held on the 25th inst., at which the rules of the company were revised, and Messrs. S. Sugiura and K. Aikawa were appointed Inspectors.

AN outbreak of fire took place on the 25th instant at 7.20 a.m. in the house of Nomura Ume, No. 6, Kotemmacho, Nihonbashi, Tokyo, destroying 29 houses, 4 houses being partly damaged before the flames could be subdued.

ON the morning of the 26th instant about 5 a.m. fire broke out in the house of Tsukamoto Jennosuke, No. 7, Tsukiji Ichome, Kyobashi, Tokyo, and destroyed or partly damaged 22 houses before the flames could be got under control.

THE students of the Imperial University at present number 1,365, of whom 47 are in the Daigaku-in, 305 in the College of Law, 216 in the College of Medicine, 109 in the College of Engineering, 89 in the College of Literature, 109 in the College of Science, and 490 in the College of Agriculture.

THE receipts of the Osaka Cotton Spinning Company during the latter-half of last year were *yen* 61.994 294, of which *yen* 9,200 were set apart as a reserve, *yen* 3,150 as rewards to officers, and *yen* 48,000 as a dividend for the half-year, to be declared at the rate of 8 per cent. per annum, *yen* 1.694,294 being carried forward to the next account.

AN ordinary general meeting of shareholders of the Tokyo Bay Steamship Company was held on the afternoon of the 25th inst. The receipts during the latter half of last year were *yen* 68.600.052, of which, after providing for miscellaneous expenses, addition to reserve, and remuneration to officers, *yen* 15,000 was appropriated as a dividend for the half-year, to be declared at the rate of 12 per cent. per annum.

THE Japanese Consul at Francisco reports that the total value of the trade between Japan and San Francisco during the month of November last was $956.726, of which $98,666 represented exports from San Francisco to Japan and $868,060 imports. The value of articles forwarded to the Eastern States of America through San Francisco during the same period amounted to $256.322.

ACCORDING to returns compiled by the Financial Department, the amount of Government paper currency and bank notes in circulation on the 31st ultimo, was *yen* 59,083.435.100, of which *yen* 33,272.714.600 represented Government paper and *yen* 25,810,720.500 bank notes. As compared with the previous month the above shows a decrease of *yen* 999.763.300 in Government paper and *yen* 463.000 in bank notes.

A MEETING of shareholders of the Tokyo Gas Company was held on the 25th instant. The receipts during the latter half of last year were *yen* 46.983.907, to which *yen* 1,000 brought over from the last account were added, making a total of *yen* 47,983.907. Of this amount, after adding to the reserve, providing for rewards to officers, and miscellaneous expenses, *yen* 19,-204.708 were appropriated as a dividend for the half-year, to be declared at the rate of 8 per cent. per annum.

THE ceremony of presenting certificates to graduates of the Tokyo Private Commercial School took place on the afternoon of the 25th instant at the Nakamura-ro, Ryogoku. The ceremony opened by the reading of the report of the school for the past two yars, 1889 and 1890. Mr. Oyagi, acting for Viscount Akimoto, President of the institution, presented certificates to the graduates, and delivered an address of congratulation, to which Mr. Yamauchi, on behalf of the graduates, replied. Over a hundred distinguished persons were present. Messrs. Ban Naonasuke, Nakamura Yeisuke, Sano Tsuneki, Naruse Ryuzo, and Tajiri Inanosuke delivered short addresses in the course of the proceedings.

IN an extia of the *Official Gazette* of the 24th instant a notification was issued over the signature of Viscount Hijikata, Minister of State for the Imperial Household, to the effect that in consequence of the death of the King of Hawaii mourning will be observed by the Court for a period of nineteen days beginning the 23rd instant. All higher officials, peers, persons of rank above sixth class, second grade, and persons in possession of decorations above sixth class, are ordered when visiting the Palace at wear mourning for the first ten days, and white or drab clothing for the succeeding nine days. Field officers, flag officers, and officials of equivalent rank are ordered to wear crape on their left arms during the above period.

THERE is very little to be said about the Import trade, there being no improvement in any direction. Yarns and Shirtings have seen only a few retail purchases, while Woollens are not looked at. Trifling sales of Metals have been effected, but at lower rates, and the only offers are at still further reductions. There have been no sales to test the value of Kerosene, and the stock remains at 600.000 cases. A little Sugar went off, but values are further reduced. The principal Export has again received considerable attention, and over 2,000 piculs of Silk have passed the scales. The market has been rather quieter during the past two days, but there is still a steady demand, and sellers who are current continue to get rid of sundry parcels. There has been less done in Waste Silk. A small business has transpired in Tea, the few piculs of leaf fired being common to medium. Exchange has not varied much during the week, and is fairly steady at the close.

## *EDITORIAL NOTES.*

### MR. MUTSU IN THE HOUSE OF REPRESENTATIVES.

MR. MUTSU, Minister of State for Agriculture and Commerce, sits in the House of Representatives as member for the first electoral division of Wakayama Prefecture. When the leading men of that district signified their desire to elect him, the question was raised whether he ought to resign his official position, but Mr. Mutsu decided, rightly we think, that, following a precedent common in Western States, there was nothing to prevent his retaining a portfolio in the Cabinet while sitting as the representative of Wakayama in the Lower House. The proceedings in the House, however, have been of such a character that few opportunities have presented themselves for Mr. Mutsu to speak, and moreover his duties both as Minister and as Government Delegate have probably left him little leisure to obey purely parliamentary calls. This, apparently, is not what his constituents expected. They probably thought that when they returned a man well-known to be one of the most brilliant politicians and speakers of his time, the first electoral district of Wakayama would be covered with glory in the House. Accordingly, some malcontents have addressed to Mr. Mutsu the following letter, which, not merely because it is the first of its kind in Japanese parliamentary history, but also for its own sake, possesses much interest:—"Excellency—Inspired with admiration of your general course of procedure, the electors of the first division of Wakayama Prefecture chose you to represent them in Parliament, believing that your voice would be raised in behalf of the vital interests of the State. But since the Diet met, you have only attended in your place five or six times, and we do not hear that you have done anything to satisfy the hopes of your constituents or to give effect to public opinion. Thus not only do you show yourself still inclined at heart to the present system of government, but you also lend no aid to the consummation of the people's hopes, and by remaining in an oligarchical Cabinet, assume an attitude of opposition to public opinion. In a letter addressed by you to your constituents, you promised that no effort should be wanting on your part to justify the confidence placed in you and requite the earnestness of your supporters, and you added that if you failed in this, your voice in the House would reach the ears of the people of Wakayama and be judged by them. The ink is scarcely dry on these words, yet you do not appear in the House of Representatives, nor is your voice heard even in respect of the vital question of the Budget. For your sake we regret that this should be so. You may possibly say that a member of Parliament is not the mouth-piece of his constituents, and has no duties to perform in respect of their wishes. Upon this point public opinion has pronounced its verdict and by that verdict we abide. The history of your political career for the past ten years shows clearly that versalility is your forte. But we are not concerned with the traits that constitute you specialty. We have only to pray that if you cannot discharge the representative functions with which you solemnly charged yourself in the face of your constituents and before the whole nation, you will resign your seat and not bring discredit upon the honourable post you fill; or that, retiring from an oligarchical Government, you will fulfil the promises made by you in writing to your electors. Neither your own credit nor the interests of the country will be advanced by your setting personal above public considerations, disregarding the people's political rights, and adopting an equivocal course. We earnestly hope that you will follow our counsel and adopt one of the two alternatives we have suggested."

* * *

This document carries only two signatures, those of Messrs. Oku Kano and Nakadani Sadanosuke. Its language is remarkable, as indicating that ambiguity of speech is not a habit with Japanese politicians. They are still far removed from the perfect art of finesse which enables European statesmen to hide what they mean and seem to say what they don't mean. But the weak point of Messrs. Oku and Nakadani's remonstrance is that they are now bringing forward a consideration which has certainly no more weight to-day than it had when they elected Mr. Mutsu; namely, that his position in the Cabinet precludes him from attacking the Government to which he belongs. When they chose him to be their representative he held the portfolio of Agriculture and Commerce, and it is absurd to contend now that he cannot continue to be their representative if he remains in office. What has happened, as it seems to us, is, not that Mr. Mutsu has disappointed the confidence reposed in him, but that his electors, or rather the two signatories of the remonstrance, have changed their minds.

### THE DIET AND THE GOVERNMENT.

THE Tokyo *Tsushinsha* or Press Agency has been interviewing Cabinet Ministers with regard to political affairs, but does not seem to have drawn much satisfaction from the spring of official knowledge. The Government, we learn, had some time ago decided on the policy which it intended to pursue relative to the Diet, and Ministers have already agreed as to the course to be adopted with regard to the Budget and to Decree No. 84. On those points their decision is firm and unalterable. But it is possible that if individual Ministers were interrogated answers might be received favouring the idea that the Cabinet had not yet selected the ground on which it will make its stand. Individual and unofficial opinions expressed by Ministers may, and no doubt do, differ very considerably from the real policy of the Cabinet. As to the future action of Count Yamada, and indeed of Ministers in general, the public will in time become acquainted. Meantime the stories circulated are, in most cases, set about by politicians wishful to further their own ends.

### FIRE INSURANCE IN JAPAN.

THE advantages of fire insurance were brought home to the people of Yokosuka with exceptional force on the 19th inst., when the Tokyo Insurance Company satisfied the claims made against it in connection with the big fire of November 29th. The conflagration was the most disastrous in the history of Yokosuka, involving the loss of eight lives as well as of a very large amount of property. Among the houses destroyed fifty-five were insured in the Tokyo Fire Insurance Company. The total sums insured amounted to 15,895 *yen*, and a good idea of the overwhelming rapidity of conflagrations in Japan may be gathered from the fact that the salvage from the 55 houses totalled only 326.50 *yen*. When the claims came to be examined, it was found that four were defective, either because the premia had been left unpaid or because some other conditions had not been complied with. These four houses were insured for 550 *yen*, so that the net loss to the company was 15,018.50 *yen*. This sum was paid over to the burned-out folks on the 19th instant, and their satisfaction is said to have been profound. Another provident householder—apparently the only one insured among the people rendered homeless by the December fire in Umamichi, Asakusa—received the amount of his policy 1,350 *yen*, on the 22nd instant, the company recovering 11 *yen* by the sale of the articles saved. It appears from this record that settlements are quickly effected in Japan.

### ISOLATION FROM ONE'S FELLOWS.

WITH an apology to our readers, we desire to refer briefly to a matter of a personal character over and over again noticed by our local contemporaries, the latest instance of such notice being on the part of the *Japan Gazette* which charges the editor of the *Mail* with "isolating himself from the men for whose benefit he professes to publish his paper." It strikes us as rather quaint that the liberty enjoyed by every one, high and low alike, to choose his own place of residence, should be denied to the editor of the *Japan Mail*. Be that as it may, however, if it interests our contemporaries to make such inquisitions into our private affairs, and if they deem the matter to be of public importance, we are not concerned to gainsay their fancy or traverse their judgment. They will agree, we presume, that the editor of a paper published in Yokohama or anywhere else, has to consider before everything how he can best collect news and procure the latest information with respect to all affairs of importance. If he possessed a large staff of reporters, correspondents, and writers, he could afford to do as the editors of great journals in Europe and American do, namely, play the part of a supervisor only, and give himself no concern about obtaining material. But a Yokokama editor is not so happily circumstanced. He has to be at once the supplier of information and the discharger of all the other functions usually falling to an editor's lot. To accomplish this with any success, his only chance is to live within the easiest possible reach of sources of news. There can be no manner of question that Tokyo, the commercial as well as the political capital of the empire, is incomparably the best place of residence from this point of view. To live in Yokohama saves an editor considerable expense in the matter of messengers, enables him to exercise a much more efficient control of the matter published in his paper, and greatly lightens the purely business part of his task. But the disdvantages of absence from the centre of all important national movement far outweighs these considerations. From merely abstract considerations it is plain that such must be the case, and moreover, our conclusion is based on the teaching of actual experience. We tried the experiment of living in Yokohama and were reluctantly obliged either to abandon it or to resign ourselves to relying entirely on vernacular journals for our knowledge of Japanese affairs. And surely, for the rest, it is a trifle childish to describe residence in Tokyo as "isolation from the men for whose benefit we write." Tokyo has a foreign community not altogether undeserving of consideration at the hands of an editor.

* * *

There is something quite flattering in the interest provoked by the affairs of the *Japan Mail*; its dependence or independence; its relations with the Government; the place of residence of the editor, and such topics. Modesty forbids us to think that international issues depend upon the private concerns of this journal, or that grave public problems are likely to be elucidated by analysing the sources of its editor's proclivities. Still, if newspapers will devote their columns to such matters, we may not unreasonably claim a voice in the discussion, especially when our critics' want of acquaintance with simple facts supplies them with weapons for assailing us. The *Japan Gazette* opines that our "connection with the Japanese Government could be proved in a Court of Law;" asks us whether we "suppose that our own assertions to the contrary will ever convince men" that no such connection exists; and with some show of feeling exhorts us to "honestly acknowledge the connection." Having learned from our contemporary's own confession what its writings had already taught us, namely, that the most important page of the country's foreign relations, though only two years old, is a sealed book to it, we shrink from asking it to recall incomparably more trivial events of a decade back. Yet it is a fact that nearly ten years ago the circumstances of the *Japan Mail's* connection with the Government were fully explained in these columns. There is no occasion to appeal to a "Court of Law;" no occasion to charge us with denials which we have never made; no occasion to urge us to honest acknowledgment. Whatever there is to acknowledge was ackowledged long ago. The only thing we deny, have persisted in denying, and must continue to deny, is that the receipt of a liberal subscription from the Government or from anyone else involves subservient support. The *Japan Gazette* is apparently unable to conceive this. Oblivious to the significance of its assertion, it declares that our attitude in respect of the public meeting of last September

Digitized by Google

proves our indifference to the foreign community. We condemned the meeting, its methods, and its resolutions; therefore, according to the *Japan Gazette's* view, we showed that we "can flip our fingers at the foreign commnnity." In other words, had we valued the subscriptions of the foreign residents, we should not have opposed the views of the majority. If the *Gazette's* creed is summed up in that startling statement, we sincerely commiserate the future lying before it. If it seriously believes, and acts by the belief, that an editor must display his dependence on his readers by approving their notions and applauding their proceedings, it has a tough task cut out for it in this settlement. For our part, what we write is not influenced by any such considerations. The support of the foreign community is just as important to us as to the *Japan Gazette*, but if we can gain that support only by trimming our sails to suit the caprice of the hour, we prefer to give up journalism. We do not "flip our fingers at the foreign community" because we say precisely what we think, without reference to the endorsement of our readers, neither shall we seek to extend our subscription list by saying what we do not think for the sake of gaining that endorsement. As for the count that we have steadily given our support to the Government, we answer, yes, undoubtedly, and we shall continue to give it, for whatever it may be worth, because we hold that no Government could have done better for Japan? Our knowledge of the methods of the Japanese administration and of the problems it has to deal with is as intimate, we venture to think, as the knowledge of other foreigners, and we assert without the least fear of valid contradiction, that the interests of the country could not have been in better hands than those of the men who have directed State affairs for the past twenty years. What is the sense of an abstract charge that we have supported the Government? Would it have been more honourable or useful to support the opposition? Instead of preferring such ill-considered and meaningless accusations, why do not our accusers show how the empire's affairs could have been better administered, or what statesmen are more competent to administer them? We have supported the Government's measures, because, in ninety-nine cases out of every hundred, we could discern no wiser measures, and because our unvarying experience is that amateur politicians, ever ready to condemn and abuse the Cabinet's procedure, are proved in the end to have been mere flippant cavillers. The limit of quaintness is certainly reached when the *Japan Gazette*, steeped to the lips in the theory that everything official must be bad and partial, announces that, persuaded of our connection with the Government, it will hereafter "decline the thankless task of replying" to our remarks on Treaty Revision. That is a deliciously naïve declaration. Whose views are better worth listening to on the subject of Treaty Revision than those of the Japanese Government? To be the supposed exponent of such views ought to secure attention and consideration at the hands of reasonable people. However, we shall waste no more time and space replying to charges of such a character. The *Gazette* professes to dislike personalities. Perhaps it will prove the truth of its profession by abstaining from comments on the relations of the editor of the *Mail* with this person or with that, on his place of residence, or on his manner of living.

### THE CASE IN THE PORTUGUESE COURT.

An attempt is made, we perceive, to fasten upon us a charge of having publicly "doubted the veracity" of the barrister who conducted the defence in the recent case in the Portuguese Court. The facts are very simple. Only one stenographic report of the trial appeared in the press: it was published by this journal, and upon it we based certain comments as to a part of the line of defence adopted. The Counsel for the defence took exception to our comments, and said that in his speech in Court he had alluded, not to the Foreign Secretary of the Railway Department, but to the *Japan Mail*. We replied by quoting the short-hand report, not as asserting its accuracy in such a matter against the counsel for the defence, but merely as indicating the basis of our own comments. We cannot see that by so doing we threw any doubts on the veracity of the counsel Certainly it was not our intention to do so. Our own criticism being traversed on the ground that we had misconceived the facts, we were strictly within our right in showing that the only stenographic report of the case justified our interpretation.

* * *

With reference to this case, we observe that a good deal of capital is made out of our original comments upon the conduct of the man who importuned a Japanese woman in the railway station at Yokohama on the 15th of November, and upon the conduct of other foreigners who, as reported by the Railway Authorities, had been guilty of insults to Japanese female passengers at the stations. So far as the man Gama is concerned, we freely admit that, by the light of the recent trial, our strictures upon his action were too strong, since it does not appear that his repeated overtures to the Japanese girl were resented by her with sufficient emphasis to convince him of her repugnance, and since there is a reasonable doubt whether he did not receive some encouragement from her at the outset. But the fact remains that, according to his own showing, Gama followed the girl about the station, and did not hesitate to press his immoral proposals in the Ladies' Waiting Room, a line of conduct certainly deserving censure, though not exposing him to the strong condemnation based by us on the original account of his doings. But what seems singular and unaccountable in this matter is that anyone should be found so blinded by romantic prejudice as to imagine that a foreign journal's public denunciation of rudeness by foreigners towards Japanese female travellers, is intended to stir up international bad blood and strife. How should such affairs be journalistically treated? Ought they to be hushed up, or ought they to be openly visited with the censure which every decent foreigner is ready to extend to them? To pass them over in silence or to minimise them would certainly tend to create the very false impression that the better class of foreigners are disposed to pardon them. We confess that we have never observed any disposition on the part of the local foreign press to make light of or hide acts of violence or impropriety committed by Japanese. Is it then to be credited that while a constantly displayed disposition on the part of local foreign journals to paint Japanese wrong-doing in the darkest colours has no effect in fomenting anti-foreign feeling, any censure by a foreign journal of foreign impropriety or rudeness towards Japanese, has that effect in a dangerous degree?

### THE CZAREWITCH AND THE VICEROY OF HUKUANG.

A singular statement has been published by the Shanghai journals and strongly commented on. It is that the Viceroy of Hukuang has intimated his resolve not to receive the Russian Prince Imperial at Wuchang. The Viceroy Chang (Chi-tung), who, during his tenure of office in Canton, seems to have established a reputation for discourtesy to all foreigners except those in his own employ, has his *yamên* at Wuchang, which lies on the opposite side of the river from Hankow. The report circulated in Shanghai is that the Russian Admiral Nazimoff sent a man-of-war to advise the Viceroy of the Prince's contemplated visit and to make any necessary suggestions as to arrangements for His Imperial Highness' reception, but that the Viceroy not only treated the Admiral with discourtesy, but also declined explicitly to receive the Czarewitch should the latter come within the limits of his Viceroyalty. It is suggested that, in consequence of this treatment, the Prince Imperial will probably change his programme in China, and that he may even refrain from visiting Shanghai. Indeed, the *North China Daily News* goes so far as to say that the Russian Government has demanded an explanation of the Viceroy's attitude, and that the detention of the Russian squadron in Chinese waters instead of its despatch to meet the Prince at Singapore, as originally intended, is perhaps connected with the complication. We find it extremely difficult to credit this story. All arrangements as to the places to be visited by the Czarewitch on his arrival in China and the personages by whom he will be received, must have been made by the Russian Representative in Peking. It certainly could not have devolved on the Russian Admiral to send a ship to Hankow for the purpose of intimating to His Excellency Chang that the Prince Imperial intended to visit the Viceroyalty of Hukuang and expected to be received by the Viceroy. Had the visit and reception been contemplated, Chang would have received his instructions and the necessary intimation from Peking, whereas we are asked to believe that no communication whatever had been sent to him from the capital, and that he will probably make such and such excuses "if called to account from Peking for his gross and embarrassing discourtesy." Now it is very conceivable that if the first intimation of the Prince's projected visit were conveyed to Wuchang by a Russian man-of-war, the Viceroy might have pointed out that in a matter of such international importance, he could not act on his own responsibility, and must wait until instructions reached him from the Throne. But is it at all conceivable that the Russian Admiral would have made the mistake of taking upon himself the discharge of diplomatic functions, above all when the affairs of the Czarewitch were in question? Assuredly not. If the Prince contemplates a visit to Wuchang, it will be found, we are persuaded, that all the necessary orders were issued from Peking, in the sequel of due diplomatic action, and that the rumour as to the Viceroy's refusal is incorrect. It is not the habit of Russian officials to expose their country to rudenesses by confounding military and diplomatic functions.

### ELECTRICITY AND THE DIET.

The Electric Light Companies, rightly determined not to let the case go against their business by default, are assisting each other loyally to prove that the fire at the Diet was not caused by the agency of the electric lighting apparatus. The Engineer in Chief of the Yokohama Company has addressed the following report to the President of the Company by whom it has been published in the advertising columns of the *Jiji Shimpo*:—"In consequence of the unsatisfactory nature of the decision announced by the *Official Gazette* and the other journals, I proceeded to the offices of the Tokyo Electric Light Company and made a careful examination of the manner in which the wires are laid and the nature of the work. The light being furnished from the Kojimachi dynamo, I examined the records kept at the station and ascertained that the actual state of affairs on the night of the conflagration was as follows:—(1) The main wire is laid from Kojimachi and branch wires lead from it to the Russian Legation and the residence of Mr. Kuki. (2) The calculations were all in accordance with rule, and were correctly carried out in practice, and there was no irregularity or want of care of any sort. (3) Proper safety fuses were undoubtedly attached at all the necessary points of the wires throughout the system. (4) The connections had been frequently subjected to examination. (5) Nothing unusual occurred that night either at the Russian Legation or at Mr. Kuki's residence. (6) Nothing unusual was observed at the Kojimachi station in respect of the main wire. From about 12.30 a.m. to 1 o'clock, however, the intensity of the lights gradually increased up to 100, and the indicator oscillated violently once or twice. Just then a *jinrikisha* man arrived, and said that a fire had been caused at the temporary Houses of Parliament by the electric lights, and that the Secretary desired to have the electricity shut off in order that it might be possible to cope with the conflagration: this was done at once. (7) According to the statement of the Secretary, the exact time when the fire broke out is not known. It was first detected by Mr.

Digitized by Google

Hayashida, one of the Secretaries, who on going his rounds observed an appearance of fire in the ceiling of the Government Delegates' room in the House of Representatives and saw that the electric lighting apparatus was incandescent. He concluded that the fire had been caused by the electric lights, but thinking that the evidence of one person only would not suffice to establish the fact, he immediately sent a messenger to report the matter to the Chief Secretary. The latter received the report about half-past twelve. Proceeding to the House of Representatives, he saw a flame in one corner of the ceiling of the Government Delegates' room and observed that the electric wire was red hot. Going thence to a room opening off the corrider of the House of Peers, he found a similar state of affairs, and subsequently he saw that fire was breaking out at several others points in the same way. (8) An employé of the Tokyo Electric Light Company, who went to the scene of the fire at about 4 o'clock a.m., was told that the conflagration had been caused by the electric lights, and that whatever quantities of water were poured on the wires their glow could not be extinguished. It appears from the above that the Chief Secretary received the report at about 12.30 a.m.; that the flames had then spread to the whole Diet, and that according to the watchmen, the electric wires were red hot. The covering of the wires must therefore have disappeared. Even if the covering remained, however, and water were thrown on the wires, the current of electricity would have been so much intensified that the safety fuses must have come into play and the change would have been observed at the dynamo station, whereas the lights there gradually burned brighter without other alteration. Again, the electric wires in the Diet were all laid between the ceilings and the floors, and therefore there was no possibility of seeing the wires glowing. If, however, the fire had been due to some independent cause and water had been thrown on the wires, the water reaching the covering of the wires and ultimately wetting them, the lights at the dynamo station would have gradually income brighter, and ultimately, when the damp penetrated completely, the fuses would have melted, and the connection being broken, the indicator at the stations would have been disturbed. In a word, the appearances observed at the dynamo station are exactly those that would have presented themselves in case of a fire arising from independent causes and water being employed to extinguish it. Electricity is not like gas, which can be confined in a pipe and lit at any moment by the application of fire. The bursting out of the conflagration at several places proves that its origin was not electrical, but something quite independent." To this is appended the signature of Mr. Iwata Takeo, Chief Engineer of the Yokohama Electric Light Company.

* * *

This report unfortunately appears to be inaccurate as to one statement of fact, namely, that Mr. Hayashida was the first to observe the fire. Mr. Hayashida has since denied that such was the case. The general argument, however, especially its scientific aspect, is not affected by this misstatement. Every one recognises the immense importance of reaching a clear decision in the matter, seeing that if the blame of the catastrophe be finally laid on the shoulders of the electric light, the Japanese public will be seriously prejudiced against one of the most useful and convenient of modern inventions. The magnitude of the loss attending the destruction of the Diet and the conspicuous nature of the catastrophe have invested the whole affair with a degree of importance which does not properly attach to it merely from the point of view of the origin of the fire. Big as was the pile of buildings destroyed, there was but one fire after all, and to discredit the system of election lighting merely because it set a solitary edifice on fire, even supposing the fact to be proved, would be a very narrow and prejudiced proceeding. The *Hochi Shimbun* advances this aspect of the case in a very convincing manner. It points out that fires caused by electric lighting are exceedingly rare, incomparably more so than fires caused by kerosene lamps. The Japanese people know roughly how many houses have been destroyed and how much destruction of property has been caused by the agency of kerosene lamps, yet they never think of abandoning the lamp and returning to the old fashioned *andon*. It would be most inconsistent and unreasonable, therefore, to discredit and abolish the electric light, which is far safer and more convenient than kerosene, merely because an accident has resulted from its use. If such a theory were adopted, railways, steam machinery, and such things would have to be given up also.

* * *

The same journal publishes some comments made by Professor Kikuchi with regard to the affair. The Professor appears to think that the discussion as to the origin of the conflagration can lead to nothing. He notes that instances are on record of fires having been caused either by the faultiness of safety fuses or by excessive charges of electricity, and says that the mere fact of every wire having a safety fuse attached can no more be accepted as an effective protection than can the cognate fact that steam boilers have safety valves. Boilers burst despite their valves, and electric wires may become red hot despite the safety fuses attached. Scientific researches show also that if electricity intended to be conducted elsewhere is sent along a wire not designed to carry it, the current may accumulate and the wire become incandescent. Just as a water-pipe of fixed capacity must inevitably burst if a stream of double the corresponding volume be sent along it, so if a current of electricity greater than the fixed quantity be sent along a wire, there is no reason for astonishment because the wire became red hot. The Professor concluded by saying that no scientific difficulties stand in the way of the supposition that fires may be produced by electric lighting apparatus.

* * *

We may remark, in connection with this subject, that Japan now possesses electrical engineers whose thorough competence is attested not only by the work they have done, but also by the evidence of foreign men of science. Further, Western electricians of established skill were employed until quite recently by the Japanese Electric Light Companies and are still employed, though in reduced numbers. Such being the case, some amusement has been caused by the publication of an insurance company's rules in the columns of a local foreign journal, with a context of well meant but rather naïve advice to Japanese Electric Light Companies in general and to the Japanese Authorities in particular, the latter being urged to have the rules translated into Japanese and to insist on their observance by all companies. Excellent as is the motive of such writing, it can only provoke a smile. Japanese experts and the foreigners in Japanese employ are not as so ill-informed as to need a text-book in the shape of an insurance company's regulations.

### A CENSOR OF YOKOHAMA JOURNALISTS.

It is always interesting to be told something about the aspect one presents to impartial observers. We have therefore read with attention an article in the *Hyogo News* discussing the methods of Yokohama journalism. The case presented by our southern contemporary loses somewhat by over-statement, but it is impossible to deny the truth of the main accusation that the amount of space devoted by Yokohama editors to discussions frequently disfigured by bitterness and sometimes by personalities, is far from creditable to the local press. Something, of course, may be urged in consideration of the fact that whereas newspapers addressing themselves to a large circle of readers can afford to take no notice of the erroneous statements of a contemporary, knowing that ample machinery exists for eliciting the truth sooner or later newspapers in Yokohama speak to a very small audience and are in no danger of contradiction, however misleading their statements, except at one another's hands. It is this condition of the problem that has often perplexed us—whether erroneous statements should be left to work unimpeded mischief, or whether the other evil, journalistic controversy, should be accepted. Of course in the abstract, there is nothing to be condemned in discussion. By the interchange of ideas and the contact of intelligences many a great truth has been evolved and established. But almost everything depends on the method of discussion, and unfortunately in this Settlement it has become the habit, at a very early stage of every journalistic controversy, to advance charges of interested bias, want of patriotism, disloyalty to the cause of foreigners, and so forth, with the result that the real points at issue are soon obscured in a cloud of bickering and recrimination. No doubt such a state of affairs must seem strange and unsightly to anyone whose sympathies have not yet been enlisted on either side, and no doubt, also, it has had the effect of greatly discrediting Yokohama journalism.

### MR. TAGUCHI ON THE LAND TAX.

We alluded in a recent weekly summary of the vernacular press to Mr. Sakatomi's essay on the land tax in the columns of the *Hochi Shimbun*, and stated that in his opinion, the land tax in Japan partakes more of the nature of rent than of tax. This opinion, which was long ago expressed by us, is shared by Mr. Taguchi Ukichi, editor of the *Keizai Zasshi*. Under the feudal *régime*, land was in the possession of local chiefs, and whatever the farmers paid to their lords was considered as rent for the use of the land. When in 1871 the feudal chiefs voluntarily surrendered their domains to the central Government, they surrendered at the same time the right of receiving rent from the farmers. The central Government, on the other hand, indemnified the feudal chiefs with the grant of Public Pension Bonds. In other words, the right to receive rent was bought by the Government for the above mentioned Bonds, amounting altogether to more than 170 million *yen*. Thus the land tax in Japan is, in the opinion of Mr. Taguchi, of the same nature as that imposed by the British Government on the peasantry in India. Such being the character of the impost, he thinks it absurd to cry out for its reduction. Considered in the light of a tax, the present rate ($2\frac{1}{2}$ per cent. of the value of the land) is high, but as rent it is decidedly low. Under the Tokugawa Government, taxation was in most cases regulated by the well known standard of *shi-kô roku-min* (four to the Government, six to the people); that is to say, 40 per cent of the harvest was paid to the feudal chiefs as rent and 60 per cent. retained by the farmers as the fruit of their labour. After the Restoration, the ratio was first lowered to 3 to 7, and subsequently it was reduced to $2\frac{1}{2}$ per cent. of the assessed value of the land. Supposing the land tax to be still further reduced, who, asks the editor of the *Keizai Zashi*, will be benefited by such reduction? Politicians loud in their clamour to have the land tax reduced, believe, or pretend to believe, that they act for the sake of the peasant class. But Mr. Taguchi contends that these politicians stand in a false position. For the reduction of the land tax will not, as they argue, benefit the poorer cultivators of the land, the tenants, but will only go to lessen the burdens of the proprietors who are already quite well off. The tenants being but working men, their wages are determined by the general state of the labour market, and not in the slightest degree by the amount of tax paid by the proprietors of land. The latter class of people—we are still quoting Mr. Taguchi—are indeed at present a great power in the politics of the country. They it is that elect the members of the Local Assemblies and of the Diet; and it is from among them that such members are now-a-days chosen. To their preponderating influence in the politics of the country, coupled with misjudged compassion for the distress of the tenants, is to be ascribed, in Mr. Taguchi's opinion, the importance which the question of the land-tax has obtained in Japan at the present moment. However, as the increasing amount of local tax and communal rates weighs

Digitized by Google

especially heavily upon the members of the above mentioned class, Mr. Taguchi would approve of some small reduction of the land tax. But he entirely fails to perceive either the wisdom or the necessity of reducing it by several millions of *yen* as at present proposed by some of the members of the Diet.

### THE SHINAGAWA ELECRIC LIGHT COMPANY.

THE Shinagawa Electric Light Company held its semi-annual meeting on the 25th inst. The accounts for the half-year were read and passed. A dividend at the rate of 4.5 per cent. for six months had been proposed by the directors, but it was announced that as the employés of the Company had declined to receive the pecuniary reward set aside for them, and had desired that the money should be placed to the general account, the dividend would be 4.8 per cent. The shareholders present at the meeting were subsequently entertained and instructed by a useful object-lesson, demonstrating the absolute safety of the electric lighting system when proper fittings are employed, supplemented by a sufficiency of safety fuses. The action of the fuses was shown by actual experiment, and the minds of the shareholders, somewhat perturbed doubtless by recent events, are said to have recovered their equanimity. It would indeed be lamentable if the cause of electric lighting were seriously damaged by the fate of the Diet. Besides, it remains to be proved that the fire at the Diet had its origin in the electric wires. The Tokyo Electric Light Company is determined to fight that question to the bitter end. It has employed Messrs. Takanashi and Urada, two barristers of high repute, to bring an appeal before the Law Courts against the official report read by the Presidents to the two Houses of Parliament. Apart from all purely scientific or technical considerations, there are understood to be two points upon which the Company relies. The first is that the wires were all "concealed," being placed between the ceiling of one room and the floor of the room above. In this position they could not possibly have been seen until either the floor or the ceiling had been burned away; a rather late period to fix their responsibity for the fire. The second point is that the flames are said to have burst out in the westerly corner of the ceiling of a certain room, whereas the plans preserved in the Company's office and the testimony of the workmen who put up the buildings prove that no electric wire existed at that place. These are troublesome points. If they can be established, the public will have to conclude that it jumped to a somewhat hasty conclusion. Meanwhile, attention being keenly directed to the whole subject of electric lights, there appear from time to time in the vernacular press items not calculated to re-assure the public. One such is a statement that the Minister President of State had the fittings in his official residence carefully examined, with the result that three dangerous spots were discovered. Such rumours will of course be circulated freely for some time to come.

### JAPAN AND THE SOUTH SEA ISLANDS.

MR. TAGUCHI UKICHI has of late written much in the columns of his journal, the *Keizai Zasshi*, on his experiences among the South Sea islands. In one article he describes the position of the German traders in these islands, and recommends his countrymen to compete with the merchants from Europe. The trade in that part of the world is, according to Mr. Taguchi, practically in the hands of Germans. They have their head-quarters in the Marshall Islands, with many stations in the Caroline Islands and other groups. At these stations imported goods are exchanged for palm-oil, which is at regular intervals shipped to the head-quarters in the Marshal Islands by a sailing vessel that makes a round of voyages among the islands. As to the character of the German traders, Mr. Taguchi's opinion is decidedly unfavourable. They are as a rule men of loose morals, addicted to drinking and debauchery, and the company which employs them is frequently subjected to losses by their reckless dissipation. Mr. Taguchi, therefore, found it very easy to successfully compete with them at Ponape, where he staid about fifty days. He very soon obtained the confidence of the natives; and while his party remained there, the German traders had scarcely any business with the natives. As the result of his experiences, Mr. Taguchi thinks that, if Japanese would open commercial communication with these islands, they would without much difficulty be able to wrest the principal share of the trade from the hands of the Germans. He further observes that there are two reasons why the South Sea trade should be more profitably conducted by Japanese than by German traders. In the first place, most of the goods needed in these islands can better be shipped from Japan, because of the latter's propinquity, and also because many of the required articles are very cheaply produced in this country. The principal articles exported to the islands are, according to the writer, kerosene, rice, umbrellas, gin, *awamori*, mosquito-nets, cotton goods, etc. It is a vital question for Japan, says Mr. Taguchi, to inquire where it is most profitable to purchase these articles, in Tokyo, in Hongkong, or in Germany? As to rice, umbrellas, and *awamori*, there is no question that Tokyo is the best place. As to kerosene and cotton goods, Mr. Taguchi thinks it will be more profitable to purchase in Tokyo than in either Hongkong or Germany, for Tokyo, being principally a retail market, cheap articles may be conveniently collected there. However, Mr. Taguchi fears that, as protectionists are now increasing in influence in Japan, the basis of these calculations may one day be disturbed. The second reason why Japanese stand in an advantageous position is that this country is better adapted for the disposal of the products obtained in exchange. There are four staple articles of export from the South Sea islands, namely, palm oil, béche de mer, tortoise shell, and wood. When Mr. Taguchi first left Japan, there was little demand in this country for the first mentioned article; when he returned home a friend of his had already invented a method of refining palm oil, and there is at present a great demand for the article. As the manufacture of soap is fast developing here, there is practically an unlimited demand for the oil. With regard to béche de mer, Mr. Taguchi admits that Japan cannot compete with Hongkong. But tortoise-shell is particularly well adapted for importation into this country, since it enters into the manufacture of various articles used by women. Thus the writer thinks that there is no reason why Japan should not become the centre of trade with the South Sea Islands, and he recommends the Authorities to give all possible facilities to persons engaged in the enterprise.

### THE TOKYO METROPOLITAN POLICE.

SOMEBODY with more imagination than caution supplied to the *Jiyu Shimbun* of the 27th inst. a detailed item, setting forth various changes which were about to be made in the Metropolitan Police Bureau, the general effect of the changes being to materially increase the sphere of the Bureau's authority. The news attracted some attention, inasmuch as the abolition of the Bureau as a separate executive section is among the measures recommended by the Budget Committee of the House of Representatives, and any extensive alterations of its organization at the present juncture would evidently signify that the Government has no intention of taking the Committee's counsels into serious consideration. But on inquiry it turns out that the *Jiyu Shimbun's* information is without foundation. No changes of any kind are in progress, or immediately contemplated, in the Police Bureau.

### THE SUIT INSTITUTED BY THE TOKYO ELECTRIC LIGHT COMPANY.

IT has been a matter of much interest and curiosity to ascertain in what form the Tokyo Electric Light Company would present the suit, which it announced its intention of bringing against the Government. An action for libel seemed the only resource. The report presented to the Houses of Parliament was undoubtedly calculated to inflict most serious injury on the business of the Company, and from that point of view a libel suit might have been preferred. The defendants would then have been compelled to establish the truth of their published assertions, a task which they would probably have found very difficult. The Company has chosen, however, to pursue a different course. It brings its action against Mr. Soné Arasuke, Chief Secretary of the House of Representatives, the complainant being Mr. Yajima Sakuro, President of the Company. The petition simply takes the form of a prayer that the defendant be ordered to correct his Report (*Hokaku teisei no uttaye*). The document sets out by alleging that from both a scientific and a practical point of view, the heating of electric lighting conductors so as cause a conflagration is in the highest degree improbable. The defendant, nevertheless, asserted in his Report to the House that the fire by which the Imperial Diet was consumed on the 19th instant had been caused by the electric lighting apparatus. This Report had been published in the *Official Gazette* and copied into several newspapers, so as to become matter of public knowledge. Further, the defendant made the same statement in a verbal account given by him to the House of Representatives. Thus the responsibility for a fire, concerning the origin of which conjectures or suppositions alone exist, has been laid on the shoulders of the company represented by the complainant, with results disastrous to its business. The Court is therefore prayed to order that the Report be amended. No damages are claimed, though the costs of action are asked for, and the petition is a model of brevity and conciseness. We are not aware that such a method of bringing an action is common in Western countries. The complainant is, however, advised by two of the best known barristers of the day, Messrs. Murata and Takanashi. We must assume, therefore, that he has adopted the course most likely to secure relief. Presumably the onus of proving that his Report was justified will rest on Mr. Soné, and it will be exceedingly interesting to see how his legal advisers acquit themselves of their responsibility.

### OFFICIALS AND THE PEOPLE.

THE *Jiji Shimpo*, returning to the subject of the wide gulf that exists between officials and ordinary people, says it is a curious fact that no sooner is an individual appointed to a Government post than he assumes a haughty and superior air, and thenceforward regards himself as immeasurably the superior of less favoured mortals. The evil, our contemporary repeats, is a relic of feudal times. When the reformed Government was inangurated it was supposed that relations between the rulers and the ruled would undergo considerable change, but when the new officials were settled in their places the idea of reform disappeared. Up to the present the country has been passing through a transition period, and perhaps it was not to be expected that sudden changes should take place. But the era of Constitutional Government has come and it behoves the members of the official class to modify their demeanour towards the people at large.

### MR. MORI TOKINOSUKE.

MR. MORI TOKINOSUKE is an unfortunate man. Notoriety is costing him very dear. Tried in a Court of First Instance on a charge of embezzlement, he was found guilty and sentenced to a year's imprisonment, and in a civil action he was condemned to refund the sum of which he had defrauded the complainants. Against the criminal sentence he appealed. Whether he thought himself really aggrieved, or whether the interest taken in his fate by the Diet laid him under some kind of imaginary obligation to fight the legal battle to the bitter end, it is not given to us to determine. At any rate he appealed, and the hearing of his appeal came to an end, in the Tokyo *Koso-in*, on the 23rd instant. Judgment was not pronounced, however, until the 27th; a judgment for which Mr. Mori could have happily waited a little longer. The Court decided that the lower tribunal had erred in respect of a point of law.

Digitized by Google

The original sentence was, therefore, revoked, and in lieu of it the appellant was sentenced to imprisonment with hard labour for a year and three months, together with a fine of thirty *yen*, and police supervision for half a year. Thus what Mori's appeal has brought him is an additional term of three months' imprisonment, a fine of thirty *yen*, and six months' police surveillance. Not deterred, however, he has again appealed to the Supreme Court, where better fortune, it is to be hoped, awaits him.

### RAILWAY ACCIDENTS IN GREAT BRITAIN.

THE recent epidemic of railway accidents in England—and it is marvellous how these things run through the land like an epidemic—lends special interest to the Board of Trade Report on railway accidents for 1889 which was issued towards the close of the year. The curious point about these statistics is their irregularity, the absence of an average amongst them, which shows that in railway accidents at least there is no law. Buckle, in his history of civilization sought to reduce things usually regarded as purely fortuitous, to order, and to show they were governed by law. At present railway accidents seem amenable to no such arrangement. The average, or what seems to be one, is liable to be upset and frequently is. If the number of killed and injured in any one year is considered in relation to all the disasters in connection with the working of the railway system, it looks very large, but if we take only the proportion of passengers who suffer in life and limb it is very small. That is to say, as a rule. A great disaster in any one year makes all the difference. In 1879, when the number of passengers killed by accident reached the high figure of 75, 73 of these were killed in the Tay Bridge disaster. In 1888 again, of the 88 passengers killed, 80 lost their lives in the collision near Armagh. A still more remarkable illustration of the manner in which the doctrine of averages is upset occurred in 1887. But for the collision at Hexthorpe in that year, by which 25 lives were sacrificed, not a single fatal casuality would have happened to passengers over all the railways in the United Kingdom from causes beyond their own control. The Hexthorpe disaster not only soiled an otherwise stainless record during that particular twelve months, but it affected and altered the decreasing proportion of the railway death-roll. In 1886 only one passenger was killed for every 90,698,049 carried. but during 1887 one was killed for every 27,346,800 carried. In the same way, while only one passenger was killed during 1888 for every 67,530,000 carried, the result of the Armagh collision is that in 1889 one was killed for every 8,808,875 carried. In 1889, taking the journeys of season-ticket holders into account, only one passenger was killed in every ten millions, and one injured in every 900,000, from causes for which they were in no way responsible. The total number of persons returned to the Board of Trade as having been killed in the working of railways during 1889 was 1,076, and the number injured 4,836. But out of this total only 183 of the killed and 1,829 of the injured were passengers; while only 88 were killed and 1,016 injured in consequence of accidents to or collisions between trains, the deaths of and injuries to the remainder being due to a variety of other causes and especially to want of caution on the part of the individuals themselves. The proportions of passengers killed and injured during the year from all causes were one in 4,236,000 killed, and one in 423,280 injured. This is higher than in 1888, when the proportions were one in 6,942,336 killed and one in 527,577 injured. The figures for the last sixteen years show the curious fluctuations in averages to which we have referred. The following refer to passengers killed by causes beyond their own control. In 1874 the number was 1 in $5\frac{1}{2}$ millions; in 1875 1 in $29\frac{1}{2}$ millions; in 1876 1 in 14; in 1877 1 in 50; in 1879 1 in $7\frac{1}{2}$; in 1880 1 in $20\frac{3}{4}$; in 1881 1 in 27; in 1883 1 in 62; in 1885 1 in 116; in 1887 1 in 29 millions. Fluctuation could scarcely go further. The causes of the accidents to trains from which these casualties arose are of the most varied descriptions. One was due to the train passing round a curve at too a high speed; another to the permanent way requiring relaying; and a third to the line not being properly repaired after derangemnent by previous accident. Several arose from the breaking of the axles of engines, and one of these, at Penistone, was of such a serious nature that the Board of Trade brought under the notice of the Railway Companies' Association the recommendation of the inspecting officer relative to the inspection of such axles. The result was the passing of an important resolution by the locomotive engineers of the principal railways in the United Kingdom. This declares that the companies are quite alive to the necessity for frequent and careful examination of engine axles, and points out that every axle passes under a test each time the engine is in the shop for repairs. With the view, however, of meeting the recommendation of the Board of Trade officers, the engineers have agreed that when an axle has run about 250,000 miles, it should be submitted to a special examination, and at each 100,000 miles run thereafter. Another matter referred to in the report has reference to accidents in which the servants of railway companies are the sufferers. The figures for 1889, as for previous years, are high, representing a total of 435 killed and 2,769 injured. There is an increase on the statistics for the previous three or four years. but on the other hand these show a considerable decrease when compared with the years 1874 to 1889. In 1874 the number killed was 1 in 320, in 1877 1 in 414, in 1880 1 in 534, in 1883 1 in 596, in 1886 1 in 845, and in 1889 1 in 796. With regard to the progress of the "absolute block" and "interlocking" systems, it is evident that an Act passed in 1889 began before the end of the year to have considerable influence on the action of railway companies. The proportion in which the signal and point levers are now interlocked amounts to 94 per cent. in England, 83 per cent. in Scotland and 60 per cent. in Ireland. Very much in the same way the block system is largely extending, being now applied to more than fifteen thousand out of the nineteen thousand miles open for traffic. Respecting continuous brakes, it appears that the number of vehicles fitted with apparatus, complying with some or all of the conditions laid down by the Board of Trade, amounts to eighty per cent.

### COUNT ITAGAKI AND THE LIBERALS..

EIGHTY-SEVEN members of the *Rikken Jiyu-to* met at the *Sanyen-tei* in Shiba Park on the 24th instant. Count Itagaki was present. Indeed the purpose of the meeting was to cement the reconciliation to which the Count had been induced to agree. The *réunion* appears to have been of a semi-private character, but it is understood that Count Itagaki was earnestly requested to abandon the attitude of reserve recently maintained by him, and to resume the functions properly devolving on him as leader of the Party. He is said to have consented, at the unanimous solicitation of the members present, to attend the Committee Meetings as well as the offices of the Party, and not only to assist actively in affairs of organization but also to indicate from time to time any mistakes of method or spirit observed by him in the proceedings of the association. The conference on this subject lasted some three hours, after which the whole party sat down to dinner. Towards the close of the repast the Count rose and made a short but emphatic speech, signifying his intention of sparing no efforts thenceforth to promote the cause of the Party. He concluded by a cheer for the Liberals (*Jiyu-to banzai*). Mr. Yamada replied on behalf of the members, and the meeting broke up at 8 p.m. It appears, therefore, that a complete reconciliation has been effected, though whether it will prove to be permanent is considered very problematical.

### THE FEELINGS OF FOREIGNERS.

FEARS having, it is stated, been expressed chiefly by members of the *Kaishin-to*, that the speeches of Count Yamagata and Viscount Aoki may have hurt the feelings of foreigners because of the emphasis with which those Ministers spoke of the development of the national rights and of the recovery of judicial and tariff autonomy, the *Nippon* takes off its coat and sets itself to read those timid people a jeering lesson. The development of the national rights and the recovery of judicial and tariff autonomy are phrases which, says our contemporary, "cannot sound pleasantly in foreign ears. But are we to hold our tongues because what we say doesn't please foreigners? Surely not. If our people really wish to please foreigners, we can tell them how to do so: allow them the right of owning land, of free residence in the interior, maintain the system of extra-territoriality, carry out the new codes, and reduce the customs tariff. If, however, the people of Japan wish to enjoy their national rights, then they must not be diverted from their policy by auy consideration for the feelings of foreigners. We cannot get our own without displeasing foreigners; so we had better make up our minds to what is plainly before us."

### THE REV. G. L. PERIN'S EXPERIENCE.

THE *Hyogo News*, which under the direction of its able new editor, promises to stir us all up from time to time, has the following note about the Nagoya incident:—

The Rev. G. L. Perin has only his own temerity to blame for an adventure which might have ended in the most serious results. He ventured into Nagoya and obtained permission to use a theatre in order to deliver an address on Christianity Mr. Perin knew that he was entering a town which is the stronghold of the Buddhists. He must have known, too, that he had no right to lecture, nor had the police any power to permit him. The result was that the platform was stormed, the speakers hustled, and they could only reach an hotel with the assistance of police protection. It would have been more creditable to the Japanese to have tried persuasion rather than force, but religious enthusiasts are usually hot-headed. It was only some five months ago that in Sherborne, Dorset, a party of missionaries from Utah were severely beaten by the Christians of the various denominations in the neighbourhood, and if England has not yet learnt religious tolerance, Japan can hardly be expected to show her an example. The Rev. G. L. Perin doubtless imperilled his life in what he regarded as a holy cause, but he was really breaking the law of the land, and must, therefore, put up with the consequence.

It is only fair to say that Mr. Perin has preferred no official complaint, though neither he nor the editor of the *Hyogo News* will be disposed to admit that any preacher of a religious creed may be reasonably expected to anticipate dangerous violence in Japan. Parallels for such incidents are plentiful enough elsewhere, but Japan is expected to live up to an exceptionally high standard. What chiefly seemed deserving of blame in Mr. Perin's case was the forbearance of the police. It is conceivable that the guardians of the law were restrained by a conviction that any attempt to arrest the ring-leaders of the disorderly section of the audience might have brought about a serious disturbance. We scarcely think so, however. Mr. Perin's account is that the great body of the audience were perfectly quiet and well behaved, and that only some fifteen youths took any part in the commotion, while among these fifteen, three were specially conspicuous. The arrest of the three, or of any one of them, would probably have restored order at once. It is hard to reconcile oneself to the notion that if a constable sees a man aiming a shotgun at another, the proper course is to shield the "shootee" instead of restraining the shooter.

### "ANXIOUS ENQUIRER."

THERE are two or three points in connection with Reuter's service of telegrams, upon which the editor of the *Japan Gazette* is anxious to be enlightened. As a sample of his curiosity we quote one of his queries:—"We should like to know how it is that a telegram can be sent to the editor of the *Mail* in Tokyo for enlargement, be sent back to Yokohama the next morning, and still appear a day earlier than a translation of the same telegram in the *Kwampō*." Cannot some one step forward and satisfy the soul of this anxious enquirer? We presume that the usual letter has been despatched to the *Kwampō* office, soliciting information on this subject, and that the editor of the *Kwampo* was unable to comply with the request. But

Digitized by Google

the editor of the *Kwampo* found himself in a position to say, in answer to another question, that there is no delay in translating and publishing telegrams when they reach the *Kwampo* office. This information, setting forth as it does a custom most widely different from that prevailing among newspapers in Europe and America, must have stunned the curious enquirer. Gracious Powers! Just think of it. Think of the editor of the *Japan Gazette* asking the editor of the *Kwampō* whether the latter, on receiving a telegram, puts it on one side to ripen, and if so, for how long, as a usual thing; and think of the Tokyo gentleman replying that he does not put the telegram aside at all! Why the incident is historical! Undoubtedly, but for the editor of the *Gazette* we might never have known that the *Kwampō* telegrams are translated and published without delay—actually published without delay!

### THE OBLIGATIONS OF THE DIET.

THE *Jiji Shimpo*, writing on the obligations devolving on the members of the Diet, points out that among the limited monarchies of Europe when the policy of a Government is found to be in opposition to the wish of the people, the Ministers resign, and that party which has most largely received public confidence takes their place. If such is the kind of Cabinet that Japanese politicians wish to see introduced into this country, our contemporary is with them in their desire. But the *Jiji* warns them that under such a system it is not only the Government for the time being that is responsible for its actions. When a Cabinet is compelled by force of public opinion to resign, those that come after are in turn responsible for their actions. Our contemporary is compelled to admit that to Japanese politicians, who have made their début in very great numbers recently, this proposition will not make itself easily understood. Under present conditions the members of the Diet should be very circumspect in the expression of their opinions: in their language as well as in their actions; but as a matter of fact they conduct themselves for the most part on widely different lines. Taking the Budget, our contemporary finds that one section of the Committee wish to reduce the total by ten million, another by seven million, and a third by five million *yen*. All three of course regard the Government estimates of expenditure as too high. "The estimates are certainly not moderate, but if they are closely examined it will be seen that the Administration is in a position similar to a man suffering from alcoholic intemperance. By all means cure the disease; but do not adopt drastic measures suddenly, or you will kill the patient. The present method of treatment is certainly not calculated to cure the ailment: indeed if it is persistently adhered to, the appearance of another ailment is to be apprehended. Let the members remember that they have serious obligations resting on them; and that it is not only the Government that has responsibilities."

### MR. KAWASHIMA'S QUESTIONS.

ON the 14th instant, in the House of Representatives, Mr. Kawashima Jun, supported by 33 members, presented a series of questions relating to the rescinding of Law 15 of the 23rd year of Meiji and the reform of Law 21; the settled accounts of revenue and expenditure from the 1st to the 23rd year of Meiji; the foreign debt; the resumption of specie payments; the national banks; the funds advanced to the *Shizoku*; the sale of public properties; the amount of the present public property; the subsidies to the Sanyo, Kiushiu, and Japan Railway Companies, and the Government's debt to the 15th National Bank. Yesterday the Government replied to this request by calling attention to the 74th Article of the Law of the Houses, which says:—"When either House, for purposes of examination, asks the Government for necessary reports or documents, the Government shall comply, provided that such reports or documents do not relate to any secret matter." Mr. Kawashima's so-called questions are, in fact, applications for documents, and such application must come from the House, not from a section of the members. It is possible that Mr. Kawashima may be able to get the House to take up his idea, but we doubt whether he will find time to do so during the present session.

### COUNT ITAGAKI.

IF anyone supposed that Count Itagaki's influence with the Liberals had decayed because his active share in the Party's proceedings seemed of late quite insignificant, the misconception has been effectually dispelled by the events of the past few days. The Count's threatened retirement threw the whole party into a ferment. Something very like a rapid climb-down was performed by a general meeting, and all the chief men of the association were found soliciting, with bowed heads and humble mien, the forgiveness of their veteran chief. Count Itagaki did not display more than a dignified hesitation. He consented to take his place once more at the head of the Liberal phalanx, and he showed by his demeanour at the Sanyentei on the 24th instant, that his heart is where it has always been, though his head may suggest a new attachment. The Count, however, though frankly consenting to bury the newspaper incident, stands pledged to a course which may yet severely test the cohesion of his party. He has declared his resolve to purge Liberalism of an evil feature called *jōhei*, and the declaration has been so blazoned abroad by the sensational events surrounding it—the resignation, the act of contrition and the reconciliation—that action must follow sooner or later. The Count has always showed himself a man of his word, and under any circumstances we should have no warrant for suspecting him of a covert design to let the dead past bury its dead, and forget the conditions under which he consented to resume the leadership of the *Rikken Jiyu-to*. But under the peculiar circumstances of the case, he cannot forget and may not forget. The *jōhei* therefore must prepare to be dealt with vigorously. *Jōhei*, a term well illustrating the pithy terseness of expression possible to a language which can always build up new words by agglomerating monosyllabic roots, means in our less compressible English, the habit of being governed by passion or sentiment. We cannot pretend to know precisely what the Count intimates when he thus sums up the present proclivity of his party, but we presume that he alludes, in part at any rate, to the want of calm judgment and practical reflection that have led to the expulsion or retirement of many respected members, and threatened to produce general disintegration. Figuratively speaking, he would probably have his disciples remember the fine old Buddhistic precept:—"Learn to translate your thoughts and motives from the troubled sphere of interest and affection to the calm and peaceful realm of mind and spirit." At one epoch in his remarkable career, he broke up his party and retired into rustic seclusion because the cause of Japanese Liberalism threatened to suffer lasting disgrace at the hands of a disreputable following, youths dealing with no higher weapons than bluster and physical force. Can it be that the generally reported and not generally discredited rumour as to the relations between the *Soshi* and certain members of the *Jiyu-to*, has recalled to Count Itagaki the events of that disastrous epoch, and opened his eyes to the full danger of suffering Liberalism and ruffianism to camp under the same flag? Perhaps so. At any late there is to be another meeting of the Party ere long, and the Count has pledged himself to set forth, on that occasion, the full import of the charges embodied in the term *jōhei*. Every one must wish him success. It is most essential to the cause of good government in Japan that there should be a strong Liberal Party, professing and actively obeying sound progressive principles. We do not believe that the *Rikken Jiyu-to* satisfies such a definition, and when the news of Count Itagaki's retirement was announced, we welcomed the event, hoping that he would draw after him all the best elements of the Party and leave the dregs to learn the bitter lesson of their deserved insignificance. The next best thing is that he should resume the functions of actual leader, pledged to make his followers worthy of their cause. The sooner a party springs up strong enough and able enough to take the reins of administration into its hands at any moment, the better for Japan. Parliamentary government will then for the first time become a sober and trustworthy reality.

### HOKUSAI IN LONDON.

THE art critic of the *World*, writing on Dec. 3rd, thus refers to the exhibition of Hokusai's works at the gallery of the Fine Art Society:—In these days of fog, frost, and darkness every lover of art should feel grateful to the Fine Art Society for having brought together a collection of works by one of the greatest artists the world has ever possessed, and one whose very name has probably been unknown to the majority of the London haunters of picture-galleries until Mr. Huish sent out his invitations to the elect to come and worship at the shrine of Hokusai. That this collection of drawings, sketches, and woodcuts has come as a surprise to most people is not to be doubted, the popular notion as regards Japanese art being that it is very quaint, but that the Japanese artist is incapable of draughtsmanship. To those possessed of such ideas a visit to 148, New Bond Street, must have been a staggering revelation, for one would need to go back to Mantegna to find anything finer than the draperies and the dignity of the figures in Nos. 41 and 86, or greater directness and sureness of hand than those to be felt in No. 59—a recumbent figure of a young lady. In his sketches of animals one can feel the earnest study which this extraordinarily conscientious artist (who, though he began to draw at the age of six, declared that it was only at seventy-three that he "had nearly mastered the real nature and form of birds, fish, plants, &c."!) brought to bear upon everything he set eyes on. The suggestion of fluffy softness in the feathers of the "Cock and Hen" (No. 13); the "Wrestling Rats" (No. 37), which recall so much of the observation and humour of poor Randolph Caldecott, qualities which are also to be found in the innocent "Puppy" (No. 127); and the extraordinary feeling of movement in the gradual approach of the "Serpent watching a small bird" (No. 141), all bear testimony that to Hokusai, as to all true artists, nothing, in the words of Revelation, was "common or unclean." And when to these beauties of drawing one adds those of colour and composition such as are exemplified in "The Return from the Fête" (No. 63), with its exquisite minuteness of detail, and in the "Illustrations to a Poem on Autumn Sadness" (No. 103), or the charmingly suggestive and poetic "Flight of Birds before the New Moon" (No. 72), one is tempted to hope that this exhibition may serve to take down somewhat of Western conceit in art-matters, and to give a salutary lesson in something more than mere "quaintness" to the average English draughtsman and colourist.

### HAWAII.

IT has been asserted, we perceive, that "the integrity of Hawaii was guaranteed some half century ago by the United States, France, and England." The statement is erroneous. No such guarantee was ever made, so far as we know. Great Britain and France entered into a mutual agreement to respect the integrity of the little kingdom, but the United States was not a party to the arrangement. It is possible, but scarcely probable, that England might raise some objection to the annexation of the islands by America, but if the Hawaiian legislature submitted a request to Washington on the subject, it is difficulty to see how any European Power could reasonably attempt to impose a veto.

### MR. MUTSU MUNEMITSU.

IT turns out that the prettily worded and outspoken appeal generally reported to have been addressed by two leading electors of Wakayama Prefecture to Mr. Mutsu Munemitsu, Minister

Digitized by Google

of State for Agriculture and Commerce, urging him to resign either his portfolio or his seat in the House, did not come from Mr. Mutsu's constituents. The Wakayama electors repudiate the document altogether, and the political sections opposed to Mr. Mutsu's Party in the House, while admitting that they commented among themselves on his repeated absence from his seat, deny that they reduced, or thought of reducing, their opinion to writing. The two frank critics are members of the *Rikken-Jiyu-to* who have come to Tokyo on business connected with petitions, and are not unwilling to extend their knowledge of such documents by addressing one of a peremptory character to Mr. Mutsu.

### GILDED ARROWS.

EDUCATE the Masses! appears to be still the battle cry of that section of society who labour under a worthy but erroneous impression that in process of time education will purge the lower stratum of the atmosphere of evil considered so objectionable in that particular stratum, but smiled at as "unfortunate," peculiar," "a little wild" and "eccentric" in the upper crust. Personally no one can wish to keep a fellow creature in ignorance of that which can bring him happiness, or make him a more useful member of society; but, unfortunately the education lavished on the lower orders of our fellow men, does not tend in the most elementary degree towards that end. To suddenly plunge a man possessing no hereditary mental preparation, into a whirlpool of information which his walk in life can never give him an opportunity to utilize; not to endow him with a fund of recreation and pleasure resulting from the possession of that knowledge, but to destroy what for generations he has held to be a correct and wise organization; to break down with one great stroke and destroy for ever the bliss which has been his portion by means of ignorance, and to leave as the grand consequential accompaniment of education the curse of discontent, this wholesale, indiscriminate education of the masses is the foundation on which has arisen socialistic democracy. They who have lifted the working man out of the sphere where God placed him, must be thanked for the strikes and revolutionary troubles which the last two years have witnessed. Education for the masses is needed, but not an education that shall only dazzle the working man's eyes by visions never to be realizable, and hopes of becoming what he can never become. The education needed is to teach each class how best to fill its station; to teach Hodge that there must be Hodges in the world, and to teach him, if he is born a Hodge, how best to remain one. Of what use to talk to him of universal equality, and the working man's rights, and to lead him finally to the imagination that it is not by a wise divine dispensation that he is a Hodge and not marquis, but a divine mistake, which a discriminating mortal in the guise of an M.P. is called upon to correct. It is a pretty theory, and sounds a nice Christian act to elevate the lowly brother's mind; but looked at form a common-sense point of view the theory makes very poor practice. Were any one to come and teach us that by process of educating ourselves and our children to a certain pitch we should become wealthy and titled without any further trouble, we cannot conceive that our path would thereby be strewn with roses. Having attained the pitch of education, but not the wealth and title, the chances are greatly in favour of a supposition growing up that something is wrong, and that all is not "quite fair" in the distribution of worldly goods. This is what these well meaning but shortsighted educationalists have been doing, and doubtless will continue to do, till they find out what a terrific blunder has been in hand, and then, as usual, it will be too late. Some years ago, Mr. Richmond, R.A. conceived a very pretty scheme for educating the masses by means of hoardings and bill posters. The idea was unique, but lacked balance of development. Let us make, said he, our ugly cities beautiful by copies of the great masters, as illustrations of advertisements. While we place before the public the fact that "Beecham's Pills," or "Holloways Ointment" are things to be desired, attract the eye of the mobocracy above such prosaic matter, and teach them to admire and worship at the shrine of art, as well as of medicine. Thus far Mr. Richmond's thoughts doubtless travelled, but he appears to have forgotten that a board can generally be painted black as well as white; and that once pictures are introduced into the advertising field, the chances are as much in favour of bad prints as of good ones. Something in this way is just what has happened, and now poor Professor Richmond is figuratively in sackcloth and ashes over the bad pictures disfiguring the vacant places of our city buildings which he had fondly hoped to turn into elysium's of poetry and art. Mr. Richmond's sanguineness must have been of a high order for him to conceive the possibility of coalheavers and waggoners being able to understand much less appreciate the delicate tintings of pictures of great price. To folk to whom blue is blue, green green, indescribable variations and nameless shades of the primary hues would have conveyed no more intelligence than does a millinery discourse on "elephant's breath" and "smashed gooseberry" to the uninitiated. Mr. Richmond has not much to grieve for. A mind already lowly has little to fear from lowly scenes, and vulgar pictures are not likely to influence the workman in the same degree as they do the artist. Dispite Mr. Richmond's good intention, the result of lining the streets with Turners, Raphaels, Millais, and Leightons would not have been observable in any remarkable elevation of the mass's tastes and acuteness of intellect.

* * *

Some little time back, an intimate friend of ours was bewailing the fact that the present age is destitute of literary ability compared with preceding centuries. We answered, you may think what you like with regard to our appreciative powers, but we are of the opinion that the esteem for and fuss made over Shakespeare largely consists of humbug. If you persistently keep your gaze fixed on one particular star, the chances are you will not discover beauty in any other; and if generation after generation persists in training the young idea to admire nothing that does not bear the stamp of the immortal William, it is quite evident that the most brilliant authorship will be passed by unheeded. To maintain that another Shakespeare does not, and cannot ever again exist is surely bordering upon obstinate and dogmatical prejudice. In Shakespeare's day it must be remembered that he stood alone, and his utterances therefore received a homage first originating in surprise. He rose a 19th century dramatist and author prematurely born, and the world, struck dumb by his eloquence, knelt and worshipped what they only partly understood. In the present day intellectual ability has reached so high a pitch that it requires, not a Shakespeare, but a man with ten-fold Shakespeare's power to occupy the head-and-shoulders-above position that Shakespeare held among his compatriots. Now, every man is a Shakespeare more or less; what wonder then if literary talent and happy phraseology have grown so common that they cease to attract attention. One is apt when one discovers a treasure to fancy it the only "pearl of great price," and it is as well before yielding too easily to the craze about certain geniuses and prominent characters in past history to compare first of all the "then and now," and see whether we have not reached an intellectual platform on which even Shakespeare, could he rise again, would not occupy such a monopoly of applause as he does in history. Our taste runs too much in hereditary grooves to be a trustworthy criterion of merit. We admire now what our great grandfathers admired, and admire it because as children we were taught to admire it. Were Shakespeare never drummed into every schoolboys' ears as the correct standard of taste, it is a great question how many, on arriving at manhood, would single him out as the Adonis of literature and the perfection of authorship.

* * *

Marriages are decreasing, we are told, in some places for one reason in some for others; but the reason for which certain young men and maidens have been living on hopeless sighs for about four years is surely an original and unique one. In Gwalior, India, matrimonial transactions have been standing still for want of a god! Four years ago, the Jaini Sect of Gwalior made an image; but, with a degree of discrimination by no means characteristic of most religious communities, that image was not considered a god—until it had had a walk. To bring about the divinity of this image, a state procession, and a bevy of other images to accompany it, were required. This procession through the streets could not be undertaken without the concurrence of the Gwalior durbar, and as a means to an end, these godless people applied to the Viceroy to use his influence on their behalf. This is doubtless the first occasion on record of a Christian and a Viceroy being applied to for assistance in creating a god, and our information does not state how the Queen's Representative dealt with the delicate matter, but considering that these people had suffered from the enmity of Brahmins, and had their temple destroyed and with it their god, not to mention all the well disposed young men and women who preferred to wait rather than enjoy a godless union, it is probable that the Viceroy did try to aid his petitioners. That four years should have elapsed without these simple-minded folk having a divinity when the process of creating one was so simple, not to say prosaic, is only another instance of how small are the hinges on which felicity swings and how easily they can be broken.

* * *

Not only in Gwalior has Hymen's altar been deserted, but in Bengal it would also appear that marriages have been scarce. In this case it is not the want of a god, but of suitable partners which has been the cause of the connubial stagnation. For two Rajahs to be unable to find in their circle of acquaintances two ladies suitable to become their respective Rajah-esses, is a circumstance peculiarly humiliating to the ladies, or indicative of exceptional fastidiousness on the part of the gentlemen. Failing to find this satisfaction from intercourse with their gentle countrywomen, they craved for European wives, and accordingly sought the only available means of gratifying their requirements namely—a newspaper. It is always an indication of straightened resources and dire need when the matrimonially inclined are driven to advertising for that happiness which is generally supposed to come in a mysteriously romantic moment at nobody's bidding. The young Rajahs were not in need of fortunes, each being possesed of a good show of temporal blessings, or something like an annual income of 99,000 Rs., so mercenary motives could not have driven them to cull from foreign fields flowers to adorn their domestic hearths, neither were beauty and accomplishments their demand, nothing in fact but European respectability. This ought to cause a flutter in the maiden dovecotes at home. Chances of 99,000 Rs. a year and a real live Rajah do not often come in the way of advanced virginity, and no stipulation is made as to the age of applicants. GRENON.

### HEAVY SNOW IN ISHIKAWA.

FROM a private letter dated at Kanazawa on the 23rd inst. we learn that serious damage to property and loss of life has occurred in Ishikawa Prefecture. In the town of Kanazawa the complete destruction of the First Church has been followed by the partial demolition of two public school buildings and the collapse of many small houses. The letter further says that a report has just come in from the vicinity of the copper mines near Komatsu, of the killing of 13 persons from the same cause, and much suffering is felt from the cold.

### THE TELEPHONE.

WE have been requested to call attention to the fact that the telephone between Yokohama and Tokyo is working very unsatisfactorily. So far as the instrument itself is concerned, no faults are noticed, conversation being easily and clearly carried on. But it seems that only a very limited

Digitized by Google

number of wires have been laid between the two places, and cases have occurred of the whole system being "bunched up" by no agency more formidable than the string of an errant kite, the result being a couple of hours' delay for persons waiting at either end. Occasional accidents are, of course, inevitable, but the general opinion seems to be that sufficient provision has not yet been made to secure uninterrupted communication. Great care is taken to keep the telephones in good order, and we venture to hope that an additional effort will be made in the case of the Yokohama-Tokyo line, so as to prevent this most useful innovation from falling into discredit at an early stage of its history in Japan.

### STYLE.

THE *Japan Gazette* assures us that our style of writing is offensive, and complains that it "has not received the most ordinary journalistic courtesy at our hands." With regard to the former point we cannot speak of course. But with regard to the latter it is only fair to remind our contemporary of two things; first, that the controversy which has evoked its comments commenced by an accusation—irrelevant and uncalled for we think—that this journal is pledged to servilely support the Japanese Government; secondly, that our emphatic denials of any such pledge have been treated with absolute indifference by the *Japan Gazette*, the same offensive charge being now repeated over and over again in its columns. It seems a little unfair that, an attack of such a character having been made upon us merely because we could not agree that China's claims would stand seriously in the way of Japanese Treaty Revision, we should now be charged by our assailant with want of courtesy. Be that as it may, however, we most emphatically deny that we claim, or have ever thought of claiming, any superiority to other writers in respect to knowledge of Japanese affairs, or that we pretend to the smallest degree of infallibility in any subject. The *Gazette* blames us for "assuming the papal style of an unerring pontiff," and is evidently much hurt because we have ventured to treat it with some sarcasm. Well, we can only say that our motives have been kindlier than our methods. We have to take a good many hard knocks ourselves in the day's work, without crying out, and if we occasionally pay them back, let it be remembered that patience is not absolutely elastic.

### THE PALACE AND ELECTRIC LIGHTING.

THURSDAY week was a busy day at the Palace. All the minor officials of the Household were engaged marshalling old-fashioned *andon*, candlesticks, and other discarded devices for obtaining light, it having been definitely decided that the use of the discredited electric apparatus must be abandoned for the present at all events. The Cabinet and Privy Council are said to have discussed the question very earnestly, and to have come to the conclusion that the best plan will be to have a special dynamo for the Palace. They hold that the burning of the Diet may prove to have been anything but a calamity, if it becomes the means of directing attention to the necessity of greater caution in fitting electric lighting apparatus, and thus becomes the means of averting other and very much greater catastrophes.

### ATTITUDE!

WE shall leave our worthy contemporary the *Japan Gazette* to drape itself in our "confessions" and attitudinize to its heart's content. "Confirmed in the conviction that the attitude it has taken is no less wise than natural," it does not hesitate now to go to the very naughty length of saying the thing that isn't. "The editor of the *Japan Mail* has consented to plead the Japanese side of Treaty Revision," and "has undertaken to say the best that can be said for the successive Treaty Revision schemes of the Government." The good *Gazette* "could never consent to occupy" such a position on the other side. Of course not. Perfect impartiality and perfect ingenuousness being the *Gazette's* monopoly, its attitude is quite "natural" when it pleasantly represents the *Mail* as "confessing" precisely what the *Mail* has emphatically denied. For such courtesy and such fairness, we are thankful. *Ingratum si dixeris omnia dicis.*

### THE UNION RACE CLUB.

AN action for thirty-five thousand *yen* has been taken by Mr. Kikuchi Ichirokuro and eight others against Marquis Hachisuka, Marquis Nabeshima, and six others, the complainants representing the contractors who laid out the race course at Uyeno and built the grand stand, and the defendants representing the *Kyodo Keiba Kaisha* (Union Race Club). The well-known barristers, Messrs. Oyagi Biichiro and Ooka Ikuzo, act respectively for the former and the latter. Failing payment of the sum claimed, the complainants pray that the defendants may be ordered to rent to them either the unoccupied land in the possession of the Club or the Shinobazu Lake, on certain terms.

### NEW STEAM WHALER.

THE Yokohama Engine and Iron Works Company, Limited, has entered into a contract with the Eastern Whaling Company, Limited, to build a new steam whaling vessel, which is to be ready for her owners in 120 days from the signing of the contract. This vessel will be of larger dimensions than any of the schooners now sailing out of the port, and will be built and fitted to class A 1—9 years at Lloyds'. Considering the facilities at the command of the local ironworks and the first-class work turned out, the Whaling Company has done well to order their vessel on the spot.

### THE PREFECT OF AKITA.

A *soshi*—every youth attempting violence against politicians or officials is now designated a *soshi*—made an abortive attack upon Mr. Suzuki Dairyo, Prefect of Akita, on the 26th instant. The Prefect was driving to his office in a *jinrikisha* when a youth stepped forward and struck at him with a stick. Fortunately the blow missed its mark, and does not appear to have been repeated. The Prefect seems to have gone on his way without further molestation, and the truculent youth proceeded to the police station, where he gave himself up. The incident is reported by telegram, and the details obviously need filling in.

### ORANGES.

MR. KURIHARA, of Wakayama Prefecture, has just returned from the United States with a rosy account of the trade in Japanese oranges. He says that the fruit constantly finds increasing favour in America, and that a growing export may be anticipated. He gives the value of a catty (*kin*) of Japanese oranges, laid down in San Francisco, as 12.2 *sen*. Whether this figure offers a remunerative margin, exporters must decide for themselves.

### DEATH OF A JAPANESE PRINCESS.

HER IMPERIAL HIGHNESS PRINCESS SOJUN—or Princess Yoshiko as she was popularly called—died on the 24th inst., at her residence in Kyoto. The deceased lady was in her 75th year, and formerly held the office of Lady Abbess of Reikan Temple. She was a member of the Fushimi Family, being aunt of H.I.H. Prince Fushimi. The Court goes into full mourning for 20 days, and into half mourning for 90 days.

### THE "SOSHI" IN YOKOHAMA.

MR. HIRANUMA SENZO, a well known resident of Yokohama, has been annoyed by frequent visits from the *soshi* expelled from Tokyo and now residing in this Prefecture. Failing to obtain an interview, it is said that these truculent youths have addressed threatening letters to him, and that Mr. Hiranuma has thought it advisable to obtain the protection of a guard of police.

### DEATH OF PRINCE BAUDOUIN.

WE are informed by the Belgian Minister that a telegraphic message has reached him bringing the sad intelligence of the death of H.R.H. the Prince Baudouin, nephew of H.M. the King of the Belgians. The deceased Prince was only 21 years of age.

### H.M.S. "PIGMY."

THE *Pigmy*, after her recent accident in the Inland Sea, where she was a short time ashore, made her way safely to Nagasaki to go into dock. The dock was occupied at the time by the *Zambesi*, but it has been ascertained that the damage to the *Pigmy* is not of a serious nature, and she will not probably be detained at the southern port more than a fortnight.

## *THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.*

The week we are about to review has been rather dull from a journalistic point of view. The political world, especially that part of it usually veiled from the view of the outside public, has indeed been a scene of constant activity and keen competition between rival parties to secure a majority on the question of the Budget. There having been during the greater part of the week no sitting of the Houses of the Diet, the members seem to have employed their time in intriguing. Various reports are circulated about the doings of this or that Representative or Peer. But the discussions in the columns of the vernacular papers for the week have been on the whole rather dull and uninteresting. The principal topics dealt with have been the all absorbing question, the Budget, the desirability of prolonging the present session of the Diet, the alleged causes of the burning down of the Parliament buildings, and a few other matters of minor importance.

* * *

The question of the Budget has become hopelessly complicated. Hitherto the Representatives have been divided into two camps, the extremists and the moderates. But both parties have of late been torn by factious dissensions, and great anxiety is entertained by the public as to the smooth passage through the Diet of any of the numerous plans of reduction now before the House of Representatives. Among the so-called moderates there are three sections advocating respectively a reduction of 7, 6, and 5 million *yen* in round numbers. These sections agree in their opposition to the Budget Committee's report on the ground that it involves an encroachment on the prerogative of the Emperor. But recent events have shown that they are not at all firmly united. On the other hand, the extremists are hardly more agreed. The *Kaishin-to* members have hitherto been universally regarded as the most radical and more uncompromisingly committed to the Budget Committee's proposal. But a strange story is now circulated by men who ought to know well, to the effect that the *Kaishin-to* members have under contemplation the introduction of a fresh plan of reduction, the amount to be cut down being about 6 million *yen*. Thus, according to the rumours noticed by the vernacular press as well as those received from private sources, neither moderates nor extremists seem to be able to count on ultimate success.

* * *

Such being the state of affairs, there is now a growing tendency on the part of the Metropolitan papers, independent and otherwise, to exhort the rival parties to lay aside their mutual animosity and arrive at a reasonable compromise, so that the first session of the Diet may come to a happy close. The *Hochi Shimbun* is especially earnest in seeking to bring about a compromise. After alluding to the rumour that a small, but powerful, coterie of the independent members, who have not yet declared themselves for either side, are contemplating a daring move, namely, to take the House by surprise by a motion to vote the reduction of a certain amount, leaving to the Government all the work of distributing the reduction among the various items in the Budget—after alluding to this rumour, our contemporary proceeds to remark that it is not now the time to introduce a fresh motion on this question, but that members who have any spark of patriotism should begin to think earnestly of the method of restoring harmony and agreement between the contending parties. It would be desirable to reduce a large amount of public expenses if such reduction were not injurious to the smooth conduct of administration, but if there is no

Digitized by Google

hope of effecting the reduction of any big sum of money, our contemporary advises the members of the Diet to be satisfied with a few million *yen*. What is required of them is not that they should cut down the estimates by so many millions, but that they should take a sensible and reasonable line of action, so that they may be able, while maintaining friendly relations with the Government, to accomplish their cherished object of giving relief to the people.

* * *

The *Mainichi Shimbun* compares the members of the Diet to a company of irregular troops in the old feudal times, when each soldier sought to distinguish himself by stealing upon his comrades. The Representatives have in this respect showed unmistakable signs of lingering attachment to the ideas of feudal times. Our contemporary, as the organ of the *Kaishin-to*, is bound to support the extremists, and calls upon the moderates to bring forward some plan of reduction which does not encroach upon the functions of the Executive, as all their schemes hitherto put forth are, notwithstanding their avowed opposition to such encroachment, open to the same charge.

* * *

The *Nichi Nichi Shimbun*, like the *Hochi*, is anxious to see the Representatives united by some happy compromise. Two courses are open to them, either to come to an agreement as to the general features of reduction, and cause the Budget Committee to remodel its report accordingly, or to decide on the amount of reduction to be effected and require the Government to remodel the Budget accordingly. The amount of reduction should be, in the opinion of the *Nichi Nichi*, fixed on the basis of lightening the land-tax by ½ per cent. Should the members of the Lower House, instead of adopting either of these plans of compromise, go on as heretofore, our contemporary fears that none of the schemes at present before the House will secure a majority, and that the Diet may be closed without voting a Budget.

* * *

The *Jiji Shimpo* is opposed to any radical plan of fiscal reform, but now turns to the Government, and reproves them on their inability to act upon the advice it gave them some time ago. Its advice was that the Authorities should anticipate the Diet by effecting every possible reduction of expenditures. But they choose not to heed its timely advice, and now they have to face the violent opposition of the Representatives. Altogether the tone of our contemporary is like that of a parent scolding an erring son.

* * *

As there is little hope of the debate on the Budget being brought to a speedy conclusion in the Diet, while its session is fast drawing towards the close, the Metropolitan papers are beginning to urge the necessity of prolonging the duration of the present session. The Representatives are at present engaged in putting questions to the Government Delegates and the members of the Budget Committee. According to the *Yomiuri Shimbun's* calculation, the questions relating to each Department of State occupy generally two days, and there being at the time of our contemporary's writing (the 24th instant, *i.e.* while the Diet was in adjournment) four Departments of State about which questions had still to be put, the Tokyo journal thought that at least a week more would be required by the House to finish its questions. Then another week would be spent debating in Committee. Thus two weeks must elapse before the House would be in a position to commence its formal debates on the Budget. But by this time the session would have nearly come to its end, and there would not be time to conclude even the Budget. The *Yomiuri*, therefore, considers it absolutely necessary to prolong the duration of the session, in pursuance of the provision of Article 43 of the Constitution. It is opposed to any increase of the number of hours of each day's meeting, because, in the first place, the effect of such increase would be to encourage superfluous talk, and in the second place, a long sitting wearies the members and is not conducive to the despatch of business.

* * *

The *Hochi Shimbun* is also of the same opinion. Under ordinary circumstances it would be entirely opposed to any prolongation of the session, but the present case is altogether exceptional, as delay in the transaction of business has been brought about by unavoidable causes of two kinds, the disastrous fire of the 20th instant and the inexperience of the newly constituted legislators, who were obliged to allow a week's extra time to the Budget Committee for the elaboration of its report. The *Hochi* deems it of great importance to have the session prolonged, though for how many days it does not state. It also suggests that the prolongation be announced as soon as possible, for, if the Diet were led to understand that no prolongation would be granted, it might be betrayed into precipitate and ill-considered decisions in order to finish its business within the prescribed period of the session. All of which advice is very commonplace.

* * *

The *Choya* thinks differently. It does not, indeed, deny that there is any necessity for prolonging the session, but it contends that the present is not the proper time to decide whether an extension should be granted or not. The duty of the Diet is to economize its time to the utmost, and to endeavour to complete its labours within the regular limits of the session. Only when there is obviously no possibility of finishing the business before the prescribed close of the session, should the question of prolongation be considered.

* * *

Some years ago, as our readers may remember, there was in fashion among the *soshi* a practice of waiting upon unpopular members of the Local Assemblies, and "recommending" them to resign their seats. Such "recommendations" were invariably backed by an implied threat of violence, should their recipients fail to comply with the demand. This pernicious practice is again coming into vogue, some members of the Diet having already been required by self-constituted delegates of their constituencies to resign their seats, while some others are said to be daily apprehending the arrival in the capital of "resignation recommendation delegates" (*jishokū kankoku i-in*). The vernacular strongly denounces this nuisance. The *Jiyu Shimbun* remarks that it is an unpardonable impertinence, not to say disgrace, on the part of electors to try to restrain the independence of their Representatives by demanding their resignation unless they agree to follow a certain course of action with regard to national questions. The members of the Diet represent, not their particular constituencies, but the whole nation. The electors have, therefore, no right to expect their Representatives to identify themselves with any local views or interests. Electors may indeed declare want of confidence in their Representatives, when the latter have committed blameworthy acts. But under no circumstances—observes the *Jiyu*—ought they to subject their Representatives to intimidation, or to present demands implying intimidation.

* * *

The *Mainichi Shimbun* condemns the practice in equally strong terms. It admits that some members of the Diet are unscrupulous enough to disregard the pledges given to their constituencies at the time of election. But that is no reason why the electors should require their Representatives to resign. The only proper course for the electors to take under such circumstance would be to wait until the next election, and then cast their votes for other politicians more likely to consult their wishes.

* * *

The arrival of the new Chinese Minister, Lord Li, has been awaited with more than usual interest by the Japanese nation. Great significance is attached here to his appointment because, in the first place, he stands in a peculiar relationship with Earl Li, and in the second, he is known to be an able and accomplished diplomatist. In the minds of some people his coming here is connected with claims on the part of China about Riukiu or Korea. But the general idea in intelligent circles is, that the presence at this Court of a Chinese Minister understood to sympathize more or less with modern civilization, will be highly beneficial to the promotion of good feeling between the two principal nations of the Mongolian race.

* * *

The *Hochi Shimbun* represents the views of people of this class when it welcomes the arrival of Lord Li. It sincerely regrets that the Japanese and the Chinese have long regarded each other with mutual dislike and contempt. Now that the Oriental peoples are one after another trodden under foot by Occidental races, the *Hochi* declares it to be the mutual interest of the two nations to forget the past, and firmly unite against the encroachment of the strong Powers of the West. China and Japan are natural allies; the decline of either could not fail to produce serious effects on the destiny of the other. Our contemporary concludes as follows:—"We are told that His Excelleney Lord Li spent several years abroad and is well informed as to the general situation in the West, and that he is exceptionally closely acquainted with the condition of things in Japan, as he lived in the interior for a period of three years. We think that his learning is wide enough to stand him in good stead in this progressive era of the 19th century, while his observation is keen enough to detect the evil elements in the present Oriental situation, and to impart a new motive force to the international relations between the nations of the East. As to the art of diplomacy, he has a good model in his worthy father. Altogether there are grounds to hope that our expectations may be fulfilled by his skilful management of affairs. We impatiently wait to see the day when by masterly handling of the Eastern Question, he may succeed in rescuing it from the intrusive meddling of Westerns."

* * *

The *Jiji Shimpo* devotes several articles to the discussion of the Budget, and endeavours to pursuade both the Government and the Diet of the importance of moderation in the present conjuncture. In another article, it condemns the distinction at present made in the treatment of titled or official members and the non-titled or unofficial members of the Diet. The *Hochi Shimbun* publishes a series of articles on the International Exhibition at Chicago, from the pen of Mr. Kato Masanosuke, now staying in New York. In another article the same paper encourages emigration to Hokkaido. The *Jiyu Shimbun* has just concluded its long series of articles on the military equipment of the country. The writer is Mr. Karihara, Count Itagaki's confidential lieutenant. He attaches the chief importance to the navy and advocates its augmentation on a large scale. The *Nippon* is publishing a long series of articles on the tariff question. It has also discussed the improvements of river courses and the reduction of public expenses. The *Kokkai* considers the question as to the process of obtaining the Government's concurrence to the Diet's decisions on "the already fixed expenditures." The *Choya Shimbun* asks what has the Department of Agriculture and Commerce been doing in the past ten years. The *Nichi Nichi Shimbun* writes about subsidies to promote companies, and about the proposed abolition of the Upper Middle Schools and the Higher Normal School. It is of course opposed to the abolition of these schools, and as to subsidies, it recommends the companies concerned to employ facts and reason rather than sentiment in defence of the advantages they are enjoying. The *Mainichi Shimbun* writes on the management of Government property, and exhorts the authorities to be more provident and careful in the preservation of such property. The *Tokyo Shimpo* discusses the Registration Bill, and also the question of conscription, advocating two years' active service instead of three.

## *THE COMMERCIAL CODE AND ITS CRITICS.*

MR. MURATA TAMOTSU, formerly a Senator, enjoys among his own countrymen a considerable reputation for legal attainments. At the close of 1887 he was appointed one of the members of Committee to revise the draft of the new Commercial and other Codes. In due time the Committee finished its labours. The members sent forward the draft of the Commercial Code with their nominal approval; the Code was enacted, and an Imperial Ordinance fixed January 1st, 1891, as the date of its operation. Meanwhile, in view of the summoning of the Diet, the Senate was abolished, and Mr. MURATA obtained a seat in the House of Peers as an Imperial nominee. Very soon the Peers had to deal with a Bill for the postponement of the operation of the Commercial Code; that is to say, the Code revised and approved by Mr. MURATA in his capacity of member of Committee. The reasons assigned by the supporters of the Bill were that the Code conflicted with the customs of the country, presented various defects of drafting, and could not conveniently be enforced before the Civil Codes. An animated debate ensued, and Mr. MURATA, instead of voting for a body of laws previously revised and endorsed by himself, threw the whole weight of his voice and influence into the opposite scale. This apparently contradictory attitude perplexed the public. His friends asked him to explain himself, and he replied by avowing that he had disapproved of the Code from the outset. Of course such an apology could not suffice. People easily perceived that whatever may have been Mr. MURATA'S private views, his public action connected him inseparably with the Code. In fact he stood in the position of confessing that, had not the Diet interfered, a Code openly endorsed though secretly condemned by him would have gone into force. He therefore extended his defence by publishing portions of instructions given to the Revision Committee by the Minister of State for Justice. Mr. MURATA's object in publishing these instructions was to show that the work of revising the Code had been urged forward in the interests of Treaty Revision, and not in those of sound legislation, alone. He succeeded in his demonstration, but at the cost of violating official confidence.

The nation's disposition at present is in one sense strongly conservative. Nothing elicits readier or more universal disapproval than the notion of sacrificing domestic customs or domestic traditions on the altar of foreign requirements or foreign principles. Mr. MURATA could confidently foretell the reception his revelations would meet. He could be quite sure that discredit must immediately attach in the eyes of his own nationals to any legislative measure supposed to have been precipitated in the interests of foreign relations. But neither he nor any one else could have imagined that similar prejudice would betray foreigners into publicly accusing the Minister of State for Justice of a "wild and unscrupulous scheme," a "plan calculated not only to undermine the authority of law, but to prove subversive of all morality." Seldom have such sweeping charges been preferred against any responsible statesman: never, we imagine, on such slender grounds. What is Count YAMADA'S crime? He simply sought to expedite the work of preparing the Code in order that Japan might be furnished with laws conducing to the recovery of her Judicial Autonomy. He knew perfectly well that only an insignificant fraction of the Commercial Code needed to be considered by the light of Japanese commercial customs, and he knew that the whole Code was consistent with the most advanced principles of Occidental jurisprudence. By applying every possible spur to hasten the promulgation of such a body of laws he acted in the best interests of intelligent progress. Arguments connected with a country's foreign policy may be employed with perfect propriety to facilitate legislation. This has been acknowledged over and over again by foreign critics of Japan's modern history. Over and over again has the weary postponement of Treaty Revision been extenuated by pleading that many of Japan's best reforms owe either their origin or their consummation to her international ambition, and that so long as the recovery of Judicial Autonomy is held up as the prize of renewed effort, her continued progress is assured. Yet no sooner is it discovered that this very motive influenced the Minister of State for Justice, than an English local journal gravely accuses him of advancing a wild and unscrupulous scheme, of undermining the authority of law, and of subverting all morality.

Thus Mr. MURATA appealed to the passing prejudice of his own nationals, and at the same time succeeded in eliciting startling endorsement from a foreign journalistic critic. It did not suffice, however, merely to show that the work of equipping Japan with much needed commercial laws had been expedited in the cause of Treaty Revision. That plea might have weight with hotly prejudiced conservatives, but could scarcely command the approval of men who judge a measure by its merits, not by the means adopted to promote it. Mr. MURATA, therefore, set himself to formulate inherent reasons for the postponement of the new Code. These reasons were published without contradiction by the vernacular press, and translated by a Yokohama English journal, which devoted three leading articles to their statement and discussion, described them as "valuable testimony," and in terms of eulogy thanked Mr. MURATA for his "important revelations." It is worth while, therefore, to examine Mr. MURATA'S reasons briefly.

He sets out by asserting that in putting the Commercial and Civil Codes into operation independently, the Government acted on the advice of Japanese barristers of German proclivities, who urged "that there is no such thing as a Civil Code in Germany;" that "the Commercial Code there answers every purpose," and that "consequently there is no reason why in Japan the Commercial Code should not go into operation before the Civil." These statements Mr. MURATA puts into the mouth of Japanese-German barristers. His own reply to them is that "the cases of Japan and Germany are by no means parallel, since the German Commercial Code is so drawn up as to make a Civil Code superfluous." Does Mr. MURATA not know that since 1875 a Commission has been working at a German Civil Code? He ought to know it, for a printed copy of the German Draft of 1888 was in the hands of the Committee on which he served. If the German Commercial Code is so drawn up as to render a Civil Code superfluous, that toil of fifteen years is a little inexplicable. Again, does not Mr. MURATA know that Civil Codes have been working in States of the German Empire side by side with the General Commercial Code; the "Landrecht" in Prussia, for example; a Civil Code in Saxony; the "Code Napoleon"—with certain modifications—in the Rhine Provinces, and so forth? If he does know all this, why differentiate Japan's case from Germany's by saying that Germany has no Civil Codes, her Commercial Code rendering such things superfluous? If he does not know it, why undertake to discuss the matter at all?

After this remarkable preface, he proceeds to explain in detail "numerous parts of the proposed Commercial Code which are damaging to Japanese Commerce." This is very interesting; for although the Code's critics have often declared that it conflicts injuriously with Japanese commercial customs, they have never taken the trouble to set forth the counts of their accusation. Mr. MURATA is the first to attempt the task. Let us see how he succeeds. The Commercial Code, he begins by saying, forbids "commercial firms or individuals to possess a number of houses situated in different places and using the same signs." He quotes the articles on which this assertion is founded; he complains that such a restriction would greatly hamper Japanese commerce, and he affirms that, according to German showing, the existence of a similar law is one of the causes of the comparative slowness of tradal development in Germany. It will scarcely be credited that the provision complained of does not exist in the Japanese Code. What the Code says is that the same firm

Digitized by Google

must not have branch houses trading in different places under the same name with independent capitals. This is something very different from Mr. MURATA'S rendering.

The second point of criticism is Article 277, which provides that in all contracts involving a sum of over fifty *yen*, a written agreement is necessary. This Mr. MURATA calls "a serious outrage on Japanese Commercial Customs." He avers that in Japan it has long been the custom to make verbal agreements for large sums, and that the necessity of employing documents would "greatly retard the progress of trade." We fail to appreciate the hardship of the provision. Certainly it is not counted a hardship in European countries. In Spain, for example, all contracts must be in writing unless the subject matter is under 1,000 *reis*. In France there is a practically like rule, the limit being 150 *francs*. In England the same idea underlies the well known Statute of Frauds, which fixes the limit at £10. Exceptions and modifications there are, of course, but the principle in these cases is identical with the principle of the Japanese law. In the Japanese Code also there are exceptions which Mr. MURATA omits to mention. One is where performance of the agreement is to take place at once, and the second is contained in the 2nd paragraph of the very article criticised. It is a curious point, and worthy of notice, that Mr. MURATA prefaces these detailed criticisms by saying that "laws which have been made for Germany do not, as a rule, suit Japan." Now the German Commercial Code lays down the opposite rule to that contained in the Japanese Code in this particular instance. To find counterparts to the Japanese law, we must go to England, France, Spain, and so forth. Does Mr. MURATA mean to tell us seriously that in Japan the system of credit has been developed to such an extent that restrictions prescribed by English and French laws become in Japan "a serious outrage on Commercial Customs." We admire his estimate of his country's condition, but we certainly were not prepared to find such an estimate quoted with approval in the columns of a local English journal.

The third point of attack is Article 525, which, we are told, "forbids the selling of any property that is not owned by the seller, and the disposal of which is not exclusively in his power." This is declared by Mr. MURATA to proscribe a very large number of common Japanese transactions. The truth, is that not the Code, but Mr. MURATA'S rendering of it, is at fault. The Code does not lay down that "ownership" is a necessary condition. The difference is vital. And will it be credited that Mr. MURATA instances as a class of transactions proscribed by the article, the very contracts dealt with in the next section of the same Code (Articles 552-558)!

Criticism the third is based on "the extreme length of the Japanese Code." This is not the least misleading statement among the whole series of blunders committed by Mr. MURATA, and complacently endorsed by his exponent in the foreign local press. It is all the more insidious, too, being incapable of refutation by mere reference to the law itself. Mr. MURATA unfavourably compares the length of the Japanese Code, no less than 1,060 Articles —1,064 is the true number—with the length of the German Code, 911 Articles. Now the Japanese Code provides for Bankruptcy and Bills of Exchange: the German Code does not, additional laws having been enacted treating of these subjects. Germany, in fact, has a Bankruptcy law of 214 Articles and a Bill of Exchange Act of 100. In other words, the Japanese Code, in 1,064 Articles, deals with matter occupying 1,225 Articles of German law. It is true that the German Bankruptcy law is longer than that contained in the Japanese Code for reasons which do not apply to the latter; but against the reduction thus obtained in the German total we have the fact that special rules relating to Companies, which in Germany form the subject of supplementary laws, are treated of in the body of the Japanese Code. Is all this unknown to Mr. MURATA? And does he not know that the Spanish Commercial Code has some 150 Articles more than the Japanese?

The last point of criticism is the terminology of the Code. The new words employed are said to be numerous and difficult of comprehension. With this objection, which has no bearing on the character of the laws, we need not concern ourselves.

So then, every one of the criticisms advanced by Mr. MURATA, except that relating to terminology, is the outcome of either false conception or want of knowledge. There can be no hesitation whatsoever in pronouncing his whole case, as stated by himself, baseless and imaginary. Yet a local English journal devotes three leading articles to presenting his misconceptions to the Community; calls them "valuable testimony;" declares that "the unsuitability of the Codes to the nation's present condition has now been demonstrated beyond a doubt;" says that Mr. MURATA'S reasons "suffice to prove beyond the shadow of a doubt that last year in high quarters a serious attempt was made to create a good impression among foreigners by representing the country's laws to be more perfect than they were known to be;" accuses Count YAMADA of a "wild and unscrupulous scheme, calculated not only to undermine the authority of law, but to prove subversive of all morality;" reads a homily to "foreign writers who make it their daily business to present to the public nothing but the comely aspects of Japanese events," and with exquisite naïveté announces its "desire to be furnished with data that shall enable it to value things at their true price—in a word, its wish to know the whole of subjects and not merely the half which the cooking party among Japanese and foreign writers habitually give." We do not remember that a more striking display of error and artlessness was ever made in Yokohama. It has seemed worth while to expose the whole quaint business, even at wearisome length, not only because the subject is in itself so vital, and because Mr. MURATA is the first Japanese expert who has undertaken to furnish a detail of the charges preferred against the Commercial Code, but also because such prominence and endorsement have been given to the ex-Senator's demonstration by a local foreign contemporary. We do not pretend to think that the Code is perfect. Neither do we doubt the prudence of postponing its operation as a whole, however, desirable may be the speedy enforcement of certain portions of it. But we still wait for some proof that its provisions conflict injuriously with established Japanese customs, and we cannot but denounce in the strongest terms statements so misleading as those of Mr. MURATA and charges so ill considered as those based on his analysis by a local English contemporary.

## *A NEW SECT OF HERO WORSHIPPERS.*

YEAR after year, when nearly all the waking civilized world is holding its Christmas, there meets in Tokyo a small but ardent body of hero worshippers, the founders one might say of a new Cult. We shall not enter into the esoteric mysteries of their faith—that would involve the writing of an encyclopædia of scientific literature. We believe, however, that the society, as such, works wholly by tradition; and, neglecting the insignificant two and a third centuries that elapsed after the birth of their hero before things took shape, we can trace this tradition in unbroken sequence, nearly. For its founders yet live, and its beginnings fall within the Meiji Era. Further, the object of their adoration is an Englishman, whose life history is known much more fully than SHAKESPEARE'S, but not quite so fully as DARWIN'S. He was afflicted, or blessed, with absence of mind, like many another mathematician from ARCHIMEDES down through the ages. One of the High Priests of this coterie of hero worshippers, indeed, emphasised this fact the other night to the extent of remarking that whoso would be great in the Mathematics must first attain unto the Absence of Mind. For the great desire of these devotees is to be great in mathematics and the sister sciences; and what better can they do when a fitting time comes than worship at the Shrine of ISAAC NEWTON? Instead of Christmas, these natural religionists hold what might be called a Newtonmas. They style themselves the *Newton-kai*, and form a society unique alike in name and character. In the assembling of them-

Digitized by Google

selves together, they are governed by as rhythmic a law as that which governs the return of any anniversary. The professors, graduates, and students of the mathematical, astronomical, and physical classes of the University are *ex officio* members; once a member always a member; and there are no others. Such is the Constitution, a model of simplicity.

The Society was, we believe, launched as an undergraduate one by Messrs. FUJISAWA, TANAKA, and TANAKADATE, the first brilliant triumvirate of mathematical graduates which the Tokyo University gave to the world. In its early days, it met in the Students' Dormitory; but as the under graduates oldened into graduates and assistants, the Professors themselves were drawn into the fold, and a more suitable assembly hall was found in the University Observatory in Kaga Yashiki. Now, however, that building is devoted to Seismological pursuits; and one trial at the Observatory in its new location at Shiba sufficed to show that even NEWTON failed to attract properly at a distance of five miles. The other night for the first time the *Newton-kai* came together in the Physical Laboratory of the Imperial University; and here we hope it will find a permanent abode. Thus met, on Christmas, 1890, on Newtonmas, 248, the members of the *Newton-kai*, to hear each other talk, to view a magic lantern exhibition, to distribute appropiate gifts, and to lengthen out the small hours with laughter and good cheer.

The Society has no President—a portrait of the august Sir ISAAC presides over the scene. It keeps no written records, no minutes; but its traditions are simple and easily handed down from year to year. What entertainment there is is run by the second year students, assisted by the first year. Each professor is expected to make a little speech, which is some times historical, some times whimsical, as the individual spirit may prompt; but it must not be suggestive of the background of a black board. The meeting in fact is essentially social; and in the preparation of the magic lantern slides, the Committee of Management lay themselves out for frolic and jest. The picture may represent a comical incident familiar to most of the members; or it may be "shimboriku," or possibly a pictorial conundrum to guess. It was a fine humour for instance which gave a caricature of one student notorious for his indefatigable asking of questions. This youth was shown labouring under a shoulder beam from which hung two buckets filled to overflowing with points of interrogation; while in the dexter background was seated one of the professors, perfectly aghast as this mathematical labourer approached with his load.

After the magic lantern exhibition comes the lottery for presents. This is a great feature, productive of much merriment. Each person draws a paper, which may be blank, but usually has a name on it. This name may be one of the illustrious living, or the still more illustrious dead. Corresponding to each name is an article, which with all solemnity is presented to the holder of the paper. The connection between the article and the name is more or less symbolic, or it may rest on a far-fetched pun, to which the Japanese language so readily lends itself. Usually the jokes are very technical; but occasionally they appeal to a circle more wide than mathematical. Thus, to take examples from various years, the drawer of "NEWTON" got an apple, and the drawer of "FRANKLIN" a kite. "HERSCHELL" (Sir JOHN) was represented by a sprig of *Nanten* (southern heavens, which he surveyed); "ARCHIMEDES" by a naked doll supposed to be returning from the bath; while the holder of "KANT-LAPLACE" got a puff of tobacco smoke blown in his face, symbolic of the Nebular Hypothesis.

Some years ago it was pointed out by a European member of the *Kai* that in holding the "Newtonmas" on Christmas Day the members were guilty of a chronological crime hardly to be excused in men trained in the accurate school of NEWTON. For although he was registered as being born on Christmas Day, 1642, it was Christmas Day, Old Style. In all strictness he was born on January 5th, 1643. When it suits their convenience, however, scientific minds are not above compromise. The great convenience of having the fête at the beginning rather than towards the end of the winter vacation, and the avoidance of any clashing with Japanese New Year festivities, were sufficient to outweigh all other considerations whatsoever. Besides, did not NEWTON himself hold his birthday on Christmas Day? Why then should his admirers hold it on any other?

After all the peculiar interest of the "Newtonmas" lies in its existence. Only to the hero-worshipping Japanese has it occurred thus to pay honour to the memory of the greatest mathematical sage of all time. We fancy very few English speaking naturalists—to use the word in its widest and legitimate sense—are even aware that Christmas Day in 1642 beheld the birth of NEWTON. It is possible that nearly fifty years ago, a bi-centenary fête was held in Cambridge; and it is very probable that fifty odd years hence NEWTON'S ter-centenary will be celebrated in England, perhaps over all the civilised world. But an annual celebration by a NEWTON Club outside Japan is a thing not to be dreamed of, unless Japan influences the hero worshipping instinct of the Westerns as profoundly as she has influenced their æsthetic taste. To all of us who inherit directly the glories of the Newtonian age there must be a certain gratification in noting that it is an Englishman whom these scientific Japanese have found worthy of a place in their Calendar.

## *A JAPANESE CONFESSION OF FAITH.*

THE Sixth Synod of the Itchi Kyokai which met in the Sukiya-bashi Church, Tokyo, in the early part of last month, was rendered signally memorable by the debate upon the creed of the Church. Deep interest attached to the Synod owing to the fact that upon it devolved the delicate and difficult task of receiving or rejecting the report of the joint Committee appointed some time ago to agree upon a new Confession. This Committee consisted of three foreign Missionaries and four prominent Japanese of the Presbysterian Church, and it was hoped that the result of their patient and prolonged investigation would receive the approval of the Synod. The expectation, however, proved ill-founded. Not only was the Confession recommended by the Special Committee stoutly rejected, but an alternative proposition, to the effect that the Church should accept the Apostles' Creed alone as its Confession of Faith, met with a similar fate. The whole weight and tendency of the meeting seemed to be decidedly averse if not actually hostile to any draft savouring in any degree of foreign inspiration. Such at least was the impression gathered by more than one present on the occasion. It has long been recognised by the older missionaries that the spirit which in the political world has effected such a marked reaction in favour of purely Japanese customs and ways, now permeates in a considerable measure the general body of Christian believers. Though unspoken and unacknowledged for the most part, the cherished cry is for independence, the intensely national spirit having unmistakably swept over the Churches of the country as well as over the ultra-conservative parties and factions. The continued need of foreign aid and foreign cousel is undoubtedly admitted, but equally certain, we take it, is the fact that there exists in the Churches to-day a feeling which distinctly aims at exercising control over all matters relating to internal organization and discipline. Aware of this, conscious too of the alleged tendency of some members to assume towards the Scriptures an attitude tantamount to implied denial of their inspiration, little wonder that grave anxiety was awakened by the evident lack of unanimity. So pronounced were some of the speakers upon certain points that, for a time, according to Japanese published accounts, actual danger existed of separation resulting. Professor ISHIMOTO, a graduate of the Meiji Gaku-in, appears to have been one of those who most keenly realized the dangerous pass affairs had reached, for he with one or two associates, upon leaving the Church after a fresh failure to arrive at a mutually-acceptable basis, retired to his quarters and re-

Digitized by Google

verently set himself to the task of drawing up a creed. It proved an all-night work. When the Synod re-assembled the draft was submitted, only to be almost immediately challenged on the ground of its evident foreign authorship. Mr. ISHIMOTO assured his numerous questioners that not until half an hour before the meeting, when he had shown it to Dr. IMBRIE, had any foreigner suspected its existence. Opposition to it vanished, and within a very short time the Confession of Faith drawn up by the Professor and his co-workers was unanimously and enthusiastically adopted. The Creed, a translation of which we reproduce at length, is essentially evangelical, and though it consists in the main of the well-known Apostles' Creed, the Confession as a whole must be pronounced to be one of the most important, and from a Christian standpoint, one of the most gratifying of this or any other time. Specially reassuring must it be to those who have laboured for the firm lodgement of orthodox Christianity in Japan. It certainly sets at rest the question of the form of Christianity which one of the strongest of the Japanese Churches will ultimately adopt, and we shall be surprised if the clearness and scope of this, the first Creed formulated by Japanese Christians, does not ere long receive endorsement from believers of other denominations.

THE CONFESSION OF FAITH.

The Lord Jesus Christ, whom we worship as God, the only begotten son of God, for us men and for our salvation was made man and suffered. He offered up a perfect sacrifice for sin, and all who are one with Him by faith are pardoned and accounted righteous; and faith in Him working by love purifies the heart. The Holy Spirit, who with the Father and the Son is worshipped and glorified, reveals Jesus Christ to the soul, and without His grace man being dead in sins, cannot enter the Kingdom of God. By Him the prophets and apostles and holy men of old were inspired, and He, speaking in the scriptures of the old and new testaments, is the supreme and infallible judge in all things pertaining to faith and living. From these Holy Scriptures the ancient Church of Christ drew its Confession; and we, holding the faith once delivered to the saints, join in that Confession with praise and thanksgiving:—

I believe in god the Father Almighty, maker of Heaven and Earth:

And in Jesus Christ His only Son our Lord; who was conceived by the Holy Ghost, born of the Virgin Mary; suffered under Pontius Pilate, was crucified, dead, and buried; He descended into Hades; the third day He rose from the dead; He ascended into heaven, and sitteth at the right hand of God the Father Almightly; from thence He shall come to judge the quick and the dead.

I believe in the Holy Ghost; the Holy Catholic Church; the Communion of Saints; the forgiveness of sins; the resurrection of the body, and the life everlasting. Amen.

One important fact remains to be noted in connection with this interesting statement, and that is the resolution passed by the Synod making it the one Confession of Faith for ministers and laymen alike, a resolution which signally bears out the view, more than once expressed in these columns, that the Japanese Church would not burden itself with the mass of confessions, cannons, and dogmas inherited and held by the parent churches of the West.

## *THE NEW BRITISH CONSULAR MARRIAGE ACT.*

IT may seem a somewhat Hibernian method of describing the statute to whichthe above title refers, to say that it is not, strictly speaking, a Consular Marriage Act at all. It is an Act to amend the Law relating to the Marriage of British Subjects in Foreign Countries, but as the previous statutes on to this subject are usually called the Consular Marriage Acts we retain the title as the most accurate description of its purport that can be given in a title. The new Act is 53 and 54 Victoria, chapter 47, and its short title is "The Marriage Act, 1890." It starts out by repealing an Act passed in 1823, by which it was provided that marriages solemnized by a minister of the Church of England in the house of any British Ambassador, or in the Chapel of any British factory, or in the house of any British subject residing in the factory, or within British military lines by a chaplin or officer acting under the orders of the Commander of a British army serving abroad, should be valid. But after re-repealing this Act, the new statute immediately proceeds to rëenact it in regard to marriages at a British Embassy, but makes no provision as to marriage within British military lines. How British subjects under these circumstances are to get married within the lines of a British army occupying a foreign country is a problem which lawyers must be left to determine when the case arises. But there is one important distinction between the new Act and the old one which, to use a favourite expression of Mr. CARLYLE, is "significant of much." The earlier Act provided that the marriage was to be solemnized by a minister of the Church of England; the new Act is wholly silent on that subject, and therefore the marriage at an Embassy becomes now, like marriages before a Consul, a civil contract, and not as hitherto a religious ceremony. Another important distinction is that under the new state of things one at least of the parties must be a British subject; formerly there was no provision of this kind, so that for purposes of English law a marriage between two natives of the country might have been solemnized at the embassy. Indeed, there is a case recorded as late as 1874 in which a British subject in Teheran, who was a Protestant, married an Armenian who was absolutely incapable of marrying him under the law of Persia, and yet the marriage was held valid by an English Court. But if the new Act makes no provision for the marriage of British subjects during the hostile occupation of a foreign country, it does what is much more valuable from a practical point of view: it enables parties to be married before any governor, high commissioner, consular or other officer authorized by the Secretary of State to solemnize marriages; and the special provision is not confined to places outside the QUEEN'S dominions, but extends the Consular Marriage Act to marriages on board HER MAJESTY'S ships on foreign stations, "Commanding officer" standing for "consul." The Act further amends the Consular Marriage Acts by extending the hours from 8 o'clock to 3 in accordance with a recent statute which does the same for Great Britain. The statute also details the procedure which is to be followed where the marriage takes place before an ambassador, or governor, or on board one of HER MAJESTY'S ships. By the first sub-section of section 9, the QUEEN gets the power by Order in Council to exclude all officials from exercising their powers under the Act in cases where it would be inconsistent with international law or the comity of nations, or in places where sufficient facilities already exist for the solemnization of marriages. This curious provision is said to owe its existence to objections which have been raised by more than one foreign Power to these marriages by British officers, especially where one of the parties to the marriage is a subject of the country in which the marriage was performed. The Act also gives power to the QUEEN to declare at what places within an embassy or consulate the ceremony may be performed, and to make arrangement of other details of a similar character. An invaluable provision of the new Act, is section 6, which authorizes a consul to register a marriage where one of the parties is a British subject, although the marriage may never have been performed before him, if he is satisfied that it has been performed in accordance with the local law. For purposes of subsequent proof in English Courts this section is invaluable to British subjects getting married abroad; for registration by the Consul is equivalent to registration before a registrar at home; the record is preserved in Somerset House in exactly the same way, and is equally accessible for ever after. It therefore enormously enlarges the safeguards of marriage abroad for a British subject who, for reasons of his own, does not desire to be married before a Consul, or is perhaps, married at a place where no Consul resides, in which case he has nothing to do but to satisfy the nearest British Consul that he has been married in accordance with the local law, and the marriage is registered, and incontrovertible proof of it is accessible to all his descendants. If the statute contained nothing but this one section it would be a great boon to British subjects abroad. The section is so important that we give it here in full:—

"Where a Consul is satisfied, in accordance with regulations made under this Act, that a marriage between parties, of whom one at least is a British subject, has been duly solemnized there in accordance with the local law of the country, he may register the marriage, and thereupon, sub-

Digitized by Google

ject to the said regulations, the Consular Marriage Acts shall apply as if the marriage had been solemnized in pursuance of those Acts." Another invaluable advantage of this section is that it removes at once any conflict between local law and British law on the subject. Before the Act, people frequently availed themselves of the Counsular Marriage Act with the result that while their marriage was good enough in England it was doubtful in the foreign country in which it took place, where, of course, an English Act of Parliament had no authority. And this was especially the case where one of the parties was a native of the country. Prudent persons in future, therefore, will be married by local law, especially if one of the parties is of local birth, and will then have the marriage registered by the British Consul. In this way it will be binding in English, equally with local, law, and subsequently whatever religious ceremony the parties may desire, can take place as is now frequently the case in connection with Consular marriages. No time has been lost in issuing the first Order in Council under the new Act. Formerly questions frequently arose as to the precise place at which a marriage might be solemnized. The Order, published in the *London Gazette* of November 25th, removes all these doubts by giving the largest possible construction to the words "Embassy or Consulate." It includes "every office, room, or place," within the precincts or curtilage of the "Embassy, Legation, or Consulate;" and it includes the dwelling or residence or usual place of abode of the Consul, as well as his office.

Thus the general effect of the new Act is to remove the grievance sometimes felt by Nonconformists that they could only be married at the Embassy by a Minister of the Church of England; they now may have their own rite, or if they like, a marriage under section 9 of the Consular Marriage Act of 1849. It enables a number of important officials to legalize a marriage by their presence, or even to solemnize it themselves, who had not that power; it gives greater latitude in the hours within which a marriage may be solemnized, and, above all things, it enables British subjects to remove for ever any possible doubt as to the legality of their marriage in local or English law, and it removes any conflict between the two by the simple expedient of satisfying the nearest British Consul that they have been married by local law, and on its registration the marriage is equally valid under English law. It is this important provision of the statute which, we think, should be in the minds of all our readers whether they contemplate matrimony or not.

## "*LUX MUNDI.*"

A SCHOOL of Oxford apologetics has recently given to the world a volume of essays that has created no little stir. This volume, bearing the title *Lux Mundi*, and now in its tenth edition, represents the opinions of the younger men of the High Church party in the English Church. Its editor, whose name is appended to one of the most violently attacked of the essays, is the Rev. CHARLES GORE, Principal of Pusey House, and several others of the writers are connected with Keble College, Oxford. The present generation has seen the founding at Oxford of colleges under the auspices of certain schools of thought. Dr. FAIRBAIRN, a tower of strength among the Congregationalists, is principal of Mansfield theological college in the old University city. The name of Keble College sufficiently indicates the school of thought with which its staff are in sympathy. That such colleges an founded and are able to flourish, betokens a liveliness in religious discussion as far removed as can be imagined from the dull and dreary formalism of religious life at the Universities in the olden days. This deadness was almost characteristic of Oxford until the great preacher, who has just passed away at a ripe age, awoke a religious enthusiasm which is still pulsating over the length and breadth of England. Cambridge, which SIMEON and his school gained over for the cause of Evangelicalism a century ago, is less in the stream to-day.

The natural result of the founding of "schools,"—we use the word in the academic sense—is the prevalance of discussion and a resulting activity of the press. The cream of what is discussed in lecture-hall and debating-room demands, by its inherent vitality, a wider field of interest and discussion. The denizens of other abodes of learning and the public at large are to be instructed and interested. Thus has it happened at Oxford. The enthusiasm which twenty years ago, founded Keble College is now perpetuating itself in publications like *Lux Mundi*, the product, as the preface states, of "writers who found themselves at Oxford together" between the years 1875-1885, engaged in the common work of University education. These essays are an attempt to place theology on a more modern pedestal, by showing that the Church is able in this age as in other ages to assimilate all new material and remain as stable as ever. The rude blows which criticism has dealt at the inspiration of the Scriptures cannot but have been keenly felt at a great University centre like Oxford. Apologists for the Christian faith there are obliged to make concessions, while the swaddled pettiness of theological seminaries in isolated places is bolstering up untenable positions and teaching its crippled nurslings a dialectic for the perpetuation of error. As might have been expected, the concessions made by the authors of *Lux Mundi* have fluttered the theological dovecotes here, there, and everywhere. The Oxford apologists have reached a stage where the others may find themselves a decade or two later.

To put it roughly, the theology of *Lux Mundi* abandons the old Protestant position that the scriptures of the Old and New Testament constitute an inspired literature separate and apart from other literature, and to be approached by a different kind of criticism. Subject to all the conditions of history and the laws of evidence, these records are to be examined as other records are examined, a process which entails complications, but which must be faced. The definition of faith given by the first of the Essayists is so Protean as to make a dogmatist of the old school gasp. Canon H. S. HOLLAND demands for faith a free field which is hard to define, upon which reason on this side is apt to enroach and emotion on the other; while the scientific frontiers are ever fixing, shifting, changing, and vanishing. Placing faith at the back of the other powers and deeper than them all, he would call upon believers to view with eqanimity the advances of scientific and historical criticism which are removing the old landmarks, but cannot touch the department which belongs by right to faith, "the most primal and elemental act of our personality." He puts faith outside the region of knowledge, and claims that it may use as its instrument every stage of science. So much does the essayist surrender in his fear lest some untenable position may be retained, dislodgement from which in the future will cause increased panic, that he makes concessions which are hard to reconcile with after claims made by other contributors. For instance, if with the resurrection of our LORD, as ST. PAUL himself assures us, the Christian's faith stands or falls, then the evidence for Christianity is brought strictly within the range of historical criticism; a position insisted upon by the writer of the sixth Essay.

It is not the intention of this article to enter upon a general discussion of the book, nor to review the controversy in which it plays so conspicuous a part. Perhaps the most striking passage in the work is to be found at the close of the fifth essay, of which the author is the Rev. J. ILLINGWORTH. Here the essayist, speaking in the language of evolution, claims for Christianity that it introduced, with its founder, a new species upon the earth, a higher development of the genus man. A divine vital energy was then communicated to humanity, which has perpetuated itself in subsequent generations of men. Scattered throughout Christendom are found men of every age, temperament, character, and antecedents, by whom the problem of moral evil has

Digitized by Google

been successfully grappled with; who have a personal conviction that their past sins are pardoned and that the whole grasp of evil upon them is loosened; and who in consequence rise to heights of character and conduct which they know that they could never otherwise have attained. These men have a spiritual lineage which can be traced back for the past eighteen hundred years, pre-Christian antiquity containing nothing analogous to it. "It has all the appearance of being, what it historically has claimed to be, the entrance of an essentially new life into the world quickening its palsied energies, as with an electric touch. And the more we realize in the bitterness of our own experience, or that of others, the essential malignity of moral evil, the more strictly supernatural does this energy appear." Such is Mr. ILLINGWORTH'S answer to negative critics, and, in face of the work of the Salvation Army and other Christian Missions, it comes with no little force. "Christianity distinctly declines to be proved first and practised afterwards. Its practice and its proof go hand-in-hand. And its real evidence is its power."

The language is no doubt, in part, the language of mysticism; but then a religion is not a religion without a considerable element of mysticism. A religion that can be proved as a mathematical science, submitting itself on all sides to experimental investigation, is an impossibility. The writers of *Lux Mundi* have wisely abandoned out-works that are becoming not worth the defending and a mere source of panic. Their frank acceptance of novel methods of scientific and historical investigation is a wholesome and lucid intellectual act. Society in England and America is suffering from the general mental obliquity and muddle-headedness which results from an absurdly disingenuous treatment of vital questions of belief.

## *IMPERIAL PARLIAMENT.*

HOUSE OF PEERS.—JANUARY 28TH.

The House of Peers re-assembled on the 28th instant at 1.20 p.m. in the Imperial Hotel, after an interval of a week. The President announced a change in the Committee on Finance, and also informed the House of the death of one of its members, Viscount Kuki. The House then proceeded to the third reading of the Weights and Measures Bill. Viscount Tani said that he was opposed to the Bill in its entirety, but as the House had passed the first and second readings, the question of rejection could not easily be raised now. He approved the idea of reforming the Japanese system of weights and measures and fixing the standards, but he did not at all approve of a temporary reform. Frequent changes in such matters were to be deprecated before everything. Japan was a sort of hotel for weights and measures. She used those of various foreign countries as well as her own, and very considerable confusion resulted. Therefore he fully appreciated the expediency of fixing a system, but he thought that the utmost care and deliberation should be observed. Scientific men asserted that the French métre was destined to become the standard of length for the whole world, and he himself admitted the excellence of that measure. But from a Japanese point of view the métre was inconvenient. There had been much discussion as to whether the French métre or the English yard should be used in the War Department. The English yard was equal to about three feet Japanese, whereas the métre was 3 feet 3 inches—a considerable difference. In introducing a foreign measure, the closer its agreement with the measures of the country the better. In the army the ranges of small arms were, for the most part, calculated in métres, and it thus became necessary to teach soldiers both the French and the English systems of linear measurement. It was most desirable that such needless confusion should be avoided. The Navy, on the other hand used the English system chiefly, and incalculable inconvenience might result from this difference when the two services operated together. Foreigners observing such a state of affairs, would conclude that Japan had no measures of her own. Doubtless some excuse was to be found in the fact that, after the Restoration, cast-off arms of various patterns had been procured from Western countries, but the times were changed now, and the State had an arm of its own. Everything pointed to the desirability of a fixed system of weights and measures. English or French, no matter which, the nation must make up its mind once and for all. The number of countries boasting a population of over forty millions might be counted on one's fingers. Such a country, independent and civilized, was disgraced by not having a fixed and scientific system of weights and measures. But the framing of such a system was a task of immense difficulty and importance, and should be entrusted to a committee of theoretical and practical experts. He admitted the scientific excellence of the métre as a standard, but he thought that the English yard was more widely used and known in Japan, and that its adoption would prove more convenient. He did not believe that the French métre would ever become the universal standard, and he moved that the Bill before the House be rejected, and a Committee be appointed to examine into the whole question. Mr. Shigeno supported the Bill. He said that Viscount Tani fully admitted the vital necessity of substituting some fixed system for the confusion now existing. The Bill gave them such a system. Viscount Tani had formerly expressed keen regret that Japan should have recourse to foreign systems of weights and measures. But now he admitted the expediency of her doing so. Could she devise some more accurate standard than the métre, the case would be different. But failing to do so, she must take the best she could find. Mr. Shimauchi Takeshige entirely disagreed with Viscount Tani's proposal for delay. There could not be the smallest doubt as to the faultiness of Japan's present system of weights and measures. Its speedy reform was a matter of pressing urgency. On the other hand, the scientific accuracy of the French métre was absolutely established, and the provisions of the Bill had been amply considered. He was one of those that had voted for postponing the operation of the Bill for 7 years, but from the point of view of the mere advantages of the proposed system, he should like to see it put in force at once. Mr. Miura Yasu approved of the reform of the Japanese system, and was quite willing that foreign standards should be used if convenient. He had therefore voted for the first reading of the Bill. But since the amendments proposed by him at the second reading had been rejected, he should vote against the third reading. He could not agree with the idea of referring to foreign weights and measures, as such, in the body of a Japanese law. Have recourse to foreign weights and measures, if you please, in elaborating your system, but do not mention the fact in the text of your laws. To do so was to offend the national dignity. He objected, in the second place, to the articles providing that regulations relating to weights and measures should be embodied in Imperial Ordinances. He also objected to the manner in which the catty (*kin*) had been treated. Finally, he could not possibly endorse the project of entrusting the manufacture of weights and measures to purely private enterprise. Rules might be perfect, but if they were not properly observed, their value became nothing. For all these reasons he should vote for the rejection of the Bill, and the appointment of a Committee of investigation. Mr. Kikuchi Dairoku said that he had no desire to oppose the members who had spoken; he merely wished to correct their misapprehensions. There was no question of adopting either a French system or an English system. There was question simply of choosing a scientific and accurate basis for their own system. In their mints they were already obliged to use foreign weights owing to the inaccuracy of their own, and the same was true of the measures employed by the Army and Navy. Surely that was highly inconvenient and discreditable. A great deal had been said about the mention of the French métre in the second article, but the designation "French" was merely employed for descriptive purposes. They had to choose some standard. How could they indicate their choice definitely without using the precise name of the thing chosen? The Minister of Agriculture and Commerce had already explained in the most explicit manner that all the Japanese names of weights and measures were to be preserved, and that the only object contemplated by the Bill was the referring of these weights and measures to accurate standards. How could such a course be possibly regarded as contrary to the national dignity? He reminded the House that there was no idea of interfering with the weights and measures used for purely domestic proposes. The object contemplated was only to correct those employed in trade or in public calculations. Viscount Tani had argued that many of the faults of the present system were due to the perfunctoriness of the official inspection of weights and measures, but however carefully inspection might be carried out, if the standards of comparison were inaccurate, as was the case in Japan at present, satisfactory results could not possibly be attained. The President said that before the House voted on the Bill, he desired to call attention to the question of drafting. Uniformity of language having been secured in drafting the Constitution and other laws, it seemed very desirable that the proposed measure should be revised in order to perfect its phraseology. He suggested that the House go into Committee to revise the drafting. A majority voted in favour of this suggestion. Mr. Kaneko pointed out the great inconvenience and delay that must result if the House itself had to deal with every alteration in the drafting of a Bill. In adopting such a method the rules of procedure must be followed, and it would be necessary for a member to obtain 20 supporters in order to propose the change of a single word. He suggested that all such business be entrusted to the Bureau of General Business (*Jimu-Kyoku*). A majority voted for this course. The House then went out of Committee. Mr. Okauchi having spoken in support of the Bill, the President announced that the final vote would now be taken. A majority voted for the passing of the Bill. The House rose at 5.30 p.m.

JANUARY 29TH.

The House met at 11.10 a.m. In the absence of Count Ito the duties of President were discharged by Marquis Konoye. Marquis Hachisuka, as President of the Committee on the Bill for the amendment of the Registration Law, explained the alterations which the Committee recommended to be made in the law. Mr. Shirane, Government Delegate, in answer to a question, said that the enforcement of the provision for a duplicate register would not entail an expense of more than ten *sen* per office, and that no other additional outlay would be involved by the new law. Mr. Miura Yasu, as a member of Committee, explained that a clause had been inserted securing the Registration Law's independence of the Civil Code, inasmuch as the latter might be expected to undergo considerable revision before 1893, when the former comes into force. Mr. Murata Tamotsu said that, while approving of the measure before the House, he could not approve of its enactment in the form of a law, but thought that it should

Digitized by Google

be promulgated as an Imperial Ordinance. Mr. Hozumi opposed this idea, and urged that the House should proceed at once to the second reading of the Bill. A long discussion followed as to whether the Registration Bill should constitute an independent law, or be included in the Civil Code, or be an Imperial Ordinance. The House rose at 4.05 p.m. without having come to a decision.

HOUSE OF REPRESENTATIVES.

The House met at 1.25 p.m. The President explained that though every effort had been made to prepare a temporary Chamber for the use of the House, the arrangements were necessarily very incomplete. Further, a great part of the archives had been burnt, and in order to avoid inconvenience as much as possible, the more important documents had been printed first. Members were requested to intimate any losses which seemed to call for immediate repair. Certain changes in the Government Delegates were then announced. The President further called attention to the fact that nearly two-thirds of the fixed term of session had already passed, yet not even the debate on the Budget had been concluded. Many motions by members had still to be considered, and twenty-four Government Bills awaited discussion. Add to all this the delay inevitably occasioned by the state of the temporary Chamber, and it became evident that some measure must be adopted to extend the hours of sitting. After sunset the building then occupied offered many obstacles to the discharge of business. He therefore suggested that, without altering the Rules, the House should agree to sit from 10 a.m. to 4 p.m. every day. Mr. Horiuchi suggested that the hours should be lengthened to 5 p.m. Mr. Makino said that, judging from the present habit of the House, if 10 o'clock were fixed for the time of meeting, business would not really begin until 11. He therefore suggested 9 a.m. as the hour of assembly. After some remarks from other members, the President begged the House not to waste time over this discussion. The proposal, as stated by the President, was then put and carried. The House went into Committee on the Budget. The President announced that the section of the Department of Justice would be proceeded with, and that the Government Delegates for the Army and Navy would reply to questions still left unanswered. Mr. Mitsukuri, Delegate for the Department of Justice, answered a number of queries as to minor points, explaining, among other things, that the total sum allowed to judges for purposes of entertainment was 15,000 *yen*. The House then proceeded to examine the Budget Committee's Report on this section. Mr. Taketomi Tokitoshi, on behalf of the Committee, pointed out that, as compared with other Departments, the reduction (1,320,000 *yen* in a total of 4.660,000 *yen*) recommended in the case of the Department of Justice might seem excessive, but the difference was due to the principle adopted by the Committee, namely, to cut down administrative expenses as much as possible, and not interfere with expenses required for actual works of public utility. They had not touched the expenses of distributing judges, public procurators, and so forth, but had only cut down their salaries. They had eliminated the appropriation on account of expenses of law students abroad—except in the case of students already receiving allowances—also the appropriation for loans to students, for as there were already some 700 graduates in law either of the University or of the Law Schools, the Government need not assist this class any more. Similarly they had cut out the item of subsidies to law colleges altogether. These subsidies, originally granted as a temporary measure, had already been going on for four years. Being asked whether the reduction made in the appropriation for the Department's foreign employés would not disturb the agreements with the employés, he replied that the only item touched had been a sum of 1,500 *yen* paid every year for the residence of Mr. Paternostro, which they had cut down to 480 *yen*. On examining the agreements, they had found that the allowance for a house was 40 *yen* monthly, a clause being added to the effect that the Minister might provide a house instead of paying an allowance. They understood this to mean that the Minister had power to provide a cheaper house, if he could find one suitable, not that he might go beyond the fixed sum. It appeared that the house occupied by Mr. Paternostro belonged to Count Yamada, and therefore no special explanation of the item seemed necessary. They had simply reduced it to the amount fixed by the agreement, thus saving the country 1,020 *yen* annually. He acknowledged that the Committee had not considered whether the Law Colleges could support themselves if the subsidies were withdrawn. Mr. Mitsukuri, the Government Delegate, in answer to a question, said that the Government did not interpret its agreements with foreigners in the same way as the Committee did. Mr. Paternostro had occupied a very high position in his own country, and when signing his agreement there, he had had no knowledge whatever of the nature of the residences procurable in Tokyo or their cost. When he came here, the Japanese Representative in Rome wrote to explain that he was a jurist of eminence in Italy, and urged that every consideration should be shown to him in respect of a residence. It was quite impossible that with his large family Mr. Paternostro could find any suitable house for a rent of 40 *yen* monthly. Count Yamada's house was large and the grounds extensive. He had been very reluctant to let it—(laughter)—but had been strongly pressed to do so. The House then passed to the section of the Department of Education. In answer to questions, Mr. Tsuji, Government Delegate, explained that the *Yobimon* (preparatory school) served chiefly for students who purposed entering the University, whereas the Upper Middle Schools were for students seeking a technical education or desiring to complete a course of intruction in higher subjects. The two were different, and had different objects. Mr. Takagi Masatoshi asked about the Government Nursery (*ikushi-ba*) at Mita. He understood that it had originally been transferred by the Department of Agriculture and Commerce to the Department of Education, and that, in October, 1886, it had been sold to Mr. Kimura Shohei for the small price of 2 *yen* to 2.50 *yen* per *tsubo*. Little more than a month afterwards, Kimura had sold the land to the Naval Department for 4 *yen* per *tsubo*, clearing 10,000 *yen*, and keeping 1,000 *tsubo*. He wished to know whether this was so, and he explained that his reason for asking was that, although sales of Government property were supposed to be by public tender, there appeared to be cases in which the sales were made directly to some favoured individual at low rates. Mr. Tsuji replied that as the matter referred to was not included in the Budget then under consideration, he could not answer without making inquiries. Mr. Aoki Tadasu said that the Girls' Upper Normal School (*Koto Joshi Shihan Gakko*) had originally been independent; then it had been included in the section of the Boys' Upper Normal School, and now it was again independent. He wished to know whether any special reason existed for this last separation. Also, how many girls had graduated at this school since its establishment, and what had become of the graduates. Mr. Tsuji replied that experience had shown the inadvisability of bringing the female and male schools under the the same system. The methods of education could not be sufficiently assimilated to allow of any economy, and the general results had proved unsatisfactory. The number of graduates had been 52, of whom 49 were employed as teachers, and were doing very well. After some minor questions, Mr. Kozaka Zennosuke asked whether it was necessary that the University should be in Tokyo. Also, why the Engineering College, having such a handsome and well equipped establishment at the Torano-mon, had been moved to Hongo. Finally, what changes had taken place in the Middle Schools in the provinces. Mr. Tsuji replied by giving a brief retrospect of the history of the University. There had been talk at one time of locating it at Konodai, in Shimosa, but the balance of opinion had been in favour of Tokyo. As to the moving of the Engineering College, that step had been taken for the sake of using the same teachers at the University and the College; also for reasons connected with apparatus, and finally on account of the control of the students. A large economy had been effected by the change. With regard to the provincial Middle Schools, no special changes were to be noted during the past two or three years. Answering other questions, he explained that there were rules relating to students sent abroad by the Government, and that the Department had to employ them on their return. A number of minor queries having been put and answered, the President announced that unless objection was raised, he should consider that the questions relating to the Educational Department section of the Budget were concluded, and the House, at its next sitting, would proceed to examine the Committe's Report. The House rose at 5 p.m.

## *CORRESPONDENCE.*

### KEROSENE OIL STORAGE IN KOBE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Referring to the paragraph in your issue of 22nd inst. about the new oil godowns at Hyogo, I must take exception to that part commencing, "The incredible accusation that the local authorities," &c. As a matter of fact the godowns were started by private enterprise, some of the Bantos employed by foreigners at Kobe being shareholders. Some time since one of those gentlemen, in the course of conversation with regard to a godown at Ohno, for which I was in treaty, informed me I had better not take it for a long period, as the Wada Point Godowns, when completed, would offer better accommodation. On my suggesting that no one would take the trouble to store oil at Wada, he laughed and said, "You must, the Authorities will make you!" This certainly induces me to believe that the local authorities have in the present case, acted in the interests of a private Company.

One point which appears to have been overlooked in the discussion so far, is that whereas the Ohno godowns are declared to be an element of danger to the neighbouring property, which consists for the most part of wretched shanties, nothing whatever has been said about the town of Hyogo where oil is constantly stored in large quantities. There thousands of dollars worth of valuable goods and buildings are constantly in greater peril, inasmuch as the danger from without—looking at the narrow streets, &c.—(which is not the case at Ohno)—is fully as great, if not greater than the risk from within.

Yours faithfully, OBSERVER.

January 24th, 1891.

[Our correspondent's evidence—that of one of the Bantos by whom the godowns had been built—is not convincing. It is also a mistake to suppose that nothing has been said about Hyogo. The new regulations apply to Hyogo also, and will be enforced there from the date of their going into operation.—ED. *J.M.*]

### THE RECENT CASE IN THE PORTUGUESE CONSULAR COURT.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I suppose I ought not to quarrel with a newspaper editor for giving greater credit to his own reporter's account of my argument in the Gama case than to my statement of what I said; but I may be allowed to observe that the report in the *Mail* was greatly condensed, and that you select a single sentence from it and then add, by way of reply to my letter, that you fail to see how the passage so selected can have been intended to refer to the paragraph in the *Japan Daily Mail* of the 22nd November. Had you looked at the passages immediately preceding and following the one selected you would have seen that the force of your editional comment is distinctly weakened; and had you taken the trouble to refer to the report in the *Japan Herald*, which appeared on the day on which I addressed the Court for the defence, you would have found that my statement to you was there corroborated. Your reporter has not, so far as I know, asserted that I did not use the argument I allege, in my letter to you of yesterday, that I did make use of; and I should have supposed that my statement of a matter of fact within my own knowledge and recollection, even

Digitized by Google

if not supported, though it happens to be so, by the *Herald's* reporter, and uncontradicted by your own, might have been entitled to greater weight than you seem disposed to attach to it.

Yours faithfully,

THE COUNSEL FOR THE DEFENCE.

Yokohama, January 23rd, 1891.

[Certainly we accept our correspondent's statement. We quoted from the short-hand report to indicate the basis on which our own comments were founded. But the fact that the strictures in question had reference to the article in the *Japan Mail* of Nov. 22nd, does not weaken our argument. Certainly nothing could have been farther from the intention of that article than to stir up bad blood between foreigners and Japanese, nor do we see how any such result can be apprehended because a foreign journal makes it clear that the foreign residents have no manner of sympathy with persons guilty of rudeness to Japanese women in railway carriages or elsewhere.—ED. *J.M.*]

---

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have been prevented by sickness from taking earlier steps to deal with the comments made on my report of the Gama case.

In his first letter to you Mr. Lowder stated:—"I did not argue that the object of the Foreign Secretary of the Railway Department in bringing the charge against Gama was to stir up bad blood and strife against foreigners;" "on the contrary, my contention was that this particular charge had already been seized upon by a portion of the press to stir up strife, etc., and I alluded to the paragraph in the *Japan Daily Mail* of the 22nd November last, headed 'Improper treatment of Japanese Female Passengers in Railway Carriages by Foreigners.'

In his next letter Mr. Lowder, in corroboration of the above statements, referred to the report of the *Japan Herald*, the relative portion of which I quote alongside the corresponding part of the *Mail* report:—

| The "JAPAN MAIL." | The "JAPAN HERALD." |
|---|---|
| "Let the Court just look to what this might lead in the present state of agitation in the minds of the Japanese against foreigners. Just consider the anti-foreign feeling existing throughout the country; was it not apt to be strengthened by this exaggerated charge? And all this was done by whom? By an employé of an employé of the Railway station, Mr. Aldrich, one in Japanese service, in order to stir up bad blood and strife against foreigners. He called it nothing less than disgraceful that upon the evidence before the Court such a complaint as this should have been based." | "Counsel drew attention to the present anti-foreign agitation in Japan, and asked how this would be looked at in view of the inflammatory article calling attention to the insult of Japanese ladies by foreigners. The whole thing was done by Aldrich in order to stir up bad blood and strife, and it was nothing short of disgraceful for such a charge to have been brought." |

Now, Sir, the quotation from the *Mail* report contains, in third person, every word that Mr. Lowder uttered on the subject of anti foreign agitation in this country, or on the subject of stirring up bad blood and strife among foreigners. You will see that the first sentence of the *Herald* extract is divided by a comma into two parts of unequal length. The latter part is absolute invention. Mr. Lowder did not refer to any "article"; he did not call any article "inflammatory."

Yours, &c., YOUR REPORTER.

January 26th, 1891.

[Except as bearing upon the characteristic charge that our report was purposely garbled—a charge scarcely worth noticing—the question of absolute accuracy is not vital. In the two reports alike—ours, which the counsel for the defence queries, and our contemporary's which he apparently endorses—the accusation of stirring up strife and bad blood is preferred against the Foreign Secretary of the Railway Department alone. However, the counsel says that he intended to refer to the *Japan Mail*, and his statement must, of course, be accepted as final.—ED. *J.M.*]

---

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Mr. Lowder's contention, in the two letters he wrote to you, was that in his speech on the Gama Case he argued, *not* that the object of the Foreign Secretary of the Railway Department was to stir up strife, but that "this particular charge had already been seized upon by a portion of the press to stir up," &c.; and that he alluded to the paragraph in the *Mail* of 22nd November. He referred for corroboration to the *Herald* report. I took the liberty of characterising that portion of the *Herald* report which makes Mr. Lowder refer to the article in the *Mail*, as an absolute invention. I said Counsel did not refer to any "article," nor did he call any article "inflammatory."

Let us see what Mr. Lowder, according to the latest information, did say?

Two gentlemen assure the editor of the *Japan Herald* that they heard Mr. Lowder "refer to the 'inflammatory article' which had appeared in the *Japan Mail*." Mr. Litchfield authorises the editor to state that the remark (what remark?) was made; the reporter of the *Herald* "distinctly heard Mr. Lowder refer to the article in the *Mail*" and is corroborated by some auditors who were in the room (the "gentlemen" of the editor and the "auditors" of the reporter seem to pretty well comprise everybody present).

Mr. Lowder, then, "referred" to the article in the *Mail*.

How does the reporter whose record of Mr. Lowder's sayings is upheld by that gentleman describe the incident?

He reports—*not* that Mr. Lowder drew attention to the article—but that Mr. Lowder drew attention to the "anti-foreign agitation in Japan," and asked how this would be looked at in view of the "inflammatory article calling attention to the insult of Japanese ladies by foreigners." And then, according to this recorder, Mr. Lowder dropped the "inflammatory article" as briskly as if it were really very much on fire, and went on to say that "the whole thing was done by Aldrich to stir up bad blood and strife," &c.

Between the "gentlemen" and the "auditors" arrayed against me I at first felt somewhat stranded, but Counsel for the prosecution seemed to have miraculously escaped inclusion in either class—to have been mentioned as an after-thought, so to speak. This awakened my suspicions, and I called on him.

Mr. Litchfield's impression is *not* that Mr. Lowder argued that "a particular charge had been seized upon," &c., and that Mr. Lowder alluded to the paragraph in the *Mail*; but that Mr. Lowder condemned Mr. Aldrich for having in the then state of anti foreign agitation given an opportunity to persons of writing or speaking about insults to Japanese ladies by foreigners.

Mr. Litchfield mentioned incidentally something about the accuracy of the *Herald* extract included in my last letter. He said it wasn't at all correct.

Under these circumstances, I must repeat that the portion which I previously indicated of the *Herald* report is an "absolute invention."

Yours, &c., YOUR REPORTER.

Yokohama, January 29th, 1891.

## BANK HOLIDAYS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The Banks in Yokohama surely should be considerate, and open their doors at least for a part of the business day instead of shutting out their supporters on the birthday of nearly every potentate of Europe, Asia, and America. This holiday mania is not in vogue in the treaty ports of China, or elsewhere. There are many residents who would like to bank their cash, obtain cash for cheques, and would like a quotation on the many holidays observed by the Banks which by British law should be open for business. Besides the inconvenience of banking, the Banks have set a bad example to the local press (yourself excepted) as the *Gazette* and *Herald* coolly announce there will be no issue of their (dull) sheets on these holidays and birthdays. This is really too bad, and no credit to this community: closed banks and not even a blank sheet to subscribers to newspapers. No wonder business is dull in Japan.

Yours truly, VISITOR.

Yokohama, January 27th, 1891.

[We must confess that our own failure to observe the holiday was due to accidental omission of the usual notice that there should be no issue of the *Mail*. We grieved at the mishap, but are glad to find that it brings us credit.—ED. *J.M.*]

## THE JAPANESE HYMNAL.

TO THE EDITOR OF THE "JAPAN MAIL"

SIR,—This morning my attention was called to the letter of "Cuique Suum" in which he takes exception to the statement of the *Japan Mail* that the new Japanese Hymnal (*Shinsen Sambika*) is "the pioneer music-book printed in Japan with type made and set up in this country."

Allow me to give some facts which will not only show that the correction of "Cuique Suum" is quite natural, but which will confirm the truth of the statement of the *Japan Mail*.

At the request of the Seishi-Bunsha, I ordered in 1888 a few specimens of music type from Boston; and from these models the type was cast and the fount gradually made up.

The work of setting up and of correcting the first pages was laboriously slow, and at times completely suspended on account of the lack of sufficient type of a certain kind. It will be observed that the new hymnal contains nearly 300 pages of four-part music.

While the work was proceeding in this slow manner, an order was received by the same company to print a Romanized edition of the *Nippon Sei-ei*, the hymnal referred to as used by the Catholic Church. During the periods of waiting for extra type, the printers were enabled with the type in hand to complete seventy or eighty pages of the Catholic Hymnal in the soprano part only. This was published in the latter part of 1889.

From these facts it is clear then that not only in the first part of the *Shinsen Sambika* do we see actually the first attempt at music printing; but as a completed work it is "the pioneer music-book printed in Japan with type made and set up in the country."

Thinking that not only "Cuique Suum" would be pleased to have this explanation, but that some others of your readers would like to know the facts, I send you this letter.

Yours truly, GEO. ALLCHIN.

Osaka, January 27th, 1891.

---

## *UNION CHURCH.*

The annual meeting of the Union Church was held on Monday at Van Schaick Hall. Between twenty and thirty members of the Church and Congregation were present. The Rev. E. S. Booth presided. Prayer having been offered, the minutes of the last annual meeting, &c., and the Treasurer's report, having been published in the papers, was taken as read. Gratification was expressed that the bi-monthly collection had resulted favourably, and that the collection taken up at the Hall for the evening services had more than sufficed to defray the expenses of lighting and heating the room. Attention was drawn to the fact that by a slight typographical error the rent of the parsonage was made to appear to be $390 instead of $300. Mr. Sale spoke of the need of assistance on the part of the laymen of the Church to make good the loss sustained through the departure of several pew-holders from the port; and, in reply to an enquiry from Mr. Wilkin, explained that the difference between the donations of 1890 and those of the preceding year was due to the special appeal made last year in connection with the organ fund. Mr. Wilkin alluded to the satisfactory increase in the pew-rents. The Chairman then called upon the Pastor for his report. No questions being asked, the Chairman said he was sure he did but speak the mind of the Church when he said that all feel and know the difficulties under which their Pastor had laboured. Yokohama was a difficult place for pastoral work, and not the least because the Community was constantly changing—some coming, others going. It was a field in which a gain of one even in membership was encouraging. His own observation went to show that attendance at Church services had increased during the year. The Pastor's work bore evidence of zeal and earnestness, and it was not necessary to go back many years to bring to mind the former condition of the Union Church. There is life and unity among the people now compared with what formerly prevailed. Late meetings had attested the fact. The absence of several on the present occasion was due to a misapprehension of the character of the meeting. Mr. Booth looked to a day when the Church would possess a thorough equipment of officers from the laity bound to make righteousness and truth thrive in the community, and then the Union Church would be stronger than it is at present, and in its strength would be well able to take all its officers from its own roll of membership and not in some measure from among the missionaries. The election of officers was then proceeded with, the result of the ballot being the reëlection of Dr. Hepburn, Rev. E. S. Booth, and Rev. G. F. Draper as Elders; the election of Messrs. W. D. S. Edwards and A. J. Wilkin as Deacons; of Messrs. T. Rose, W. Cameron, and Geo. Sale as Trustees, the latter gentleman being also appointed to the Treasurership. Mr. W. D. S. Edwards was reëlected Superintendent of the Sunday School. This concluding the purely business portion of the meeting, the Pastor rose and called upon Mr. C. V. Sale to submit a proposition with reference to the hymn books now in use by the congregation. It is proposed to replace the present books by the volume known as "Church Praise," the work with which the name of E. J. Hopkins, Mus. Doc., is principally identified. This hymnal combines the best features of most works of sacred song, and is that which was compiled by a Committee of the Presbyterian Church of England. It has been some years before the public and has steadily gained in favour. For its compilation the proprietors of Hymns Ancient and Modern most generously permitted the use of their copyrights, and the result is a modern hymnal which at once preserves old associations and secures respect to the diversities of musical taste. After considerable discussion, it was finally decided to adopt the proposed new hymnal. It was made clear that the substitution

Digitized by Google

of the new and improved work for the old, which has been in use several years, would involve a very small outlay. The meeting dispersed at 10 o'clock.

## *THE GRAND HOTEL (LIMITED).*

The half-yearly meeting of the shareholders of the Grand Hotel (Ltd.) was held on Monday afternoon. Mr. J. F. Lowder occupied the chair, and among those present were Paymaster McDonald, U.S.N., Messrs. W. B. Walter, E. Blanc, Jas. Walter, W. Aitchison, W. Mann, H. Arthur, Howie, C. W. Ure, B. C. Howard, Dr. Gravatt, J. Rickett, C. Arthur (Secretary).

Mr. LOWDER on taking the chair, said, fortunately, according to their rules, for the purpose of declaring a dividend a quorum of three was sufficient, showing the wisdom of the original promoters, who knew that in Yokohama generally when there was a satisfactory report it was rather difficult to get a meeting. The report the directors had to submit to the shareholders had been in the hands of the latter for a week past, but as it was very short he would as a matter of form read it:—

The Directors have the pleasure to submit the General Balance Sheet, Profit and Loss Account, and Statement of Assets and Liabilities for the half year ended the 31st December, 1890, duly audited.

The net profit, including the balance brought forward from the 30th June, and after providing for the general expense of the half year, Directors' and Auditor's fees, interest, &c., and depreciation of Buildings and Furniture, amounts to ..... $18,002.82
which it is proposed to apply as follows:—
In payment of a Dividend of 7 per cent. for the half-year ..... $17,500.00
Balance to be carried to new Account ..... $ 522.82
$18,002.82

The last half of the year is usually less profitable than the first; but the Directors are gratified to be able to place before the Shareholders accounts which show substantial progress.

The change which has been made in the management of the hotel has proved entirely satisfactory.

The installation of the Electric Light has been delayed, through no fault of the contractors on this side, but is now proceeding with as much expedition as is compatible with sound workmanship. The whole of the new portion of the building has been lighted for some weeks past, and the remainder of the work will soon be completed. The light itself, the workmanship, and the working of the dynamos, have so far quite fulfilled the expectations of the Directors. It is anticipated that a large monetary saving will be effected by the substitution of the electric light for gas: and the comfort of the guests of the hotel will be materially increased. It has been decided that the payment of the expense of installation shall be spread over a period of ten years.

The cost of the new Building amounted to $7,228; an expenditure which will be repaid by the rent of the larger room which has been leased for a term of three years at a monthly rental of $500.

The Buildings and Furniture of the hotel are amply covered by insurance; as also are the profits for a period of eight months: but the danger of fire is materially decreased by the introduction of the electric light. There is also a private hydrant in the grounds.

The position of the Company is satisfactory and its prospects are hopeful; whilst many letters received from guests, who have been entertained at the hotel, highly laudatory of its comfort, of the excellence of its management and cuisine, and the moderate tariff of charges, afford gratifying proof that the resources of the establishment are appreciated by the public.

It is proposed that the Dividend shall be made payable to Shareholders and holders of Share Warrants on 28th of January.

J. F. LOWDER, E. BLANC. } Directors.

Yokohama, 17th January, 1891.

E. & O. E.

Yokohama, December 31st, 1891.

J. F. LOWDER, E. BLANC } Directors.

I have examined the foregoing accounts and compared them with the books and vouchers of the Company, and certify them to be correct.

O. KEIL, Auditor.

Yokohama, January 13th, 1891.

The accounts he would not read to them, as he was sure they had been very carefully perused by them all. In the last paragraph of the report he saw it stated that the danger to fire had been materially decreased by the introduction of the electric light, and as he read those words it occurred to him that in view of the recent destruction of the Houses of the Diet in Tokyo, which was generally attributed to some defect in the electric light installation—a point he believed, however, which had not yet been decided—nevertheless, as the mere fact of such an accident having occurred would possibly give rise to some anxiety in the minds of some of their shareholders with regard to the installation of the electric light in this establishment, he might mention that the persons with whom they had contracted, Messrs. Bagnall and Hilles, had from the very commencement guided themselves strictly by the rules of the Phœnix Fire Insurance Co., and he thought he was also right in saying that before they commenced the installation, or at the time they were commencing it, the Agent of that Company in Yokohama, in which the hotel was insured, was invited to go round and inspect the installation, and expressed himself as entirely satisfied with what he had seen. That statement would, he thought, remove all anxiety that might have existed in the minds of the shareholders as to the electric light in the hotel. With regard to the accounts, it was generally considered necessary on an occasion of this kind that the Chairman should add something by way of explanation or elaboration of the report and accounts as submitted. Well, they spoke very clearly, he thought, for themselves, and therefore it would not be necessary for him to trespass on the patience of those present for any great length of time by giving any further explanations. But a question had been put to one of the Board of Directors—not to the speaker personally—how, with regard to the fact that they had only apparently $706.16 cash in hand, was it possible for the Directors to declare an earning of net profit of $18,002.82, and to propose a divident of 7 per cent.? Now of course a question of that kind put to a business man who was acquainted with accounts would simply cause a smile. To answer it would be like explaining the A.B.C. of accounts. Still, as the question had not been put for the first time to-day, but also arose in connection with the last dividend, it might be as well that he should point out that an analysis of these accounts shows that, notwithstanding that the sum of $22,166.60 had been written off for depreciation since the company commenced business less than two years ago, and $21,685.81 had been spent on buildings and furniture during the some period, they had on the 31st December, exclusive of their original capital investment of $250,000, additional assets and stock in hand to the value of $28,918.46. Against this they had borrowed of their bankers $10,915.64, leaving a balance of $18,002.82, which, though invested in stock and other paying property, was actually nett profit earned during the past half-year. The loan from the bank would not have been necessary but for the erection of the new wing at a cost of over $7,000 and the payment on account of the electric light of nearly $5,000, and it would be manifestly unfair that these permanent additions should be paid out of the current profits of the last half-year. The cost of the new building would be reimbursed by the rent; the transaction would ultimately show a handsome profit, to say nothing of the commodious cellar and morning room, both of which were necessary adjuncts to the hotel. The payment of the cost of the electric light would be spread over a period of ten years. While on the accounts, he would make another statement which he felt convinced would be of interest to the shareholders, and that was with reference to their method of audit. They all knew that they had an auditor; but the work of that auditor was not confined to auditing the accounts at the end of every half-year. They might perhaps more accurately describe their auditor as an inspector. He inspected most thoroughly; inspected their books at the end of every month. He himself saw that stock was taken at the end of every month. He checked all the vouchers and all the accounts, and furnished the directors with a trial balance at the end of every month. He thought therefore they might agree with him that the directors were in as good as, if not in a better, position than most companies in this respect, because they were able at the end of every month to ascertain what was the position of the company and the accounts. Knowing as those present did, that the auditor was Mr. Keil, they might be perfectly satisfied that it was a most conscientious, most thorough, and most rigorous inspection to which their accounts were submitted. In fact he might say that there were some among them who might be inclined to look upon Mr. Keil as a hard task-master rather than as a friendly inspector of accounts. These were all the remarks he wished to make, but if there were any questions arising from the report and accounts, and within his power to answer, he would be glad to do so.

On the motion of Mr. URE, seconded by Paymaster MACDONALD, the report and accounts, with the declaration as to a dividend, were agreed to unanimously.

On the motion of Mr. HOWARD seconded by Paymaster MACDONALD, a hearty vote of thanks was accorded to the Directors.

A similar compliment to the Chairman was passed on the motion of Mr. AITCHISON, seconded by Mr. Ure.

The CHAIRMAN in his own name and the names of his co-directors thanked the meeting very much for the kind thought of proposing a vote of thanks to them. It would perhaps be false modesty, speaking as he did for himself as well as others, to say that they were not entitled to some little appreciation of their labours, which were always of an arduous nature. Still, so long as they felt that they were giving satisfaction on the one hand to the members of the company, and on the other hand to the public, upon whom the directors depended in order to give the shareholders a fair interest for their money, that he was sure would always be sufficient gratification to the board of directors of this company.—(Applause.)

This terminated the proceedings.

# *VICTORIA PUBLIC SCHOOL.*

## Meeting of Subscribers.

The annual general meeting of subscribers to and supporters of the Victoria Public School was held on Wednesday afternoon in one of the large rooms of the Masonic Temple, Keil's Buildings. Among those present were Bishop Bickersteth, Chairman of the Committee; Messrs. W. B. Walter, Vice-Chairman; and P. E. F. Stone, Hon. Secretary and Treasurer; Rev. W. T. Austen; Mr. Jas. Troup, H. B. M. Consul; Mr. M. Russell, Mr. A. J. Wilkin.

Bishop Bickersteth took the chair, and after intimating that the minutes of the last meeting, having been published in the local papers, would be taken as read, called on the Secretary to read the report and accounts.

Mr. Stone read the report and accounts as follow:—

### Victoria Public School Report for 1890.

The Committee now beg to present for the information of subscribers the Accounts and Annual Report for 1890.

The Accounts show a balance in hand of $1,283.47, or $517.40 less than in January, 1890 The receipts from School fees during the year were $3,990 ($70 still to collect) plus $79, part of the amount outstanding from 1889, and $54 account, 1891, paid in advance. Only one subscription of $25 was received for the Sustentation Fund, and the profit realised on the second Japanese Class for Adults was only $6.45. The ordinary Expenses for the year, for salaries, rent, &c., amounted to $4,847.66.

Taking into account $72.26 earned on Interest account ($100 less $27.74), the loss on working account for the year amounts to $715.40, which is mainly caused by the diminution in the number of scholars in attendance during the last Term of the year. The number of boys during the three Terms of 1890 were:—1st Term, 49; 2nd Term, 48, and 3rd Term, 40 respectively; but the Secretary has so far been unable to collect the fees of one boy for both the 2nd and 3rd terms. The same remark also applies to an item of $10 outstanding from 1889. Comparing the account for 1890 with that for 1889 it will be observed that the Committee have been able to effect a reduction of $180 on salary account, and of $50 on medical attendance account. On the other hand, there is an increase on rent account of $40. The lease of 179, Bluff, expired on the 31st August last, and the Committee have renewed same for a further period of 2 years at a rental of $70 or an increase of $10 per month. The item for school prizes is perhaps a little high; but it includes $10 refunded to the Head Master properly belonging to 1889, and $11.80 expended in a special prize for E. Clarke, on his leaving the school, in recognition of work done in assisting with the teaching of some of the younger boys.

The prize distributions were held in the school room on 7th July and 22nd December, and were then fully reported in the local papers. On the former occasion Mr. Enslie, H.B.M.'s Consul, kindly presided.

The Head Master reports that during the past year the language difficulty has been greatly overcome, the boys being now able to understand English easily, and he is consequently able to devote much more time to writing instead of having so much *viva voce* work. The school has lost many of the elder boys,—some of whom have been in attendance from the beginning.

Several of these have obtained good and promising positions in business houses in Yokohama or Kobe, and it is hoped that the credit they do the school will tend to bring in more pupils as time goes on. It is satisfactory to note that the boys who have gone to complete their education in America, have taken high places in the schools, and have done very well in their classes.

During the past year the Boy's Committee managed the sports of the school very well, and the Head Master thinks that there is much enthusiasm for manly exercises. The boys, unless they have some work after school hours, prefer to play the games of foot ball or cricket to lounging about. It is rather difficult to get other schools to meet them, and the competition, which is so necessary a stimulus to athletics—has to be provided by challenging the crews of the men-of-war which are stationed here.

The Committee after much deliberation over the finances of the school, unanimously agreed that, as with the present number of scholars the loss on working account during the next twelve months would be about $1,200 or $1,300, thus using up the funds at their disposal, a considerable reduction in the expenses would be absolutely necessary, and that the only way to economise to this extent would be to do without an Assistant Master. The Committee were therefore reluctantly compelled to notify Mr. H. L. Fardel that his services would not be required after the 31st March next. They now desire to place on record their high appreciation of the value of the work done by him during the 3½ years he has taught in the school. The work of the school will now be entirely managed by Mr. and Mrs. Hinton, with the help of the Japanese Master; should the number of boys materially increase during the year, it will be for the incoming Committee to decide what fresh arrangements may be necessary.

The Head Master's agreement expired in August last, and has been extended indefinitely, subject to 6 months' notice on either side. Mr. M. Kirkwood does not offer himself for re-election to the Committee, and Mr. P. E. F. Stone resigns his position as Hon. Sec and Treasurer.

In conclusion, the Committee have to thank Mr. B. Gillett and Mr. F. W. Hill for again kindly auditing the accounts, and the Yokohama press for their courtesy, in reporting all matters of interest in connection with the school.

E. Bickersteth, Bishop, Chairman.
W. B. Walter, Vice-Chairman.
W. Barrie.
M. Kirkwood.
P. E. Fred. Stone, Hon. Sec. and Treasurer.

### The Victoria Public School.

(Add, $77—for sundries adjusted in January, 1891.)

E. & O. E.
Yokohama, 22nd January, 1891.
P. E. Fred. Stone,
Honorary Secretary and Treasurer.

The Chairman invited remarks on the report and accounts. None being forthcoming, he said he very much regretted that the hope which he expressed a year ago with reference to the financial condition of the Victoria Public School had not been fulfilled. When he had the pleasure of meeting last June, at the prize-giving, those now present, he was able to say that for the two terms which had then elapsed his hope had been quite fulfilled, and that the school was paying its own way for the first time since it was established. Unfortunately the last term had changed that very bright prospect. The number of boys, for some reason which it was not very easy to discover, had suddenly diminished from about 50 to about 40, and the result of that diminution in the number of pupils had been to give them an adverse balance-sheet. He supposed that in a community of the size of Yokohama they would always be subject to fluctuations of this kind, and it was in order to safeguard the school against such fluctuations that it was started with a considerable sum in hand as they would remember four years ago. Nevertheless when the Committee considered a month ago the financial condition of the school, they could not but feel, and they were unanimous in their opinion, that it was impossible—conditional on the safe conduct of the school for the future—to reduce the money which they had in hand below the sum at which it at present stands. Therefore, as the number of boys was less and the requirements of teaching were proportionately less, they reluctantly came to the conclusion that in future they should have only one English master, with the assistance of Mrs. Hinton or some other lady, and a Japanese master. They very reluctantly came to that conclusion, because Mr. Fardel had given them most excellent service during the past three and a half years, and they earnestly hoped he might be able to obtain such work in Japan as would open before him a useful and honourable career. They should have been very glad if it could have been possible to retain his services in connection with their own school, but they felt that could not be. They had therefore proposed to the subscribers what they thought the next best arrangement: that the head-master, with Mrs. Hinton or some other lady—there was no immediate hurry in settling the matter till the end of March—and the Japanese teacher should carry on the education of the boys. Three teachers were sufficient for forty boys. If for the moment they compared their school here with the schools of, say England, they felt that they had to fight against great disadvantages which in England did not present themselves. If he might take the school, for instance, at which he was brought up, it stood on land given 300 years ago by a Knight of the Court of Queen Elizabeth, and when he went to College he profited by endowments given by another celebrated man of that same Court. Here they had no such assistance. Nevertheless—they of course knew far better about this than he did—he supposed they were all practically agreed that there would always be settlements of foreigners in these eastern lands; that trade had so developed, and the connection between east and west was so assured, that there would be practically always—so far as human prognostication might go—settlements of foreigners in countries like China and Japan. It would therefore always be necessary to provide education for the sons of such foreigners, and that being so, had not the occasion arisen which arose 300 years ago in England, to provide permanently for the education of youths? We of this generation profited, he dared to say, by what our fathers did. Was it unreasonable to think that it might be possible that perhaps even in our generation and now, in an important mercantile settlement like Yokohama, some one might give them a site on which the school might stand free of rent, and possibly also some such endowments as those he had referred to as attaching to his own school and others in England. And so as we have profited by the generosity of our forefathers, our posterity might profit by the generosity of our own day. But be all this so or not, he did not think there was any reason for immediate discouragement in reference to the condition of the Victoria Public School. They had an excellent head-master, with large learning and more experience than perhaps they could have expected to find in this distant corner of the East. They had an able assistant in Mrs. Hinton; and the Japanese master was, he believed, an effective educationalist in his own line. The boys who had gone from the school had done singularly well: he read a letter showing the high place taken in the United States by J. H. Loomis in Greek and French, and also in Latin and Geometry, his marks in French being 99. That was a remarkably good report of a boy who had had all his teaching for the last three years he believed in the Victoria Public School. It was evident to him therefore that they were doing good work, and that they had the power to do so. Above all things, however, it was necessary that they should have

Digitized by Google

some union in Yokohama in reference to the education of boys. If the boys were scattered in little centres, however excellent, then such a school as they enterprised and took in hand four years ago, at the time of the Queen's jubilee, could not be supported. If the boys were gathered together in one centre, then with 50 or 55 boys they could have an excellent school giving the highest education, and that knowledge which was so necessary for a boy's future career. He earnestly hoped it might be possible to bring together the boys of Yokohama to receive the education offered to them in the Victoria Public School. Those present would have been sorry to notice that Mr. Stone was about to retire from the position he had so kindly and laboriously filled during the last two years. Those of them who were acquainted with accounts would see what work Mr. Stone had had in hand. They all owed him their very best thanks, and that not only for his services in connection with the accounts but also in conjunction with Mr. Walter, for the interest both gentlemen had taken in the school week by week and month by month as the small difficulties which always entered into any school had cropped up, and many arrangements which school life demanded had had to be met.—(Applause.)

In regard to the Committee, the CHAIRMAN remarked that Mr. Wilkin was willing to accept the place of Mr. Kirkwood on the Committee—(applause)—and though he had not the pleasure of Mr. Wilkin's acquaintance, from all he heard there could be no doubt they would have in him a worthy successor to a worthy member.

Mr. TROUP, in rising to move the adoption of the report, said one might have wished it were more favourable. It showed a decline in the number of boys with the result that the financial position of the school was in some degree unsatisfactory. The Right Rev. Chairman had, however, entered so fully into the question of keeping up an establishment such as this in Yokohama, that it was quite unnecessary for the speaker to go into details on the subject. But he might say that looking at the conditions of their residence in this place if seemed to him there was a field, and must always be a field, for an institution of this sort. He believed he had already privately exchanged views with the Right Rev. Chairman, and they had agreed that there was much to be hoped for, and he reminded the Chairman that in another place (Kobe) where he had the pleasure of seeing him, a proposition was started by the Bishop for the organization of a school there. But the community wanted to have their show, and their blow-outs, and their illuminations, and so on, and if he mistook not, the proposition on being put to the house, was only supported by one vote. Subsequently the subject of asking support for this school from the sister ports came up, but he for one, he confessed, never believed in support being available from the other ports. The fact was that local institutions demanded support from the residents of those places, and the facilities were now so great for sending their children elsewhere that they could hardly look for many scholars from the sister ports. They must therefore depend upon their own efforts, and for the sake of the children in this place he thought no effort should be spared to be keep up the Victoria Public School. Although things were looking rather black at present, still fluctuations might take place; they might hope that the next fluctuation might be in the other direction, and that the committee who were to occupy office for the next year would have something better to report than the retiring committee had.—(Applause.)

Mr. AUSTEN seconded, and the report and accounts were unanimously adopted.

Mr. STONE remarked, as to scholars coming from the sister ports, that there were now five boarders from Kobe.

Mr. WALTER fancied, from experience they had had so far, that they could look forward always to considerable fluctuations in the number of boys. There were so many residents going home every few years and taking their children with them, that many pupils must be withdrawn from school who in a town at home would remain. They must make up their minds to that. Mr. Walter explained that though Mr. Stone had been obliged to resign his post as Hon. Secretary and Treasurer he had not declined to assist them on the committee.

The ballot for a Committee resulted in the election of Bishop Bickersteth, and Messrs. W. B. Walter, W. Barrie, P. E. F. Stone, and A. J. Wilkin.

The CHAIRMAN intimated that that was all the business before the meeting.

Before those present left the room,

Mr. STONE said the Committee would always be glad to receive suggestions, &c., from parents or others interested in the school.

Mr. RUSSELL drew attention to the system of "keeping in" pupils, which he said told very injuriously against the school. He ventured to assert that if any parent who did not send his child to the school were asked the reason, it would be found that the "keeping in" was the cause.

Mr. WALTER said the matter had already been before the Committee, but pointed out that the Committee had repeatedly asked that parents should bring before them just such matters as this.

Eventually Mr. STONE said he would lay the subject before the Committee.

## *THE INTER-OCEANIC CANAL OF NICARAGUA AND ITS PROBABLE INFLUENCE UPON JAPAN.*

A lecture was delivered before the Tokyo Geographical Society at their Hall, Nishi Konyamachi, Kyobashi, Tokyo, on the evening of the 27th inst., on the above subject, by Captain Taylor, Commander of the U.S.S. *Alliance*. The meeting was presided over by the Vice-President of the Society, Viscount Enomoto, and a large gathering of foreigners and Japanese was present.

The CHAIRMAN, in a few words, introduced Captain Taylor to the meeting.

Captain TAYLOR, before delivering his lecture, drew attention to the various charts and maps which lined the walls of the room. Two large rough charts illustrated the chief routes to and from the canal to various parts of the globe, and also the course of the canal through the Isthmus and Lake of Nicaragua from the Pacific to the Atlantic Ocean, together with smaller charts, giving in detail the countries adjoining the Isthmus and a table of distances by the canal.

Mr. S. SHIGA acted as interpreter.

The LECTURER said:—The intervening continent which blocked the path to the Indies for Columbus and his successors, was to them a serious disappointment,—to them it was an obstacle. Centuries passed before the sailors and the merchants of the world became contented with the new geography,—not, indeed, until the interrupting lands, peopled with an active race, gave signs of becoming, themselves, a goal to be reached, of an importance equal to that of the Indies and far Cathay.

But again the old discontent grew, for the Pacific coasts of the ancient obstacle rose before the commercial eye, and their busy people throve and multipled, and became buyers and sellers, shippers and receivers, and though the way had been long around Good Hope to the Indies, it was still longer around Cape Horn, to these Western shores of America.

Thus to-day, this discontent of commerce and shipping has so increased that we may truthfully say that, through the old obstacle, there must be cut a communicating way between the Oceans, and that this must be done now.

It is proper to mention some facts upon which is based so positive a statement,—some details of the various plans for joining the waters of the Atlantic and the Pacific through the American Isthmus, after which we may glance, briefly, at some of the possible results to flow from the successful joining of the Oceans, and reflect upon its probable influence upon the trade of the Pacific, and, more especially, upon the trade now dawning upon Japan, for it may be supposed that it was, primarily, an interest in that development which has caused your distinguished Society to honour me with your attention to-night.

* * * * * *

Let us, then, consider briefly, the question of communication between the Oceans, across the American Isthmus.

Hardly had Nunez de Balboa's first glance from the hills of the Isthmus, rested upon the broad expanse of the Pacific, when the whole world immediately concluded that, as so narrow a neck of land separated the great Oceans, throughout a length of nearly a thousand miles, nature must have provided somewhere in that extent, a communicating waterway. For two centuries this problem was regarded as still unsolved. "The Secret of the Strait" occupied Christendom then as does the discovery of the North Pole now. Spaniards, Portuguese, French, Dutch, and English sought diligently, from the Rio de la Plata, in South America, to the St. Lawrence River, in North America for this much desired channel. The search, as we know, was in vain, but before entire conviction came there were already projects being discussed for supplementing nature's defect by the work of man.

From the days of Columbus to the present time, almost all men of distinction, whose attention has been drawn to the American Isthmus, have urged, at one point or another, an inter-Ocean canal. Cortez, Saavedra, De Soto, among the earlier; Guizot, President Adams, and Louis Napoleon, among the later, are the more prominent names which occur to me now.

We pass by with brief notice earlier dreams and aspirations, and note the fact that the Prince Louis Napoleon, while yet a prisoner in the Fortress of Ham, had given his approval to an enterprise which was to have been established under his name, and to be known as the Canal Napoleon de Nicaragua. Time will not permit my reciting to you his eloquent words, published in one of the reviews of that day, as to the great commercial and political importance of the strip of land which separates Lake Nicaragua from the Pacific Ocean.

It was shortly after the abandonment of the project by Napoleon, dazzled by the glitter of a possible crown, that the first organized attempt was made. In 1849 some American gentlemen formed a Company known as the Atlantic and Pacific Ship Canal Co., and under concessions from Nicaragua, began actual work on a canal.

The financial world was not ready for it,—the enterprise was transformed into a transit company, which, after some years of carrying passengers and freight, from one ocean to the other, by way of Lake Nicaragua and the river San Juan, presently faded away.

The interest in this line for a canal still continued, however, and was about to show some result when two other routes were proposed,—that of a ship canal through the Isthmus of Panama, backed by the energy and former success of De Lesseps,—and a ship railway across the Isthmus of Tehuantepec, in Mexico, backed by an American engineer, Captain Eades. So strong was the personality of these two men that the Nicaragua route was compelled to remain quiescent, until time and experience should balance these gentlemen's popularity and persuasive eloquence.

The death of Captain Eades, a few years ago, removed the Tehuantepec Ship Railway project as a competitor, nor has it since reappeared with any semblance of success. As to a Panama Canal, time and experience have fully shown to the world the unfortunate mistake of M. de Lesseps, in attempting a ship canal at the level of the sea, at Panama. Work has been for some time suspended upon the Panama Canal,—the enterprise owes $420,000,000, and its assests will not, it is believed, amount to $20,000,000.

The results are known to you,—the newspapers of the day, everywhere except in France, having kept careful record of the various steps in this unfortunate enterprise.

Until 1887, De Lesseps clung to the idea of a sea level canal. This was, indeed, almost a necessity, for he had often given public utterance to his opinion that Nicaragua was by far the best point for a canal with locks, but that *he* proposed to build a sea level canal. In that year, however, after enormous expenditure of men and money, he was compelled to change his plans to a lock canal at Panama. Though the situation was very unfavourable for a lock canal there, it was not absolutely impracticable, as was a sea level canal, and might have been constructed had he changed earlier, before so much money had been spent.

It was, however, too late, and after raising, at ruinous discount, some further sums, he was obliged to discontinue the work for lack of funds. There seems to be no hope of a revival of this project, in the minds of those best informed in the commercial world. In the last few days news has been received that the Concession has been renewed and more time given to the Canal Co. to complete the work, but Colombia has not granted this without exacting heavy compensation, and the Company has besides the task before it of raising money upon an enterprise practically dead. We need not dwell upon the sad picture of this heroic old gentleman sinking under the burden of so terrible a reverse. De Lesseps has done great service to France and the world, and has made only one mistake,—but this a gigantic one.

Let me ask your attention, now, to what seems to promise happier results, the Nicaragua Canal.

A great failure deserves notice next only to a great success, and the magnitude of this unparalleled financial disaster at Panama calls for some explanation and description.

In 1879, a small group of French gentlemen, who had obtained a concession from the Colombian Government to build a canal anywhere through its territories, but whose brief superficial examination of the Isthmus of Panama had given them practically no data on which to determine the best engineering route for a canal, persuaded M. de Lesseps, by means, of which we will always be

Digitized by Google

ignorant, to place himself at the head of their enterprise, to form a Company,—to purchase their concession from them,—and to undertake the construction of a Panama Canal (at the level of the sea). M. de Lesseps thereupon caused to be called together in Paris, representatives of the maritime countries of the World, to attend an International Canal Congress to decide upon the routes.

By means, the nature of which also we shall probably never know, this Congress after some deliberation, decided by a large majority upon the Panama route as proposed by De Lesseps. The Congress was warned, on the part of England, by the eminent engineer Sir John Hawkshawe, and on the part of the United States, by Admiral Ammen, that such a canal was impracticable,—that it could not be constructed, and if constructed, could not be conserved for the use of shipping. The hilly country, the raging course of the Charges River, the torrential rains, and the pestilential climate forbade the hope of success. To these remonstrances De Lesseps, flushed with the success of Suez, and impatient of contradiction, would give no heed, and the French people, loyal to him and proud of his well-deserved reputation, swarmed about his offices and liberally subscribed to this new project of the great promoter.

In Nicaragua, the mountain chain which stretches from the Arctic regions of North America, to Cape Horn, sinks to its lowest point, producing a comparative depression, unique in character. This depression or basin is occupied by the waters of Lake Nicaragua, a fresh water inland sea, 90 miles in length by 45 in breadth, and with general depths varying from 50 to 100 feet. The western shore of this Lake is only 13 miles from the surf of the Pacific Ocean, and the intervening neck of land, on the route selected for the Canal, has a maximum elevation of only 40 feet above the Lake. The elevation of the Lake is 110 feet above the ocean, and the dividing ridge 150 feet above the ocean.

Although this great sheet of water is so close to the Pacific side, its waters drain to the eastward, by way of the River San Juan, into the Caribbean Sea, a distance of about 120 miles. This river is navigable, to some extent,—a steamer drawing 6 feet of water has ascended from the ocean to the lake, in the last few years, although being delayed, somewhat, in getting up the rapids.

These facts will indicate to you how much nature has already done toward a canal, by this route, and a closer investigation develops many other features most favourable, in an engineering point of view. This lake, being a great reservoir, is but little influenced by the rainfall, and the same is, of course, true of the river which is its outlet.

The main features of the canal now being constructed, are the following:—The lake and upper river will be the summit level of the canal; there will be a cut through the neck of land between the lake and the Pacific, the greatest depth of this excavation being 40 feet, and the canal quickly emerging upon the western slope of this neck of land, will reach the Pacific through the valley of a small stream which flows into that ocean, descending to the sea level by means of three locks.

Going eastward from the lake toward the Caribbean Sea, the San Juan River will be followed for a distance of 64 miles from the lake, at which point the river will be dammed to such a height as will back its waters to the lake, raising the level of the lake to a uniform height of 110 feet above the level of the sea, and thus deepening the water in the upper river to such a degree that but little dredging will be needed throughout the 64 miles.

The upper river, being of the same general character as the lake, is not subject to violent freshets. The lower portion, receiving some large tributaries from the neighbouring mountains, possesses a different and more unstable character. For this reason the line of the canal leaves the river at this dam, 94 miles from the lake, and pursues a straight course across country to the Caribbean Sea at Greytown, making use of some convenient interior valleys by means of dams at their outlets, and thus continuing the summit level until it emerges from a confining range of hills, and looks down upon the 18 miles of flat and marshy land, between the hills and the coast. Here, upon the eastern slope of these hills, the canal descends by three locks, to the level of the sea, and continues its course by dredging to the harbour of Greytown. The total distance from ocean to ocean, by this route, is 169 miles, of which 27 miles will be excavated canal, and 42 miles free navigation in Lake Nicaragua, the River San Juan and basins in the valley of the smaller streams.

To describe it more in detail, beginning at the Atlantic or Caribbean side, the canal starts from Greytown Harbour by dredging, 9 miles to Lock No. 1, in the valley of a small stream, the Deseado. Lock No. 1 has a lift of 30 feet. The dimensions of all the locks are uniform, namely, 650 feet long by 70 feet wide, by 30 feet deep.

From Lock No. 1 to Lock No. 2, 1¼ miles, the canal occupies this valley, which is flooded by the construction of embankments, and thus reduces the amount of dredging to be done. Lock No. 2 has a lift of 31 feet. Lock No. 2 to Lock No. 3, 2 miles, continues in the valley of the Deseado, which is flooded by dams and embankments, and but slight excavation being necessary. Lock No. 3 has a lift of 45 feet. This brings us to the summit level of the canal. For 2½ miles beyond this Lock, the same system of embankments avoids the necessity of any excavation, the flooding of the valley producing depths of from 30 to 70 feet. The canal then enters a rock cutting in the eastern divide, 3 miles long, and of an average depth throughout these 3 miles of 110 feet. This cutting contains 21 per cent. of the total excavation needed for the whole canal. Emerging from this cut the canal line enters the basin of the Canon (valley) San Francisco. Dams and embankments are used to impound the water of this stream, and to form a long and narrow lake, whose length is in the direction of the canal line.

Passing thus through the San Francisco and adjacent valleys, the canal enters the River San Juan just above the dam in that river, at a distance of 12⅓ miles from the eastern divide cut. The canal line then proceeds from the dam in the River San Juan, up to the lake a distance of 6⅓ miles, thence across the Lake Nicaragua, a distance of 56⅓ miles. From the lake to the Pacific, the distance by the canal line is 17 miles, of which 11½ miles is in excavation, and 5½ through a basin in the valley of the small streams Rio Grande and Rio Tola.

Of the two terminal harbours, Greytown on the Atlantic side has been, in its time, an excellent harbour, but its mouth has been closed by a sand bar, caused by the sand in the vicinity drifting across the entrance. A pier or jetty has been built lately, into the sea, at right angles to the shore on the windward side of the old entrance to prevent this drifting of the sand, and has already caused the harbour to open, permitting the Company's dredges to pass in and out; and the entrance thus sheltered in becoming deeper every day. Dredging is being carried on to assist the forces of nature. Brito, the point on the Pacific Coast where the entrance to the canal is to be, has no harbour, and the deep water on that coast prevents long breakwaters. But Brito is situated at the mouth of a broad, alluvial valley which can be dredged from the beach inland to any distance required for the needs of a terminal harbour. These needs, as will be observed at Port Said, in the Suez Canal, are not extensive as far as area goes.

The dimensions of the canal being constructed are such as to permit a net tonnage of 20,000,000 tons a year.

* * * * * * *

The calculations which have been made as to the traffic using this canal, when constructed, have not been permitteed to include any of the large prospective increase, which may be counted upon with reasonable certainty, as a result of the existence of this waterway. It has been thought better to estimate only for that traffic which will be already existing and ready to use such a canal, as soon as it shall be open. Leaving out, then, the extraordinary estimates made by M. de Lesseps for the Panama Canal traffic, and considering, only, the actual statistics, we find the vessels ready to use the Canal now amounting to about 6,000,000 of tons, and at the present rate of increase there would be in 1896 about 8,000,000 of tons annually.

Putting the tolls at two dollars per ton, we have receipts of sixteen million dollars or, allowing liberally for operating expenses, a net revenue of fifteen million, or 5 per cent. upon three hundred million dollars.

* * * * * * *

The cost of the construction of this great work, under liberal estimates, is seventy-five million dollars, and it is quite safe to say that one hundred millions will cover all contingencies.

Having stated these facts I should add, that these figures are not based upon cursory or superficial examination, nor do they rest upon the unsupported opinion of those interested in the enterprise. Many years had been spent in elaborate detailed surveys, which have mapped the contours of the land to a degree of accuracy and closenesss of detail equal to that of the suburbs of our great cities. Depths of the lakes, velocities of the river waters, records of the rainfall, have all been absolutely determined. Numerous borings have shown the amount and quality of rock to be encountered in our excavations. In fact, every point of detail has been thoroughly worked out. A board of eminent engineers, possessing no interest whatever in the Canal, has been assembled, and after months of careful consideration of the finished plans and surveys, have submitted their estimate of cost, allowing in their calculations liberal increases in the prices of labour, tools, and material of all kinds.

It is, therefore, safe to say that the cost of this work is practically established. Large percentages of increase have been made, to allow for all possible contingencies of accident, while no reduction in cost has been allowed for the improvement and added economy of the new machinery constantly being perfected, for excavating, dredging and the building of breakwaters, jetties, and bridges. There is no reasonable probability that the cost of the completed work will exceed the estimate, and it is quite likely that it will fall much below it.

The financial question may, therefore, be thus stated:—The canal can be built, ready for use, with every convenience, and of dimensions suitable for the commerce of the whole world, for one hundred million dollars, while the canal when completed represents a property instantly worth three hundred millions, and paying 5 per cent. interest on that amount from the day of its completion.

It has been my endeavour to avoid possible exaggeration, and for this reason nothing has been said as to the increase in the tonnage, which will be a direct result of the existence of the canal. Not alone will the vessels already plying, use it, but the canal will build up a traffic in commodities which, up to the present, have had no market, owing to their distance from those fields which require them.

It will be when the canal is open, that we shall first learn how great is the demand for the timber of Alaska, for the guanos and nitrates of Peru and Chili, and for many of the products of Japan and Northern China, which now are prevented from reaching a market by the long and costly freight transportation which they must undergo before reaching their destinations. This fact was noticeable when the Suez Canal was opened, and a glance at the map of the world shows that the Suez Canal, though of vast importance, opened communication only between sections of the world, while a canal connecting the Atlantic and Pacific Oceans may be said to establish communication between separate and distinct commercial worlds. We may, therefore, expect, with reason, that this annual revenue of $15,000,000 net, will rapidly increase, even with diminished tolls, to $30,000,000 net, after which, questions of increasing the capacity of the canal or building another one in another portion of the Isthmus, may be considered.

Let us consider now the effect of a finished Nicaragua Canal upon the commerce of the Pacific and the World.

And first let us repeat that this canal will join two worlds of commerce; the one being composed of those countries and peoples which front upon the Atlantic, and upon its tributary seas, gulfs and rivers; the other, those nations whose coasts form the shores of the Pacific.

Of Suez it may be said that its office, its principal office, is to connect two sections of a trade world, not two distinct, ever sundered, commercial world spaces. Those sections were not strangers in trade to each other before Suez was opened; since the dawn of history slow lengths of innumerable caravans toiling through sandy deserts have incessantly deployed upon the shores of the Eastern Mediterranean, bringing the rare and costly products of Persia and India to the ships of Phœnicia, of Greece, of Rome and later to those of Venice, Genoa, Spain, and England. The Suez Canal did not create a new trade—it improved and increased a trade already existing between sections and only between sections. I will not be suspected in saying this of trying to belittle that great and noble work, whose usefulness to mankind cannot be over estimated. It has doubtless been of greater service for that very reason that it has not created new trade, but has vastly helped that which was already existing.

The Nicaragua Canal, on the contrary, will connect two areas of commerce hitherto without connection, independent of each other—nay, almost ignorant of each other, each with its own trade channels and currents circling and eddying in response to the various and changing demands of merchandise and the needs of its transportation. It is true that the Atlantic system reaches out in some degree to Australia, China and Japan, and that Alaskan fish and lumber, Chilean guano and nitrates pass in limited quantities around Cape Horn to New York and Europe, but the intervening distances are too great to produce anything like a union or joining of the trade systems of the Atlantic and Pacific.

They are distinct and separate, and will so remain, unless joined by a waterway through the

Digitized by Google

American Isthmus. This done, we should with reason expect a gradual mingling of the elements and factors of transportation and, as the new necessities were felt and the new conveniences realized, there would gradually be effected changes of great importance to the commerce of the world —far more so than the changes which Suez effected as between the Atlantic and Indian Oceans. More remarkable still, however, in my belief, will be the great increase of trade; the creation of new productiveness in many fields hitherto unworked, resulting from the completion of the canal and the consequent opening of convenient markets and active demands for the various commodities produced.

Let us go a little more into detail and, with our eyes upon the map, once more discuss the effects of the Canal's completion. I shall be glad at any time to be interrupted in this description with suggestions, for there are many doubtless among you who have studied the trade routes of the Pacific and to whose knowledge as to details I will readily defer in this division of my subject.

The most marked of the immediate effects will be observed between New Orleans in the Gulf of Mexico, and Guayaquil and the other ports on the West Coast of South-America and Mexico. The distance by water now from New Orleans to Guayaquil is 11,683 miles; by the Canal it will be be 2,340 miles, a saving of 9,343 miles.

New Orleans is the natural port of the populous and productive states of the Mississipi Valley, while the Peruvian Coast has for exchange its guanoes and nitrates.

Next in order of benefit is the communication between New York and San Francisco—between Philadelphia and Puget Sound—as well as the Alaskan Coast. Also the trade of England and Germany with the West Coasts of North and Central and South America. By the Nicaragua Canal the saving in distance between New York and San Francisco is 10,080 miles, between Liverpool and San Francisco 7,182.

The bulk of the traffic passing through the canal will at first consist principally of shipping plying between these last mentioned localities. Upon these lines will, I believe, be seen the development of new trade increasing with great rapidity. The difficulties and expense of the voyage around Cape Horn have restricted the transportation, and hence the production, of many commodities to the point almost of prohibition. When the products of Peru and Chili, the coffee and cocoa of Mexico and Central America, the grain of California, the lumber of Vancouver and Alaska can be placed in the markets of the United States and Europe at prices largely reduced by the cheaper transportation afforded by the Canal, then we shall see a greater demand for these products, and hence larger areas of those almost virgin coasts will be utilised, and the present traffic now ready to use the Canal will be dwarfed by the volume of new trade, whose existence will depend upon such a Canal.

There is, as we all know, a railway across the Panama Isthmus, but the necessity of breaking bulk twice makes its general use for large trade impracticable. It need not therefore be dwelt upon as a serious factor in this discussion.

I have said that the first and most notable users of the Canal would be the ships plying between the ports of Europe and the East of America on the one hand, and the West Coasts of the American Continent on the other. The trans-Pacific countries would need more time to become convinced of the advantage they would derive from a Nicaragua Canal.

In the first place the distances *via* the Suez Canal are as little as, and in some cases less than, those *via* Nicaragua. Speaking generally, there is not much difference between Suez and Nicaragua in passing from Western Europe to New Zealand or Japan; while to Australia and Southern China the difference is in favour of Suez. The route by Suez has also the advantage of convenient coaling stations, and much local traffic; and finally, it has been long established, and many interests have grown up around it. Commerce is conservative, looking always with doubt upon any suggestion of change.

But there are many features in the Nicaragua route which will gradually commend themselves with great force to certain Pacific localities, and to none more than to Japan.

By the Suez route Japan, although a terminal point, sees between itself and Europe more than one "way station" whose commerce with Europe overshadows that of Japan. India and Farther India, the East Indies and Southern China, make up so large a percentage of the Suez traffic that Japan suffers by comparison, and although really a terminus, does not have such corresponding commercial weight and importance as a terminus should possess. This, though perhaps natural, is not desirable for a great nation, whose evident destiny is to become one of the commercial powers of the world, in virtue of its admirable maritime location and the vigour and intelligence of its people. Japan cannot be satisfied until its trade is in every sense direct between its ports and London, Hamburg, and New York, and not simply a minor incident of the Indo-Chinese-European traffic. There must be no ports or coasts intervening between Yokohama and New York, between Kobe and London, which outweigh or even approach in importance the terminal ports of the route. I think all will agree with me that this is an essential condition to the development of great commercial qualities.

With these considerations in our mind it is easy to perceive that the Nicaragua Canal offers to Japan the final solution of the problem. Direct communication now exists with the western coast of North America, but that coast is as yet in its commercial infancy. The Nicaragua Canal will provide that direct intercourse between Yokohama, Kobe, Hakodate, Nagasaki, and Hamburg, London, New York, New Orleans.

This trade will not be limited in its powers of expansion as is the mail steamer and passenger service. Over this route will pass the principal heavy exports and imports to and from Japan and the Atlantic nations. By this route the opportunity at once presents itself to Japanese merchants and shipping to start their own lines of steamers and sailing ships between Japan and the Atlantic countries. By this cheaper route merchandise will be landed in foreign markets with less burthensome freight charges, and hence be sold at lower prices. Thus the demand increases, and greater areas of Japan are called into the productive field, while its industries, responding to the demand, widen their scope of manufacture. These healthy influences react upon each other, and more Japanese shipping will be needed to transport the increased amounts of products. But I need not dwell too long upon the important results flowing from a direct, uninterrupted trade communication between the Japan terminus and those at New York and Liverpool, for I believe the intelligence of this audience will quickly perceive its value for a nation like Japan, which is just beginning to stretch out its hand to grasp some at least of the world's trade.

I will here interrupt the discussion of the trade conditions in order to touch upon one feature that we have not yet considered. It is a matter of importance, and is destined in the future to hold the close attention of the statesmen of all maritime nations. This feature is the strategic value of the Nicaragua Canal, considered in a naval and military sense, and as a direct result its value in the eyes of politicians and diplomatists. It must appear plain to all present that this waterway between the oceans will be the key to power on both sides of the Continent and in both oceans; and will secure paramount influence to that nation which shall hold it in time of war or upon the approach of war. In these days of swift war steamers, a fleet holding the canal could issue from its western entrance, and within five days strike a blow at any point of the western coast from Peru to California. If the fleet's presence were needed on the Atlantic side, it could reach in three days the Gulf of Mexico or the principal channels in the West Indies, and in four days could be in a position to fight a battle off the Atlantic coast of the United States.

It must not be thought that these facts are only of interest to those nations which lie near the canal. It is not only the United States, Central America and Peru, which are affected by the canal. These countries are indeed near it in a geographical sense, but all maritime nations are near it in a commercial sense. All nations whose ships are to pass though it, who enjoy or hope to enjoy the advantages of foreign trade, will be virtually affected by anything which may happen to the canal in peace, and especially so in war. We know for example that Egypt is the nearest of all countries to the Suez Canal, while among European nations England and Germany are the most distant from it geographically.

Yet we know well how vast is the importance in a commercial sense of the Suez Canal to those distant nations, and how great would be their losses if in time of war their merchant steamers should find the canal closed to their passage.

It is therefore not only the nations of America that will have much at stake in the affairs of a Nicaragua Canal, but Europe, Japan, New Zealand must watch carefully that a passage for their ships be always kept open. This interest of the world's trade in the Nicaragua Canal will doubtless result in certain conventions or treaties between all nations, which shall provide for the unobstructed use of the Canal, whether in peace or war. The Republics of Nicaragua and Costa Rica, through whose territories the Canal is to pass, are inhabited by a brave and intelligent people, but their numbers are so small that it may be expedient for some more powerful nation to guarantee to them and to the nations of the world the absolute neutrality of the Nicaragua Canal.

The strategic value of the Canal is enhanced by the existence of the great sheet of fresh water, Lake Nicaragua, which is its summit level. Ships are now built of steel, and their bottoms when in sea water become quickly covered with a growth of barnacles and grass, which seriously impedes their speed and efficiency.

But fleets may lie at ease in the lake, keeping their hulls clean in the fresh water, while their crews grow healthy and vigorous in the salubrious atmosphere of that most healthful locality. Here in this wonderful inland lake, a fleet of swift and powerful war ships could await the proper moment, and sallying out from either entrance, strike powerful blows against an enemy, and returning to the lake could coal and repair while preserving in the highest degree the speed and efficiency of its ships, the health and discipline of their crews.

It is this lake which gives to the canal a strategic importance unique and significant. I believe the future will show it to be in this respect unparalled in the history of the world.

Taking up again the thread of our subject, and discussing the development of trade in the Pacific Ocean, resulting from the opening of a canal across the American Isthmus, it is proper to notice the difficulties, as well as the advantages, that will be encountered. In the first place, this canal will not provide rapid transportion for the merchandise of most of the countries whose shipping will use it. It will provide a cheap and convenient route, but not especially a speedy one. The Western coasts of South America and Mexico are an exception to this, and for them a most rapid transit will be provided by the canal, to New Orleans, New York, and Western Europe. But it may safely be predicted that mails and passengers from Japan will continue to pass across the Pacific and by rail across North America. For most of the maritime nations of the world the Nicaragua Canal will be a freight route.

Such being the case, and as the cargo steamers of Japan, the U. S. and Europe are to make large use of it in the future, it is desirable to examine all possible routes across the Pacific, which may be used in connection with such a Canal. We here come upon a notable difficulty, the lack of sufficient coaling stations. Those of my hearers who are familiar with shipping are well aware that for cargo steamers it is of first importance that coaling ports should not be too distant from each other along their routes of travel, for the cargo steamer must not be obliged to fill up with its coal supply too much of its stowage space and thus restrict unduly the amount of cargo it can carry.

This difficulty will be principally felt on the Southern route across the Pacific by the Western bound steamers. Those Eastern bound from Japan to the Canal will find their best route on a great circle between Yokohama, San Francisco, and Puget Sound, which will carry them quite near the Aleutian Islands in the North Pacific, among which a convenient coaling station can be selected, which will break the long distance between Hakodate and Puget Sound. On the Southern route, however, there will be felt a great need for a coal port West of the Sandwich Islands. The only points available are in the Marshall Islands or the Caroline Group—but none of these islands produce anything to export in large quantities, and the vessels that should take coal there, could expect no return cargo. Coal supplies at such points would be therefore kept up only at great and undue expense. These groups of Islands are also so far to the southward that they would cause too great a deflection from a vessel's course after leaving the Sandwich Islands, unless she proposed to visit Manila and the Chinese Coast before proceeding to Japan. In that case the natural route for a cargo steamer would be a circuit. It would leave the Canal and pass along the West coasts of Central America and Mexico, touching where desirable, and filling its bunkers at Mazatlan in Mexico. Thence it would steer West for the Sandwich Islands, take coal there and proceed to one of the Caroline or Marshall Islands. Thence to Manila, Shanghai, Nagasaki, Kobe, Yokohama. From Yokohama a great circle route to San Francisco or Puget Sound would be the course to steer, touching if desirable at Hakodate, and of necessity at the coal port selected in the Aleutian Islands. By this means we would reduce the distances between coaling stations to about 2,000 miles, which is not excessive for a cargo steamer.

Digitized by Google

It is interesting to notice that in following this route to San Francisco and continuing down the coast of America to Nicaragua, the total distance traversed is about 7,000 miles; while the route from Yokohama to Nicaragua by way of Honolulu is about 7,500 miles. The distance, which appears on these maps to be much the shorter *vid* Honolulu, is in reality 590 miles longer. In addressing this distinguished Society of geographers, to whom maps and charts are familiar, I need not dwell upon the cause of this apparent discrepancy. Mercator's method of projection, though convenient in many ways, has, as the Society knows, the fault of distorting the higher latitudes, thus producing such errors as I have mentioned. To compare intelligently the distances covered by different routes a projection is needed which will exhibit the great circles of the earth as straight lines. Such is the Gnomonic Projection, of which I have here a chart, and whose principles I will take pleasure in discussing with any of the gentlemen present who may not be familiar with that method. I have referred to this projection because of its close connection with the study of Trans-Pacific routes.

It is possible that the difficulties of the Southern route via the Sandwich Islands in the matter of coaling stations, may cause it to be abandoned, and the westward bound shipping to follow the same line to Japan as the eastward bound vessels from here to America. For sailing ships, however, and the slow cargo steamers to whom economy of coal is a great desideratum, there is still much to recommend the southern route when coming to the westward. The steady trade winds from the north-east, the favouring currents, the quiet weather and the smooth seas are strong arguments for ships which are to carry the cheaper and heavier merchandise of the world. In any case we have for the eastern bound traffic one natural route, namely by a great circle to the American coast and down that coast to the Nicaragua Canal. For the western bound shipping we have a choice between the southern route, longer but with better weather, and the northern route, shorter but with less favourable weater.

Five years must elapse before the Nicaragua Canal is open, but that period can be well devoted to a thorough study of the future commercial situation, and to preparation which will enable Japan to avail itself of the advantages to be then provided.

The time at my disposal permits me only to touch upon many points which deserve more thorough discussion, but I shall be well satisfied if this slight and superficial consideration of the subject should draw the attention of some of the able minds of this distinguished Society to the approaching change in commercial conditions due to a Nicaragua Canal.

The opening of that Canal will in my opinion mark the beginning of a great development in Japan's foreign trade, and signalize its entry to the brotherhood of commercial nations. When that day comes Japan will be welcomed by all countries, and by none more cordially than by her trans-Pacific friend, the United States of America. I thank you, Mr. President, and gentlemen of the Geographical Society for the patience with which you have listened to me. It will give me much pleasure to reply to any further questions which gentleman may wish to ask on this subjectr

A Japanese gentleman, addressing Capt. Taylor, wished to know the time required for the passage of a steamer from one end of the canal to the other.

The LECTURER stated that the amount of traffic which could pass through the canal was determined by the time it took one vessel to do the distance. Each lock required 45 minutes and the total time from ocean to ocean was 28 hours. Entering from Greytown Harbour, the speed for the first few miles would be 4 miles an hour through the narrow cuttings, with 6 miles an hour in the River, and 10 miles an hour in the Lake of Nicaragua. The total capacity of the canal was calculated at 20 millions of tons per annum at the above speeds. The canal would be furnished with electric lighting apparatus which would admit of ships using it with equally as much ease at night as in the day time. If the calculations had been for day work only, they should have been stated as 10 millions of tons. The average was about 14 vessels per day. The Lecturer also explained some of the charts to his hearers, and this terminated the proceedings.

## *LETTER FROM SHIMANE.*

(FROM AN OCCASIONAL CORRESPONDENT.)

January 24th, 1891.

The January holidays were not, this year, very enjoyable in Izumo. Just before Christmas we had a few exquisite days, during which Dai-Sen, the Fuji of Izumo (*Izumo Fuji* it is called by the people) revealed its magnificent snowy cone in the sky, far above the hills that ring in the beautiful city and lake. I think that such a charming vision of Dai-Sen usually angurs bad weather, just as, before a hurricane in the tropics, I have seen the sky become singularly beautiful and all the peaks standing out in strangely sharpened beauty against the loveliest of skies. The New Year began with a terrific rain-and-wind storm. It lasted nearly two weeks—almost the whole time of the holidays. In the city the force of the wind was extraordinary; and Lake Shinji roared like a sea. The police stationed themselves at the entrances to the main bridge, and prohibited every one from crossing the Ohashi, so that one district of the city was temporarily isolated from the other. Before this measure was taken, it had seemed quite possible that the bridge would give way to the fury of the storm, and a child who had tried to cross, was bodily lifted up by the wind and flung into the lake. The child swam like a fish, however, and made its way safely to shore. Shipping in the port was slightly damaged—masts and cabins being in some cases carried away. After a few days of this foul weather, and oceans of rain, there came a brief lull—sharp cold weather, frost, and a slight snow.

The lull gave me a chance to see something very interesting to a stranger—Matsue robed in Shinto attire for the celebation of the New Year. I suppose, in all parts of Japan, the holiday decorations are about the same:—the pine-trees and bamboos planted at every house-door, *shimenawa* over the entrance, the crossed flags above the gates bearing the symbol of the Red Sun. But in Matsue I think there were some unique features. Here the houses are nearly all of exactly the same height, and the awning at the same level. Consequently the *shimenawa*, on either side of the street, presented one symmetrical unbroken line as far as the eye could see. Here the people do not put up little thin straw cords. The *shimenawa* in Izumo are always massive and heavily fringed, and decorated with *gohei* at short entervals. I noticed a great many fern fronds interwoven with them. In all the houses, the *tokos* were decked with similar *shimenawa*; and upon the *kamidana*, the offerings of fresh rice cakes, laid upon white paper, and surrounded by fern fronds and sprays of the plants sacred to Shinto, were illuminated by lamps kindled at the sacred fire, which must be made by a flint and steel—never by match.

Soon after the lull, the bad weather set in again with great fury. One week ago it began to snow tremendously. In twenty-four hours the snow before my house had drifted in places to the height of four feet. *Kuruma* could scarcely be moved by two men. This snow continued for five days, accompanied with a very bitter wind. I never saw a heavier snow-fall, even in Western America; but the thermometer never went below zero. The day before yesterday became beautiful and sunny, and—fatal omen—Dai-Sen appears once more enchantingly beautiful. Thereafter more rain, more snow, more wind; and misery of cold in Japanese houses facing the lake.

The people say that such weather has not been known here before for more than fifteen years. It is very trying to persons of weak lungs. We have, however, as yet escaped the influenza: the wind from the Asiatic coast is blowing against the path of the infection, whose march is westward. Perhaps we ought to be grateful for the storms.

## *LETTER FROM DENVER.*

(FROM AN OCCASIONAL CORRESPONDENT.)

Denver, Colo., December 20th.

The end of the year generally sees some stringency in the money market, but the most salient feature of the last few weeks has been a growing distrust and disquiet in commercial centres. Denver is still chiefly dependent on outside capital. Ten years ago its own resources were of course still most limited, and a period of "booming" was certain to be followed by a sharp reaction. We are not, and are not likely soon to become, self-reliant enough to keep the even tenor of our way when London and New York frown on speculation. We may brag of our progress, but after all it is the fruit of Eastern capital. The present experience reduces our selfsufficiency and abates our enthusiasm. If the pulse of the commercial world can best be felt on Wall street or in London, when that pulse runs slow and feeble we in the extremities get very cold. But present difficulties seem to be entirely due to lack of confidence and daring. Banks have been calling in every available dollar; and one of the largest of those institutions has boasted that in case of a run upon it every depositor could be paid in full. The result of this accumulation by the banks is that it is next to impossible to obtain a loan even on the best security. A gentleman whose estate is worth at least a million and a quarter cannot borrow a couple of thousand. But it is of course the smaller firms and those who have tried to conduct a big business with small capital who feel the pressure most severely, and many of them have gone to the wall. We confidently hope that, so soon as the semi-annual statements have been made by the banks and the inspector has been satisfied with abundant evidence of wealth, the stringency will give way, and Denver will boom as merrily as before. I imagine, however, that it is not merely Denver bankers who are pursuing this policy, and that we may possibly find it a matter of months instead of weeks before confidence is restored.

Nothing will satisfy the West now but a free coinage measure. Silver, we are told, has been the tool of unprincipled speculation and the silver miners have been its victims. Probably the immediate adoption of such a measure would make things easier for the present. But he would be a brave man who should dare to say that the free coinage of silver in this country would certainly issue in the permanent relief of commerce. Unquestionably in many respects it would be better than the present law. That law may be certainly called a failure. It simply offered a premium to the most skillful juggler in bullion. It did not secure a steady and high price for silver. A friend of mine, a banker, tells me that the best results may be expected from free coinage. But inasmuch as the silver question affects the whole world's trade, it does not seem possible for any one country to solve it finally. Some good might be done by a determined conference of business men and capitalists of all commercial centres, if mutual trust and the conviction of identical interests could but gain ascendency. In these days of universal intercourse it is fatal to the stability of trade for a medium of exchange to suffer constant variety through the separate action of individual nations, and through these are truisms they are commonly disregarded. One thing seems quite certain, namely, that the relative value of silver and gold is of less importance than the fixity of that value. And consequently the matter best desiring attention and decision is what shall that value be. Silver producers of course want a high price,—will be content with nothing short of the old standard. And yet it is hard to see how any metal can obtain a fictitious value largely higher than its value as a commodity merely by receiving a certain stamp. Our democracy had better study Locke's refutation of Lowndes if that theory is in their minds.

The last month has brought its full tale of drunken crime. The most recent instance was fatal to a well-known bully whose early days were spent in the prize ring. This ornament of life would seek the plaudits of his friends by exercising his pugilistic powers on inoffensive pedestrians; and as he kept a saloon he could generally make his peace with the guardians of that virtue. No one doubts that his assailant was an injured man, drugged by vile liquor, swindled by unscrupulous cunning, and maddened by loss. And no one seriously expects the murderer to be severely punished or regrets the disappearance of the burly scoundrel who paid so dear a penalty for his crimes. But it is an interesting fact that scores of red-eyed, heavy looking men paid a sort of drunken tribute to the dead by hanging about the coroner's office as long as the body lay there.

But the subject that overtops all others in point of interest is the Indian scare. It has been threatening for months. To an onlooker, however, most remarkable is the fact that from the beginning there seems to have been no evidence of evil doing, no instance of unprovoked violence on the part of the Indians. The settlers and they make bad neighbours. A kind of religious frenzy had recently taken possession especially of the Sioux. They engaged in what is called a ghost-dance, almost starving themselves, exerting their endurance to the utmost, and consequently were subject to trance and visions. They expect the advent of a Messiah or Saviour. If this hope assumes startling and sensuous forms it proves nothing against the Indians. The very same hope often takes on

Digitized by Google

equally grotesque forms among the followers of a more enlightened faith. When men watch their nation dwindle, their lands fall into the possession of an alien and more crafty people, the terrible coil of fate closing on them in ever narrowing circles, is it wonderful that they should expect supernatural deliverance? And when harassed by the settlers, goaded into some kind of rebellion by men waiting for their inheritance and ready to find a flimsy pretext to win aid from Government forces, it would be very strange if brave hearts did not ever and anon burst into a flame of hated and kindle a war of desperation. This seems to be the genesis of the present trouble. On the one hand, there are no doubt many far-seeing and politic men among the tribes, who see the folly of resistance, the hopelessness of regaining freedom. Their buffaloes are extinct, and if they chase them they must first cross the dark abyss over which the beasts have been driven. A single generation has made the old free life impossible for evermore. And in their sane moments the Indians know it. Some among them appear content to live as paupers on the rations allowed by the Government. But there are not wanting more adventurous ones, whose valour would cast prudence to the winds, and these are the creators of the present mischief. It is a sad sight, but inevitable so long as material progress is the highest object of the white man's ambition. And there does not seem any ground for hoping that the white man will voluntarily recede from his present opinion as to the value of material wealth. If he does so it will be through sheer disgust and weariness and the gradual growth of the conviction that not by any abundance of "the resources of civilisation" will the spiritual wants of himself and his children be satisfied.

## *THE RECORD OF BADALIA HERODSFOOT.*

By Rudyard Kipling.

The year's at the spring
And day's at the morn;
Morning's at seven;
The hill-side's dew-pearled;
The lark's on the wing;
The snail's on the thorn;
God's in his heaven—
All's right with the world;
Pippa passes.

This is not that Badalia whose spare names were Joanna, Pugnacious, and McCannat as the song says, but another and much nicer lady.

In the beginning of things she had been unregenerate; had worn the heavy, fluffy fringe which is the ornament of the costermonger's girl, and there is a legend in Gunnison-street that on her wedding-day she, a flare-lamp in either hand, danced dances on a discarded lover's winkle barrow till a policeman interfered, and them Badalia danced with the Law amid shoutings. Those were her days of fatness, and they did not last long, for her husband after two years took to himself another woman, and passed out of Badalia's life over Badalia's senseless body; for he stifled protest with blows. While she was enjoying her widowhood the baby that the husband had not taken away died of croop, and Badalia was altogether alone. With rare fidelity she listened to no proposals for a second marriage according to the customs of Gunnison-street, which do not differ from those of the Barralong. "My man," she explained to her suitors, "'e'll come back one o' these days, an' then, like as not, 'e'll take an' kill me if I was livin' 'long o' you. You don't know Tom; I do. Now you go. I can do for myself—not 'avin' a kid." She did for herself with a mangle, some tending of babies, and an occasional sale of flowers. This latter trade is one that needs capital, and takes the vendor very far westward, in so much that the return journey from, let, us say, the Burlington Arcade to Gunnison-street, E., is an excuse for drink, and then, as Badalia pointed out, "You come 'ome with your shawl arf off of your back, an' your bonnick under your arm, and the price of nothing at-all in your pocket, let alone a slop takin' care o' you." Badalia did not drink, but she knew her sisterhood, and gave them rude counsel. Otherwise she kept herself to herself, and meditated a great deal upon Tom Herodsfoot, her husband, who would come back some day, and the baby that would never return. In what manner these thoughts wrought upon her mind will not be known.

Her entry into society dates from the night when she rose literally under the feet of the Reverend Eustace Hanna, on the landing of No. 17, Gunnison-street, and told him that he was a fool, without discernment in the dispensation of his district charities.

"You give Lacar Loo custids," said she, without the formality of introduction; "give her pork-wine. Garn! Give'er blankits. Garn 'ome! 'Er mother, she eats 'em all, and drinks the blankits. Gits 'em back from the shop, she does, before you come visiting again so as to 'ave 'em all handy, an' Lascar Loo she sez to you, 'Oh, my mother's that good to me!' she do. Lascar Loo 'ad better talk so, bein' sick abed, 'r elsê 'er mother would kill 'er. Garn! you're a bloomin' gardener—yoo an' yer custids! Lascar Loo don't never smell of 'em even."

Thereon the curate, instead of being offended, recognised in the heavy eyes under the fringe the soul of a fellow worker, and so bade Badalia mount guard over Lascar Loo, when the next jelly or custard should arrive, to see that the invalid actually ate it. This Badalia did, to the disgust of Lascar Loo's mother, and the sharing of black eye between the three; but Lascar Loo got her custard, and coughing heartily, rather enjoyed the fray.

Later on, partly through the Reverend Eustace Hanna's swift recognition of her uses, and partly through certain tales poured out with moist eyes and flushed cheeks by Sister Eva, youngest and most impressionable of the Little Sisters of the Red Diamond, it came to pass that Badalia, arrogant, fluffy-fringed, and perfectly unlicensed in speech, won a recognised place among such as labour in Gunnison-street.

These were a mixed corps, zealous or hysterical, faint-hearted or only very wearied of battle against misery, according to their lights. The most part were consumed with small rivalries and personal jealousies, to be retailed confidentially to their own tiny cliques in the pauses between wrestling with death for the body of a moribund laundress, or scheming for further mission-grants to resole a consumptive compositor's very consumptive boots. There was a rector that lived in dread of pauperising the poor, would fain have held bazaars for fresh altar cloths, and prayed in secret for a new large brass bird, with eyes of red glass, fondly believed to be carbuncles. There was Brother Victor, of the Order of Little Ease, who knew a great deal about altar cloths but kept his knowledge in the background while he strove to propitiate Mrs. Jessel, the Secretary of the Tea Cup Board, who had money to dispense but hated Rome—even though Rome would, on its honour, do no more than fill the stomach, leaving the dazed soul to the mercies of Mrs. Jessel. There were all the Little Sisters of the Red Diamond, daughters of the horseleech, crying "Give" when their own charity was exhausted, and pitifully explaining to such as demanded an account of their disbursements in return for one half-sovereign, that relief work in a bad district can hardly be systematised on the accounts' side without expensive duplication of staff. There was the Reverend Eustace Hanna, who worked impartially with Ladies' Committees, Androgynous Leagues and Guilds, Brother Victor, and anybody else who could give him money, boots, or blankets, or that more precious help that allows itself to be directed by those who know. And all these people learned, one by one, to consult Badalia on matters of personal character, right to relief, and hope of eventual reformation in Gunnison-street. Her answers were seldom cheering, but she possessed special knowledge and complete confidence in herself.

"I'm Gunnison-street," she said to the austere Mrs. Jessel. "I know what's what, *I* do, an' they don't want your religion, Mum, not a single ——. Excuse me. It's all right when they comes to die, Mum, but till they die what they wants is things to eat. The men they'll shif' for themselves. That's why Nick Lapworth sez to you that 'e wants to be confirmed an' all that. 'E won't never lead no new life, nor 'is wife won't get no good out o' all the money you gives 'im. No more you can't pauperise them as 'asn't things to begin with. They're bloomin' well pauped. The women they can't shif' for themselves—'specially bein' always confined. 'Ow should they? They wants things if they can get 'em anyways. If not they dies, and a good job too, for women is cruel put upon in Gunnison-street."

"Do you believe that—that Mrs. Herodsfoot is altogether a proper person to trust funds to?" said Mrs. Jessel to the curate after this conversation. "She seems to be utterly godless in her speech at least."

The curate agreed. She was godless according to Mrs. Jessel's views, but did not Mrs. Jessel think that since Badalia knew Gunnison-street and its needs, as none other knew it, she might in a humble way, be, as it were, the scullion of charity from purer sources, and that if say, the Tea Cup Board could give a few shillings a week, and the Little Sisters of the Red Diamond a few more, and, yes, he himself could raise yet a few more, the total, not at all likely to be excessive, might be handed over to Badalia to dispense among her associates. Thus Mrs. Jessel herself would be set free to attend more directly to the spiritual wants of certain large-limbed, hulking men who sat picturesquely on the lower benches of her gatherings and sought for truth—which is quite as precious as silver, when you know the market for it.

"She'll favour her own friends," said Mrs. Jessel. The curate refrained from mirth, and, after wise flattery, carried his point. To her unbounded pride Badalia was appointed the dispenser of a grant—a weekly trust, to be held for the benefit of Gunnision-street.

"I don't know what we can get together each week," said the curate to her. "But here are seventeen shillings to start with. You do what you like with them among your people, only let me know how it goes so that we shan't get muddled in the accounts. D'you see?"

"Ho, yuss! 'Taint much though, is it?" said Badalia, regarding the white coins in her palm. The sacred fever of the administrator, only known to those who have tasted power, burned in her veins. "Boots is boots, unless they're give you, an' then they ain't fit to wear unless they're mended top an' bottom; an' jellies; an' I don't think anything o' that cheap pork-wine, but it all comes to something. It'll go quicker 'n a quartern of gin—seventeen bob. An' I'll keep a book—same as I used do before Tom went an' took up 'long o' that pan-faced slut in Henessy's Rents. We was the only barrer that key' reglar books, mean'—'im."

She bought a large copy-book—her unschooled handwriting demanded room—and in it she wrote the story of her war; boldly, as befits a general, and for no other eyes than her own and those of the Reverend Eustace Hanna. Long ere the pages were full the mottled cover had been soaked in kerosene—Lascar Loo's mother, defrauded of her percentage on her daughter's custards, invaded Badalia's room in 17, Gunison-street, and fought with her to the damage of the lamp and her own hair. It was hard, too, to carry the precious "pork wine" on one hand and the book in the other through an eternally thirsty land; so red stains were added to those of the oil. But the Reverend Eustace Hanna, looking at the matter of the book, never objected. The generous scrawls told their own tale, Badalia every Saturday night supplying the chorus between the written statements thus:—

*Mrs. Hikkey, very ill brandy 3d. Cap for hospital, she had to go, 1s. Mrs. Poone confined. In money for tea (she took it I know, sir) 6d. Met her husband out looking for work.*

"I slapped 'is face for a bone-idle beggar? 'E won't get no work this side o'— excuse me, sir. Won't you go on?" The curate continued—

*Mrs. Vincent. Confid. No linning for baby. Most untidy. In money 2s. 6d. Some cloths from Miss Evva.*

"Did Sister Eva do that?" said the curate very softly. Now charity was Sister Eva's bounden duty, yet to one man's eyes each act of her daily toil was a manifestation of angelic grace and goodness—a thing to perpetually admire.

"Yes, sir. She went back to the Sisters' 'Ome an' took 'em off 'er own bed. Most beautiful marked too. Go on, sir. That makes up four and thruppence."

*Mrs. Funnett to keep good firee coals is up. 7d.*

*Mrs. Lockhart took a baby to nurse to earn a triffle but mother can'd pay husband summons over and over. He won't help. Cash 2s. 2d. Worked in a ketchin but had to leave. Fire, tea, and shin of beef, 1s. 7½d.*

"There was a fight there, sir," said Badalia. "Not me, sir. 'Er 'usband, o' course 'e come in at the wrong time, was wishful to 'ave the beef, so I calls up the next floor an' down comes that mulatter man wot sells the sword-stick canes, top o' Ludgate-'ill. 'Muley,' sez I, 'you big black beast, you, take an' kill this big white beast 'ere.' I knew I couldn't stop Tom Lockart alf drunk, with the beef in 'is 'ands. 'I'll beef 'm,' sez Muley, an, 'e did it, with that pore woman a-cryin' in the next room, an' the top banisters on that landin' is broke out, but she got 'er beef-tea, an' Tom 'e's got 'is gruel. Will you go on, sir?

"No, I think it will be all right. I'll sign for the week," said the curate. One gets so used to these things profanely called human documents.

"Mrs. Churner's baby's got diptheery," said Badalia, turning to go.

"Where's that? The Churners of Painter's-alley, or the other Churners in Houghton-street?"

"Houghton-street. The Painter's-alley sold out 'an left."

"Sister Eva's sitting one night a week with old Mrs. Probyn in Houghton-street—isn't she?" said the curate, uneasily.

"Yes; but she won't sit no longer. *I've* took up Mrs. Probyn. I can't talk 'er no religion, but she don't want it; an' Miss Eva she don't want no diptheery, tho' she sez she does. Don't *you* be afraid for Miss Eva."

"But—but you'll get it, perhaps."

"Like as not." She looked the curate between the eyes, and her own eyes flamed under the fringe. "Maybe I'd like to get it, for aught you know."

The curate thought upon these words for a little time till he began to think of Sister Eva in the grey cloak with the white bonnet ribbon under the chin. Then he thought no more of Badalia.

What Badalia thought was never expressed in words, but it is known in Gunnison street that Lascar Loo's mother, sitting blind drunk on her own doorstep, was that night captured and wrapped up in the war-cloud of Badalia's wrath so that she did not know whether she stood on her head or her heels, and after being soundly bumped on every particular stair up to her room, was set down on Badalia's bed, there to whimper and quiver till the dawn, protesting that all the world was against her, and calling on the names of children long since slain by dirt and neglect. Badalia, snorting, went out to war, and since the hosts of the enemy were many, found enough work to keep her busy till the dawn.

As she had promised, she took Mrs. Probyn into her own care, and began by nearly startling the old lady into a fit with the announcement that "there ain't no God like as not, an' if there *is* it don't matter to you or me, an' any'ow you take this jelly." Sister Eva objected to being shut off from her pious work in Houghton street, but Badalia insisted, and by fair words and the promise of favours to come so prevailed on three or four of the more sober men of the neighbourhood that they blockaded the door whenever Sister Eva attempted to force an entry, and pleaded the diphtheria as their excuse. "I've got to keep 'er out o' arm's way." said Badalia, "an' out she keeps. The curick won't care a —— for me, but—he wouldn't any'ow."

The effect of that quarantine was to shift the sphere of Sister Eva's activity to other streets, and notably those most haunted by the Reverend Eustace Hanna and Brother Victor, of the Order of Little Ease. There exists, for all their human bickerings, a very close brotherhood in the ranks of those whose work lies in Gunnison street. To begin with they have seen pain—pain that no word or deed of theirs can alleviate—life born into Death, and Death crowded down by unhappy life. Also they understand the full significane of drink, which is a knowledge hidden from very many well-meaning people, and some of them have fought with the beasts at Ephesus. They meet at unseemly places, exchange a word or two of hasty counsel or advice, or suggestion, and pass on to their appointed toil, since time is precious and lives hang in the balance of five minutes. For many, the gas-lamps are their sun, and the Covent Garden wains the chariots of the twilight. They have all in their station begged for money, so that the freemasonry of the mendicant binds them together.

To all these influences there was added in the case of two workers that thing which men have agreed to call Love. The possible chance of Sister Eva's catching diphtheria did not enter into the curate's head till Badalia had spoken. Then it seemed a thing intolerable and monstrous that she should be exposed not only to this risk, but any accident whatever of the streets. A wain coming round a corner might kill her; the rotten staircases on which she trod daily and nightly might collapse and maim her; there was danger in the tottering coping-stones of certain crazy houses that he knew well, danger more deadly within those houses. What if one of a thousand drunken men crushed out that precious life? A woman had once flung a chair at the curate's head. Sister Eva's arm would not be strong enough to ward off a chair. There were also knives that were apt to fly. These and other considerations cast the soul of the Reverend Eustace Hanna into torment, that no leaning upon Providence could relieve. God was indubitably great and terrible—one had only to walk through Gunnison-street to see that much—but it would be better, vastly better, that Eva should have the protection of his own arm. And the world that was not too busy to watch might have seen a woman, not too young, light-haired and light-eyed, slightly assertive in her speech, and very limited in such ideas as lay beyond the immediate sphere of her duty, where the eyes of the Reverend Eustace Hanna turned to follow the footsteps of a Queen crowned in a little grey bonnet with white ribbons under the chin.

If that bonnet appeared for a moment at the bottom of a court-yard, or nodded at him on a dark staircase, then there was hope yet for Lascar Loo, living on one lung and the memory of past excesses, hope even for whining, sodden Nick Lapworth, blaspheming in the hope of money over the pangs of a "true conversion this time, s'elp me Gawd, sir." If that bonnet did not appear for a day, the mind of the curate was filled with lively pictures of horror, visions of stretchers, a crowd at some villainous crossing, and a policeman—he could see that policeman—jerking out over his shoulder the details of the accident, and ordering the man who would have set his body against the wheels—heavy dray wheels, he could see them—to "move on." Then there was less hope for the salvation of Gunnison-street and all in it.

Which agony Brother Victor beheld one day when he was coming from a death bed. He saw the light in the eye, the relaxing muscles of the mouth, and heard a new ring in the voice that had told flat all the forenoon. Sister Eva had turned into Gunnison-street after a forty-eight hours' eternity of absence. She had not been run over. Brother Victor's heart must have suffered in some human fashion, or he would never have seen what he saw. But the law of his Church made suffering easy. His duty was to go on with his work until he died, even as Badalia went on. She, magnifying her office, faced the drunken husband; coaxed the doubly shiftless, thriftless, girl wife into a little forethought, and begged clothes when and where she could for the scrofulous babes that multiplied like the green scum on the water cisterns.

The story of her deeds was written in the book that the curate signed weekly, but she never told him any more of fights and tumults in the street.

"Mis' Eva does 'er work 'er way. I does mine mine. But I do more than Mis' Eva ten times over, an' 'Thank yer, Badalia,' sez 'e—'that'll do for this week' I wonder what Tom's doin' now long o' that—other woman. 'Seems like as if I'd go an' look at 'im one o' these days. But I'd cut 'er liver out—couldn't 'elp myself. Better not go, p'raps."

Hennessy's Rents lay more than two miles from Gunnison-street, and were inhabited by much the same class of people. Tom had established himself there with Jenny Wabstow, his new woman, and for weeks lived in great fear of Badalia's suddenly descending upon him. The prospect of actual fighting did not scare him; but he objected to the police-court that would follow, and the orders for maintenance and other devices of a law that cannot understand the simple rule that "when a man's tired of a woman 'e ain't such a bloomin' fool as to live with 'er no more, an' that's the long an' short of it." For some months his new wife wore very well, and kept Tom in a state of decent fear and consequent orderliness. Also work was plentiful. Then a baby was born, and, following the law of his kind, Tom, little interested in the children he helped to produce, sought distraction in drink. He had confined himself, as a rule, to beer, which is stupefying and comparatively innocuous; at least, it clogs the legs, and though the heart may ardently desire to kill, sleep comes swiftly, and the crime often remains undone. Spirits, being more volatile, allow both the flesh and the soul to work together—generally to the inconvenience of others. Tom discovered that there was merit in whiskey—if you only took enough of it—cold. He took as much he could purchase or get given him, and by the time that his woman was fit to go abroad again, the two rooms of their household were stripped of many valuable articles. Then the woman spoke her mind, not once, but several times, with point, fluency, and metaphor; and Tom was indignant at being deprived of peace at the end of his day's work, which included much whiskey. He therefore withdrew himself from the solace and companionship of Jenny Wabstow, and she therefore pursued him with more metaphors. At the last, Tom would turn round and hit her—sometimes across the head, and sometimes across the breast, and the bruises furnished material for discussion on doorsteps among such women as had been treated in like matter by their husbands. They were not few.

But no very public scandal had occurred till Tom one day saw fit to open negotiations with a young woman on the subject of matrimony according to the laws of free selection. He was getting very tired of Jenny, and the young woman was earning enough from flower-selling to keep him in comfort, whereas Jenny was expecting another baby and most unreasonably expected consideration on this account. The shapelessness of her figure revolted him, and he said as much in the language of his breed. Jenny cried till Mrs. Hart, lineal descendant, and Irish of the "mother to Mike of the donkey-cart," stopped her on her own staircase and whispered: "God be good to you, Jenny, my woman, for I see how 'tis with you." Jenny wept more than ever, and half dazed with the sickness that makes the bannisters swim in the morning, gave Mrs. Hart a penny and some kisses, while Tom was conducing his own wooing at the corner of the street.

The young woman, prompted by pride, not by virtue, told Jenny of his offers, and she spoke to Tom that night. The altercation began in their own rooms, but Tom tried to escape; and in the end all Hennessy's Rents gathered themselves upon the pavement and formed a court to which Jenny appealed from time to time, her hair loose on her neck, her raiment in extreme disorder, and her steps astray from drink. "When your man drinks you'd better drink too! It don't 'urt so much when 'e 'its you then," says the Wisdom of the Women. And surely they ought to know.

"Look at 'im!" shrieked Jenny. "Look at 'im, standin' there without any word to say for himself, that u'd smitch off and leave me an' never so much as a shillin' lef be'ind! You call yourself a man—you call yourself the bleedin' shadow of a man? I've seen better men than you made outer chewed paper and sput out arterwards. Look at 'im! 'E's been drunk since Thursday last an' e'll be drunk s' long's 'e can get drink. 'Es took all I've got, an' me—an'. me—as you see——"

A murmur of sympathy from the women.

"Took it all, he did, an' atop of his blasted pickin' an stealin'—yes, you, you thief—'e goes off an' tries to take up long o' that"—here followed a complete and minute description of the young woman aforementioned. Luckily, she was not on the spot to hear. "'E'll serve 'er as 'e served me? 'E'll drink every bloomin' copper she makes an' then leave 'er alone, same as 'e done me! O women, look you, I've bore 'im one an' there's another on the way, an' e'd up an' leave me as I am now—the stinkin' dorg. An' you may leave me. I don't want none o' our leavin's. Go away. Get away!" The hoarseness of passion overpowered the voice. The crowd attracted a policeman as Tom began to slink away.

"Look at 'im," said Jenny, grateful for the new listener. "Ain't there no law for such as 'im? 'E's took all my money, 'e's beat me once, twice an' over. 'E's swine drunk when 'e aint mad drunk, an' now, an' now e's' trying to pick up along o' another woman. 'Im I give up a four times better man for. Ain't there no law?"

"What's the matter now? You go on into your 'ouse. I'll see to the man. 'As 'e been 'itting you?" said the policeman.

"'Ittin' me? 'E's cut my 'eart in two, an' 'e stands there grinnin' as tho' 'twas all a play to 'im."

"You go on into your 'ouse and an' lie down a bit."

"I'm a married woman, I tell you, an' I'll 'ave my 'usband!"

"I ain't done her no bloomin' 'arm," said Tom from the edge of the crowd. He felt that public opinion was running against him.

"You ain't done me any bloomin' good, you dorg. I'm a married woman, I am, an' I won't 'ave my 'usband took from me."

"Well, if you are a married woman, go into the 'ouse," said the policeman soothingly. He was used to domestic brawls.

"Shan't—thank you for your impidence. Look 'ere!" She tore open her dishevelled bodice and showed such crescent-shaped bruises as are made by a well applied chair-back. "That's what 'e done to me acause my heart wouldn't break quick enough! 'E's tried to get in an' break it. Look at that, Tom, that you gave me last night; an' I made it up with you. But that was before I knew what you were tryin' to do long o' that woman——'.

"D'you charge 'im?', said the policeman. "'E'll get a month for it, pre'aps."

"No," said Jenny firmly. It was one thing to expose her man to the scorn of the street, and another to lead him to jail.

"Then you go in an' lie down, and you"—this to the crowd—"pass along the pavement, there. Pass along. 'Taint nothing to laugh at." To Tom, who was being sympathised with by his friends, "It's good for you she didn't charge you, but mind this now, the next time," &c.

Tom did not at all appreciate Jenny's forbearance, nor did his friends help to compose his mind. He had whacked the woman because she was a nagging nuisance. For precisely the same reason he had cast about for a new mate. And all his kind acts had ended in a truly painful scene in the street, a most unjustifiable exposure by and of his woman, and a certain loss of caste—this he realised dimly—among his associates. Consequently whiskey was a good thing. His friends condoled with him. Perhaps he had been more hard on his woman than she deserved, but her disgraceful conduct under provocation excused all offence.

"I wouldn't 'ave no more to do with 'er—a woman like that there," said one comforter.

"Let 'er go an' dig for her bloomin' self. A man wears 'isself out to a skeleton shovin' meat down their mouths, while they sit at 'ome easy all day; an' the very fust time, mark you, you 'as a bit of a difference, an' very proper too for a man as *is* a man, she ups an' 'as you out into the street, callin' you Gawd knows what all. What's the good o' that, I arx you?" So spoke the second comforter.

The whiskey was the third, and his suggestion struck Tom as the best of all. He would return

Digitized by Google

to Badalia his wife. Probably she would have been away, and he could then vindicate his authority as husband. Certainly she would have money. Single women always seemed to possess the pence that God and the Government denied to hard working men. He refreshed himself with more whiskey. It was beyond any doubt that Badalia would have done something wrong. She might even have married another man. He would wait till the new husband was out of the way, and after kicking Badalia, would get money and a long absent sense of satisfaction. There is much virtue in a creed or a law, but when all is prayed and suffered, drink is the only thing that will make clean all a man's deeds in his own eyes. Pity it is that the effects are not permanent.

Tom parted with his friends, bidding them tell Jenny that he was going to Gunnison-street, and would return to her arms no more. Because this was the devil's message, they remembered and severally delivered it, with drunken distinctness, in Jenny's ears. Then Tom took more drink till his drunkenness rolled back and stood off from him as a wave rolls back and stands off the wreck it will swamp. He reached the traffic-polished black asphalte of a side street and trod warily among the reflections of the shop-lamps that burned in gulfs of pitchy darkness, fathoms beneath his boot-heels. He was very sober indeed. Looking down his past, he beheld that he was justified of all his actions so entirely and perfectly that if Badalia had in his absence dared to lead a blameless life he would smash her for not having gone wrong.

Badalia at that moment was in her own room after the regular nightly skirmish with Lascar Loo's mother. To a reproof as stinging as a Gunnison-street tongue could make it, the old woman, detected for the hundredth time in the theft of the poor delicacies meant for the invalid, could only cackle and answer—

"D'you think Loo's never bilked a man in 'er life? She's dyin' now—on'y she's so cunning long about it. Me! I'll live for twenty years yet."

Badalia shook her, more on principle than in any hope of curing her; and thrust her into the night, where she collapsed on the pavement and called upon the devil to slay Badalia.

He came upon the word in the shape of a man with a very pale face, who asked for her by name. Lascar Loo's mother remembered. It was Badalia's husband—and the return of a husband to Gunnison-street was generally followed by beatings.

"Where's my wife?" said Tom, "Where's my slut of a wife?"

"Upstairs an' be —— to her," said the old woman, falling over on her side. "'Ave you come back for 'er, Tom?"

"Yes. 'Oo's she took up while I've bin gone?"

"All the bloomin' curicks in the parish. She's that set up you wouldn't know 'er."

"'Strewth she is!"

"Oh, yuss. Mor'n that, she's always round an' about with them sniffin' Sisters of Charity an' the curick. Mor'n that, 'e gives 'er money—pounds an' pounds a week. Been keepin' her that way for months, 'e 'as. No wonder you wouldn't 'ave nothin' to do with 'er when you left. An' she keeps me outer the food-stuff they gets for me lyin' dyin' out 'ere like a dorg. She's been a blazin' bad 'un has Badalia since you lef'."

"Got the same room still, 'as she?" said Tom, striding over Lascar Loo's mother, who was picking at the chinks between the pave-stones.

"Yes, but so fine you wouldn't know it."

Tom went up the stairs ond the old lady chuckled. Tom was angry. Badalia would not be able to bump people for some time to come, or to interfere with the heaven-appointed distribution of custards.

Badalia, undressing to go to bed, heard feet on the stair that she knew well. Ere they stopped to kick at her door she had, in her own fashion, thought through several volumes of the book of human life.

"Tom's back," she said to herself. "An' I'm glad . . . spite o' the curick an' everythink."

She opened the door, crying his name.

The man pushed her aside.

"I don't want none o' you kissin's an' slaverin's. I'm sick of 'em," said he.

"You ain't 'ad so many neither to make you sick these two years past."

"I've 'ad better. Got any money?"

"On'y a little—orful little."

"That's a —— lie, an you know it."

"'Taint—and, oh Tom, what, s the use o' talkin' money the minute you come back. Didn't you like Jenny? I knowed you wouldn't."

"Shut your 'ead. Ain't you got enough to make a man drunk fair?"

"You don't want bein' made more drunk any. You're drunk a'ready. You come to bed, Tom."

"To you?"

"Ay, to me. Ain't I nothin'—spite o' Jenny?"

She put out her arms as she spoke. But the drink held Tom fast.

"Not for me," said he, steadying himself against the wall. "Don't I know 'ow you've been goin' on while I was away, yah!"

"Arsk about!" said Badalia, indignantly, drawing herself together, "'Oo sez anything agin me 'ere?"

"'Oo sez? W'y, everybody. I ain't come back more 'n a minute fore I finds you've been with the curick Gawd knows where. Wot curick was 'e?"

"The curick that's 'ere always," said Badalia, hastily. She was thinking of anything rather than the Rev. Eustace Hanna at that moment. Tom sat down gravely in the only chair in the room. Badalia continued her arrangements for going to bed.

"Pretty thing that," said Tom, "to tell your own lawful married 'usband—an' I guv five bob for the weddin' ring. Curick that's 'ere always! Cool as brass you are. Ain't you got no shame? Ain't 'e under the bed now?

"Tom, you're bleedin' drunk. I ain't done nothin' to be shamed of.'

"You! You don't know wot shame is. But I ain't come 'ere to mess with you. Give me wot you've got, an' then I'll dress you down an' go to Jenny."

"I ain't got nothin' 'cept some coppers an' a shillin' or so."

"Wot's that about the curick keepin' you on five poun' a week?"

"'Oo told you that?"

"Lascar Loo's mother, lyin' on the pavemint outside, an' more honest than you'll ever be. Give me wot you've got!!"

Badalia passed over to a little shell pincushion on the mantelpiece, drew thence four shillings and threepence—the lawful earnings of her mangle—and held them out to the man who was rocking in his chair and surveying the room with wide-opened rolling eyes.

"That ain't five poun'," said he, drowsily.

"I ain't got no more. Take it an' go—if you won't stay."

Tom rose slowly, gripping the arms of the chair. "Wot about the curick's money that 'e guv you?" said he. "Lascar Loo's mother told me. You give it over to me now, or I'll make you."

"Lascar Loo's mother don't know anything about it."

"She do, an' more than you want her to know."

"She don't. I've bumped the 'eart out of 'er, and I can't give you the money. Anythin' else but that, Tom, an' everythin else but that, Tom, I'll give willin' and true. 'Taint my money. Won't the dollar be enough? That money's my trust. There's a book along of it too."

"Your trust? Wot are you doin' with any trust that your 'usband don't know of? You an' your trust! Take you that!"

Tom stepped towards her and delivered a blow of the clenched fist across the mouth. "Give me wot you've got," said he, in the thick, abstracted voice of one talking in dreams.

"I won't," said Badalia, staggering to the washstand. With any other man than her husband she would have fought savagely as a wild cat; but Tom had been absent two years, and, perhaps, a little timely submission would win him back to her. None the less, the weekly trust was sacred.

The wave that had so long held back descended on Tom's brain. He caught Badalia by the throat and forced her to her knees. It seemed just to him in that hour to punish an erring wife for two years of wilful desertion; and the more, in that she had confessed her guilt by refusing to give up the wage of sin.

Lascar Loo's mother waited on the pavement without for the sounds of lamentation, but none came. Even if Tom had released her gullet, Badalia would not have screamed.

"Give it up, you slut!" said Tom. "Is that 'ow you pay me back for all I've done?"

"I can't. 'Tain't my money. Gawd forgive you, Tom, for wot you're——" the voice ceased as the grip tightened, and Tom heaved Badalia against the bed. Her forehead struck the bed-post, and she sank, half kneeling, on the floor. It was impossible for a self-respecting man to refrain from kicking her: so Tom kicked with the deadly intelligence born of whiskey. The head drooped to the floor, and Tom kicked at that till the crisp tingle of hair striking through his nailed boot with the chill of cold water, warned him that it might be as well to desist.

"Where's the curick's money, you kep' woman?" he whispered in the blood-stained ear. But there was no answer—only a rattling at the door, and the voice of Jenny Wabstow crying ferociously, "Come out o' that, Tom, an' come 'ome with me! An' you, Badalia, I'll tear your face off its bones!"

Tom's friends had delivered their message, and Jenny, after the first flood of passionate tears, rose up to follow Tom, and, if possible, to win him back. She was prepared even to endure an exemplary whacking for her performances in Hennessy's Rents. Lascar Loo's mother guided her to the chamber of horrors, and chuckled as she retired down the staircase. If Tom had not banged the soul out of Badalia, there would at least be a royal fight between that Badalia and Jenny. And Lascar Loo's mother knew well that Hell has no fury like a woman fighting above the life that is quick in her.

Still there was no sound audible in the street. Jenny swung back the unbolted door, to discover her man stupidly regarding a heap by the bed. An eminent murderer has remarked that if people did not die so untidily most men, and all women, would commit at least one murder in their lives. Tom was reflecting on the present untidiness, and the whiskey was fighting with the clear current of his thoughts.

"Don't make that noise," he said. "Come in quick."

"My Gawd?" said Jenny, checking like a startled wild beast. "Wot's all this 'ere? You ain't——"

"Dunno. 'Spose I did it."

"Did it? You done it a sight too well this time."

"She was aggravating'," said Tom, thickly, dropping back into the chair. "That aggravatin' you'd never believe. Livin' on the fat 'o the land among these aristocratic parsons an' all. Look at them white curtings on the bed. *We* ain't got no white curtings. What I want to know is ——" The voice died as Badalia's had died, but from a different cause. The whiskey was tightening its grip after the accomplished deed, and Tom's eyes were beginning to close. Badalia on the floor breathed heavily.

"No nor like to 'ave," said Jenny. "You've done for 'er this time. You go.

"Not me. She won't hurt. Do 'er good. I'm goin' to sleep. Look at those there clean sheets! Are you comin' too?"

Jenny bent over Badalia, and there was intelligence in the battered woman's eyes—intelligence and much hate.

"I never told 'im to do such," Jenny whispered. "'Twas Tom's own doin'—none o' mine. Shall I get 'im took, dear?"

The eyes told their own story. Tom, who was beginning to snore, must not be taken by the law.

"Go," said Jenny. "Get out! Get out of 'ere."

"You—told—me—that—this afternoon," said the man very sleepily. "Lemme go asleep."

"That was't nothing. You'd only 'it me. This time it's murder—murder—murder! Tom, you've killed 'er now." She shook the man from his rest, and understanding with cold terror filled his fuddled brain.

"I done it for your sake, Jenny," he whimpered feebly, trying to take her hand.

"You killed 'er for the money, same as you would ha' killed me. Get out o' this. Lay 'er on the bed first, you brute!"

They lifted Badalia on to the bed, and crept forth silently.

"I can't be took along o' you—and if you was took you'd say I made you do it, an' try to get me 'anged. Go away—anywhere outer 'ere," said Jenny, and she dragged him down the stairs.

"Goin' to look for the curick?" said a voice from the pavement. Lascar Loo's mother was still waiting patiently to hear Badalia squeal.

"Wot curick?" said Jenny, swiftly. There was a chance of salving her conscience yet in regard to the bundle upstairs.

"'Anna—63, Roomer-terrace—close 'ere," said the old woman. She had never been favourably regarded by the curate. Perhaps, since Badalia had not squealed, Tom preferred smashing the man to the woman. There was no accounting for tastes.

Jenny thrust her man before her till they reached the nearest main road. "Go away, now," she gasped. "Go off anywheres, but don't come back to me. I'll never go with you again; an', Tom—Tom, d' you 'ear me?—clean your boots."

Vain counsel. The desperate thrust of disgust which she bestowed upon him sent him staggering face down into the kennel, where a policeman showed interest in his welfare.

"Took for a common drunk. Gawd send they don't look at 'is boots! 'Anna, 63, Roomer-terrace!" Jenny settled her hat and ran.

The excellent housekeeper of the Roomer Chambers still remembers how there arrived a young person, blue-lipped and gasping, who cried only: "Badalia, 17, Gunnison-street. Tell the curick to come at once—at once—at once!" and vanished into the night. This message was borne to the Rev. Eustace Hanna, then enjoying his beauty sleep. He saw there was urgency in the demand, and unhesitatingly knocked up Brother Victor across the landing. As a matter of etiquette, Rome and England divided their cases in the district according to the creeds of the sufferers; but Badalia was an institution, and not a case,

Digitized by Google

and there was no district-relief etiquette to be considered. "Something has happened to Badalia," the curate said, "and it's your affair as well as mine. Dress, and come along."

"I am ready," was the answer. "Is there any hint of what's wrong?"

"Nothing beyond a runaway knock and a call."

"Then it's a confinement or a murderous assault. Badalia wouldn't wake us up for anything less. I'm qualified for both, thank God."

"I'd give much if our Church insisted on decent medical training. I've subscribed to the Thirty-nine Articles, but it would be better if I had subscribed to the *Lancet* intelligently from the beginning. Come along."

The two men raced to Gunnison-street, for there were no cabs abroad, and under any circumstances a cab fare means two day's good firing for such as are perishing with cold. Lascar Loo's mother had gone to bed, and the door was naturally on the latch. They found considerably more than they had expected in Badalia's room, and the Church of Rome acquitted itself nobly with bandages, while the Church of England could only pray to be delivered from the sin of envy. The Order of Little Ease, recognising that the soul is in most cases accessible through the body, take their measures and train their men accordingly.

"She'll do now," said brother Victor, in a whisper. "It's internal bleeding, I fear, and certain amount of injury to the brain. She has a husband, of course?"

"They all have, more's the pity."

"Yes, there's a domesticity about these injuries that shows their origin." He lowered his voice. "It's a perfectly hopeless business you understand. Twelve hours at the longest."

Badalia's right hand began to beat on the counterpane, palm down.

"I think you are wrong," said the Church of England. "She is going."

"No, that's not picking at the counterpane," said the Church of Rome. "She wants to say something; you know her better than I."

The curate bent very low.

"Send for Miss Eva," said Badalia, with a cough.

"In the morning. She will come in the morning," said the curate, and Badalia was content. Only the Church of Rome, who knew something of the human heart, knitted his brows and said nothing. After all, the law of his order was plain. His duty was to watch till the dawn while the grey worn moon went down.

It was a little before her sinking that the Rev. Eustace Hanna said, "Hadn't we better send for Sister Eva? She seems to be going fast."

Brother Victor made no answer, but as early as decency admitted there came one to the door of the house of the Little Sisters of the Red Diamond and demanded Sister Eva, that she might soothe the pain of Badalia Herodsfoot. That man, saying very little, led her to Gunnison-street, No. 17, and into the room where Badalia lay. Then he stood on the landing, and bit the flesh of his fingers in agony, because he was a priest and a man and knew how the hearts of men and women beat back at the rebound, so that Love is born out of horror, and passion declares itself when the soul is quivering with pain.

Badalia, wise to the last, husbanded her strength till the coming of Sister Eva. It is generally maintained by the Little Sisters of the Red Diamond that she died in delirium, but since one Sister at least took a half of her dying advice, this seems uncharitable.

She tried to turn feebly on the bed, and the poor broken human machinery protested according to its nature.

Sister Eva started forward, thinking that she heard the dread forerunner of the death-rattle. Badalia lay still conscious, and spoke with startling distinctness, the irrepressible irreverence of the street hawker, the girl who had danced on the winkle barrow, twinking in her one available eye.

"Sounds jest like Mrs. Jessel, don't it? Before she's 'ad 'er lunch an' 'as been talkin' all the mornin' to her classes."

Neither Sister Eva nor the curate said anything. Brother Victor stood without the door, and the breath came harshly between his clenched teeth. He was in pain.

"Put a cloth over my 'ead," said Badalia. "I've got it good, an' I don't want Miss Eva to see. I ain't pretty this time."

"Who was it?" said the curate.

"Man from outside. Never seed 'im no more'n Adam. Drunk, I s'pose. Selp me Gawd that's truth! Is Miss Eva 'ere? I can't see under the towel. I've got it good, Miss Eva. Excuse my not shakin' 'ands with you, but I'm not strong, an' it's fourpence for Mrs. Imeny's beef-tea, an' wot you can give 'er for baby-linning. Allus' avin' kids, these people. I 'adn't oughter talk, for *my* 'usband 'e never come nigh me these two years, or I'd a bin as bad as the rest; but 'e never come nigh me. . . . A man come and 'it me over the 'ead, an' 'e kicked me, Miss Eva; so it was just the same 's if I had ha' had a 'usband, ain't it? The book's in the drawer, Mister 'Anna, an' it's all right, an' I never guv' up a copper o' the trust money—not a copper. You look under the chist o' drawers—all wot isn't this week is there. . . . An', Miss Eva, don't you wear that grey bonnick no more. I kep' you from the diptheery, an'—an' I didn't want to keep you so, but the curick said it 'ad to be done. I'd a sooner ha' took up with 'im than anyone, only Tom he come, an' then—you see, Miss Eva, Tom 'e never come nigh me for two years, nor I 'aven't seen him yet. S'elp me ———, I haven't. Do you 'eer? But you two go along, and make a match of it. I've wished otherways often, but o' course it was not for the likes o' me. If Tom 'ad come back, which 'e never did, I'd ha' been like the rest—sixpence for beef-tea for the baby, a shilling for layin' out the baby. You've seen it in the books, Mister 'Anna. That's what it is; an' o' course, you couldn't never 'ave nothing to do with me. But a woman she wishes as she looks, an' never you 'ave no doubt about 'im, Miss Eva. I've seen it in 'is face time an' agin. . . . Make it a four pound ten funeral—with the pall."

It was a seven pound fifteen shilling funeral, and all Gunnison-street turned out to do it honour. All but two; for Lascar Loo's mother saw that a Power had departed, and that her road lay clear to the custards. Therefore, when the carriages rattled off, the cat on the doorstep heard the wail of the dying unfortunate, who could not die—

"Oh, mother, mother, won't you even let me lick the spoon!"

## *HYOGO AND OSAKA CHAMBER OF COMMERCE.*

The annual general meeting of the Hyogo and Osaka Chamber of Commerce was held at the Municipal Hall on Friday, Mr. A. Evers in the chair. There were also present Messrs. Butt, Crowe, H. L. Baggallay, De Ath, Pigott, D. B. Taylor, Goodison, Hughes, Faber, C. P. Hall, Braess, M. Brown, Süth, Bremner, and Mur (Secretary).

The SECRETARY having read the notice convening the meeting, the minutes of the previous meeting were read and adopted.

The next business was the passing of the accounts, the CHAIRMAN remarking that the balance in hand was the same as that for the last half-year, with the exception of a few cents. The subscriptions had fallen off a little, but there had been a saving in some of the expenses.

Mr. MUR next read the annual report, which stated that during the interval since the last half-yearly meeting nothing had happened which had particularly called for the assistance of the Chamber. With regard to commercial matters, he would say that the year which had just closed had been the most disappointing of any in the history of their intercourse with Japan. When addressing them six months ago they were undergoing a course of severe depression which seemed to affect all branches of trade, but the hope was then held out that the incoming rice crop, the abundance and excellence of which was well assured, would bring wealth and prosperity to the people once more, and enable them at the same time to enter into new engagements and increase their purchases to an extent calculated to alleviate the unsatisfactory condition of the markets; but, contrary to all expectations, the relief expected did not come, and the large quantity of grain available for export seemed hard to move, as prices were kept up to such high figures by speculators and dealers that shipments could be made on a very small scale. Looking at the import market, almost every article appeared to suffer from want of demand, and the retrospect of the trade for the past year could not be viewed with satisfaction, as it had proved unprecedentedly disastrous to foreigners and Japanese alike. The reasons were not far to seek. They had had high prices for rice during most of the year, unfavourable markets abroad for Japan silk, and a heavy fall in the value of local shares of all kinds; these combined had had a telling effect upon all departments of trade. Another source of trouble and annoyance to importers had been fluctuations in exchange caused by the Silver Bill, every advance having been seized by dealers as an excuse for demanding lower prices for merchandise, and in many instances the most flimsy pretexts had been put forward for failure to carry out their engagements. It would be clearly seen that the course of business during the past year had accentuated the fact that supplies of almost every description of goods had been received greatly in excess of the momentary absorbing power of the country, and time was required to work off the heavy stocks remaining on hand. The balance of trade as shown by the Customs' statistics was against Japan, but that was in a great measure attributable to the heavy importations of foreign rice to make up the deficiency in the crop previously refered to. With regard to exports, he would only remark that the business done with foreigners had been remunerative to the native merchants beyond all their expectations, the prices obtained by them for most articles having never before been so high. The accounts had been audited as usual, and found correct, and a balance of $124.90 were carried forward to new account. The subscriptions to their circulars had fallen off a little, but since a saving in the expenditure had been effected, it allowed of the carrying over of a balance almost the same as that of last year. He thanked the gentlemen of the Committee for the assistance given him in the discharge of his duties during the past year.

The report was adopted on the motion of Mr. HALL, seconded by Mr. H. FABER.

The next business was the election of Chairman, and as Mr. EVERS explained that owing to the fact of his having been two years Chairman and that he was leaving in the spring, he did not offer himself for re-election, the voting was taken by ballot, with the result that Mr. H. St. John Browne was elected.

Some delay then took place with regard to the election of the Committee. On a ballot being taken Messrs. M. Brown, Baggallay, and Braess were elected, Messrs. Hughes and Faber tieing for the last place. Mr. Hughes withdrew in favour of Mr. Faber. Messrs. Baggallay and Braess next declined to serve on the Committee, and, as Messrs. Hall and Goodison, the next on the list, each also declined, another ballot was taken, Messrs. Goodison and Hall being elected, and agreeing to serve on the Committee, the four members of which, therefore, are Messrs. M. Brown, Faber, Goodison, and Hall.

The formal business being disposed of, Mr. TAYLOR inquired of the Chairman the reason why the statistics for the year ending 31st Dec. last had not been issued.

Mr. MUR said it was never customary to issue these circulars until some time after the meeting. The statistics could not be collected in such a quick time. They had never previously been issued before the end of January.

Mr. TAYLOR next asked the reason why shippers had been placed at such great inconvenience by not being able to obtain from the Chamber of Commerce the statistics of the shipments of tea until several days after the steamers had left.

The CHAIRMAN said they had been so very badly used by the tea shippers that they were thinking of leaving out those statistics altogether.

Mr. TAYLOR said it was not a matter of obtaining the assistance of the merchants, but a question of duty. They should demand the returns from the Consulate where they were all filed.

The SECRETARY said that in a great many instances the tea merchants were not duly registered at the Consulate. Very often they only registered at the very last minute, and all sorts of explanations were made for the invoices not being registered, but it was generally the fault of the merchant that the invoices were not at the Consulate.

Mr. PIGOTT said it was more likely to be the fault of the officials at the Consulate than of the merchants. If the invoices were not sent in the tea could not go on.

Mr. TAYLOR pointed out that the merchants would not be able to unship at San Francisco or Vancouver or at any other port unless they were duly registered. The explanation was absurd. It was a matter of great importance, for the tea people could not get up their circulars, owing to not having the statistics. He had very often been able to get these statistics from the Consulate when he had been unable to get them from the Chamber of Commerce.

Mr. GOODISON said that when Mr. Abell was Secretary they could get the returns next day, and very often on the day that the steamer left.

Mr. MUR said that Mr. Abell had admitted to him that very often the returns were all wrong—(laughter)—and what he gave in one statement had to be corrected in the next.

Mr. TAYLOR said he had looked over his own files, and found that during Mr. Abell's time there were very few alterations. He had gone into the matter very closely, and found that there were fewer alterations in Mr. Abell's time than there were at present. He thought something should be done in the direction of giving them a little more timely information with regard to the subject.

The CHAIRMAN said that no doubt the remarks which had been made would be sufficient to induce Mr. Mur to present the statistics sooner than he had hitherto done.

This concluded the business of the meeting.—*Hyogo News.*

## *IN THE SUPREME COURT OF JAPAN.*

Before Judge NISHIOKA YUMEI, President of the First Criminal Bureau, and Judges H. YAMANE S. KAWAGUCHI, S. SHOYA, and S. OKUYAMA.

### AN IMPERFECT JUDGMENT AND INADMISSIBLE EVIDENCE.

#### THE PUBIC PROCURATOR OF THE MORIOKA CORRECTIONAL COURT.

Principles deduced from the following case:—The date on which an offence was committed must be mentioned in the sentence, as it affects both the question of prescription and the degree of punishment.

That the relatives of an accused person are disqualified from giving evidence is clearly shown in the Code of Criminal Procedure.

Reference—Par. G. Art. 181, Code of Criminal Procedure:—"The following persons may not be witnesses:—Relatives of the plaintiff in a civil suit, or of an accused person."

The accused Yamamoto Minosuke, Sasaki Chomatsu, Sato Genyo, and two others were convicted in the Morioka Correctional Court of assault and battery and were each sentenced to major imprisonment for nine months under Arts. 301, and 305 of the Penal Code.

The three accused appealed to the Supreme Court, contending (1) that the original judgment was imperfect in respect that it did not state the date of the offence, so that no information was afforded as to whether the offence had or had not been extinguished by prescription; and (2) that as one of the witnesses, Yamamoto Sannojo, was the husband of Yamamoto Minosuke's sister, and was therefore disqualified under par. 2 Art. 181 of the Code of Criminal Procedure from being a witness, the lower Court was *ultra vires* in admitting his testimony.

The Public Procurator of the lower court contended that the appeal was groundless.

The Supreme Court held that every sentence of judgment must contain the date of the offence, because the insertion of the date affected the question of whether or not the offence had been extinguished by prescription and affected also the degree of the punishment. The original judgment which failed to clearly state the date of the offence was, therefore, in this respect, imperfect. In the second point of the appeal, par. 2. Art. 181 of the Code of Criminal Procedure set forth that the relatives of the accused person could not be witnesses. From the notes of the trial (*Kohan Shimatsusho*) it appears that Yamamoto Sannojo stated in reply to the judge of the lower court that his house was a branch of that of Minosuke and that his wife was a sister of the latter. That was to say, the accused and Sannojo were relatives within the scope of par. 3, Art. 114 of the Penal Code and of par. 2, Art. 181 of the Code of Criminal Procedure. Sannojo therefore was not qualified to appear as a witness, and the judgment of the lower court was improper. The judgment must therefore be cancelled and the case be transferred to the Hiromaye Correctional Court for a new trial in accordance with Art. 428 of the Code of Criminal Procedure.—*Saiban Suishi*, Dec. 6th, 1890.

## *LATEST TELEGRAMS.*

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, January 24th.

In the House of Commons, Mr. Parnell gave notice that he would move a resolution condemning the Administration for the working of the Crimes Act.

London, January 29th.

The Attorney-General of the United States has filed an answer in the *Sayward* case which maintains that the seizure is legal.

FROM THE "SINGAPORE FREE PRESS."

London, January 7th.

The correspondence relating to the Behring Sea question has been submitted to Congress; it is confined to elaborate arguments on both sides, but without anything menacing in tone.

London, January 8th.

It is expected at Washington that the Bill for the free coinage of silver will pass the Senate, but that it will be rejected by the House of Representatives, in which case it is probable that no financial bill will be passed this session.

London, January 10th.

The silver men in the House of Representatives consider that it is not at all certain that the House will reject the financial Bill.

London, January 12th.

There is renewed intense frost in Great Britain and on the Continent, where several railways are blocked with snow; a number of towns are completely isolated, and food is scarce.

London, January 13th.

The Canadian-Attorney General, with the approval of Great Britain, has empowered the owner of the *Sayward*, the vessel seized by the Americans in Behring's Sea, to apply for an injunction of the Supreme Court against the confiscation of the vessel on the ground that Behring's Sea is a high sea. The United States Attorney-General has been granted a fortnight to reply.

London, January 15th.

The United States Attorney-General maintains that the Supreme Court has no jurisdiction in the matter of the seized vessel *Sayward*, since the suit originated in the Alaskan Court.

[FROM MANILA PAPERS.]

Madrid, January 12th.

Great cold prevails. In Paris the temperature has fallen so low that the Seine is frozen.

Madrid, January 13th.

Señor Alonso Martinez is dead. Great honours have been paid to the deceased statesman by the Government.

## *TIME TABLES AND STEAMERS.*

### TOKYO-YOKOHAMA RAILWAY.

DOWN TRAINS LEAVE SHIMBASHI Station at 6,* 7, 8 05, 9, 9.35,† 10.45, and 11.40† a.m., and 1.10, 2.20,† 3.35,‡ 4.45, 5.55, 6.50,† 8.30, 9.50,* and 11.15* p.m.

UP TRAINS LEAVE YOKOHAMA Station at 6.30, 7.45,* 8.20, 9.20,* 10.20, and 11.25* a.m., and 12.50, 1.50,* 2.55, 4.51,* 5.45, 7.05, 8, 8 58,† 10, and 11.05* p.m.

FARES—First-class, *sen* 60; second-class, *sen* 40; and third-class, *sen* 20.

Trains marked (*) run through without stopping at Omori, Kawasaki, and Tsurumi Stations. Those marked (†) run through without stopping at Omori and Tsurumi Stations. Those marked (‡) run through without stopping at Tsurumi Station.

### OFUNA-YOKOSUKA RAILWAY.

TRAINS LEAVE OFUNA (down) at 7.26 and 9.40 a.m., and 12.10, 3.50, 5.09, 6.25, and 8.20 p.m.; KAMAKURA (down) at 7.35 and 9.51 a.m., and 12.21, 4.01, 5.18, 6.36, and 8.31 p.m.; and DZUSHI (down) at 7.43 and 10 a.m., and 12.30, 4.10, 5.25, 6.45, and 8 40 p.m., YOKOSUKA (up) at 6.25, 8 02, and 11.20 a.m., and 3, 4.30, 5.45, and 7.35 p.m.; DZUSHI (up) at 6.41, 8.16, and 11.36 a.m., and 3.16, 4.46, 6, and 7.51 p.m.; and KAMAKURA (up) at 6.50, 8.25, and 11.46 a.m., and 3 26, 4.55, 6.08, and 8 p.m.

FARES—To Kamakura, first-class *sen* 9, second-class *sen* 6, third-class *sen* 3; to Zushimura *sen* 15, *sen* 10, *sen* 5; and to Yokosuka *sen* 30, *sen* 20, *sen* 10.

### TOKAIDO RAILWAY.

TRAINS LEAVE YOKOHAMA (down) at 6.50, 9, and 10.25 a.m., and 12.30, 3.10, 4.30, 5.45, 7.40, and 10.40 p.m.; and KOZU (up) at 6.09, 7.30, 9.40, and 11.05 a.m., and 1.08, 3.13, 5.15, 7.17, and 9.43 p.m.

FARES—To Hodogaya, first-class *sen* 6, second-class *sen* 4, third-class *sen* 2; to Totsuka, *sen* 18, *sen* 12, *sen* 6; to Ofuna *sen* 36, *sen* 24, *sen* 12; to Fujisawa, *sen* 42, *sen* 28, *sen* 14; to Hiratsuka, *sen* 66, *sen* 44, *sen* 22; to Oiso, *sen* 75, *sen* 50, *sen* 25; and to Kozu, *sen* 93, *sen* 62, *sen* 31.

A tramway runs between Kozu and YUMOTO (distance 4 *ri*.) Jinrikisha may be hired between YUMOTO and MIYANOSHITA (distance 1¾ *ri*)

### TAKETOYO-OFU RAILWAY.

TRAINS LEAVE TAKETOYO (up) at 8 a.m., and 1.50 4.20 p.m., and OFU (down) at 2.55, 5.25, and 9.05 p.m.

FARES—Second-class, 26 *sen*, third-class, 13 *sen*.

### KOZU-KOBE RAILWAY.

DOWN TRAINS LEAVE KOZU at 8.26 and 10.33 a.m., and 2.03, 4 42, and 6.09 p.m., and 12.08 a.m.; GOTEMBA at 9.48 and 11 55 a.m., and 3 32, 6.05, and 7.35 p m, and 1.24 a.m; NUMAZU at 10.37 a.m., and 1.10, 4.35, 7.10, and 8.30 p.m., and 2.12 a.m.; SHIZUOKA at 6 a.m., and 12 17, 3.39, 6.35, and 8.55 p.m., and 3.45 a.m.; HAMAMATSU at 9.05 and 11 55 a.m., and 2 44 6, and 9.20 p.m, and 6.10 a.m.; TOYOHASHI at 10.08 a.m., and 1.05, 3 48, 7 08, and 10.26 p.m., and 7.20 a.m.; OFU at 11.51 a.m., and 2.49, 5.21, 8 52 and 11 55 p m., and 8 59 a.m.; NAGOYA at 5.45, a.m., and 12.45, 3.35, and 6 03 p.m, and 12.33 and 9.43 a.m.; GIFU at 6.43 a.m., and 1 52, 4 45, and 7 p.m., and 1.25 and 10.48 a.m.; OGAKI at 7.10 a.m., and 2.22, 5.18, and 7.29 p.m., and 1.54 and 11.20 a.m.; MAIBARA at 8 32 a.m., and 3 47, 6.47, and 8.46 p.m., and 3.10 a.m. and 12.50 p.m.; HIKONE at 8 43 a.m., and 3.59, 7.01, 8.57, and 1.01 p.m.; BABA (Otsu) at 10.18 a.m., and 6, 8.40, and 10 26 p.m., and 4 50 a.m., and 2.40 p.m.; KYOTO at 11.05 a.m., and 6.50, 9.30, and 11.08 p.m., and 5.36 a.m, and 3.30 p.m.; and OSAKA at 12.36, 8.18, and 11.12 p.m., and 7 a.m., and 5.05 p.m.

### METALS.

Very small business at lower prices. Market weak, and buyers want still further concessions.

| | PER PICUL. | | |
|---|---|---|---|
| Flat Bars, ¼ inch | $2.60 | to | 2.65 |
| Flat Bars, ½ inch | 2.70 | to | 2.75 |
| Round and square up to ¾ inch | 2.60 | to | 2.75 |
| Nailrod, assorted | | Nom. | |
| Nailrod, small size | | Nom. | |
| Iron Plates, assorted | 2.70 | to | 2.80 |
| Sheet Iron | 3.00 | to | 3.40 |
| Galvanized Iron sheets | 5.80 | to | 6.00 |
| Wire Nails, assorted | 4.20 | to | 4.50 |
| Tin Plates, per box | 5.00 | to | 5.25 |
| Pig Iron, No. 3 | 1.20 | to | 1.30 |

### KEROSENE.

Prices are nominally unchanged, but there have been no recent sales to test them; although transactions to the extent of 60,000 cases made some time back have only just come to light. No arrivals since the *Mascotte*, which brought only a small quantity. The *Lochiel* has taken on about 25,000 cases of the original lading to Kobe. Present stock here about 600,000 cases.

QUOTATIONS.

| | | | |
|---|---|---|---|
| Chester | $1.70 | to | 1.72½ |
| Comet | 1.67½ | to | 1.70 |
| Devoe | 1 65 | to | 1.67½ |
| Russian | 1.60 | to | 1.65 |

### SUGAR.

A small business has been done. Prices again a shade lower. Arrivals of new Formosa kinds are expected very soon.

| | PER PICUL. | | |
|---|---|---|---|
| Brown Takao | $3 80 | to | 3.85 |
| Brown Daitong | 3.00 | to | 3.75 |
| Brown Canton | 4 50 | to | 5.50 |
| Brown Java and Penang | 4 80 | to | 5.20 |
| White Refined | 4.00 | to | 7.00 |

## EXPORTS.

### RAW SILK.

Our last was dated the 23rd inst.; since then settlements in this market amount to 2,099 piculs, divided thus: *Hanks*, 27; *Filatures*, 1,238; *Re-reels*, 571; *Kakeda*, 187; *Oshu*, 76. Direct shipments have been light amounting to 14 bales only, thus making the total export trade of the week equal to 2,113 piculs.

The large business we reported a week ago continued for some days with the above named result. Now the market is quieter, but still with some fair amount of daily trade. Prices are unchanged from last report with a few unimportant exceptions; for while some holders maintain their strong attitude and do not offer their silks, other dealers are current in their ideas and go steadily selling at present quotations whenever buyers offer themselves.

Telegraphic intelligence from consumers reports dullness and bad trade, but at the same time they send along some orders at current rates. The under current of business for Europe continues, and the *Iraouaddy*, now loading, should take a pretty large shipment.

Arrivals from the country are still insignificant, and the stock list shows a further reduction of 2,000 piculs on the week, making 4,000 less than a fortnight ago.

The stock on offer also shows considerable decline in quality and in assortment offering. Prime summer reelings have been gradually taken up until they are now getting scarce, and by far the major portion of our stock is now cold weather reeled, showing thereby some inferiority in quality.

There has only been one shipping opportunity this week: the English mail steamer, *Ancona*, which left port on the 22nd inst., took 600 bales for various European points and the export figures to date are now 15,585 piculs, against 31,592 piculs last year, and 33,253 piculs to the same date in 1889. It will be noted from these export figures that about 3,000 piculs of recent settlements are still waiting shipment by the out going mail steamers, now loading.

*Hanks.*—Small trade in these, consisting of some common *Hachoji* at $460. The stock is small and neither sellers nor buyers appear anxious for business.

*Filatures.*—Again the chief trade has been in this class, some large parcels being taken both for America and Europe. For the first named country good No. 1 *Shinshu* have been done at $570, while *Koshu* have been booked at $555. In fine sizes several parcels of *Mino* and *Shinshu* Filatures have been taken at prices ranging from $570 to $590; the lower qualities at from $540 to $560. The stock in this class is now below 7,000 piculs.

*Re-reels.*—A good enquiry for these has resulted in considerable business at quotations. A parcel of *Five Girl* Chop was done at $550, while something in best No. 1 commanded $565. A great deal of the business has been in common and medium sorts at prices from $480 to $540. Holders are fairly strong especially for better grades and well known marks.

*Kakeda.*—This has been in good demand, and holders have succeeded in getting their asking prices. It will be noted from our stock list that there has been very little on offer in this department.

*Oshu.*—Trade has been done in both *Sendai* and *Hamatsuki*, several parcels being taken at the beginning of the week at $495, $500, $505, and $522½.

| Available supplies to date | | 30,150 | 36,900 | 40,700 |

### WASTE SILK.

There has been less doing in this branch, settlements for the week being 529 piculs, of which 119 are *Noshi*; and 410 *Kibiso*.

The operations of buyers are restricted by the poor assortment, best quality of *Noshi* being now almost extinct. Were these more plentiful there is no doubt that buyers are ready to take more of them. In the mean time they are at work upon *Kibiso*, and stocks generally are within a very reasonable compass.

Arrivals have been light, and the stock list is now down to about 6,000 piculs, which compares very favourably with the state of things last January. The English mail steamer, *Ancona*, carried 205 bales for Europe and the present export figures are now 20,060 piculs, against 19,282 last year, and 23,508 at the end of January, 1889.

*Pierced Cocoons.*—Nothing whatever done. Prices purely nominal.

*Noshi.*—Some little business every day, but the absence of the higher grades interferes with business. *Oshu* has been done at $125, with *Joshu* at $72½ for good ordinary assortment.

*Kibiso.*—Two or three large parcels have again been taken up, chiefly medium and low *Curlies*, at prices ranging from $40 to $25½, according to quality.

Nothing done in *Mawata* or *Neri*, during the week. Stocks of the former are small, and contain very little good quality.

QUOTATIONS.

CONTRACTORS TO THE ADMIRALTY, LEADING STEAMSHIP COMPANIES, AND YACHT OWNERS.

STEAM LAUNCHES & YACHTS,

Fitted with KINGDON'S PATENT MACHINERY (of which we are sole makers) are far superior to any others. The chief advantages are:—

1. Wonderful Economy of Fuel.
2. First-class Workmanship.
3. Moderate Prices.
4. Greatest obtainable power for weight and space occupied.
5. Quickness in raising steam.
6. High rates of speed guaranteed.
7. Absence of noise and vibration.

We build Steam Launches of every description, from the smallest size suitable for carrying on yachts of 10 tons and upwards. We also build small light Draft Paddle Boats, Tugs, Stern Wheel Paddle Steamers, and Boats in Frames, &c., &c. We supply sets of Machinery separately. Illustrated Catalogue in English, French or Spanish. Send for Copy to

SIMPSON, STRICKLAND & CO.

WORKS:
DARTMOUTH, SOUTH DEVON (ENGLAND).

LONDON OFFICE:
181, QUEEN VICTORIA STREET, E.C.

MACHINERY.—Mr. ARTHUR WADHAM, proprietor of *The Machinery Market and Exporter* (illustrated) — the greatest machinery business journal published—(subscription 12s. 6d. per annum post free); London Agent of Messrs. Simpson, Strickland & Co., steam-launch builders, is also a large exporter of Machinery and Engineering Materials. Registered address for telegrams—"Wadham, London." 1y. June 28, 1890.

KEATING'S COUGH LOZENGES.

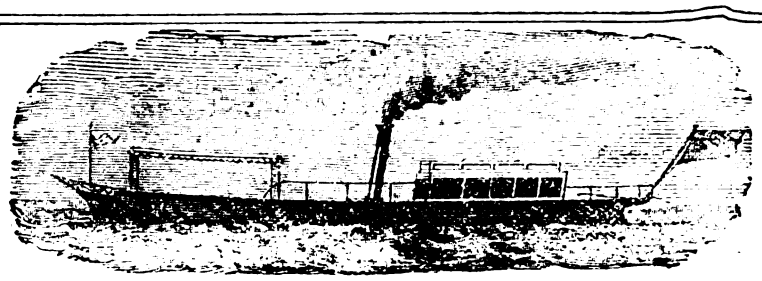
COUGHS, ASTHMA, BRONCHITIS, DIFFICULTY OF BREATHING are speedily cured by KEATING'S COUGH LOZENGES (recognised and recommended by the Medical Faculty). No other remedy in half so effective. One Lozenge alone gives relief. They contain no Opium, Morphia, nor any violent drug, and may be taken by the most delicate. One or two at bed-time ensure rest when troubled by the throat. Sold by all Chemists, in Small Tins. Dec. 27th, 1890.—21ins.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In I short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."



SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1890.

YARROW'S

SMALL STEAMERS AND STEAM LAUNCHES.

SCREW STEAMERS WITH SPEEDS RANGING UP TO 30 MILES AN HOUR.

PADDLE STEAMERS WITH DRAFT RANGING DOWN TO 6 INCHES OF WATER

Stern Wheel Steamers with very shallow draft especially suitable for river navigation.

MACHINERY CONSTRUCTED FOR BOATS BUILT ABROAD.

YARROW & CO., POPLAR, LONDON, E.

Builders of the Stern Wheel Steamers used by the British Government for the Nile Expedition.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, FEB. 7, 1891.

## *SUMMARY OF NEWS.*

COUNT ITO, President of the House of Peers, is a sufferer from influenza. He is at present at Odawara.

THE work of laying a telegraphic line between Sendai (Rikuzen) and Morioka (Rikuchu) has been completed.

THE Railway Bureau has granted a charter to the Osaka Railway Company for opening a line between Inaba and Sanoji.

THE total quantity of sugar imported into Osaka from foreign countries during the latter half of last year was 100, 460 bales.

A BRANCH of the Osaka Cotton Spinning Company was opened on the 1st instant at Odemmacho Itchome, Nihonbashi, Tokyo.

H.I.H. PRINCE KOMATSU (AKIHITO), accompanied by H.I.H. Princess Yoriko, left the capital yesterday for Shizuoka Prefecture.

MAJOR HAYAMIZU SHINICHI, of the Osaka Arsenal, who had been in Italy for some time on official business, returned to Japan recently.

THE Government has decided to lay a telegraph line between Sapporo (Ishikari) in Mashige (Teshiwo) by way of Ichikijiri and Sorachibuto (Ishikari).

MT. FUJINAMI NORITADA, father of Viscount Fujinami, Director of the Bureau of Imperial Mews in the Imperial Household, expired on the 31st ultimo.

FIRE broke out on the night of the 27th inst. in the house of Saito Masakichi, No. 312, Iseharacho, Osumigori, Kanagawa Prefecture, and destroyed 61 houses, 2 godowns, 16 sheds, and 1 Buddhist temple, and partly damaged 4 godowns before the flames could be got under control.

THE *Amagi Kan* arrived at Shinagawa on the 1st instant. On the day following, the *Hosho Kan* left Kobe for Kure, and the *Kaimon Kan* arrived at Yokosuka.

THE Higher Commercial School, Tokyo, was closed on the 28th ultimo for about two weeks in consequence of the prevalence of influenza among the teachers and students.

THEIR Imperial Highnesses Princesses Tsune Masako and Kane Fusako were to leave the capital on the 1st instant for Oiso, starting from the Shimbashi Station at 8.30 a.m.

THE section between Kobe and Kusashiki on the Sanyo Railway line will, it is expected, be completed about the middle of next month, the tunnel at Funasaka, Bizen, being completed.

DURING November last 2,566,490 catties of cotton were imported into Japan from Shanghai, of which 86,400 catties were for Nagasaki, 1,789.751 catties for Kobe, and 690,339 catties for Yokohama.

A GENERAL meeting of the members of the Shiba Sanitary Society was held on the afternoon of the 30th ult. Dr. Matsuyama Toan, President of the Society, and other gentlemen addressed the meeting.

ON the night of the 24th ult. fire broke out in a house at Nagasumura, Sarushimagori, Ibaraki Prefecture, and destroyed 20 buildings, including a police station and a village office, before the flames could be got under control.

THE premises of the Military Academy, which are now in course of construction at Ichigaya, Ushigome, Tokyo, will, it is expected, be completed before the end of March, and be occupied about the middle of April next.

MR. KONOYE TADAHIRO, father of Prince Konoye Atsumaro, is a victim of influenza. Mr. Konoye was once an instructor in penmanship to the Empress, who on receipt of tidings of his illness despatched a messenger with a present to him.

EARLY in the morning of the 3rd instant fire broke out in the house of Yamada Shintaro, No. 13, Tomimatsu-cho, Kanda, Tokyo, destroying 5 and partly damaging 6 houses, 4 persons being burned to death before the flames could be subdued.

DURING the month of January last 3,540 persons visited the Museum at Uyeno, of whom 3,430 were adults, 63 children, and 47 students. To the Zoological Garden at Uyeno there were 9,473 visitors, of whom 8,553 were adults 842 children, and 78 students.

THE regular general meeting of shareholders of the Japan Braid Company (Nippon Kumihimo Kaisha) was held on the 31st ult. in the Bankers' Club, Sakamotocho, Nihonbashi, Tokyo, and a dividend was declared at the rate of 7 per cent. per annum.

DURING 28 days of January last the Tokyo Library was visited by 3,088 persons, of whom 2,740 were ordinary visitors and 348 special. The number of books inspected during the period was 20,273, of which 18,651 represented Japanese and Chinese, and 1,622 foreign works.

THE opening ceremony of the Tokyo Hospital was held on the 1st inst., the chief part in the function being taken by Dr. Takagi Kanebiro. Over three hundred distinguished persons were present. Messrs. T. Sewaki, N. Hata, S. Nagayo, S. Marukawa, H. Miyake, T. Ishiguro, M. Iwaya, and T. Matsuyama addressed the company in the course of the proceedings.

THE regular general meeting of shareholders of the Japan Weaving Company was held on the 29th ultimo in the office at Hatagocho, Nihonbashi. Messrs. Amano Shensuke, Tamura Kisaburo, and Abe Takasuke were elected Managers, Messrs. Machida Takunosuke and Kawasaki Tokunosuke being elected superintendents.

THE total amounts of money deposited in and withdrawn from postal savings banks throughout the Empire during December last were *yen* 802,377, and *yen* 1,452,859 respectively, showing an increase of *yen* 109,415 in the amount of deposits, and *yen* 7559,238 in the amount of withdrawals as compared with the previous month.

THE receipts of the Charity Ball held at the Imperial Hotel about the end of last year were *yen* 3.031.95, of which *yen* 457 were set apart as miscellaneous expenses, *yen* 1,548 being subscribed towards the funds of the Red Cross Hospital, *yen* 400 to the Honjo Yoikuin (or Poor's Asylum), and *yen* 100 to the Anzendo Hospital, the remainder being deposited in the Mitsui Bank.

IT is stated that Messrs. Miyagi Kozo and Yamada Kinosuke, barristers of high repute in the capital, will appear for Mr. Soné, Chief Secretary of the House of Representatives, in the action raised by Mr. Yajima, Director of the Tokyo Electric Company, against Mr. Soné, demanding that corrections should be made in the report published by the defendant in the *Official Gazette* relating to the origin of the fire at the Parliament Houses.

THE regular general meeting of shareholders of the Tokyo Marine Insurance Company was held on the afternoon of the 2nd instant. The receipts during the latter half of last year *yen* 98,278.649, of which *yen* 41,772.842 were were set apart as a reserve, *yen* 9,214.598 as remuneration to officers, and *yen* 39,000.000 as a dividend for the half-year, to be declared at the rate of 13 per cent. per annum, *yen* 8,291.208 being carried forward to the next account.

No change has occurred in the Import trade, the small lots of Yarn, Shirtings, and Italians taken being insufficient to make quotations. The same remark applies to the Metal market and the Kerosene trade. A sailing ship from New York has arrived with a full cargo, which further increases the already heavy stock. The Sugar trade has moved, and better prices are offered for White Refined. The first cargo of new Formosa has arrived in the steamer *Haiphong*, but no rate has apparently yet been fixed for new crop Sugar. There has been a small daily business in Silk for Europe, and holders are strong, especially those having prime summer reelings of the best chops, which are now getting somewhat scarce. Arrivals do not keep pace with the small sales effected, and stocks are being gradually if slowly reduced. There has been a fair demand for Waste Silk, and more could have been done in the better kinds had the parcels wanted been forthcoming. Prices are unchanged, but firm for the kinds in most request. Nothing to note in the Tea trade. Exchange declined from last week's rates, but has been moving upwards again these last two or three days.

## *EDITORIAL NOTES.*

### THE DIET'S SESSION ON THE 31ST ULTIMO.

THE proceedings in both Houses of the Diet on the 31st ultimo were exceptionally interesting. In the Upper House, the tactics adopted by the opposition in order to defeat the Registration Bill, showed pretty plainly that the mainsprings of parliamentary action in Japan are already much the same as those in countries where representative institutions have existed for a century. The Conservatives could find little of anything to oppose in the Bill, since its provisions, though drafted with the object of amending, will also have the effect of confirming, a system long in vogue and in some respects peculiar to Japan. Recourse was therefore had to another argument, namely, that matters of Registration ought to be regulated by Ordinance, not by law, a proposition which would certainly have been rejected by the Lower House, and which consequently, if accepted by the Upper, would have effectually shelved the Bill for this session. Professor Toyama ruthlessly exposed the fallacy underlying this contention. The Professor is beginning to take off his gloves, and to treat the august assemblage of which he is a member, to a little of the striking oratory inaugurated by him a couple of years ago. The Peers must have looked at one another curiously when the gentleman from the University, in his own brusque, merry manner, told them that they seemed to have been attacked by an Ordinance fever, and administered a dose of scathing rhetoric by way of febrifuge. Mr. Shimauchi, too, spoke out pretty plainly. Certain members, who had opposed the Weights and Measures Bill on account of the foreign origin of its standard of length, had the fine audacity to stand up a few days later and oppose the Registration Bill because precedents for its provisions could not be found abroad. That was a trifle too reckless, and Mr. Shimauchi did not hesitate to call it by its right name, opposition to a measure, not on its merits, but simply because of its official origin. Baron Senge and Mr. Hosokawa Junjiro, the chief offenders of this nature, probably expected to be unpleasantly exposed by Mr. Shimauchi, for they were not present in the Chamber when he rose to speak, a precaution that furnished him with a new weapon of attack. The House, however, passed the first reading of the Bill by a two-thirds vote

* * *

In the Lower House, Mr. Ishida Eikichi Vice-Minister of State for Agriculture and Commerce, was the hero of the session, and will figure in Japanese history as the first Government Delegate ever "sent down" by the House. More than once there have been threats of rejecting a Delegate because his answers were not satisfactory, and members have been heard to cry out "Bring on another Delegate." But dissatisfaction of this nature never found practical expression until the session of the 31st ultimo. The Vice-Minister of the Noshomusho appeared as Government Delegate to answer questions relating to the portion of the Budget devoted to that Department. At quite an early stage the affair of the subsidy granted to the Tea Company for the purpose of exporting leaf tea to America and brick tea to Russia, became the subject of inquiry, and Mr. Ishida was asked to explain the policy of the Department in repect of this subsidy; namely, whether it was proposed to give official protection to the Tea Company only, or whether the grant was to be regarded as part of a general system of protection to all companies. The inquiry was perfectly natural, and might, we cannot help thinking, have been answered by Mr. Ishida without much difficulty. Certainly he ought to have foreseen that such a query would inevitably be addressed to him. To discuss the item intelligently, it was essential that the House should know exactly to what it was pledging itself: whether special considerations applied to the Tea Company, or whether a policy of general protection was to be inferred from the subsidy. But Mr. Ishida resolutely declined to give any information on this point, his plea being that, as Vice-Minister, he could not undertake to expound the policy of his chief. The member by whom the question was originally propounded, seemed disposed to accept this plea, for he merely announced his intention of having recourse to the independent method of seeking information prescribed by the Law of the Houses. But the House, justly exasperated, voted first to go out of Committee in order to discuss the question, and then decided, after a very short debate, to apply for another Delegate, The Delegates who attend in the Houses are present under the sanction of the 54th Article of the Constitution, which provides that "the Ministers of State and the Delegates of the Government may, at any time, take seats and speak in either House." Further, the 44th Article of the Law of the Houses, by implication prescribes the attendance of Government Dele gates whenever the House is in Committee; and empowers members to seek explanations from these Delegates. It has thus become the habit, before proceeding to debate a Government Bill, to address queries, more or less numerous, to the Delegates. But the action taken by the House on the 31st ultimo assumed its right to pass judgment on the qualification of the Delegates; a proposition which the Government might hesitate to endorse. It happens, however, that the House was plainly justified in the present instance from the point of view of the Delegate's incompetence to supply essential information.

* * *

In the same session, Mr. Tanaka Shozo succeeded in paying his debt to Count Goto with interest, though he marred the effect of a fairly skilful stroke by pushing it home with tedious insistance. Count Goto, in his celebrated campain of 1888, did what many a political agitator does everywhere, namely, criticised the Government from a theoretical, not a practical point of view. Any zealous enemy, taking the speeches delivered by him at that time, and comparing them with his present position and procedure, might find material for a strong attack. Mr. Tanaka Shozo adopted that plan, and is doubtless reflecting now with satisfaction that he has amply vindicated himself against the charge of dementia which recently obtained so much publicity. But Mr. Tanaka is not an artist. The prominent and really admirable figure in this episode, and in its accompanying shower of questions, was Mr. Mayejima. He took the measure of his questioners with perfect accuracy, and answered them with all the ease and assurance of an exceptionally able and experienced statesman who finds himself confronted by a number of zealous and inquisitive tyros—for there are few members in the Lower House who can claim to be anything but tyros beside Mr. Mayejima. The Vice-Minister of Communications is the first Government Delegate who has passed through the ordeal of a parliamentary inquisition on the Budget, without having to defer a single answer to the sequel of further research.

---

### SPINNING FACTORIES AND RAILWAYS.

THE *Keizai Zasshi* of a recent date repeats what it has more than once observed as a warning, and what we have written about for six years, that the conversion of floating into fixed capital has been carried to a dangerous extent, and hopes that capitalists will for the present abstain from sinking their money. Among industries that have attracted the largest share of capital, spinning factories and railways stand prēeminent. Of the former, the principal establishments are the cotton spinning factories of Tokyo, Osaka, and the Provinces of Ise, Izumi, and so forth. The Tokyo journal thinks that the best course at present offering to extricate these establishments from their difficulties is to amalgamate them into a few big companies. Then passing on to speak of railways, the *Keizai* observes that the entire length of lines, private as well as Government, already opened for traffic as well as under construction or projected, is more than 3,000 miles, with a capital of about 200 million *yen* in round members. The following table shows the names of the railway companies, with the length of their lines (opened or otherwise), and their capital:—

| Company | Length of Miles. | Capital *yen*. |
|---|---|---|
| Nippon Tetsudo Kwaisha | 567 | 20,000,000 |
| Ryômô Tetsudo Kwaisha | 52 | 1,500,000 |
| Mito Tetsudo Kwaisha | 42 | 1,200,000 |
| Kôbu Tetsudo Kwaisha | 23 | 900,000 |
| Kô shin Tetsudo Kwaisha | 117 | 4,500,000 |
| Han-kai Tetsudo Kwaisha | 7 | 330,000 |
| Iyo Tetsudo Kwaisha | 4 | 40,000 |
| Sanuki Tetsudo Kwaisha | 10 | 250,000 |
| Osaka Tetsudo Kwaisha | 37 | 1,800,000 |
| Kwansai Tetsudo Kwaisha | 72 | 3,000,000 |
| San-yo Tetsudo Kwaisha | 303 | 13,000,000 |
| Kyushu Tetsudo Kwaisha | 272 | 11,000,000 |
| Chikuhô Tetsudo Kwaisha | 30 | 750,000 |
| Yamagata Tetsudo Kwaisha | 78 | 2,000,000 |
| Jô-etsu Tetsudo Kwaisha | 190 | 6,987,000 |
| Gan-etsu Tetsudo Kwaisha | — | — |
| Sô-bu Tetsudo Kwaisha | — | — |
| Gumma Tetsudo Kwaisha | 13 | 500,000 |
| Total | 1,817 | 67,757,000 |

The above figures represent only privately owned railways. Putting the total sum of the capital of private companies at 70 million *yen*, and supposing that 7 per cent. profit is to be declared on the average for the shareholders, there must be a net profit of 4,900,000 *yen* annually, or in other words, the aggregate gross receipts on the whole lines must be some 10 million *yen* a year. The *Keizai Zasshi* thinks it altogether out of the question that such a large amount of gross receipts can be realized under the present circumstances of the business world. Our contemporary, consequently, considers it of vital importance for the sake of the general prosperity of the country to stop the construction of all new lines, so that the lines already opened for traffic may remain in a healthy financial condition.

### "IL GENIO DELL' ISLAMISMO."

SAUL among the prophets was probably no stranger sight to his day and generation than Osman Bey Kibritzli-Zadé, the author of *Il Genio dell' Islamismo* is to us in this nineteenth century. The writer in question, himself an unspeakable Turk, comes to the aid of our social and socialistic reformers, and points out in his work, which was some months ago published by L. Roux and Co., at Turin in Italy, the utter futility of all their endeavours and the hopelessness of their contest with the rising tide of poverty and evil. Historically, of course, the cause of Europe's present miseries must be sought in the victory of Charles Martel at Poitiers and in the successful defence of Vienna in the seventeenth century. But on this as ancient history the author dwells but briefly. When Schopenhauer said that Islam had scarcely any metaphysical basis, he was right; but when he added that it must be placed very low as a religious system, he was decidedly wrong; in fact the absence of metaphysical speculation is according to Osman Bey its true strength and very *raison d'être*. Mohammed's revelation sprang, not from the absorption of the human mind in the mysteries of God, but from the righteous indignation of a frank and noble heart at the strange perverseness of the so-called civilization of the empire of Eastern Rome, as well as from disgust at seeing the real power rest, not with the sword and the strong arm, but with the law and contemptible cunning, the *astuzia*, of the pettifogger, the priest, and the Jewish usurer. Intimately connected with the spirit of Mohammed, though vastly inferior in consistency and energetic manifestation, is, according to Osman Bey's way of thinking, the present anti-Semitic current that sweeps through the industrial centres of Eastern and Central Europe. Deception and trickery reign indeed among the dastardly race of men; but by him who with a true and hearty *Kismet* can boldly face whatever comes, the terrors of both life and death have been vanquished forever. To such a man belongs the world, and rightly. Islam's *credo* is hence very simple: God, a horse, a sword; and above us all inexorable Fate.

What must be, must happen;
And none of us is his own.

An overpowering simplicity, the vastness of

Digitized by Google

the desert, the grandeur of the ocean—that is the character of Islam. A grand brotherhood in arms of all the faithful—that is its purpose. Its warlike and simply religious but not ecclesiastical character excludes avarice, intrigue, and that narrow-mindedness generally associated with terms like *bourgeoisie* and Carlyle's Philistism. Who has ever seen a Turk deplore the approach of his own death or lament the departure of another? It is fate—why tears? On the other hand, boundless hospitality and ready pity for all that suffer both among men and animals secure for the poor and unfortunate help and support in time of need. Of course, as our author admits, the ideal period of Mohammed's social system is past, especially in Turkey. Two Islamitic institutions remain to be noticed, the harem and slavery. The inferior position of woman, which she prefers to the freedom and emancipation of Europe, and the institution of slavery, with its humane treatment of the subordinate, are closely connected and give to society its peculiar mark and impress. Here Osman Bey grows indignant. "Slavery, according to European ignoramuses, a disgrace to mankind? Why, our serfdom is but an adoption made in due form. Take note, ye scribbers at Brussels!"—"Slavery is an absolutely necessary wheel in the machinery of Islamitic society. Without it the machine stops. Without it the harem is impossible. How can the slaves be free and the mistresses imprisoned? As the harem is an almost sacred institution of Islam, slavery also must be respected: attacks upon it are directed against Islam itself. Why then this call on the part of the 'civilised powers' for the abolition of slavery? The answer is simple: they wish to exploit the negro themselves, for he is a cheap and good labourer. We may then take what their employment bureaux will give us, the drunkards and rogues, in a word, the scum. Social and political ruin, that is the vista opened to us at Brussels." The sword seems to our author to offer the only solution of the difficulty, but he does not appear to be sanguine as to the result. However excellent the individual may be, the Islamitic world lacks discipline, cohesion, and leadership. On the whole, Osman Bey's solution of the social problem is easily understood. The introduction of the harem would do away with all the questions arising from the employment and remuneration of woman's work, while slavery, of a humane type of course, would forever rid us of the problems forced upon public attention by the occasionally very large number of the unemployed. Than this remedy nothing could be simpler or more effective. It bears the mark of genius, for it is simplicity itself. Voilà tout!

### EARTHQUAKES IN THE SCOTTISH HIGHLANDS.

THE good folks of Inverness in Scotland were startled by an earthquake which visited the town at the busy hour of six o'clock one Saturday evening in November last. A good many of the shops were full of customers, who had the new sensation of seeing articles tilt over on the shelves, and pictures go swinging. In one ironmonger's establishment lamps and other articles were overturned, and the scared employés rushed out into the streets. People who happened to be seated felt a rocking motion as if in a cradle, with the additional sensation of being violently dragged as in a railway carriage that has left the rails. There was no great damage done, although it is reported that a chimney and a staircase fell in Petty Street. In the West Highlands slight shocks of earthquake are not uncommon, and it is supposed that this earthquake travelled northwards up the great glen of the Caledonian Canal. It is four or five years since a similar occurrence took place.

### SCOTTISH EDUCATIONAL NEWS.

THE past year saw the amalgamation of University College, Dundee, with the ancient corporation of St. Andrew's University. As the two cities are only fifteen miles apart, the long chimney-stalk of Lochee factory being plainly visible from St. Andrew's golf-links, the two institutions are likely to draw more completely together in the course of time. Dundee offers special advantages for medical study, a department in which St. Andrew's has but the making of a medical faculty, being provided with only three medical chairs. Some of the chairs are duplicated in the amalgamated corporation, but in the bifurcation of studies, which is the goal of educational reformers at present, the duplicate chairs can easily be made use of for special branches, if necessary. Professor J. A. Ewing, formerly of the University of Tokyo, which he left for University College, Dundee, six or seven years ago, has remained for but a short time a professor of St. Andrew's University. At the close of last year he was appointed to the new chair of engineering at Cambridge University, a post worth £700 a year. St. Andrews has received a windfall in the shape of the Berry bequest. When the estate of this Australian benefactor is realised,—a matter of three or four years still—it is expected that no less a sum than £100,000 will accrue to the University. As its usefulness has been seriously impaired in the past by lack of funds, this bequest comes in very opportunely. The recent additions to the staff of Glasgow University seem to be acceptable to the undergraduates. Professor Bradley, a nephew of the Dean of Westminister, who succeeded Henry Nicol in the English Literature chair, is lecturing to exceptionally large classes this session. Glasgow as well as Edinburgh has chosen for Lord Rector a member of the present Cabinet. Mr. Goschen in Edinburgh polled 1,378 to Sir Charles Russell's 805, and Mr. Balfour in Glasgow defeated Lord Aberdeen by a majority of 231, the votes being 948 and 717 respectively. When Mr. Gladstone, some twenty years back, was elected Lord Rector of Glasgow University, the only man whom he could think of for recommendation to the degree of LL.D. was Mr. A. J. Balfour, now his successor. Principal Donaldson has been having a fling at Normal Schools. These institutions in Scotland absorb £28,000 of national money, while the Universities receive only £42,000, a miserably inadequate sum. The work of the Normal Schools might easily be thrown on the Universities to the advantage of all concerned, when it would be done more efficiently and more cheaply. The principal is also troubled about secondary education in Scotland. The old arrangement allowed masters to be virtually independent each in his own department, but recent changes have tended to make them more and more subordinate to the head-master, who undertakes the complete responsibility. This change is operating unfavourably in lowering the status of masters, and rendering the profession less popular. The same class of men will not come forward, when their position no longer allows them a free hand. It is an English innovation, and is opposed to the best traditions of Scottish education.

### THE ELECTRIC QUESTION.

MR. IWATA'S letter in our correspondence columns suggests the advisability of referring to a point which has given rise to some misrepresentations. A short time ago the *Japan Gazette* published a series of rules compiled by an insurance company with reference to electric lighting apparatus, and added the advice that Japanese electric light companies should be compelled to observe the rules. Referring to this we said:—"Some amusement has been caused by the publication of an insurance company's rules in the columns of a local foreign journal, with a context of well meant but rather naïve advice to Japanese Electric Light Companies in general, and to the Japanese Authorities in particular, the latter being urged to have the rules translated into Japanese and to insist on their observance by all companies. Excellent as is the motive of such writing, it can only provoke a smile. Japanese experts and the foreigners in Japanese employ are not so ill-informed as to need a text-book in the shape of an insurance company's regulations." It is inconceivable that these plain words should be misconstrued? They cannot by any possibility mean anything except that, in our opinion, there is matter for mirth in the conduct of a newspaper presenting to Japanese electrical engineers elementary rules with which they are already perfectly familiar, and accompanying the rules by equally superfluous advice to the authorities. Yet the *Japan Gazette* appears to imagine that our comment was directed against the rules themselves, and against "facts supplied to it by experts in electric lighting." And now comes "Electron" enquiring whether "the editor of the *Mail* means to say that Japanese engineers are competent to work without rules when these rules are found necessary for the guidance of engineers in Western countries." What an earth the *Gazette's* retort or "Electron's" query has to do with our original remarks, we are at a loss to perceive. If we laughed at the notion of presenting bread to a man already well supplied with food, would it follow that we condemned bread itself, or pronounced it unnecessary as food?

### THE TELEPHONE.

THE telephone is sometimes a faithless servant. It betrays secrets as well as communicates them. The *Yomiuri Shimbuu* says that a certain gentleman of gay proclivities, desiring the other day to consult a friend as to the possibility of spending a jolly evening, rang the bell of the telephone and asked to be placed in communication with Number so-and-so. Accustomed, however, to send messages in this way to his own family, habit made him give the number of his house. The connection was duly made, and his wife hastened to apply the trumpets to her ears in order to receive her lord's commands. "What can I do for you?" she asked. "What do you say," came the answer, "to an expedition to our usual haunt to-night, without letting the good folks at home know anything?" "Consult your own convenience," replied the angry lady. "I shan't wait for you." "Who is there?" inquired the puzzled husband. "It's I," signalled the lady, and then the disconnecting bell tingled violently.

* * *

Another story from the same source tells of a gentleman who, telephoning to a friend, said:—"Can I see you for a moment? Pray pardon me for interrupting you in the midst of your business." For answer the wire transmitted a hearty laugh, repeated more than once. By and by the inquirer grew angry, and asked curtly:—"Is everybody out?" "No," was the reply. "But there's no one here that can see you by telephone. We shall all be pleased to hear you, however."

### MR. TANAKA SHOZO.

MR. TANAKA SHOZO, who charged Count Goto with harbouring seditious characters and was dubbed a madman for his pains, does not appear to be exactly the model of a parliamentary representative approved of by the people of Tochigi Prefecture. He certainly has unique merits. Few members of Parliament can boast, as he can, that he never speaks without startling the House and invariably manages to rescue from oblivion and neglect matters which, without his solicitude, would never attract any attention whatever. These are gifts of their kind, but they are not the kind of gifts that the voters in Tochigi seem to appreciate. A movement is said to be on foot in that prefecture to urge Mr. Tanaka to resign. We cannot honestly wish it success, for if Mr. Tanaka does not always convey instruction, he generally manages to furnish amusement.

### THE ELECTRIC LIGHT COMPANY'S CASE.

THERE is great interest in Tokyo about the suit brought by the Electric Light Company against Mr. Soné. The novel character of the pleading astonishes experts. It is difficult even to ascertain against whom the action is laid; that is to say, whether against Mr. Soné, as a private individual, or against Mr. Soné, Chief Secretary of the House of Representatives. If the former, the difficulty arises that Mr. Soné merely expressed an opinion about the origin of the fire,

Digitized by Google

and did not attribute carelessness or any other shortcoming to the Electric Light Company. If the latter, then it would appear that Mr. Soné cannot be called to account, since his statements in the House are privileged. Further, careful examination of the language of the plaint reveals the fact that no allegation of actual injury is made. It is merely stated that the results threaten to be injurious to the Company. The Japanese law does not assume injury in case of libel. The complainant is required to prove that he has suffered. Thus from many points of view people are perplexed to understand how the suit, as now preferred, can be entertained.

### THE VICTORIA SCHOOL.

At the last annual meeting of the Victoria Public School, it was shown that the number of scholars had diminished from fifty to forty, and that, in order to maintain the School, it had been necessary to draw upon the capital fund, which has now shrunk from its original amount of over four thousand *yen* to a little more than one thousand. This state of affairs naturally excites a considerable share of public attention. It is hoped, indeed, that the decrease of pupils noticed during 1890 will prove a mere temporary fluctuation, and that the present year will see a sensible increase of numbers. No solid grounds for such a hope seem to exist, the simple fact being that material to draw from is not forthcoming. Were the management of the School or the instruction offered there deficient in any respect, the prospect might be brightened by remedying these defects. But there do not appear to be any grounds for finding fault with the school. On the contrary, circumstances have been particularly kind in furnishing it with a Head-master of quite exceptional abilities, and it has enjoyed throughout its whole career the advantage of thoroughly earnest and efficient supervision at the hands of a Committee of the foreign residents. For our own part, we entertain little doubt that the cause of the falling off in the attendance of pupils is to be sought in an external circumstance, namely, the establishment of a school in Tokyo with which the Victoria School cannot hope to compete successfully. We allude to the School of the Morning Star at Kudan. This institution is under the auspices of one of the best known and most highly reputed Educational Societies of the day. It has ample resources, and its staff of foreign teachers, now numbering eleven, is evidently far in excess of any staff that can be provided at a School depending entirely on local support in Yokohama. Several lads who were entered as boarders at the Victoria School, have been withdrawn within the past twelve months, and placed at the Kudan institution, not because any fault could be urged against the former, but simply because parents are morally bound to give their children the best instruction available. The conditions of competition between the two schools are hopelessly unequal. In the one case we have a greatly underpaid Head-master —a host in himself, certainly, but still only one man—a Japanese assistant, and a state of impecuniosity which forbids all liberal expenditure on account of equipment, and generally cramps the useful energy of the school. In the other, we have a staff of eleven foreign teachers, all of them specialists and having no object in life but the education of the young; several competent Japanese; a rich patron society which recently voted a sum of sixty thousand dollars for the purchase of a site and the erection of buildings, and the certainty that for each increment of students ample addition will be immediately made to the foreign staff. Thus the support which the foreign and Japanese Communities of Tokyo might otherwise lend to the Victoria School is effectually diverted by the presence of such an institution as the "Ecole de l'Etoile du Matin" at Kudan. The chief element of hope in the case of the Yokohama school was that Japanese boys would be sent there, as to a place where they could look forward to acquiring English thoroughly and easily by daily contact with English and American play-fellows. But the Tokyo School offers this advantage to an even greater degree, for a lad attending there learns, in a wonderfully short time, to speak both French and English. Indeed, it is not too much to say that the Tokyo institution presents almost unique educational facilities, and that with such a school at their doors, parents in Tokyo are most unlikely to turn to Yokohama. Doubtless there will always be a certain number of lads in Yokohama and Kobe to attend the Victoria School, so long as it remains under Mr. Hinton's management, but whether they will suffice to support it is a serious problem. The Committee has now been obliged to resort to the extreme measure of dispensing with the services of the second foreign teacher, and when a school finds itself compelled to reduce its staff of instructors in order to make ends meet, there cannot be much hope of attracting an increased number of students in the future. Everybody wants to see the Victoria School flourish, but despite the high qualifications and unflagging zeal of its principal, supplemented by the aid of a hard-working Committee, the School has steadily failed to present any prospect of becoming self-supporting, and its present condition seems darker than ever. What ought to be recognised, we think, is that the fault does not lie with the institution itself, but is to be sought in independent and uncontrollable causes.

### MR. J. M. DIXON'S "IDIOMATIC ENGLISH PHRASES."

The *St. James's Gazette* says:—

If evidence was desired as to whether the Japanese have progressed in the study of European languages, it would be found in the volume which has just appeared. The *Dictionary of Idiomatic English Phrases* (London: T. Nelson and Sons, 1891), by James Main Dixon, M.A., Professor of English Literature in the Tokyo University, is the result of many examples collated to assist students in their work of studying English. Having had to look out so many for the benefit of his hearers Mr. Dixon has wisely enlarged the material he thus collected, and brought out the book now before us on a wider and more comprehensive plan. He was encouraged as there was nothing against him in the field except the clever but rather loose production of Mr. Kwong Ki-chiu, whose publication of a "Dictionary of English Phrases" we noticed a few years ago. Mr. Dixon objects to this work that it is American more than British, many phrases of the latter class being omitted altogether. He is likewise dissatisfied with the arbitrary and confusing arrangement of the book and with the examples given, which, though apt, have not the *imprimatur* of some well-known author's name. Mr. Dixon does not err in this way He has brought in many phrases that Kwong has omitted, followed an alphabetical arrangement, and gives quotations as examples of the meanings he describes. He divides the phrases into four categories, which are indicated by a letter. Thus P means that the phrase is used in serious composition; C in polite conversation; F in familiar circles, but not in polite society, and S for Slang, where the phrase is vulgar, and should be avoided. It is perhaps strange that the previous work of this kind was compiled by a Chinaman—clever and highly educated, no doubt, and with able American assistance—and that Mr. Dixon's chief object in work was to place in the hands of his students a ready aid to further comprehending the English language. By its means the Japanese at home or abroad will be able to study his phrases and adapt them exactly to the company he may find himself in Thus he may "egg on" any one whilst using a polite phrase, but if he calls anyone a "bad egg" he is using slang. "A fig for anyone" would be familiar, to be "run in" Mr. Dixon classifies as conversational, whilst to say anyone or anything was "slap up" would be again slang. The student may suggest "casting sheep's eyes," or remark he sees it "with half an eye," but the one would right in polite society whilst the other would be familiar; and unless he wants to be slangy he should never say "my eye," or "all my eye and Betty Martin" any more than he should talk of "Glasgow magistrates," or of "slipping into a man." Mr. Dixon concludes with a list of the works from which he has selected quotations.

### THE YOKOHAMA HARBOUR WORKS.

The critics have taken the field again, we perceive, but have changed the scene of their performances from Yokohama to London. We have not often read a statement so redolent of bias and disfigured by misrepresentation as an article on the Yokohama Harbour Works published by *Engineering*, and reproduced on Saturday last by one of our local contemporaries. A scathing reply by the Superintending Engineer of the works appears in our columns to-day. Plainly the article was written, or at least inspired, by some professional man, perhaps one better acquainted with Yokohama than he cared to be let seen. We are thus driven to the conclusion that there are to be found in the ranks of one of the finest professions black sheep for whom no methods are too unscrupulous when they seek to defame one of their own brotherhood. Misrepresentations too flagrant to be regarded as misconceptions are the disgraceful weapons employed by them. Happily in the present case the object of their attack cannot be harmed by the stabs of such *soshi*: his high standing and long record of good work in many parts of the world place him entirely above their reach. We have a very vivid recollection of a previous attempt to discredit the same gentleman when he was carrying out the Yokohama Water Works. It appeared in the columns of the *Japan Gazette*. We remember also what came of it. This second attempt is bolder, but we predict for it a similar fate..

* * *

As to the points raised by *Engineering*, we have made enquiries in respect of a few of them, and are satisfied that they proceed from entire misapprehension, real or pretended, of the character of the works and the details of construction. The non-connection of the breakwaters with the land, for example, would never have been honestly questioned by any one aware that they are so designed mainly for the important purpose of excluding from the anchorage, by training works, the silt-laden streams at present flowing into it and filling it up, especially the water of the Katabiragawa, which is and has been from time immemorial the harbour's worst enemy. Again, the notion that anything would have been gained by beginning at the shore and working steadily out therefrom comes strangely from a writer who states, wrongly as it happens, that the superstructures are to be below high-water level. If the breakwaters had been high enough and wide enough to facilitate continuous operations from the top of the finished work, creeping out gradually from the land, something might be said in favour of the plan, though, on the other hand, the fact of working off one forward face only would not have been conducive to rapid progress in the early stages of the work, while it would also have had the effect of delaying as long as possible the commencement of the outer parts. where the water is deepest and the breakwaters are most massive, and where, in consequence of the softness of the sea-bottom, the longest possible period is needed for settlement and observation. But, for excellent reasons, the breakwaters are to be carried only to one foot above high-water level, and it will hardly be contested, we think, that, in this windy region, work from a surface having so little command above the water would (unless the command were increased by costly staging) be only too often interrupted for hours of every tide; and this objection would have yet greater force in the case of the still lower breakwater height of the critic's imagination. Further, the breadth of the superstructures is small for the greater part of the distance, for the simple reason that greater breadth is not needed. As for the pretence that the work has been carried on from outwards inwards, it is a mere falsehood. For the sake of expedition, the laying of the foundations and substructure has, by gradual expansion, come to be carried on at more points than one—a method to which no objection can be taken in respect of the stages hitherto reached in the work; but each section has always progressed outwards. Once more, the silly fable about rocks and reefs can have been dictated only by malice. People who want breakwaters must make up their minds to a limitation of previously existing free water-space, while the works are in progress as well as after their completion; and it does not appear that the operations here have been spread over needlessly long lengths, having regard to rapidity of progress and other exigencies of the case. Lastly, so far from dumping having been began at the breakwater heads, the truth is that to this day not an ounce of material has been dumped within 1,530 feet

Digitized by Google

of the head of the East Breakwater or within 400 feet of the head of the North Breakwater, while, at the latest possible date of the information so falsely supplied to *Engineering*, those intervals were considerably greater.

### HAWAII.

THE assertion that the independence of Hawaii is guaranted by Great Britain, France, and the United States, having been made with some insistance in contradiction of our statements, we have examined the documents bearing on the question. From these we learn that, in February, 1843, Lord George Paulet, Captain of H.B.M.'s ship *Carysfort*, took possession of the Sandwich Islands in the name of the Queen. Five months later Admiral Thomas, commanding the British squadron in those waters, hauled down the British flag and restored the islands to independence. Negotiations ensued between England and France, with the result that, in November of the same year, the following declaration was made by those two Powers, with reference to the independence of the Islands:—

Her Majesty, the Queen of the United Kingdom of Great Britain and Ireland, and His Majesty the King of the French, taking into consideration the existence in the Sandwich Islands of a Government capable of providing for the regularity of its relations with foreign nations, have thought it right to engage, reciprocally, to consider the Sandwich Islands as an Independent State, and never to take possession, either directly or under the title of Protectorate or under any other form, of any part of the territory of which they are composed.

The undersigned, Her Majesty's Principal Secretary of State for Foreign Affairs, and the Ambassador Extraordinary of His Majesty the King of the French at the Court of London, being furnished with the necessary powers, hereby declare in consequence, that their Majesties take reciprocally that engagement.

In witness whereof the undersigned have signed the present Declaration, and have affixed thereto the seal of their arms.

Done in duplicate, at London, the 28th day of November, in the year of our Lord, 1843.

(L.S.) ABERDEEN. (L.S.) St. AULAIRE.

It will be seen that there is here no question whatever of "guarantaing the independence" of Hawaii. The two Powers merely pledge themselves receiprocally to "respect its independence," as we stated in a previous issue. The Government of the United States took no part in these negotiations. But in a despatch dated November 19th, 1881, from Mr. Blaine to the United States Representative in Hawaii, we find the following:—"The Government of the United States has always avowed and now repeats, that under no circumstances will it permit the transfer of any of the territory or sovereignty of these islands to the great European Powers."

### ELECTRICITY AND FIRE.

LITTLE acquainted as yet with the real nature of electric lighting apparatus and cognate matters, the middle and lower classes in the capital appear to have been greatly startled by the fate that overtook the Houses of Parliament. Nobody seems to doubt that the electric light was responsible for the catastrophe, and whereas formerly this method of lighting was believed to give absolute immunity against fire, now-a-days five people out of every ten regard each wire stretched overhead as a distinct source of peril. Not electric lighting alone, but every method of utilizing electricity has become an object of suspicion, the telephone among the rest. Certain folks have been asking experts whether the telephone might not be responsible for a fire one of these fine days, and others want to know whether cholera germs could not be propagated by this subtle instrument as well as waves of sound. We have not come across any of these inquisitive folks ourselves, and are disposed to attribute their rumoured appearance on the scene to the birth of a mood that generally overtakes the Japanese when they are emerging from any temporary excitement. With them the immediate successor of any distressing emotion is merriment. After a few more whimsical fancies have exhibited the ridiculous phase of this panic about electric lighting, things will return to their old groove, the Diet will be forgotten, and the pear-shaped lamps will once more begin to multiply. Previously to the 20th of January every foreign visitor to Tokyo was struck by the remarkable predilection shown by the pettiest tradesmen for the electric light. It was a common thing to see the new luminary glowing in a tiny store, the whole of whose visible stock in trade would not have fetched ten *yen*. Some time must elapse ere this tide of popularity begins to blow again.

* * *

A very foolish question has been raised about the propriety of Mr. Takanashi's undertaking to conduct the case of the Electric Light Company against Mr. Soné. A law-suit against the Chief Secretary of the House, is virtually a law-suit against the House itself, say the objectors, and it does not become a member of the House to appear in the Courts as Counsel for its prosecutors. This is certainly a confused kind of sentiment. If it really obtains currency in Japan, we shall have to set it down as another element of perplexity in estimating the character of a decidedly enigmatical people.

### A PERSISTENT MISCONCEPTION.

IT is surprising that, if the *Japan Gazette* will not take the trouble to refer to Viscount Aoki's speech in the House of Representatives, so as to ascertain what he really did say, the inherent improbability of the stories which it continues to circulate about the former Minister of Justice and the present Minister of Foreign Affairs, does not occur to it at once. In the first place, these stories rest on no better authority than that of two newspapers both strongly and openly hostile to the present Government. The *Japan Gazette* has lately told the public with considerable insistance and emphasis that it refuses all faith to the arguments or assertions of any journal suspected of official proclivities. But it certainly fails to exercise any reserve whatever in respect of journals known to be anti-official. Every attack upon the Authorities by the latter class of newspapers appears to be accepted by our contemporary as sufficiently credible to form the basis of hostile criticisms on its own account. Be this as it may, however, the tale itself is so obviously concocted without regard to facts that we cannot understand the *Gazette's* attitude towards it. Our contemporary continues to put into Viscount Aoki's mouth a denial of "the connection of the Commercial Code with Treaty Revision." Now is it conceivable for one single instant that Viscount Aoki could make such a denial? The connection between the Codes and Treaty Revision has been a matter of public notoriety for the past seven or eight years. One of the chief causes of the failure of Treaty Revision in 1887 was that Japan, not being able to present her finished Codes to the foreign negotiators, was required to give such pledges with regard to their nature and permanency as no independent State could give without serious loss of dignity. Count Inouye himself, in addition to the arduous duties of his special office, undertook in those days to sit as President of a Committee of Japanese and foreign experts assembled to carry on the work of revising and comparing the Codes, which has been drafted long before that time. On Count Inouye's retirement from the Foreign Office, Count Yamada succeeded to the presidency of this Committee, and it was then, in 1887, that he sought to expedite the work of revision by reminding the Committee how closely the completion of their task was connected with a most important phase of the empire's foreign relations. Throughout the whole of this period Viscount Aoki remained Vice-Minister of Foreign Affairs, and in that position must have been familiar with, and an active participator in, everything that was going on. Certainly he, of all men in Japan, would have been the last to deny the intimate connection between the Codes and Treaty Revision. But in 1887 the nationalistic reaction set in, and soon the temper of the country grew to be such that whereas Western origin had previously guaranteed a popular reception for any innovation, the slightest taint of alienage became thenceforth almost deterrent. The new Codes could not hope to escape suspicion, since all the world knew that their revision had been hastened in the interests of Treaty Revision. Accordingly, when the Commercial Code was promulgated, one of the first charges preferred against it was that it substituted foreign customs for Japanese. Everybody who understood anything of the temper of the time, knew that this suspicion was at the root of the opposition raised in Parliament against the Code's speedy operation, and knew also that to dispel the suspicion was the only hope of inducing the Diet to vote against postponement. No member of the Cabinet was personally so interested as the Minister of State for Justice in saving the Code, and no member of the Cabinet gave him such open aid as Viscount Aoki. But Viscount Aoki did not tell the House of Representatives that no connection existed between the Code and Treaty Revision. Such a statement would have been ridiculous, and every one of his hearers would have appreciated its aburdity. What he told them was that Treaty Revision had not been the origin of the Code, and that its provisions had not been framed in the interests of two or three thousand foreigners living in Japan as her guests, but in the interests of forty millions of Japanese. This is a mere question of truth or untruth. The stenographic report of Viscount Aoki's speech is accessible to every one. Why does not the editor of the *Japan Gazette* consult it, instead of persisting in putting an extravagant falsehood into the mouth of the Minister of Foreign Affairs? Frankly speaking, we cannot persuade ourselves that the *Gazette* has given this matter any serious thought. For it actually suggests that the House might have voted against the postponement of the Code's operation, had it not learned from Viscount Aoki that the new law was not "connected with Treaty Revision." Now the fact is that had it been possible to convince the House of the Code's absolute independence from a legislative point of view, the chances of a hostile vote would have been immensely diminished. Viscount Aoki did what he could to assist Count Yamada, though the effect of his aid was doubtless greatly marred by the question of privilege immediately raised in connection with it. All this is so plain and so consistent with the circumstances of the time that it baffles our comprehension to understand how the *canard* now in circulation finds credence. The *Japan Gazette* may have its reasons for reposing in the anti-Government tales of second-class anti-Government journals confidence which it avowedly withholds from pro-Government journals in all conjunctures. But the utter improbability of the story it so implicitly accepts, and the easily established falsehood of the account it republishes of Viscount Aoki's speech in the Diet, render the incident very singular.

### THE DAY AFTER THE STORM.

As might have been expected, the House of Representatives found itself in a peculiar position when it assembled on Tuesday. The resolution adopted on Monday provided for nothing more than the forwarding of a request to Mr. Mutsu Munemitsu, Minister of State for Agriculture and Commerce, asking him to attend in his place in the House, in order to answer questions as to his general policy in respect of subsidies to industrial and commercial companies. The resolution said nothing whatever about the obviously possible contingency that Mr. Mutsu might be unable or unwilling to attend. As it happens, Mr. Mutsu is laid up with influenza; a rather fortunate conjuncture, for nothing is less likely than that, attending in the House as a private member, he would have consented to answer questions relating to his policy as a Minister of State. At all events, when the House re-assembled after its stormy session, no Mr. Mutsu was visible, while, on the other hand, the discredited Delegate, Mr. Ishida, was waiting quietly in his place, and the Orders of the Day placed the House in the predicament of having to go on questioning him as though nothing had happened. To this course, however, the members

Digitized by Google

could not reconcile themselves. Nor did Mr. Ishida succeed in throwing any oil on the troubled waters. Having obtained a hearing, not without difficulty, he explained that his refusal to answer a question about the general policy of the Minister of his Department, had been prompted by a conviction that such information was not essential in discussing the Budget. This meant that the House should confine itself to the items actually submitted to it, a view naturally repugnant to such inquisitive economists as Messrs. Inugai, Kawashima, Otsu, and so forth. What was the House to do under the circumstances? To go on questioning Mr. Ishida as though nothing had happened would have looked decidedly fatuous. One member, indeed, ventured to formulate a query, but nobody paid any attention to him. As for Mr. Takanashi, the proposer of the obfuscating resolution, he made no attempt to solve the situation. Finally the House resigned itself to the only consistent course, namely, to postpone further queries about the Department of Agriculture and Commerce until Mr. Mutsu's attendance in his place. Mr. Mutsu will probably be unable to attend for several days, and in the meanwhile the fate of the Budget will be sealed for good or for evil.

* * *

It has been rumoured during the past ten days that the House might look forward to having some surprises sprung upon it in connection with the Budget. The anticipation received its first verification on Tuesday. There are two processes through which a Bill has to pass in the Japanese Parliament: the first is the inquiry stage (*shitsugi-kai*), the second the deliberative (*togi-kai*). During the session devoted to inquiry, the House, figuratively speaking, places the Government Delegates as well as its own Committee in the witness-box and examines them as exhaustively as it pleases in order to obtain a clear idea of the measure it is about to discuss. This inquiry stage occupied a space of 14 working days in the case of the Budget, for each section was investigated first as it stood in the original Budget, and secondly as it appeared after the Committee's amendments. The weary process came to an end on Tuesday afternoon, however, and as the House was about to rise at an unusually early hour, in order to prepare itself for the debate of the next day, Mr. Oyagi Biichiro asked permission to bring in an urgency motion. Mr. Oyagi is one of the most eminent barristers of the day. He is also a prominent figure among the "moderates" in the Lower House. In the early days of the Diet's session, he and men of acknowledged calibre and standing, as Messrs. Ooka, Suyematsu Kencho, Misaki and so forth, took an active part in the debates, but of late they have sat perfectly quiet, watching the band of busy Radicals and Progressionists who have made things so lively for the Delegates, the House, and themselves. When, therefore, Mr. Oyagi ascended the rostrum, the extremists scented the fray and began to fume at once. Mr. Oyagi's proposal aimed simply at shelving the Report of the Budget Committee by returning it to the Committee, with directions to amend it so as to make it consist with the Law and the Constitution. It will be remembered that a less equivocal motion was brought on the 12th of January by Mr. Nishi Kiichi, and that, though urgency was granted to it by a vote of 120 against 104, in a small and unprepared House, the Radicals and Progressionists mustered all their forces the next day, and defeated the motion by 140 against 124. Mr. Oyagi's proposition was less successful in one sense, for urgency was refused by 134 against 127. But, on the other hand, such a very slender majority as 7 in a House of 261, shows that a strong sentiment prevails in opposition to the extremists.

### FIRE.

FIRE broke out about half-past ten on Sunday evening in the International Hotel, No. 93, the property of Mr. James Carey. The flames appear to have originated in one of the out-houses, but spread with surprising rapidity to the main building which, being largely composed of wood, was soon one mass of flame. The fire was seen at an early stage from the lookout tower of the Fire Brigade, and a hose cart was on the spot in a very few minutes, standpipes being fixed and several streams playing on the fire and on adjacent buildings. The fire had obtained such a hold, however, in a quarter of an hour or twenty minutes that no hope remained of saving the hotel. The residence of Mr. Carey, only a few feet distant from the hotel, was saved, and the new building of Messrs. Witkowski & Co., though in some danger, escaped the flames, which under the influence of a fresh breeze threatened destruction in more than one direction. Some half a dozen hydrants were in use; and the "Victoria" and "Relief" steam engines were on the spot, though only one was in action pumping from the well opposite the British Gaol. We understand the building and furniture were both insured, in one case in the Straits and in the other in the Manchester Fire Insurance Company.

### PREDICTIONS FOR 1891.

THE *Kokumin* makes the following predictions for 1891:—

(1) The friction between political parties and the Houses will become more pronounced.

(2) Scholars and theorists of narrow views and desirous of winning popularity will raise vehement charges that the Bill for the examination of the Budget is a contravention of the constitution.

(3) The distinction between persons in the Government service and those outside it will become more marked.

(4) The Korean question will come to the front.

(5) The notion of emigrating to foreign countries will become very prevalent.

(6) Dramatic works will appear in the literary world.

(7) Students of English law will once more gain influence and English law schools will prosper.

(8) Changes in the journalistic world, some lights falling and others rising into view.

(9) A revolution will take place among the Constitutional liberals, and with the amendment of the regulation as to Political Associations, alliances according to different localities will be formed in the party.

(10) Detectives in high life will themselves be detected.

(11) A great reaction will be apparent in religious circles especially among Christians.

(12) Count Okuma will reappear on the stage of public life.

(13) Count Ito's reputation will be enhanced.

(14) Count Itagaki will be offended and will retire to his home at Tosa.

### COUNT INOUYE.

A short time ago rumour was very busy with Count Inouye's name. Wise folks asserted confidently that the Government had invited him to come to the capital in order to mediate with the Diet in respect of the Budget. A more extraordinary task was probably never before conceived in connection with Count Inouye, but still the story obtained credence, its foundation being the undoubted fact that Mr. Tsuzuki Keiroku, one of the Minister-President's Private Secretaries, had proceeded to Yamaguchi. Mr. Tsuzuki has now returned to Tokyo, and accounted for his proceedings in a very matter-of-fact fashion. It appears that, although his feelings urged him to make his way to Count Inouye's residence, he might have failed to do so after all, had he not been prompted by a reason no more romantic than want of money. He had run short of travelling expenses, and the easiest way to supply the deficiency was to go to Count Inouye. He found the Count buried in poetical studies, the *Kokiu-shu* and the *Manyo-shu*, his constant companions. In answer to his visitor's inquiries, he said that his chief aim was to shake from his feet the dust of a wearisome world, and to bury the memory of political perplexities in a grave as deep as utter seclusion could furnish. But Count Inouye's merry humour is always active, and he did not suffer Mr. Tsuzuki to depart without something to set the public laughing. Hitherto he said, men had called him *Segai Mukyo Koji* (the Homeless Recluse) by way of posthumous title, but henceforth he was to be the *Sanyen Koji*, or Three-monkey Recluse. This last title is not plain to the uninitiated. It refers to a celebrated picture of three monkeys, one asleep, another with its paw to its mouth, and the third holding a paw to each ear. The picture is based on a pun. *Saru*, the Japanese for "monkey," is also the negative verbal terminal. Thus the three verbs, "not seeing," "not speaking," and "not hearing" are *mi-zaru*, *iwa-zaru*, and *kika-zaru*, and the Count's new name is intended to intimate his complete retirement from the political arena. "But although I have become a monkey," he added, "let no one erect a *Koshin-zuka* (wayside shrine) in my honour."

### MISSIONARIES OUTSIDE THE SETTLEMENTS.

THERE appears in the correspondence columns of the *Hyogo News* a letter to which reference is necessary, because if the opinion expressed by the writer finds circulation and credence among missionaries, troublesome consequences may ensue. The letter is as follows:—

SIR,—In your issue of to-day I notice a paragraph, which, in justice to the Government of this country, if for no other reason, asks for immediate correction. I refer to the note about the Rev. G. L. Perin preaching in Nagaya. So far as "the law of the land" goes there is religious toleration, the Constitution promulgated in 1889 declaring all religions lawful, proved they do not militate against the peace of the State. Nor, again, is there any contravention of the law of the land in a foreigner addressing a meeting, religious or otherwise, outside of Treaty limits, nor is any permission from the police or any local authority needed. Information is simply given to the police station that such and such a meeting is to be held and addresses given on Christianity, education, or whatever the subject may be, and the police take what steps they may think necessary to prevent disturbance. The laws with regard to political addresses are of of course distinct from these.

Whether it was wise or not in the Rev. G. L. Perin engaging a theatre in Nagoya is a question on which it is hard to pronounce any judgment without knowing the special circumstances, but, so far as law-breaking is concerned, he must be at once declared guiltless, Japanese law being on these subjects as fully tolerant and almost invariably as generously administered as is law in England.

Yours truly,
A MISSIONARY.

Kobe, January 26th, 1891.

The writer, it will be observed, states his position with absolute confidence, and in some respects he is undoubtedly correct. The law of the land does guarantee religious toleration and the Constitution does declare all religions equal. Its 28th Article says:—Japanese subjects shall, within limits not prejudicial to peace and order and not antagonistic to their duties as subjects, enjoy freedom of religious belief." We do not understand, however, with what object "A Missionary" recalls these facts, since they have no bearing whatever on the Nagoya affair. The question is—has any foreigner, cleric or layman, travelling in the interior of Japan under passport, the right to deliver addresses, lectures, or sermons? We answer, undoubtedly not, and we do so not only as the result of inquiries addressed to officials, but also on the strength of simple reasoning. Passports are granted on one of two pleas, namely, for purposes of health or of scientific research. It is impossible to include religious lectures or addresses under either of these headings. The missionary, therefore, has no *right* to hold a public meeting for religious purposes outside the settlements, and it is well that this fact should be distinctly recognised, for the results of misconception might evidently be grave. But though the right does not exist, the privilege is tacitly extended by the Authorities to all missionaries, and is enjoyed by them with such absolute freedom that some have apparently conceived the erroneous idea stated in the letter reproduced above. Religion does not enter into this problem at all from the Government's point of view, as we understand it. A merchant is not entitled to deliver a commercial lecture, nor a

Digitized by Google

philosopher a scientific address, to audiences publicly convened outside the settlements. The sole object of withholding recognition of such a right is to preserve the theoretical limits under which passports are now granted, and to avoid the growth of conditions which, if not ultimately incapable of control, might at all events be controllable only with difficulty and perhaps at the cost of some hardship. In the upper ranks of Japanese officialdom there are to be found very few men actively opposed to Christian propogandism, the majority being indifferent and the minority well disposed. The Constitution, has, of course, no application to foreigners as yet, nor can it have until they occupy the state of Japanese subjects in regard to the laws of the land. But so long as the missionaries do not specially challenge official notice, they may confidently count on uninterupted enjoyment of the freedom they now exercise. The one thing calculated to endanger that freedom would be any open or combined attempt to raise to the rank of a right what, for reasons of international policy, the Japanese Government can only recognise as a privilege. The letter of a "Missionary" shows a failure to appreciate the real state of affairs, and it is obviously well that there should be no misunderstanding whatever.

### THE HOUSE OF REPRESENTATIVES.

UNLESS the patience of the Japanese people be of a most uncommon order, it must soon grow utterly weary of the tactics pursued by the Opposition in the Lower House. Obstruction has been carried to a very high point of art at Westminster, but there it is obstruction with a purpose. At Tora-no-mon, on the contrary, the obstructionists obstruct themselves. Presumably their object is to embarrass the Government, and with that view they have succeeded in getting the Budget Committee to present a Report which, if accepted by the House, will compel the Cabinet to choose between the alternatives of dissolving the Diet or consenting to reductions of a crippling character. Thus far successful, they ought, one would imagine, to push on the debate with all speed so as to obtain a vote as soon as possible. But instead of adopting that course, they indulge in device after device for frittering away time. We can understand the purpose of the rain of questions showered upon the Delegates. The hope was that under such a searching cross-examination some Delegate would break down, or some unguarded answer of a damaging character might be elicited. But the session for inquiry being concluded, and the Government Delegates having endured the 14 days' ordeal, the Opposition's aim should be expedition. On Wednesday they might very well have proceeded to discuss the only motion that separated them from the actual debate on the Budget. But they preferred to waste a whole day. The Government had been asked, through the President, to afford information in respect of its general policy as to State support of industrial and commercial enterprises. The House is not empowered to put questions to the Government in that manner. A Committee is competent to question a Government Delegate through the President, but questions to the Government can only be put under a procedure laid down in the 48th Article of the Law of the Houses. The Government, therefore, declined to answer, but at the same time, intimated very plainly that if the proper procedure were adopted, an answer would be given, and further qualified its refusal by a conciliatory clause explaining that it shared the desire of the House to see the Rules duly observed. Nevertheless, this answer was eagerly made the basis of a motion asking for a vote of want of confidence in the Government, a motion couched in the strongest terms. The House rejected the motion, but wasted an hour discussing it. Then followed another proposition, namely, that any ballots taken in the debate on the Budget should be written. The object of this proposition was quite plain: the Radicals and Progressionists wished to keep the members of their parties under the closest possible supervision. The whole of the remainder of the day's session only just sufficed to decide this point, a majority of 22 finally voting in favour of the motion. Thus not only was another day wasted, but the House also committed itself to the most tedious and least unbiassed method of arriving at a decision in regard to the various parts of the Budget. There are four ways of taking a vote in the House; first, by directing the "ayes" to stand (*kiritsu*); secondly by calling the roll (*shimei tenko*); thirdly by ballot without names (*mumei tohyo*); and fourthly, by ballot with names (*shimei tohyo*). When a clear result is not furnished by the first method, one of the other three is adopted, generally the third. But the House has now been pledged by the truculent majority to resort to the last and longest plan whenever the first and simplest is unsatisfactory. It is pretty certain that the divisions on all vital points of the Budget will be very close, so we may expect to see a considerable fraction of the House's time wasted in the mere process of voting. This materially reduces the chances of the Budget's passing through both Houses before the close of the session. Even supposing that a week's extension be granted in consequence of the fire, only 22 or 23 working days remain. From the Lower House the Budget has to go to the Upper, where the amendments of the Representatives are very unlikely to be accepted in their entirety. Supposing them not to be accepted, a conference of the two Houses would ensue, and if an agreement could be reached, there might be a slender possibility of the Budget's coming into the hands of the Government before March 3rd. But even if the Upper House endorse all the changes made by the Lower, the fact still remains that only 23 days are available for the debate in the Lower House; the voting item by item at the second reading; the examination by Committee in the Upper House, and the debate there. It looks very much as though the Budget will not be "brought into actual existence," in which event the Budget of the last fiscal year will be carried out, according to the Constitution. The Representatives ought to take that contingency into their serious consideration.

### GERMAN TRADE IN JAPAN.

THE *London and China Express* says:—

The following is from *Kuhlow*, which we give as printed, despite the number of grammatical errors:—Commercial people in Japan have had to battle for some years past with a very unwelcome change in the manner of payment of the home buyers, these trying more and more to introduce a system of taking goods on trust instead of paying directly as was the case formerly. In itself this is not difficult to comprehend, for also the home merchant, who manages the intercourse with the interior is also thrown on having book-debts. But with the loan-business not only the risk of the foreign commercial men is increased, but it must also be feared that hereby often an import on a much larger scale is favoured than is justified by the conditions, and under which—before everybody else—the foreign merchants, would have to suffer. Also those political parties there, who aim at the perfect independence of their country and whose programme embraces the gradual supplanting of European industrial products, and especially the entire removal of European merchants for the management of the export and import, threaten German influence on the Japanese market. That these endeavours have not remained without result is proved by the fact, that the direct total import by Japanese merchants reached in 188, the sum of $9,607,706, or about 15 per cent. of the total import. Concerning Japanese industrial activity as compared with European it may justly be assumed, according to the opinion of experts—that the time is yet far off, where—with the exception of a few—a supplanting of the latter by equally good and cheap home productions is to be feared. Really excluded from the import in Japan are at present only matches and straw-boards. In the foreign trade the import of Japan amounted in the last year to 208 million marks (against 206 millions in 1888) and the export to 220 millions (against 206 millions), whereby may be seen, that a further increase of the economical development of Japan has taken place.

### STUDENTS OF JAPANESE IN BERLIN.

THE *Kokkai* says that three students presented themselves for the first examination at the close of last year, in the Japanese Section of the School of Oriental Languages in Berlin. The School was established in 1887 and as the courses are of three years duration, the first examination for graduation took place in 1890. Two out of the three students passed, and one failed. The tests to which the students had to submit were, first, translating a portion of Japanese history in German; secondly, rendering a German letter and a short conversation into Japanese; thirdly, writing a German essay on Japanese history; and, fourthly, conversing in Japanese. These tests are said to have been most satisfactorily endured, the penmanship of the successful students being especially praised.

### CUSTOMS RETURNS.

THE following is a summary of the Customs Returns for December, showing the foreign trade of Japan for the month:—

EXPORTS AND IMPORTS.

| | 1889. SILVER YEN. | 1890. SILVER YEN. |
|---|---|---|
| Exports | 6,601,129.410 | 5,507,339.080 |
| Imports | 6,853,156.140 | 5,569,096.510 |

| | |
|---|---|
| Total exports and imports | 11,076,435.590 |
| Excess of imports | 61,757 430 |

| CUSTOMS DUTIES. | SILVER YEN. |
|---|---|
| Exports | 126.474 002 |
| Imports | 238,353 724 |
| Miscellaneous | 11,291.868 |
| Total | 376,119.594 |

TOTAL VALUE OF EXPORTS TO AND IMPORTS FROM VARIOUS FOREIGN COUNTRIES.

### GRADUAL DISCOVERIES.

WE are gradually making discoveries. We have learned, for example, that if a Court of Law decides that certain paragraphs, occurring in the course of three leading articles, were not written for the purpose of bringing officials into contempt, the decision must be taken as implying that, in the opinion of the Court, the whole of the statements contained in the three articles are true. By parity of reasoning it would follow that if a newspaper were acquitted of seeking to caricature a statesman whose portrait it published, then the biography accompanying the portrait must be regarded as having received the endorsement of a tribunal of justice. That is startling enough as a proposition in logic. Another discovery is that if one of the vernacular journals relied on by a foreign newspaper is spoken of a "second-rate," then it must be understood that a charge of second-rateness is preferred against the whole Japanese

Digitized by Google

press. These discoveries were owe to the *Japan Gazette*. The latter of the two is very handsomely set forth in its leading article of Wednesday, where, in a series of cumulative interrogatories, it wants to know whether the epithet "second-class" can be applied to the *Jiji Shimpo*, the *Mainichi Shimbun*, the *Toyo Shimpo*, the *Nippon*, the *Kokkai*, and the *Yomiuri*. Now it happens that only two out of this list of journals could possibly have been implicated in the charge of second-rateness. They are the *Toyo Shimpo* and the *Nippon*. What on earth, then, is the meaning of flourishing the names of others in the air, and of pretending to think that the *Japan Mail* has called them "second-class," thereby publishing "mis-statements that can only be the result of prejudice"? It is utterly impossible that the *Japan Gazette* can have really suspected us of applying the adjective "second-class" to the *Jiji Shimpo*, the *Mainichi Shimbun*, and the *Yomi-uri Shimbun*. Moreover, there never was any question whatsoever of these journals. What are we to say, then, of our contemporary's attempt to fix this charge upon us? Is it an example of "honesty first, honesty second, and honesty last?"

### THE DELEGATE FOR THE NOSHOMUSHO.

It appears now that Mr. Ishida, Vice-Minister of Agriculture and Commerce, acted with a full comprehension of what he was about when he refused to answer the question put to him in the House of Representatives on the 31st ultimo. His action surprised us, and seemed to imply a remarkable degree of unpreparedness. But according to a reply made by the Government to an inquiry from the House, Mr. Ishida was quite justified, since the subject of the question put to him did not lie within the scope of the Budget actually before the Diet. Speaking technically this is doubtless correct. The figures written in the Budget for 1891 are quite independent of any figures that may be entered in future Budgets. But from a common-sense point of view, we are unable to follow the Government's line of reasoning. Surely when Parliament is asked to vote a subsidy to a tea-exporting company, it is entitled to know what such a vote pledges it to: whether, in short, the vote is part of a general system of State protection to commerce or industries, or whether it is a special act of consideration to a particular company. We find the question put to Mr. Ishida quite natural, and cannot perceive that it lies beyond the legitimate scope of a parliamentary inquiry into the manner of preparing the Budget. Everybody knows that the Government has no intention whatsoever of reverting to the old-time policy of "grants in aid," and that the Tea Company's case was altogether exceptional. We don't pretend to know why the Tea Company got its two hundred thousand *yen*, nor can we discover any valid explanation of such a step on the Government's part. But that the precedent is not to be generally followed goes without saying, and surely there ought to be no objection to telling as much to the House.

### SUSPENSION OF THE "RIKKEN-JIYU SHIMBUN."

The organ of the Constitutional Liberals was suspended on Thursday, doubtless on account of its leading article, a powerfully written appeal to the members of the Diet and to the people. The former are called upon to put forth all their strength and vote for the reduction of the Budget; the latter are incited to follow the example of Ibaraki and one or two other Prefectures, by sending delegations to the capital to push the cause of the reduction of the taxes. The *Jiyu Shimbun* alleges that every man in the nation is groaning under the burden of taxation, and that to lessen the load is the most pressing necessity of the time. It compares this duty with that of Treaty Revision, and says that though the latter is of vital importance as concerning the national dignity, the former is a life-and-death problem to numbers of people. The tone of the article is highly inflammatory and mischievous, but it is greatly to be regretted that public opinion in Japan cannot yet be trusted to gauge such utterances at their true value, without recourse to the strong arm of the law. The suppression of their organ at this stage will not help to soften the vehemence of the procedure which the Radicals are adopting in the Lower House.

### THE HOUSE OF PEERS.

The House of Peers finished of the Registratiou Bill on Thursday. The Peers have done well since they settled down to constructive legislation. They treated the Barristers' Bill badly, and, as we think, unwisely, but they got through the Weights and Measures Bill with commendable celerity, so far as mere procedure is concerned, and their progress with the Registration Bill is capital. Marquis Konoye does not hold the House as well in hand as Count Ito. That would be too much to expect. One of his decisions has been condemned by a majority vote, and there seems to be considerable readiness to challenge him. But on the whole his management is said to justify his nomination by Count Ito—who, we hear, is suffering badly from influenza. The House of Peers will have a fairly good record, when its session concludes. But truly it is difficult to be sanguine about the House of Representatives.

### THE CHARITY BALL IN TOKYO.

We are requested by the Committee of the Tokyo Charity Ball to convey their sincere thanks to the foreign residents of Tokyo and Yokohama for the kind assistance given to the Committee in every respect. Owing to this charitable cöoperation the Ball was a great success. By the sale of tickets and by donations a total of 3,031.95 *yen* was realized, and as the expenses only amounted to 457 *yen*, there remained a sum of 2,574.95 for distribution. This was appropriated as follows:—To the Red Cross Hospital, 1,548 *yen*; to the Honjo Poorhouse and Hospital, 400 *yen*, and to the Honjo Lying-in Hospital, 100 *yen*. The balance, *yen* 526.45, has been banked as a reserve fund. The ladies of Tokyo have decided to organise a ball of the same kind annually in Tokyo, in the hope of relieving, to some extent, the sufferings of the sick poor.

### KAGOSHIMA.

Political parties in Kagoshima seem to be in a very divided and dissentient condition. The *Doshikai*, founded by Messrs. Kawashima Jun and Gamo Sen, threatens to break up into several sections, and wise folks say that the disruption will be attended by all the heat and commotion usually generated when bodies are separated into their primitive elements. There are numerous rumours in circulation, but they are difficult of comprehension except by persons with accurate local knowledge. The sum of the matter is that the politicians of the premier province have grown weary of organizing themselves into fruitless bodies, and are determined to build up an association with some elements of cohesion in its programme, not in its units only.

### EMIGRATION TO HAWAII.

Emigration to Hawaii is to be conducted on a scale of some magnitude this spring. Three batches of emigrants, each numbering a thousand, are to be despatched, the first by the Japan Mail S.S. Company's *Yamashiro Maru*, on the 26th instant; the second by the same Company's steamer *Omi Maru*, on the 15th of March, and the third by the *Yamashiso Maru* on the 10th of April. The sailing of these three fine steamers within a space of two months, offers a unique opportunity for a visit to Hawaii.

### THE TOKYO LACQUER COMPANY.

The *Tokyo Shikko-kai*, or Tokyo Lacquer Company, formed only three months ago, has already attained considerable dimensions, its roll of members containing 432 names. It held its first general meeting at the Fine Art Gallery in the Uyeno Park on the 1st instant, when several very practical addresses were delivered. The President is Viscount Shinagawa, and the Vice-Presidents are Messrs. Nomura Sosuke and Saito Shiuichiro.

Mr. Takahashi Yoshinori, Director of the Accountant's Bureau in the Communications Department (and formerly Post-master at Yokohama) who for some time had been suffering from inflammation of the lungs, expired on the 3rd instant. The funeral will take place on the afternoon of the 6th instant at the Aoyama Cemetery.

## *THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.*

The question of the estimates continues to occupy the greater portion of the attention of the Metropolitan press. The situation in respect of the Budget has somewhat changed since the publication of our last weekly summary. At the end of last week, it was generally supposed in intelligent circles that the moderates were slightly stronger in number than the extremists. But people who thought thus were surprised on the 3rd instant by the defeat of Mr. Oyagi's urgency motion to recommit the Budget Committee's Report. It is indeed premature to conclude that the Report will ultimately pass through the House: the extremists' victory on Mr. Oyagi's motion was too narrow to warrant any such conclusion. Still it is an undeniable fact that the extremists now possess more confidence in themselves than they ever had before. The circumstances principally instrumental in bringing about such a state of things are two, namely, the reunion of the *Rikken Jiyu-to*, and the strained relations between the Government and the Diet resulting from the unfortunate incidents resulting from the refusal of the Delegate, Mr. Ishida, to answer certain questions put to him. In consequence of there union of the Constitutional Liberals, that section among them which, as already stated in these columns, was opposed to the Budget Committee's report, seems to have been gained over to the side of the extremists. There may be a few Liberals who will vote with the moderates even at the peril of having their names struck off the roll of their party. But the majority of those who, as some papers graphically stated, oscillated between their party and their conscience, have, it appears, decided to stand by their party. The Government's refusal to comply with the demands of the Lower House as to a change of Delegate for the Department of Agriculture and Commerce may not have influenced the votes on Mr. Oyagi's motion, but it cannot be gainsaid that the strained relations between the Government and the Representatives consequent upon this incident is not at all calculated to make things more favourable for the passage of the Budget.

* * *

There are, some who believe that the Government is really desirous of having the Representatives vote for the Report of the Budget Committee, because then it will have a plausible pretext for vetoing the Diet's decision and carrying out the original Budget. On the other hand, if the moderates be ultimately triumphant, the Government will be at a loss to find such a pretext, for the moderates do not, like the extremists, propose any encroachment upon the functions of the Executive. Some papers, especially the *Nichi Nichi Shimbun*, constantly dwell upon this feature of the problem. Possibly the object in giving prominence to such a story is to frighten the extremists into a less radical course of action. The *Nichi Nichi* observes in its latest article on the subject, that the moderate plan of reduction (a reduction of 5½ million *yen*) is unassailable either from constitutional or legal points of view, or on account of the amount to be reduced. "The proposed reduction," says our contemporary," is the minimum limit with which the 40 millions of the people are prepared to be satisfied. In opposing this proposal, therefore, the Government must be prepared to take upon itself the responsibility of opposing the public

Digitized by Google

opinion of the whole country. To accept the proposed reduction is a painful task for the Government, while opposition to it will lead to a loss of popular confidence. Such is perhaps the reason why the Government does not desire the passing of the moderate plan of reduction. Should, on the other hand, the extremists be successful in carrying their proposal, the Government would be enabled to revert to the original Budget without incurring any troublesome responsibility. Such is the result we fear most. Who will be to blame, should such a contingency come to pass? The Representatives of the extreme section (*kô-ha*) will have to answer for it."

* * *

How will the discussion on the Budget end? This is a question anxiously asked by everybody who takes the least interest in political affairs. In a series of articles on the future prospect of the Budget, the *Mainichi Shimbun* remarks that two possible causes may bring about the contingency provided for in Article 71 of the Constitution, namely, the non-existence of the Budget. The first cause is the failure of all the plans of reduction to obtain a majority of votes; the second is the failure of the Budget as amended by the Diet to receive the consent of the Government. As to the former cause, our contemporary thinks that at present there is a probability that the three or four plans of reduction now before the House of Representatives may every one of them fail to obtain a majority of votes. In that case, the House will have a method of extricating itself from its embarrassing situation by carrying out Art. 123 of the Regulations of the House of Representatives. This Article provides that, "In case a Bill and its amendments alike fail to obtain the support of the majority, the House may, if it decides that the Bill should not be abandoned, cause a special Committee to draw up a new proposal and submit it for deliberation." The *Mainichi* thinks that, when confronted with the alternative of having the Budget of the preceding year carried out, the Representatives will see their way to agree on some reasonable plan of reduction. So the *Mainichi* hopes that the contingency mentioned in Article 71 of the Constitution may not be brought about by dissensions among the Representatives themselves. But what steps are to be taken in case the decision of the Diet be not approved by the Government? And there are, in the opinion of the *Mainichi*, grounds to fear that the Government may not approve of the proposed reductions now before the House of Representatives. Will it do in such a case to fume and cry out for vengeance on the Government? The only sensible course for the Diet will be, in the Tokyo journal's opinion, to demand, clause after clause, an explanation of the reasons why the Government is unable to consent to the amendment proposed by the Representatives, and placing all the explanations given by the Government on record, to leave it to posterity to judge which acted with more propriety, the Legislature or the Executive.

* * *

The vernacular press is divided as to the propriety of the course which the House of Representatives took about the Government's Delegate for the Department of Agriculture and Commerce. The prevailing opinion, however, seems to be that the conduct of the Representatives was, if not unconstitutional, certainly impolitic and inconsistent. The *Kokkwai*, the *Toyo Shimpo*, and the *Chûsei Nippo*, though not directly approving the constitutionality of the course adopted by the House, write in a manner clearly indicating that they are on this question on the side of the Legislature, for they all condemn the refusal of the Government to comply with the Lower House's request not as unconstitntional, but as ill-considered and unsympathetic. The *Nichi Nichi Shimbun* rebukes the Representatives for letting themselves be betraved by passion into a course of action that cannot in any way contribute to increase their dignity. The *Yomiuri Shimbun* regrets the incident for the sake of both the Government and the House of Representatives. The latter ought to have adopted a more moderate course to obtain satisfaction, while the Government on the other hand, ought to have sacrificed its delegate for the sake of the confidence of the people in its policy. The *Tokyo Shimpo* condemns the conduct of the Representatives as inconsistent and unconstitutional. Its writing on this topic seems worthy of ampler notice; so we devote the following paragraph to a reproduction of its gist.

* * *

Early last December Mr. Ozaki Yukio brought a motion in the House that Government Delegates must be men capable of representing the Cabinet or the respective Ministers of State. In explaining the motion he spoke as though he was opposed to have officials of *sonin* rank sent in the capacity of Delegates. The motion was rejected by the House, on the ground that it was self-evident that Government Delegates must represent the whole Cabinet or the respective Ministers. and that it was entirely unnecessary to specify the rank which such Delegates should hold. Now in the face of this decision, to vote, as the House did in the case of Mr. Ishida, a resolution clearly implying the absence of such representative capacity in Government Delegates, was, in the opinion of the *Tokyo Shimpo*, rash and inconsistent. Further our contemporary thinks that, as the Agricultural and Commercial Department's policy in giving subsidies to companies has no direct connection with the items of expenditure in the Budget, the House of Representatives had no right to demand an explanation of that policy while engaged in the discussion of the Budget; and that the only constitutional course would have been to seek the information through the process of independent interrogations provided for in the Law of the Houses. The House, had it wished to adopt a decisive attitude, might have taken Mr. Ishida's answer for that of the Minister of Agriculture and Commerce, and then raised the question of the responsibility of Ministers of State. But instead of choosing that method, it took a line which, besides being timid and unconstitutional, could not fail to lead to its own humiliation.

* * *

A most lamentable difference of opinion has arisen between the Government and the House of Representatives on the interpretation of Art. 67 of the Constitution, respecting the proper time for obtaining the Government's concurrence to proposed reductions of expenditures referred to in that article. On the 5th instant Mr. Tsuda introduced a motion in the Lower House, that such concurrence should be sought by each House separately before proceeding to vote on the reductions in question. But the combined opposition of the *Kaishin-to* and the *Rikken Jiyu-to* members proved too strong, and the motion was rejected by a large majority. The Lower House thus decided by implication that the concurrence of the Government should be sought by the Diet in its collective capacity after voting the reductions. Before the House rose Count Matsukata, Minister of State for Finance, addressed the House and declared that according to the Government's interpretation of the 67th Article, such concurrence should be sought by each House separately before voting the reductions.

* * *

This question has been from time to time discussed by the vernacular press. The *Kaishin-to* and the *Rikken Jiyu-to* organs are of the opinion that the Government's concurrence must be sought by the Diet in its collective capacity, while other papers generally sustain the interpretation which has been put upon the Constitution by the Government. The *Nichi Nichi Shimbun* regrets that its repeated appeals to the Representatives to obtain the Government's concurrence before proceeding to vote on the Budget have been of no avail. But the Lower House having now committed itself to a definite course of action, cannot go back, and our contemporary earnestly hopes that the Government will not insist on its own interpretation of the Constitution in this particular case. The *Choya Shimbun* thinks that whatever hope remained of the smooth passage of the Budget has been shattered by the fatal difference of interpretation of the 67th Article of the Constitution between the Government and the Lower House. There are two unavoidable contingencies before the Diet. If the Upper House should oppose the reduction voted by the Lower House, then there will arise a serious collision between the two branches of the Legislature. If the Upper House should approve the vote of the Lower House, the Government will at once reject the decision of the Diet as being contrary to the Constitution, both in substance and in process. In either case, the inevitable result will be the non-existence of the Budget. The *Choya* sincerely regrets that such a bad precedent should be left by the first Japanese Parliament. Other papers have not yet written on this subject.

* * *

The *Kokumin Shimbun* notices that the books now eagerly devoured by the rising generation are no longer those on the French Revolution, but those treating of the geography and commerce of the South Sea Islands. To such an extent has the spirit of enterprise been roused in the breasts of the younger generation. Our contemporary advises youths to turn their attention more to industrial subjects, and prepare themselves to become the founders of Birminghams and Sheffields in Japan. It is all right to go abroad and find markets for Japanese commerce, but without goods to dispose of markets avail little. A commercial country is practically a manufacturing country. So the *Kokumin* recommends its young readers not to confine their attention to commercial pursuits alone, but also to devote a due share to arts and manufactures.

* * *

The *Jiji Shimpo* is engaged in a crusade against titles of nobility and all other artificial social distinctions. Our contemporary, among all the papers in Japan, is most uncompromising in its opposition to such distinctions, as being inconsistent with the equality of human beings. The *Jiji* goes so far as to recommend the *Kaishin-to* and the *Rikken Jiyu-to* to combine and form a Commons party, refusing to admit to its ranks persons possessing any artificial distinctions. The ultimate object of our contemporary in proposing such an extraordinary course is to rouse popular opposition to the excessive influence of officialdom in society.

* * *

The *Hochi Shimbun* declares the rent paid by the House of Peers for rooms in the Imperial Hotel excessively high. It also reviews the foreign trade of the empire for the past year, and noticing the recent gradual brightening of the prospects of the silk trade, predicts that the present year will witness a still further increase of the volume of the country's foreign commerce, and recommends politicians to turn more attention to business questions, instead of throwing themselves heart and soul into discussions relating to the Budget, and to the reduction of a few million *yen* in the expenditures of the Government. The *Nippon* continues its articles on the question of tariff autonomy. The *Yomiuri Shimbun* devotes several articles to the discussion of the reduction of the land-tax, and the equalization of the assessed value of land, warmly advocating those measures. The *Toyo Shimpo*, in a series of long articles, narrates the modern development of Muscovite influence. The *Kokkai* writes on the declining importance of Nagasaki as a port of foreign trade. The same journal draws the attention of the nation to the international importance of the fisheries off the coast of Hokkaido. The *Mainichi Shimbun* writes on Government subsidies and the sale of Government property. The *Kokumin Shimbun* describes in a long series of articles the origin and objects of the Salvation Army, at the same time giving an epitome of "Darkest England." The *Nichi Nichi Shimbun* condemns the grant of 200,000 *yen* to the Tea Company, and recommends the Authorities to be more cautious in future in giving away public money.

## *THE HOUSE OF REPRESENTATIVES.*

THE House of Representatives held its stormiest session on Monday. Contrary to expectation, its request to have Mr. ISHIDA, Vice-Minister of Agriculture and Commerce, replaced by another Delegate, was emphatically refused, the Minister-President of State explaining briefly in his reply that the Delegates of the Government were free to answer or not answer questions according to their own judgment, and that the Government could not consent to change a Delegate merely because he had declined to reply to an inquiry. The greatest excitement ensued when this communication was read out. One after another the leading members of the anti-government parties ascended the rostrum and denounced the Authorities. Everybody had something to propose, and it seemed at one time as though the balance of opinion would sway in favour of eliminating altogether from the Budget the section relating to the Department of Agriculture and Commerce. The whole debate did very little credit to the House. Its request for another Delegate seems to have been conveyed to the Authorities in the briefest possible form, amounting simply to an intimation that as the House could not get the Noshomusho Delegate to answer questions, it wanted somebody else. To a demand thus curtly preferred, the Government could not reasonably have been expected to reply favourably. Had the House condescended to explain the nature of the question which the Delegate declined to answer, and the impossibility of intelligently discussing the subsidy item in the appropriation for the Department of Agriculture and Commerce without a clear statement of the general policy comtemplated in respect of such grants, it is scarcely conceivable that the Minister-President would have failed to satisfy so reasonable a requisition. But being asked simply to send another Delegate because the one already supplied would not answer the House's questions, the Minister had no choice but to reply in the negative. Had he acceded to a demand couched in such general terms, he would have openly enunciated the principle that a Delegate is not entitled to exercise any discretion, but must answer any and every question put to him, except, of course, questions trenching upon subjects specially removed from parliamentary purview by the Constitution and the Law. It is singular that the House did not appreciate this difficulty and provide against it, and still more singular that the point was not brought out in the debate of Monday. Of the speakers who occupied the rostrum very few indeed were disposed to reason calmly, the majority seemed simply to vie with one another in saying severe things about the Government, and seeking to pledge the House to some openly hostile course. But want of unity marred all chance of success. Everybody was so anxious to be the author of some history-making motion, that instead of combining to place an effective issue before the House, they frittered their strength away in putting forward wild and unpractical proposals. Meanwhile, the sober section sat quiet, and it appeared at one time as though the whole excitement would end in smoke. But the arch-agitator, Mr. ARAI SHOGO, took advantage of the mid-day recess to organize his fellow-thinkers, and when the House re-assembled, it was suddenly asked to vote upon a motion for changing the Orders of the Day in order to discuss the impropriety of the Government's reply. A majority endorsed this course, and it then became necessary to take another recess in order that the President might obtain the Government's permission to change the Orders. This led to a second surprise. The Government declined to give any such permission for any such purpose. The House, confounded by so sudden and forcible a reminder that it was not omnipotent, welcomed a proposal by Mr. TAKANASHI that the information withheld by the Delegate for the Department of Agriculture and Commerce should be sought from the Minister of that Department in his capacity of member of the House. Mr. MUTSU, though holding the portfolio of Agriculture and Commerce, sits in the House as repesentative of the first division of Fukushima Prefecture. He has not hitherto taken any active part in the debates, but he will probably feel compelled to do so now, unless an illness from which he is suffering prevents his attendance. But if he does attend, and if he does expound his policy, we fail to see how the House will have made any progress towards a solution of the crux between itself and the Government. In fact a more illogical course than the one it has adopted could scarcely be conceived. Breathing all kinds of threats against the Government for refusing to give it a new Delegate, it quietly decided to fall back upon the expedient of seeking from one of its own members the information it could not procure from the recalcitrant Delegate. This certainly seems like making a hole to escape from the obligations of one's own bluster. Mr. TAKANASHI, perhaps the most eloquent man in the House, is always sure of a pleased hearing, but we should not have thought that even his power of speech could suffice to dignify such a stratagem. The Government, too, has unfortunately made its first display of firmness in a matter that demanded address rather than strength. Thus the outcome of the whole incident, so far, is that the House looks very small, and that its relations with the Administration have become decidedly strained.

## *COUNT YAMADA AND VISCOUNT AOKI.*

A REMARKABLE accusation has been preferred against the Japanese Cabinet in general and the Minister of Foreign Affairs in particular by the *Japan Gazette*—a direct accusation of "double dealing," of seeking to "throw dust in the eyes of the Diet," and of deliberate deception. When such charges are publicly advanced by a responsible journal, it must be presumed that their bases will bear examination. Let us briefly consider whether such is the case in the present instance.

The *Japan Gazette* declares that the proximate cause of General Count YAMADA'S retirement from the Cabinet was an act of deceit practised by the Minister of State for Foreign Affairs, who "deliberately said one thing to his fellow Ministers and another to the Diet." Thereupon Count YAMADA "the honest old warrior," "with a heavy heart resolved to sever his connection with the Government." The details of Viscount AOKI'S "double-faced" dealing are set forth by the *Gazette* itself. At the close of 1889, "when Count OKUMA'S scheme of Treaty Revision had to be sacrificed to the public opinion of the time," the Cabinet held a meeting to discuss the future policy of the Government. This meeting took place at the very close of the year, in November at the earliest, for Count OKUMA'S retirement did not occur until that month. At the meeting Count YAMADA—we quote from the *Gazette*—advocated the policy of increasing the Army and Navy as the best means of attaining the national object. Viscount AOKI, on the contrary, urged the importance of legislative and judicial reform, referring, by way of example, to commercial law, which, he said, would be constantly needed when foreigners were permitted to trade in the interior. Thereupon, according to the *Japan Gazette's* words, "Count YAMADA was convinced of the truth of Viscount AOKI'S remarks, and agreed to take prompt measures for the compilation of the Civil and Commercial Codes and for the re-organization of the Law Courts."

Three things occurred at the end of 1889. The question of date is important as showing the extraordinary nature of the story. We have it, then, that at the close of 1889, Count YAMADA, in deference to Viscount AOKI'S suggestion, "agreed to take prompt measures for the compilation of the Civil and Commercial Codes and for the re-organization of the Law Courts." Now the new Organization of the Law Courts was promulgated on February the 25th, 1890, and the Commercial Code on the 27th of the following month. That is to say, arguments presented to the Cabinet in November by Viscount AOKI were, according to the *Japan Gazette*, the cause of the compilation and promulgation of two extensive bodies of law within four months

Digitized by Google

from the date of the Cabinet's meeting. We have never encountered a more wonderful assertion in print.

We are taking the case exactly as presented by the *Japan Gazette*, and in examining it our object is not to provoke controversy but to see how far a charge of bad faith and double dealing, preferred publicly against a Japanese Minister of State, can be reconciled with the grounds of the allegation. The compilation of the Civil Code and Code of Civil Procedure was commenced more than fifteen years ago. Of the four volumes containing these Codes, two were actually in print in 1880, long before Count YAMADA became Minister for Justice. The compilation of the Commercial Code was undertaken at a later date, but the draft had been put into type by 1886. The revision of the Codes was pressed forward with all possible expedition. Their promulgation, monthly expected all through 1889, was delayed for various purposes of comparison and correction. As for the re-organization of the Law Courts, the completed draft of the scheme had undergone full revision before Viscount AOKI accepted the portfolio of Foreign Affairs, that is to say, before the end of 1889. Yet we are now asked to connect the preparation and promulgation of all these important enactments with a statement made by Viscount AOKI four months before their publication, and fifteen years after the first steps towards their compilation had been taken.

There is another curious feature of the case. It is this. Seven days before preferring the above accusation against Viscount AOKI, the *Japan Gazette* concluded a series of three articles attacking Count YAMADA. The principal basis of the attack was that, in 1887, as President of the Committee of Law Investigation, Count YAMADA had unduly precipitated the revision of the Commercial Code, alleging that its completion was essential to Treaty Revision. "I have promised," the *Gazette* made him say, "that within a year the required laws shall be prepared," since "the Civil, Commercial, and other Codes of Law and the Organization of the Law Courts are connected with the Revision of the Treaties." This same *Japan Gazette*, after an interval of only seven days, now tells its readers that "Count YAMADA, convinced of the truth of remarks" made by Viscount AOKI at the close of 1889, "agreed to take prompt measures for the compilation of the Civil and Commercial Codes and for the re-organization of the Law Courts." Thus Count YAMADA was induced to commence in November, 1889, what the *Gazette* itself shows him to have been actively pushing forward in 1887, and what had in fact been carried in part to a tolerably advanced stage before he even became Minister of Justice.

We come now to the count constituting the charge of "double dealing." Viscount AOKI having declared in 1889 that the Civil and Commercial Codes were required for purposes of Treaty Revision, "quietly informed the House of Representatives in 1890 that there was no connection between the Commercial Code and Treaty Revision." If this were true, the charge would be established. But it is not true. Here are the words used by Viscount AOKI, as translated literally from the stenographic report:—"I have a word to say to Mr. SUYEMATSU. He has stated, with respect to the origin of the compilation of the Commercial Code, that the Cabinet probably had ulterior objects. I cannot admit that assertion. There has not been the smallest attempt on the Government's part to make laws for the sake of two or three thousand foreigners, living here as guests, in the interests of Treaty Revision. The laws are to promote the well-being of 40 millions of persons. They are to preserve good order in the country. They are not laws compiled with any other object." No Japanese statesman would dream of denying that the compilation of the Civil and Commercial Codes was expedited in the interests of Treaty Revision. To that extent a connection exists, and everybody is well aware of it. But unfortunately certain Japanese politicians believe, or profess to believe, that the compilation of the Codes was not only undertaken for the sake of Treaty Revision, but also subsequently guided by a desire to present to the world laws consistent with high European standards, rather than adapted to the requirements of the Japanese nation. The prevalence of such an idea at this particular epoch would effectually discredit the Codes, and postpone for a long time that greatly-to-be-desired consummation, the enactment of a sound system of civil law in Japan. Count YAMADA would be the last to admit that the various projects of law which he found in process of preparation when he came into office, and of which the most important had been commenced long before Treaty Revision became a burning question, were undertaken, not to meet the legislative needs of the nation, but to conciliate foreign scruples. Nothing could be more mischievous than the spread of such a notion. Viscount AOKI did what he could to correct any misconception on the subject in the House of Representatives. Count YAMADA, before his retirement, had repeatedly sought to vindicate the new laws against the suspicion of having been undertaken or framed in the interests of foreign policy. The *Japan Gazette*, being, as we believe, honestly anxious for the country's progress, ought to assist in establishing the truth instead of obscuring it by preferring accusations unsupported by any tittle of evidence, and obviously incapable of credence in some of their most important details.

The truth is that it is unsafe to accept implicitly the political stories told by Japanese journals. The *Japan Gazette* doubtless has its own sources of information, but in this particular case it is avowedly guided, in the main, by the *Toyo Shimpo*, and it describes as thoroughly "intelligible and reliable" the account given by that newspaper of what took place at a Cabinet meeting 14 months ago, and of what Viscount AOKI said in the Diet on the 17th of December. Viscount AOKI, as may be seen by examining the stenogaphic report, and as we can vouch who heard him, did not say what the *Toyo Shimpo*—according to the *Japan Gazette*—attributes to him. Is it extravagant to conclude that a newspaper which cannot accurately quote a speech delivered only a month ago in the Diet, and preserved in stenographic records, may not be taken as an unerring exponent of the secret deliberations of the Cabinet in former years? On the 21st instant the *Japan Gazette*, relying on a narrative told by Mr. MURATA TAMOTSU, accused Count YAMADA of undertaking "a wild and unscrupulous scheme" in 1887, and of "proposing a plan calculated not only to undermine the authority of law, but to prove subversive of all morality." On the 28th instant, relying on a narrative told by the *Toyo Shimpo*, the same *Japan Gazette* described the same Count YAMADA as an "honest old warrior" who "believes in no trimming to the wind," and who "with a heavy heart resolved to sever his connection with a Government" capable of double dealing. It is not impossible that the very black character now given to Viscount AOKI by our contemporary may, in the course of a week or ten days, undergo a similar transformation. Perhaps the plain facts detailed above may expedite the process.

## *JAPANESE WEIGHTS AND MEASURES.*

WE have several times had occasion to refer to the Weights and Measures Bill, which has been engaging the attention of the House of Peers. To appreciate the purpose of the Bill, it is necessary to bear in mind the present condition of the system which the Bill is designed to reform. The importance of having a good and well defined system of weights and measures cannot be over-estimated. The system must be good in the double sense of accurate and convenient; it must be well defined for the purposes of comparison with the systems of other nations. These conditions are certainly not satisfied by the present Japanese system; and to remedy this serious defect is one of the objects of the new Bill. The other chief object of the Bill is to put on a satisfactory basis the licencing to manufacture, sell, and repair instruments in use, and the modes of testing their accuracy. At present what regulations exist are practically ineffective.

Digitized by Google

As regards the weights and measures themselves, we shall take them up for consideration in the usual order of length, superficies, capacity, and weight. The *shaku* or Japanese foot is generally supposed to be the standard. So far, however, it may be safely said that no real standard exists. True, a so-called copy of INO'S *shaku* is in the possession of the Noshomusho. But this is a roughly graduated brass rod without the remotest claim to accuracy. The thickness of the graduation marks is a respectable fraction of the whole; and the changes due to temperature are quite ignored. In short INO'S *shaku* might have any length between certain limits, small no doubt from an ordinary work-a-day point of view, but altogether too large in these days of scientific accuracy. Now the present Bill proposes to fix, to the highest degree of scientific accuracy attainable, the Japanese *shaku* so as to be within the limits of indefiniteness of INO'S *shaku*. This is to be done in terms of a *metre-prototype*, which has been directly compared with the standard métre at Paris. It is a platinum-iridium rod, the cross-section of which is intermediate in shape to an X and an H. This form provides the greatest rigidity, and gives at the same time a surface in the axis of the bar for bearing the graduations. The distance between the graduations on this rod is a little less than a metre at O°· C., the temperature of melting ice. The error is such as to make the distance one metre at O°· 15 C.; and the framers of the Bill get over the whole question of temperature correction by the very simple expedient of defining the *shaku* in terms of the length on this rod at this temperature of O°· 15 C. The *shaku* is then defined so that 3.3 *shaku* make this metre length; or the *shaku* is $\frac{10}{33}$ of the graduated distance of a particular rod at a definite temperature, which distance is a mètre. Nothing can be simpler or more satisfactory. This *shaku* is as correct a value of the ordinary *shaku* as any previously defined or measured *shaku*. Further, it is connected with the metre by a very simple numerical relation; and by accepting this definition, the Japanese nation will be saved all the expense and trouble involved in making a comparison of standards. There are 3.2809 English feet to the métre, so that the Japanese *shaku* is fully 0.6 per cent. shorter than the English foot. The *shaku* being thus defined, all the other Japanese measures of length are thereby definitely determined. In the Bill, the names in ordinary use are wisely retained; only their legal values in terms of European measures become known. The *ri* contains 36 *cho;* the *cho* 60 *ken;* the *ken* 6 *shaku;* while the usual subdivisions of the *shaku* (the *sun*, *bu*, *rin*, and *mo*) follow the decimal system. Then there is the *jō*, or ten-*shaku* unit, used in measuring the depths of wells, heights of waterfalls, etc. It is easy to calculate that 1 *ri* contains 3.9273 kilometres or 2.4403 statute miles. It will be noticed that there is no attempt made to establish a decimal system running up to the higher units. The *ri* with its 12,960 *shaku* is to retain its place as the geographical unit of distance. It is well to observe also that there is practically no change in the values hitherto used by the best authorities. SATOW and HAWES give 2.44 English miles to the *ri;* and the author of the article "Weights and Measures" in the *Encyclopædia Britannica* gives the *shaku* as $\frac{10}{33}$ of a metre.*

As with the various units of linear measure, so with the superficial units, no essential change is suggested. The *bu* or *tsubo* is a square *ken* or 36 square *shaku*. The *cho* (= 10 *tan* = 100 *se* = 3,000 *tsubo*) is consequently 0.9917 hectare or 2.451 acres. For lower superficial measures, the *tsubo* is divided decimally. This system is all but decimal, the only break being in the passage from *tsubo* to *se*.

In the measures of capacity, the well established relation is still to hold: 1 *koku* = 10 *to* = 100 *sho*. The *sho* is, however, defined to be 64,827 cubic *bu*, or 64.827 cubic *sun*. This makes the *koku* equal to 4.963 English bushels, so that a *to* is very nearly half a bushel, or, for liquids, 4 gallons (accurately 3.970).

So far the framers of the Bill, under the influence of a rational conservative spirit, have no great difficulty to contend with, since there is already in Japan a nearly universally accepted system of measures of length, surface, and capacity, needing only a clear scientific definition of the fundamental legal *shaku* to place it above reproach. But it is otherwise with the weights. Even the legal *kwan*, as represented by the so-called standards in the possession of the Noshomusho, is quite indefinite. Of these standard weights there are several sets, not even consistent amongst themselves. Some years ago, at the Osaka Mint, the *kwan* was compared with the kilogramme; but the result of this comparison, through largely accepted, has no certain claim to being regarded as accurate. These various quantities called *kwan* suffice, however, to give a general idea as to its approximate value; and the Bill proposes to fix the real accurate value as having a simple numerical relation to the kilogramme-prototype that has been obtained from Paris. The *kwan* is to be defined as $3\frac{3}{4}$ of this prototype, so that a kilogramme is $\frac{4}{15}$ of the *kwan*. This makes the *kwan* equal to 8.2673 pounds avoirdupois. (The *Encyclopædia Britannica* gives 8.281 pounds, a value based probably on the Mint determination of the *kwan* as 3.757 kilogrammes.) The *momme* (1,000=1 *kwan*) will then be equal to 57.87 grains. It is worthy of remark that in the International Postal Convention 1 *momme* is taken as the equivalent of $3\frac{3}{4}$ grammes, this rate being assumed to be accurate enough for practical purposes. The new Bill proposes then to make the postal rate accurate and legal.

Some surprise has been expressed that the *kwan* and not the *kin* should have been adopted as the standard. But the truth of the matter is that at present the *kwan* is the legal unit, and the *kin* has no legal existence. The *kin* has been so far a nondescript kind of quantity, varying greatly in value according to locality and commodity. In England there are, as is well known, two pounds recognised—the pound Troy and the pound Avoirdupois. But the Japanese *kin*, which is vaguely regarded as a fair equivalent of the pound, is truly legion in its values. It may contain, for example, 60, 80, 100, 120, 160, and so on up to 320 *momme*. The 120-*momme kin* is nearly the English pound avoirdupois. It is used in selling beef, and is commonly, and very appropriately too, called the *pondo-kin*. The *kin* in most common use for such commodities as sugar, tea, silk, etc., is the 160-*momme kin*. It is probably of Chinese origin, being the hundredth part of a picul. Under the new Bill this *kin* (or *catty*) is to be made legal, forming an extra unit defined in terms of the standard *kwan*. It value is exactly 600 grammes (about $1\frac{1}{3}$ lb.).

After defining in the way just indicated the various weights and measures which are to be legalised, the Bill proceeds, in Article V., to enact that the Metric System shall also be legal, subject of course to the same regulations as the *shaku-kwan* system already described. It was over this article that self-styled patriotism had its fling. The Metric System is no doubt originally French; but it has taken such a hold of the civilised world generally that it has quite lost a distinctive national flavour. It has been freely adopted in many European countries, and is legal even in Great Britain. There is some difficulty then in appreciating the argument that a legalised Metric System is inconsistent with true patriotism. It is convenience alone that regulates such matters. The Englishman still sticks to his tons, his pounds, his yard, and his two-foot rule. These have all the advantages of a convenient and long established practical system, notwithstanding the awkwardness of their non-decimal relations. But a life-time usage minimises this awkwardness, as it does the awkwardnesses of symmetrical-toed boots, tall hats, and £ *s. d.* The métre is perhaps a shade too long for an ordinary sized draper to handle easily in measuring out his cloth; and the pound is a handier quantity for the grocer to deal with than a kilogramme. Nevertheless for a ten-fingered decimal-counting race the Metric System has great advantages which the scientific man all the world over has fully recognised. Science is the one great in-

* In this article, whose value depends on its accuracy, we have the extraordinary error made of giving 39 *cho* to the *ri*, with the result that the *ri* is stated to be equivalent to 2.647 miles!

Digitized by Google

tellectual commodity which Japan owes almost entirely to the West; and to accept, nothing doubting, the whole trend of scientific thought and yet kick against its system of weights and measures, can hardly be regarded as evidence of strong logic. The legalising of the two systems will certainly not lead to any practical confusion. In arts bearing on scientific pursuits, it is probable that the Metric System will be the favourite; in the numerous industries that have to do with common life the "National System" will persist so long as it is found to be convenient. And that it will certainly continue to be for several generations.

The Bill further enacts that two sets of standard copies shall be made—the one set to be preserved by the Noshomusho along with the original prototypes; the other to be in the charge of the Minister of Education, that is virtually, of the Imperial University.

The remaining Articles of the Bill have to do with the very necessary regulations as to the licence to manufacture, sell, and repair instruments. In the Bill itself these regulations are of a general kind, the practical details being left to be arranged by Imperial Notification. It will suffice to note a few of the points that are of special importance. Every weight and measure, whether manufactured in the country or imported, cannot be used commercially without having been duly tested; and the same applies to all instruments (balances for instance) that have to be used along with the weights and measures. The instruments in public institutions are subject to the same control. Then there are such questions as the toleration of error, the material to be used in the manufacture of the weights and measures, the period after which these must be re-tested, the lowest denominations that are to be tested, and the fines for infringing any of these regulations. The Bill is to take effect from the first day of the first month of Meiji 26 (1893); but it is to be possible for manufacturers to obtain their licences six months earlier than that date.

Article 20, which fixes the term during which the instruments and weights now in use may be allowed to pass unchallenged, occasioned a good deal of debate. The framers of the Bill fixed this term at three years originally; but at the second reading in the House of Peers the term was extended to seven years. This long term seems a little extraordinary when it is remembered that the new weights and instruments are to be tested every 5 years. Practically, however, it will be of little consequence, as most of the old weights and instruments will almost certainly die a natural death before the seven years come to an end.

The Bill has just passed its third reading in the House of Peers by a large majority (almost unanimous). What its fate will be in the House of Representatives it is difficult to surmise. Whether the present Bill passes or not, one thing is pretty certain, namely, that the weights and measures will be taken as they have now been defined. In this respect the labours of Messrs. KIKUCHI, NAKAMURA, and YAMAGAWA, on whose report the scientific portion of the Bill was based, will not be lost. It is doubtful if, in the House of Representatives, the Bill will have a champion of the calibre of Professor KIKUCHI, whose knowledge of the subject and power of debate were so conspicuous in the House of Peers. What we hope for is that the Representatives will discuss the Bill entirely on its own merits, and uot allow any irrelevant sentimentality to cloud their vision and rule their votes.

## *AN INTERESTING CASE.*

LAST September there appeared in the columns of the *Nippon* newspaper, under the heading of *Shiho Jigen* (a discussion of the judicial affairs of the day) a series of three articles containing expressions which were considered by the Public Procurator to constitute the offence of *Kanri-bujyoku*, or an attempt to bring officials into contempt. A suit was accordingly instituted against the newspaper. In opening the case for the prosecution, the Procurator thus stated his case:—"In the articles entitled *Shiho Jigen*, the Japanese legal officials of the present day are stated to be men unsuited for their posts, and the cause assigned for this unsuitability is a faulty system of appointing law officers. Now, as the appointments are made by the Minister of State for Justice, to assert that the methods of appointment are not proper is to bring the Minister into contempt, and on this ground the present prosecution is instituted." The Procurator then proceeded to demonstrate the animus of the articles by further quotations, the parts selected being these:—"The evil of the present day is found not in any imperfection on the side of the law, but in imperfection of the administration of justice; not in any faultiness on the side of the judicial organization, but in inaptitude on the part of the Judges. * * * The Department of State for Justice is properly nothing more than an administrative office. But it is plain that in practice the Department to this day possesses the power of promoting, dismissing, and punishing law officers. Has that Department, then, accomplished much in the way of selecting law officers? Has it succeeded in eliminating the remnants of the old *Dan-jo-dai** elements, and in placing in their stead genuine officers of law? Has it respected the independence of the Judiciary, and abstained from subjecting it to the control of the Executive? In a word, previous to this time, when the new organization of the Law Courts is about to be put into force, has the Department of Justice fostered pure and upright customs among Judicial officials in general, and placed pure and upright judges in important posts? This is a grave question. We are not accurately acquainted with the state of affairs in the Department of Justice, but what we have heard induces us to arrest our pen, and hesitate before giving a decisive reply to such a query. * * * Nothing is more deporable at present than the fact that the improvements effected in institutions are not accompanied by proper selection of officials. * * * Not that men of ability are rare among the law officers of the present day, but that the method of employing them seems to be faulty. Men of deeply conservative notions and of small capacity are mixed up, like pebbles among jewels, with independent men of new ideas and new theories. In no other sphere of society are bricks and stones more frequently placed above jewels of precious value: * * * Not only is the method of selecting able men imperfect, but the manner of employing them is faulty in respect of salaries and official rank. * * * Cases of negligence, blundering, violation of rules, corruption, and so forth, cannot be rare among the numerous officers of law, but the information we have acquired as to the state of things up to the present, goes to show that law officers deem it a point of honour to screen one another. Thus there being no means of encouraging virtue, while there is a method of hiding vice, it is not difficult to gauge the future of judicial conditions. The evil lies at present, not in imperfection of the law, but in imperfection of the men that administer it; or rather, not in imperfection on the men's part, but in a faulty method of employing them. * * * The re-organization of the constitution of the Law Courts is doubtless calculated, so far as appearances go, to effect improvements in the judiciary. But for the present, the method of selecting able men being faulty, will not the new enactment prove, in practice, an obstacle to judicial progress? We repeat once more that the evil lies at present, not in imperfection of the law, but in imperfection of the men administering it; or rather, not in imperfection on the men's part, but in a faulty method of employing them."

The Public Procurator having read these quotations in support of the charge, the Counsel for the defence took them up, one by one, and argued that they could not possibly be interpreted to imply an attempt to bring the Minister of Justice into contempt, since they were plainly nothing more than ordinary criticisms such as the press is now at liberty to pass upon any

* The name of a Judicial Office created shortly after the Restoration, and subsequently transformed into the present *Shiho-sho*.

Digitized by Google

branch of the Administration. He did not, of course, attempt to establish their truth, but confined himself strictly to their intention. The Public Procurator, in his closing address, explained that the quotations made by him had been cited by way of illustration, and that he based his charge chiefly on the paragraph wherein the propriety of the method pursued in appointing law officers was questioned. The Court, however, took a different view from that of the Public Procurator. It acquitted the editor and publisher of the paper. The words of the judgment were that the incriminated articles "merely expressed opinions on current judicial, topics, and did not contain anything implying insult to the Minister of State for Justice in his official capacity." The case was appealed, and on the 18th ultimo the Court of Appeal confirmed the judgment of the inferior tribunal.

The interest of the event centres in the evidence it affords of the independence of the Japanese Judiciary. With regard to the facts criticised by the *Nippon*, they are doubtless, to some extent, consistent with truth. The condition graphically described as a jumble of pebbles and jewels, is more or less inevitable in every department of the modern Japanese polity. Just as in the Army and Navy several of the highest posts are filled by men who owe their elevation to qualifications no longer counted sufficient to justify either appointment or promotion, so in the Judiciary there are to be found officials who represent the old regimen and are out of touch with the radically altered circumstances of their era. It would be unwise to minimise the evils inseparable from the presence of this comparatively inefficient element in the various departments of State, but, on the other hand, we have to remember that the only alternative is to set aside the senior generation altogether, and bestow the various offices on men of the younger school only. That is obviously impossible. Time must be trusted to remove the representatives of the discarded civilization. Thus there is an unquestionable substratum of truth in the strictures of the *Nippon*. But the justice or injustice of its criticism did not interest the public in the smallest degree as compared with the fact that although arraigned by the Public Procurator on a charge of seeking to bring the Minister of Justice himself into contempt, and although tried by Courts the officers of which, according to the *Nippon's* own account, owe their appointments to, and base their hopes of preferment on, the Minister's good-will, the newspaper was acquitted. It would have been impossible to furnish more significant testimony that the administration of justice in Japan has ceased to be swayed by official influence. Viewing the issue of the two trials in that light, the vernacular press expresses strong satisfaction, and even as outsiders we echo the sentiment.

Before dismissing the subject, it seems expedient to refer to some comments and inferences published by the *Japan Gazette*. That journal, in narrating the affair, says that "the articles in the *Nippon* were deemed actionable," and infers, from the verdict of acquittal, that "the facts published by the *Nippon* were of such an indisputable character as to enable the paper to win its cause in the Law Courts;" the "Public Procurator having failed to prove any of the allegations actionable." The injustice of this inference may be gathered at once from what we have written above. The Courts were not asked to decide, directly or indirectly, as to the truth or falsehood of *Nippon's* allegations. The sole question at issue related to the animus of the writer. Were certain sentences of his articles designed to bring the Minister of State for Justice into contempt, or were they not? The Courts decided in the negative. They ruled that the newspaper had not exceeded the limits of critical liberty, as now defined by the law, but their ruling did not extend in the remotest degree to the truth or falsehood of the *Nippon's* statements. The *Japan Gazette* seems to have entirely misapprehended the ground of action. It says that "the prosecution of the *Nippon* turned on the point of whether the facts (stated by it) could legally be proved to constitute a slander or not" whereas in truth there was not the smallest question of "slander." If, before undertaking to discuss this remarkable trial, the *Gazette* had ascertained what the trial was about, it would doubtless have avoided committing itself to the singular proposition that because the writer of certain phrases, occurring in the course of three long essays, is legally absolved from any intention to bring a Minister of State into contempt in respect of those particular phrases, therefore the truth of all the allegations contained in the articles must be taken as indirectly established. Nor do we find that the *Gazette's* epitome of the allegations which it thus accepts as proved, is consistent with the words of the *Nippon's* articles. We cannot discover, and we think our local contemporary would be greatly perplexed to discover, any assertions in the original text capable of being construed so as to support the following sweeping charges:—

> The present Minister of Justice, being a man of the old school, regards himself as the head of all law-making and law-administering agencies whatever, and his subordinates know that determined resistance to his decisions would mean loss of office. The good qualities of the theoretical organisation of the Department of Justice are thus nullified by the practice of its chief. The course pursued by the Minister has a most injurious effect on subordinates; it being understood among them that there is no play for the exercise of discretion, no sphere for shaping within legal limits their own courses, they sink into a subservient state and administer the laws like so many human machines, without troubling to think out cases, to weigh minor differences in the applicability of laws to circumstances.

These are not the words of the *Nippon*: they are words which the *Japan Gazette* puts into the mouth of the *Nippon*. Had they appeared in the columns of the latter journal, the charge of seeking to bring the Minister of Justice into contempt would have been proved without difficulty to the satisfaction of any Court of Law. In its next paragraph also the *Gazette* shows equal indifference about accuracy of quotation. It writes:—

> Our contemporary quotes the remuneration received by officials of the Preliminary Courts compared with that of those of the Courts of First Instance, whereas the amount and difficulty of the business transacted by officials attached to the latter Courts exceeds to an enormous extent that of those attached to the former.

This is precisely the opposite of what the *Nippon* says. That journal's contention is that the duties devolving upon Judges of Preliminary Courts are more difficult and onerous than those of other Judges—no comparison is set up as the *Gazette* alleges, with Judges of Courts of First Instance—and that consequently it is a subject for regret that Judges of Preliminary Courts (not Judges of Courts of First Instance as the *Gazette* puts it) are not accorded treatment differing from that received by other Judges, inclusive of the Judges of Courts of First Instance. Yet again, in its next paragraph, the *Gazette* makes the *Nippon* says:—"Men are promoted on account of age, or for social reasons, rather than for administrative ability." What the *Nippon* really does say is, "the lazy and incapable get promotion in the course of time," evident reference being made to the fact that a certain number of years in each judicial grade qualifies for promotion to the next. As to "social reasons," we can discover nothing corresponding in the original. Finally, the *Gazette* writes thus:—

> These abuses, affirms the *Nikon*, exist in a Department whose independence has been guaranteed by the State, and they are encouraged or winked at by the head of that Department, hence reform becomes impossible.

For this statement also we can find no manner of warrant in the *Nippon's* articles. The *Japan Gazette's* failure to ascertain the ground of the action and the extraordinary inference it consequently deduces from the verdict, are certainly not extenuated by its subsequent misrepresentations and exaggerations of the Japanese journal's language.

## *IMPERIAL PARLIAMENT.*

HOUSE OF PEERS.—SATURDAY, JANUARY 31ST.

The House met at 11 a.m. In the absence of Count Ito, Marquis Konoye acted as President. Mr. Miura Yasu, on behalf of the Committee, explained, in reply to a question, that although the Registration Law was called independent, it was in reality closely connected with the Civil Codes, being a part of the law of persons. The amendments inserted by the Committee aimed at securing for this Law sufficient independence to guarantee it against being affected by minor changes in the Civil Code. This independence was, of course, limited. It was impossible to foresee what alterations Parliament might make in the Civil Code. Alterations of magnitude might necessitate corresponding amendments of the Registration Law. Viscount Kiôka Kocho opposed the Bill, but for reasons different from those advanced by previous speakers. He opposed it because its provisions conflicted with the law now in force. It had

Digitized by Google

been contended that laws were enacted now-a-days in too great number; that the people were weary of legislation, and that they were often unable to understand, and as a rule unable to remember, the numerous statutes promulgated. Therefore, said critics, the provisions of this Bill should be embodied, not in a law, but in an Ordinance. But if the laws were becoming too numerous for the nation to appreciate or follow, what help was to be gained by changing them into ordinances? The progress of the nation at present doubtless demanded unusual legislative activity, but it was essential that the connection of laws should be carefully preserved. This Registration Law corresponded in character with the Law of Persons in operation in the West. It was an enactment having a wide and important bearing on the comfort and convenience of the people. He pointed out several points of conflict between the proposed Laws and the Civil Code, and suggested that the best course would be to send the Bill back to the Government for amendment. Marquis Hachisuka traversed Viscount Kiôka's arguments, and urged the House to pass the first reading of the Bill at once. The House took a recess at 12.20 and re-assembled at 1.30 p.m. Baron Watanabe pointed out that the chief defect of the Law of Registration now in force, was that no penalties were provided for its infringement. It was necessary that there should be penalties, and as penalties could not be inflicted except by due process of law, the propriety of putting the provisions relating to Registration into the form of law seemed quite plain. Viscount Matsudaira combatted the idea of bringing matters of Registration into the sphere of Imperial Ordinances. Such a course would be a needless and regrettable curtailment of the Legislature's functions. He ridiculed the contention that the laws were already too numerous, and maintained that in considering a law they ought to confine themselves to the question of its utility or inutility, not taking any account of the mere arithmetical question of number. Professor Toyama said that the House seemed to have been suddenly attacked by an Ordinance fever. The opponents of the Bill claimed that it ought to be an appendix to the Civil Code. He denied that altogether; but even granting it, what argument was thus furnished against enacting the provisions of the Bill in the form of a law? On the contrary, it seemed to him that no other form was suitable. The regulations for the registration of transactions relating to property were already embodied in a law. What reason could be found for refusing to attach at least equal importance to the corresponding regulations for the registration of persons? To subject the person of the subject to the government of Ordinances, and to bring his property within the purview of law, was to reverse the proper order of things. As for the contention that the system enforced in Japan had no parallel in foreign countries, he pointed out that such was not the case, and quoted the methods pursued in England as even stricter and more secure than those of Japan. Mr. Shimauchi spoke strongly in support of the Bill. He asked how it happened that members who had opposed the Weights and Measures Bill on the ground that the métre which it took for a standard of length was a foreign measure, were now urging the rejection of the Registration Bill because they could not find parallels for its provisions in foreign countries. He observed that Baron Senge and Mr. Hosokawa Junjiro, who had adopted this inconsistent course, were no longer in their places. Did they think that their parliamentary duties in respect of a measure so important were finished so soon as they had delivered their own speeches? A Government Bill should be judged on its merits. If bad, it should be rejected. To throw out every measure proposed by the Government merely because it came from the Government, was mere trifling. A ballet was then taken, when 67 votes were recorded for proceeding to the second reading and 32 votes against. The House rose at 3.30 p.m.

MONDAY, FEB. 2.

The House met at 10.30 a.m. and proceeded to the second reading of the Registration Bill, Marquis Konoye acting as President. Mr. Hosokawa Junjiro moved that the Bill be returned to the Special Committee for further amendments. In its present state much confusion would certainly arise between its provisions and those of the Civil Code. In both the latter Code and the present Bill, affairs relating to births, marriages, and deaths were dealt with, whereas affairs relating to changes or terminations of domicile and alterations of name were provided for in the Bill but not in the Code. Thus from one point of view the two instruments were complementary, from another, independent. The Special Committee should be asked to revise the Bill once more. Viscount Kiôka supported the motion, but suggested that another Special Committee be appointed. Mr. Miura pointed out that Viscount Kiôka had not really supported the motion since his proposal involved the appointment of another Committee. Marquis Hachisuka said that Mr. Hosokawa's motion was merely a device for getting the House to vote again upon a subject already decided, namely, whether the Bill should be read a second time. He repeated the argument that the Law of Registration proposed by the Bill was independent of the Civil Code. The motion was then put to the House, but rejected by a large majority. The House then proceeded to discuss the Bill article by article. During the course of the debate, Mr. Hozumi was about to ascend the rostrum when the President ruled him out of order, on the ground that a member must not speak twice on the same subject. Mr. Hozumi replied that his former remarks had been made in his capacity of member of Committee, and their purpose had been to supplement the explanation given by the President of the Committee. Nevertheless, he bowed to the President's ruling. Mr. Miura protested against the principle that an explanation offered by a member of Committee should be regarded as a speech, in the sense of the prohibition prescribed in the Rules. A hot debate followed. Mr. Hozumi declared that he was content to abide by the President's decision, and that to raise the question again would be to "slay the slain twice." Mr. Miura asked Mr. Hozumi whether his desire to speak had committed suicide or been killed. Mr. Hozumi said it had been killed. At this point some confusion ensued. Finally, on the motion of Viscount Matsudaira, and in accordance with the 85th Article of the Rules of Procedure, a vote was taken as to the propriety of the President's ruling. A majority voted against its propriety. The House adjourned for its mid-day recess, and re-assembled at 1.25 p.m. The debate on the articles of the Bill was resumed. Mr. Fujimura Shiro sought to put a question with regard to an article not yet reached, and being ruled out of order by the President, disputed the ruling, alleging that his purpose was to prepare an amendment, and that if he waited until the article came up for discussion, he could not be in time. The President insisted, and after some difficulty Mr. Fujimura yielded. The House having reached the 5th Article at 2.40 p.m., the President announced that as the Committee on Memorials and the Budget Committee had to meet, the House should now adjourn.

TUESDAY, FEB. 3.

The House met at 11 a.m. In the absence of Count Ito, Marquis Konoye acted as President. A motion by Mr. Hayashi Soyemon to expedite progress by taking four or five articles of the Bill (Registration) at a time, was rejected. The discussion of the Bill article by article then proceeded. On coming to the eleventh article, Mr. Murakami proposed that the fees for Registration should be included in the local revenues instead of in the State revenue, and the House voted in favour of this motion. On coming to the 31st Article, Mr. Fujimura Shiro moved to expunge the clause providing that every person registering should state the day and hour of his birth. It would be almost impossible, he urged, for almost any middle aged person, and quite impossible for any old person, as a rule, to comply with such a condition. Mr. Shirane, Vice-Minister of Home Affairs, strongly opposed this change. He asserted that the day and hour of birth had always been preserved in Japan—being written on the packet containing the umbilical cord—and he dwell upon the absolute necessity of having accurate records for every purpose of civilized society. The motion being put, was lost. The 23rd Article was expunged. The House rose at 3 p.m., having reached the 34th Article.

WEDNESDAY, FEB. 4.

The House met at 10.50 a.m., Marquis Konoye presiding in Count Ito's absence. The debate on the Registration Bill was continued, from Article 34 to Article 73, and the House rose at 3 p.m.

THURSDAY, FEB. 5.

The House met at 11 a.m., under the Presidency of Marquis Konoye. The debate on the Registration Bill was continued and concluded, the House passing each Article from No. 72 to No. 108, without any noteworthy discussion or change, the amendments recommended by the Special Committee being in most cases adopted. The House rose at 2.10 p.m.

HOUSE OF REPRESENTATIVES.—SATURDAY, JAN. 31.

The House met at 10.25 a.m. The President announced that the Weights and Measures Bill had come down from the Upper House, and that Mr. Satake Yoshikaga desired permisson to introduce a Bill for the amendment of the Commercial and Civil Codes. The House then went into committee, and proceeded to consider the section of the Budget Committee's report relating to the Department of Education. The President said that documents explaining the transations as to the sale and purchase of the land at Yenoki-zaka, now occupied by the United States Legation, had been forwarded from the Departments of Foreign Affairs and of Agriculture and Commerce, and were distributed in the Section Rooms. Mr. Amano Tamayuki, representing the Budget Committee, said, in anwer to questions, that with regard to appropriations for schools generally, the rule was that a certain sum was granted by the Treasury, and if it exceeded the actual expenditure, the surplus went to form a capital fund for the maintenance of the school. This had led to a system of sending in requisitions larger than were needed for present purposes, and the Committee deemed it advisable to put a stop to such a system. As for the abolition of the appropriation for Upper Middle Schools, he was individually opposed to that measure, but as a member of the Committee he should explain the Committee's reasons for recommending the abolition. It was not pretended that the Upper Middle Schools were useless and might be dispensed with, but only that, under existing educational conditions, no valid reason presented itself for supporting them out of the public funds. Their functions might very well be performed by private schools, and by Prefectural and City Schools. The same considerations applied to the Female Upper Normal School and to the School of Music. With regard to the future of the pupils now receiving education at these various schools, the Committee had not entered into any discussion. The abolition of the schools as State-supported institutions being considered necessary, nothing offered but to leave the students to their own resources. The Committee had not touched the appropriations for the Commercial School and the Tokyo Deaf and Dumb School, believing that the support of these institutions was essential at present. After some further questions, the House proceeded to the section of the Department of Agriculture and Commerce in the Budget. Mr. Inugai, referring to the antimony mine in Ehime Prefecture, said that it had originally been worked by the people of the locality, but he believed that the Authorities had resumed possession and then transferred the mine to one person, Mr. Fujita Denzaburo, together with a grant of 80,000 *yen*. He wished to know whether this was the case. He also asked why a subsidy of 200,000 *yen* had been given to the Tea Company. The Government Delegate said that he could not answer the first question without reference, but as to the second, the tea merchants, being in considerable difficulties, had petitioned the Go-

Digitized by Google

vernment for assistance in order to export leaf tea to America and brick tea to Russia. The memorial had been supported by the Prefects of the localities concerned, and the Government had complied, after much consultation and enquiry. Replying to a query as to why a subsidy had been granted to a company not yet possessing any capital, the Delegate said that the Company was now engaged in raising capital. The Company had not yet commenced the business of export. In answer to Mr. Nakamura Yeisuke, he explained that no injury would be inflicted on other tea merchants by the course adopted, the intention being to promote the prosperity of the tea trade generally, and at the same time to relieve present distress. Replying to Mr. Yebashi Ko, he said that no explicit statement was possible with regard to the procedure which might be adopted in case the Company failed to become a practical reality. But as for the subsidy of 200,000 *yen*, it was safely lodged in a Bank. Mr. Inugai pointed out that a general principle must guide the granting of subsidies. What the State did for a tea company, it seemed equally bound to do for a silk company, or for any other trading association. He desired, therefore, to have a distinct statement of the Government's reasons for assisting the Tea Company. If the Delegate could not answer at once, he trusted that a reply would be given after due inquiry. The Government Delegate said that, even after inquiry, he could not answer such a question. Mr. Inugai observed that, in that case, he should take the steps otherwise prescribed to obtain an explanation. The Delegate promised to comply with a request by Mr. Kudo Kokan, that copies of applications for subsidies and of the Department's answers to such applications be laid before the House. Mr. Otsu Junichiro said that the question put by Mr. Inugai had referred simply to the financial policy of the Minister of State for Agriculture and Commerce. If the Delegate could not answer such questions the House would be seriously inconvenienced. He proposed that the President (of the House) make application that the Delegate (Mr. Ishida) should be replaced by a better informed official. The Delegate was about to offer an explanation, but the President ruled him out of order. Mr. Nagata Sadayemon asked whether the Delegate's refusal to answer Mr. Inugai's questions was because the subject of inquiry lay beyond his functions, or because he did not possess sufficient knowledge. The Delegate explained that as the subject concerned the policy of the Minister of State for Agriculture and Commerce, it did not lie within the functions of an inferior official to expound it. There was no secrecy in the matter, but when he was asked to explain why the Department protected one company and did not protect another, he could not undertake to reply. Several members rose to support the suggestion of Mr. Otsu Junichiro. Mr. Hayama Chiuyemon protested against the course advocated by Mr. Otsu. If the House wanted fuller information than the Delegate could furnish, there was a prescribed method of obtaining such information. The President asked the House to decide whether steps should be taken to put the proposal of Mr. Otsu to the vote. A majority voted in the affirmative. The House then went out of Committee. Mr. Shimada Saburo, President of the Committee of the whole House, reported to the President of the House that a resolution had been voted in Committee to the effect that inasmuch as the Government Delegate was unable to furnish the information desired by the House, another Delegate be substituted for him. Mr. Otsu ascended the rostrum and argued at some length that the questions put to the Delegate were strictly germane to the matter before the House, and that his refusal to answer must be taken as an indication of incapacity. Several members supported this view. An altercation took place between Mr. Arai Shogo and Mr. Inouye Kakugoro, the former desiring to know whether the Delegate's refusal to answer was due to want of knowledge or to want of authority, the latter asserting that this point had been already settled. The Government Delegate ascended the rostrum and was about to speak, when Mr. Hashimoto Kiutaro protested, on the ground that the House was already in possession of the information sought by Mr. Arai. Other members supported the last speaker. After some further discussion the President put the motion of Mr. Ostu, namely, that another Government Delegate be applied for. A majority voted for the motion. Mr. Sasaki urged that the attendance of the Minister of the Department be asked for. If a Chief of Bureau was sent, his replies would probably be less satisfactory than those of the Vice-Minister, for whose replacement they had just voted. After some further discussion, the House rose for the mid-day recess, and on re-assembling at 1.15 p.m., went into Committee to consider the section of the Budget relating to the Department of Communications. Mr. Shiota Okuzo enquired about the Osaka Mercantile Marine Company. From investigations undertaken, he understood that the Company, receiving a subsidy from the Government, had been able to drive its competitors out of the field. Now however, the railway had become its competitor. Did the Government intend to continue the subsidy in order to maintain this new competition? Mr. Tanaka Shozo said that he wished to address a few words to the House before the business of putting questions to the Government Delegate began. He had observed that the stenographic records were abbreviated, and that questions and answers of some moment were omitted. It seemed desirable that everything relating to this important discussion of the Budget should be fully and accurately reported. With regard to the Department of Communications, he noted that whereas its appropriation had been only 4 millions in 1888, it was now 6 millions. Apparently, a steady increase in the number of its officials and the cost of administration was the order of the day. The House knew who was Minister of State for Communications and doubtless remembered the speech made by Count Goto two years ago in Yamagata Prefecture—(cries of "Needless,"—where upon a member rose and protested against such interruptions, claiming that he wished to hear what the speaker had to say). That speech had met with the approval of them all.—(A voice—"Are you going to avenge yourself now?" The President sternly called the House to order, and at the same time asked Mr. Tanaka to confine himself as closely as possible to the important points of his subject.) In his speech Count Goto had told the nation that from the day of the opening of the Diet, the Cabinet's responsibility must be clearly established and excessive expenditure of the Government reduced. The Count had alluded specially to the Department of Communications, asserting that, whereas the duties of the same Department in France were discharged at a cost of 900,000 *yen*, they involved an outlay of three millions in Japan. Naturally people had looked to see these fine principles put into practice when the Count entered the Cabinet, but so far from this expectation being fulfilled, the Department over which Count Goto presided now asked them to pass estimates seven times as large as the French outlay, which the Count had taken as a standard in his Yamagata speech. True, there was a difference between speaking when in opposition and acting when in power, but under the circumstances he thought the House had a right to ask what was the policy of the Minister of State for Communications—(as the speaker descended the rostrum, he called out that Count Goto's speech might be seen in the book called *Daido Danketsu*, and in the newspapers of the time). Mr. Kudo Kokan said that Mr. Tanaka's inquiry related to statements made by Count Goto before he came into office, and that it would plainly be out of order to seek an explanation of such matters from the Government Delegate. Mr. Otsu Junichiro differed from the last speaker. He considered it perfectly proper to inquire why the expenditure of the Department had increased yearly. Ministers of State must be guided by some policy in compiling the estimates, and the House had a right to be informed about that policy. In the days of autocratic government, a Minister could scarcely be required to fulfil, when in office, the promises made by him in opposition. But those days were past. They possessed constitutional government now, and it could not be suffered that a man should tell the nation one thing one day, and act another thing when in power the next. Mr. Kudo Kokan explained that he did not raise any objection to questions about an increase of expenditure or about the policy of the Minister, but he protested against questions relating to the sayings of an official while not in office. If that were permitted, they might begin to inquire what so and so had said, or how he had behaved, during his visits to a hotel or a tea-house. Mr. Mayejima, Vice-Minister of Communications, as Government Delegate, said that while prepared to give every possible information about the affairs of the Department and its policy, he did not feel called upon to enter into any discussion of what the present Minister had said or done before taking office. As to the increase of expenses, that was in no sense due to the policy of the Minister. On the contrary, since the Minister assumed the control of the Department, no effort had been spared to effect economies. The increase was the inevitable result of social development. The difference of 800,000 *yen* between the estimates for the current fiscal year and those for the next year, resulted entirely from extensions of essential business. The outlay on account of telegraphs, post offices, banks, and so forth had grown, and was bound to grow. If the number of officials had been augmented, so had the business to be discharged by them, and that too in even greater proportion. He trusted that this general explanation would suffice, and that the necessity for minute inquiries would be obviated. With regard to the Osaka Mercantile Marine Company, the support given to it had not been prompted by any idea of raising one company and throwing down another. The thing had been done purely in the interests of the quick and safe despatch of mail matter, an object which the Department was bound to attain if possible. The assistance given to the Department by the Mercantile Marine Company had been of the greatest utility, and had also satisfied economical requirements. A company, no less than an individual, was entitled to be remunerated for its work, and the company in question had given to the public full value for the subsidy granted to it. With regard to its competition with rival companies, or with the railway, that was a matter in which the Government had no concern. Mr. Otsu asked whether the revenue of the Department increased in the ratio of its expenditure. Mr. Tanaka Shozo said that his question had been judged inadmissible, but he presumed that the Count Goto of former days had the same head on his shoulders as the Count Goto of to-day. His practice in office ought to be consistent with his professions in opposition. A clear explanation was desirable. The Government Delegate declined to make any further reply to Mr. Tanaka, but in answer to Mr. Otsu said that the ratio between outlay and income could not be considered constant. In some cases expenditure was incurred with a view to a return in future years. In the case of railways, for example, though the construction of a line might save expense of transit in one respect, it might increase it in another by calling for the establishment of a post-office within the train. The Delegate gave several other illustrations of causes operating to affect expenditure in respect of communications, and said that he should be glad to enter into fuller particulars if necessary. In reply to Mr. Shiota, he said that the Osaka Commercial School had not been established for the purposes of any particular company, but in order to afford mercantile education to a city of the highest commercial importance. Being pressed by Mr. Inugai to tell why an explanation was not appended to the estimates showing why an additional sum of twenty thousand *yen* had been given to the Mercantile Marine Company,

Digitized by Google

the Delegate said that the Department of Communications did not stand on its trial like a thief. It acted according to the best of its judgment so as to secure safety and celerity of transport, and it was not required to append a separate explanation to every item in its general estimates. Moreover, there was a Board of Audit by which every figure of the accounts was carefully examined. The increase of twenty thousand *yen* had been a fair and proper allowance for the labour of carrying mails of greatly increased weight and bulk. Replying to other questions, he said that it would be impossible to have the mail matter carried in the interior by contract. Mr. Takagi Masatoshi asked a number of questions about the Japan Mail S.S. Company: what tonnage had been fixed for its fleet at the time of extending Government protection to it; whether the voyages to be made by its vessels had been determined; whether the protection now given to it was considered necessary to enable it to compete with foreign ships; whether in the present advanced state of maritime enterprise, the presence of a subsidized company's ships on routes like that between Yokohama and Kobe did not serve to deter independent companies; whether, without abolishing the subsidy to the Japan Mail Steamship Company, the routes taken by its vessels could not be changed in accordance with the 37th Article of its charter; what basis had been taken in fixing its subsidy at 880,000 *yen*; what expenses were incurred in carrying out the official inspection of the Company's ships, and whether attention had been directed to points needing change in the salaries of the Company's officers. Further, he wished to know whether some of the work carried on in the Department's shops could not be done just as well at private factories, and finally he desired to be supplied with information about the purchases of goods made by the Department, a point that had given rise to much comment and led to striking criticisms in the press, notably in the *Hochi Shimbun*. The Delegate said that the comments of the *Hochi Shimbun* had not escaped attention, but were found to be based on incorrect information. The general public apparently failed to understand that many of the articles required by the Department were of such a character as to require very particular specifications, and in calling for tenders language was employed which probably puzzled the uninitiated. The Department exercised its discretion in accepting tenders, and did not necessarily take the lowest. There had been a case of misconduct on the part of an official charged with the duty of laying in certain stores, but he had been duly punished and the fact announced in the *Official Gazette*. As for the Japan Mail Steamship Company, the voyages to be performed by its ships were laid down in the charter, but the allowance on account of each voyage was not fixed. After the Tokaido Railway had been opened, the Company had no longer been obliged to carry the mails between Kobe and Yokohama, but, on the other hand, it had opened a new service between Vladivostock and Ninsen. As for the question of subsidy, the original calculation had been made on the basis of the services required of the company and the tonnage at which it was obliged to maintain its fleet, but the Government had subsequently deemed it much wiser and more economical to pay a fixed sum instead of pledging the Treasury to a varying obligation. He entered further into a lengthy explanation of the difficulty of dividing the items of public service performed by such a company so as to compare them with the amount of the subsidy; declared that the Department saw no reason to interfere in respect of the salaries paid to officers of the Company, and pointed out that full answers to several of the questions asked could be found in documents supplied to the House, whereas to explain them point by point from the rostrum would entail serious delay. In reply to another question, he said it was quite true that the shares of the Company held by the Imperial Household Department, 2,500 in number, had been transfered to the company, as a special consideration, at their face value, which was less than their market price at the time. After several questions of a minor character, Mr. Tanaka Shozo again pressed for an answer to his original enquiry. He urged that a clear answer should be given in Count Goto's interests. Otherwise the Count would be regarded by the nation as an irresponsible Minister, to whose public declarations no value attached. The Delegate said he should be glad to answer any question about the Minister of State for Communications, but he must decline to discuss a speech delivered by Goto Shojiro in his private capacity. The President announced that he should consider the questions concluded in reference to this particular section of the Budget. The House rose at 4.05 p.m.

MONDAY, FEB. 2.

The House met at 10.30 a.m. The President announced that an answer had been received from the Minister-President of State to the House's request for a different Delegate to represent the Department of Agriculture and Commerce; that Mr. Amano Saburo asked leave to bring in a Bill amending the 3rd Article of the Conscription Regulations, and Mr. Shoma Shuko a Bill directing the sale of the Tomioka Filature. The reply of the Minister President was then read by a Secretary, as follows:—The Government Delegates, within the limits of their competence, are at liberty to answer or not to answer the questions put to them. Therefore the Government cannot consent to change a Delegate because he has refused to answer a question." Mr. Yamada Toji protested against this reply, and asked for permission to move, as a matter of urgency, another application to the Government. Mr. Otsu Junichiro spoke in the same sense, maintaining that the action of the Vice-Minister of Agriculture and Commerce amounted to an insult to the House, and that such procedure could scarcely be consistent with the spirit of the Constitution and its accompanying laws. He did not think, however, that the present was the proper occasion to push the matter. A fitting opportunity would occur when the House came to debate the Agricultural and Commercial Section of the Budget. Mr. Naito deprecated hasty action, and hoped that the further consideration of the question would be postponed. Messrs. Yamada and Inugai strongly condemned the Government's action. Mr. Nakamura Yoroku said that, after such a reply, the House could have no confidence in the Government. The people did not pay taxes to support useless officials and rebels. Why, then, was full information as to the Budget withheld from the House? Mr. Minoura Katsuta saw no occasion for further reference to the Government. It amounted to this, that the Government withheld information essential to the intelligent discussion of the Budget, and the House must act upon that conviction. Mr. Ishida Kannosuke thought that the issue should be raised and distinctly decided, whether the Government Delegates were really at liberty to answer or not as they pleased. If the principle enunciated in the Minister-President's reply were admitted, it followed that all information about the Budget might be withheld from the House. Mr. Iwasaki Manjiro thought that, without raising the question of whether or no the Delegates were at liberty to refrain from answering, the proper plan would be to ask the Minister-President to attend in the House, and explain under what circumstances a refusal to answer was justifiable. He moved that steps be taken with that object. Mr. Hashimoto Kiutaro said that the Vice-Minister of Agriculture and Commerce had refused to answer because he could not undertake to expound the policy of the Minister of his Department. The Government, however, could expound it, and for that reason the House had applied to the Government for another Delegate. He could not but think that some misunderstanding had occurred, and he suggested that instead of committing themselves to any hasty resolution, a Committee of twelve should be appointed to investigate the matter. Mr. Arai Shogo begged the President to determine whether the proposition advanced as a point of urgency had received sufficient support to come before the House for debate. The President said that Mr. Yamada's motion had not yet found one supporter. Mr. Ooka Ikuzo urged the necessity of deliberation. He recalled the circumstances under which the Vice-Minister of Agriculture and Commerce had declined to answer on the 31st ultimo, and the reason given, namely, that a junior official could not expound the policy of the Minister of his Department. Plainly the bearings of the question were very wide. The answer would show exactly what policy the Government intended to pursue with respect to the support of industry and trade in general, and he, the speaker, shared the anxiety of all the members to obtain distinct information on such a vital point. But they could not expect a Vice-Minister to make himself the exponent of the thoughts and views of the Minister of his Department. To obtain such an exposition they must seek it from the Minister himself, and he therefore moved that the Minister be asked to attend. Mr. Suzuki Manjiro denounced the idea of wasting time over this discussion. The Government Delegate had declined to give them information. They had asked to have him changed, and the Government replied by sending him back to them. Under the circumstances the only course was to expunge the whole portion of the Budget relating to the Department of Agriculture and Commerce. Mr. Amano Saburo supported this proposal. Mr. Kashima Hidemaru suggested that the method adopted in reporting to the Government decisions like that of the 31st ultimo ought to be considered. He thought that, on an occasion of such importance, the House itself should determine the nature of the report. Otherwise many circumstances calculated to influence the Government's reply might escape attention. If the stenographic record had been attached to the President's letter forwarding the resolution of the House in the present case, the Government would have appreciated the temper of the House, and could scarcely have returned such an unsympathetic reply. On the other hand, the Government had had time to read the stenographic report, and, moreover a number of Government Delegates had been in their places listening to the debate. Under these circumstances the reply given by the Government indicated a suicidal policy. If that was the resolve on the Government's side, the House knew what course to take. They wanted no Minister to come before them, and had no need to put further questions. Mr. Inouye Kakugoro totally disapproved of the Government's answer, but failed to see what could be gained by repeating the original application. If the House had made up its mind how to act in the sequel of a second application, it had better proceed to act in that way at once. There had been talk of appointing a Committee. They knew by experience what that meant. The House fell into a fever, appointed a Committee in hot haste, and then, in two or three days, cooled down. It had been so in the case of Mori Tokinosuke. As for the suggestion that no more questions need be asked in the section of the Department of Agriculture and Commerce, such a course would not ultimately secure public approval. What he suggested was that, since this particular Department was generally disapproved of, and since public opinion inclined to its abolition, they should cut down item after item of its appropriation when they came to vote the Budget, and so exterminate it. After some further discussion, the President said that as the original motion had failed to receive the requisite support, it was not before the House, and the same was true of the subsequent motions, which necessarily took the form of amendments. The House would therefore proceed to the Orders of the Day. Several members spoke briefly criticising the Government in bitter terms. Mr. Takanashi Tetsushiro said that the occasion was one eminently demanding a clear understanding between the Government and the House. Many plans had been proposed, but he thought that the simplest of all would be to seek an explanation from the

Digitized by Google

Minister of Agriculture and Commerce in his capacity of member of the House. The advantage of a Minister being also a member of the House was to be realized under precisely such circumstances as they were now dealing with. The President then put to the House the motion of Mr. Yamada Toji, but a majority voted against it. The House adjourned for the mid-day recess, and re-assembled at 1.25 p.m. The President announced that during the recess a motion of urgency had been sent in by Mr. Makino Kozo, to the effect that the Orders of the Day should be changed in order to admit of a discussion as to the impropriety of the answer received from the Government. The motion was supported by Messrs. Arai Shogo, Aoki Tadasu, and Inugai Ki. Mr. Arai, in a speech of some length, repeated the arguments against the Government's procedure, and explained that the proposition now made was intended to give voice to what was evidently the general opinion of the House. There had been much discussion in the forenoon, and various proposals had been made. He begged the members to postpone for the moment any consideration of what particular steps should be taken towards the Government, and to decide the broad fact of the impropriety of the answer given to the application of the 31st ultimo. The President, in accordance with the Rules, took the sense of the House at once as to the question of changing the Orders of the Day. A majority voted for the change. The House took a recess in order that the Government's permission for the change might be sought, and re-assembled at 3.10 p.m. The President announced that the Government had refused to consent to the change. Mr. Takanashi Tetsushiro said that this was a grave conjuncture. They could not discuss it, however, without changing the Orders of the Day. The wisest plan seemed to be to proceed with the regular business, and then to prolong the session after 4 o'clock in order to consider the motion of Mr. Arai and others. Several members rose to speak, but the President ruled them out of order. The House went into Committee and proceeded to consider the report of the Budget Committee relating to the Department of Communications. Mr. Otsu Junichiro said that as the matter before the House was the Budget, it was within the competence of a member to bring forward any motion relating to the Budget. The 44th Article of the Constitution seemed to indicate that the Delegates of the Government had no special obligations towards the House, but the 44th Article of the Law of the Houses provided that a Committee in meeting might, through the President, demand explanations from the Delegates of the Government. They had asked for an explanation of the policy of the Department of Agriculture and Commerce, and they had received an answer that left them quite unable to discover the principles upon which the Budget had been framed. He moved, therefore, that they reject the whole Budget and appoint a Committee to draw up another Budget. The President ruled this motion out of order. Mr. Shoma Shiku explained, on behalf of the Committee, that the reductions made in the appropriation for the Communications Department were small in comparison with those of other Departments. The reason of the difference was shown in the following figures:—

| | Department of Agriculture and Commerce. | Department of Communications. |
|---|---|---|
| | Yen. | Yen. |
| Appropriation on account of horses, grooms, &c. | 3,904 | 2,400 |
| Office expenses | 143 (per head) | 67 (per head) |
| Allowance to Officials on Retired List | 15,754 | 7,159 |
| Pensions | 5,211 | 1,511 |
| Funeral Allowances | 1,500 | 900 |

This striking difference between the two Departments was not due to any difference of establishment: on the contrary, the officials in the Department of Agriculture and Commerce numbered only 350 against 511 in the Department of Communications. Morever, the salaries of *Hannin* officials in the former Department averaged 30 *yen* against 24 *yen* in the latter. For these and similar reasons no special reduction had been made in the case of the Communications Department. After some further explanations, several members urged that the discussion on this section of the Committee's Report should terminate, and that, as the section relating to the Department of Agriculture and Commerce was not yet concluded, questions might be put about it in the extra session. A confused debate followed. Mr. Ozaki Yukio moved that the House go out of Committee. Mr. Ishida, Vice-Minister of Agriculture and Commerce, wished to address the House, but a violent uproar ensued, members calling out that they did not desire to hear him. The President rebuked the House for want of decorum and disregard of rules. The Government Delegates were entitled by law to address the House at any moment, and the Vice-Minister of Agriculture and Commerce must have permission to do so. Mr. Misaki Kamenosuke urged the House to behave in an orderly and manly manner, and to give the Delegate a hearing. The President repeated that the Delegate had the right to address the House, but again an uproar arose, several members calling out that it was past 4 o'clock. The President (Mr. Shimada Saburo) rebuked the House sternly. He said that such disorderly conduct was disgraceful, and he warned Mr. Suzuki Manjiro not to make any further attempts to speak without permission. He called upon Mr. Takanashi to explain his motion. Mr. Takanashi spoke at some length, urging that the most expedient course was to ask the Minister of Agriculture and Commerce to attend in his place as a member of the House and explain his policy. Mr. Hashimoto Kiutaro moved that a Committee of nine be appointed to investigate the matter. Mr. Nishio Genzo supported Mr. Takanashi's motion, but said that he understood that Mr. Mutsu, Minister of Agriculture and Commerce, was suffering from sickness. It would be impossible for him to attend, and the business of the House could not go on. He moved as an amendment that Count Yamagata be asked to attend, and that if he declined, the House should proceed to discuss a motion of want of confidence in the Government, or adopt some other suitable course. A short discussion ensued, after which the President put Mr. Takanashi's motion and it was carried by a majority. The House rose at 4.35 p.m.

TUESDAY, FEB. 3.

The House met at 10.35 a.m. The President announced that Mr. Ayai Takeo and 39 others had handed in a series of questions relating to the Treasury Reserves and Loans; and Mr. Kawashima Jun and 62 others, a series of questions relating to the present Government. A member suggested that more punctuality should be observed in assembling, at the sound of the President's bell; and another member urged that an accurate report should be speedily furnished showing what books and documents had been destroyed by the conflagration. Mr. Hamano Noboru complained that the *Kokkai Shimbun* had spoken of him as an "animal" because, being afflicted with a severe cold, he wore an overcoat in the House. The President said that such matters did not fall within his province. The House went into Committee on the Budget. Mr. Shimada Saburo, President of Committee, said that the order of business was to continue the questions relating to the Department of Agriculture and Commerce. Mr. Ishida, Vice-Minister of Agriculture and Commerce, said that his refusal to answer a question on the 31st ultimo having led to much discussion, he desired to offer an explanation. The function entrusted to him as Delegate was to give information about the Budget submitted to the House. It had not seemed to him that a question bearing on the general policy of the Government as to the protection of industries, could fairly be considered to fall within the scope of an item relating to the Tea Company only. He thought the House might have obtained that information in some other manner. At the same time, they would find him perfectly willing to afford all the information in his power in respect of matters needing elucidation. Messrs. Inugai, Tachiiri, Hashimoto, and Higashio objected to put questions to Mr. Ishida under the circumstances. The House had voted that information should be sought from the Minister of State for Agriculture and Commerce, and until he attended in his place it was useless to make any further inquiries. The President pointed out that the House had not voted to suspend its inquiries, but only to ask for the attendance of the Minister of Agriculture and Commerce. If, therefore, members did not choose to put questions, the session of the committee must go on all the same. Mr. Yamada Toji said they had decided the preceding day that the Delegate, Mr. Ishida, was morally incompetent to answer question, and he therefore protested against questions being put to him. Mr. Hamano Noboru said that since the Mori Tokinosuke incident the House had received five or six rebuffs from the Government, and had made no return. If they acted similarly in the present case, the public would say that the three hundred Representatives were fossils. The President warned Mr. Hamano that any repetition of such language would compel him (the President of Committee) to report the matter to the President of the House, and request that due punishment be meted out. If Mr. Hamano undertook not to use similar words again, his remarks on this occasion might be overlooked. Mr. Hamano promised to be more circumspect. Mr. Inouye Kakugoro said that the House had decided to ask for the attendance of the Minister of State for Agriculture and Commerce. It had not decided to interrupt its inquiries, nor had it decided that the Delegate was morally incompetent to answer. He protested strongly against such statements being made by a member. A long discussion followed as to the propriety of postponing the inquiry in regard to the Departf ment of Agriculture and Commerce until the Minister himself attended. The President finally, in the exercise of the powers vested in him, decided that the inquiry should be postponed, and that the House should proceed to consider the Revenue side of the Budget. Various questions were put to the Government Delegate, Mr. Watanabe, with regard to re-surveys of land for purposes of taxation and with regard to loans to Cities and Prefectures. Mr. Kudo Kokan asked for information about loans made by the Government during the Meiji era. The Delegate replied that the documents containing information on this subject would fill two large chests. They were accessible to all the members. After a number of minor questions, the majority of which the Government Delegate promised to answer at a future date, Mr. Ayai Takeo moved that as the House had already devoted 27 days to the session of inquiry it should proceed at once to debate the Budget. The motion being put, a majority voted in the affirmative. The House then went out of Committee. Mr. Oyagi Biichiro moved that the Report of the Budget Committee and the amendments proposed by Messrs. Suge and Matsuda should be grouped together, and returned to the Committee, in order that only such portions of them as complied with the law and the Constitution might be embodied in a new Report. He urged the expedency of this course in a long speech. The motion being brought forward as one of urgency, the House was asked to decide whether the Orders of the Day should be altered for the purpose of debating it. A vote was taken by ballot, when 134 members voted against changing the orders, and 127 voted in the affirmative. The House rose at 2.26 p.m., the President having announced that the business for the next day would be the debate on the Budget.

WEDNESDAY, FEB. 4.

The House met at 10.50 a.m. The President announced that in answer to the inquiry addressed by him to the Government, the following had been received:—"With reference to the question concerning the general policy of the Government in respect of State aid to industrial and commercial enterprises—a question lying outside the scope of the actual Budget—it is desired that, in accordance with Article 48 of the Law of the Houses, the question should be accompanied by the memorandum therein prescribed. The Government, in common with the House, being anxious to comply strictly with the law, this reply is given." Mr. Aoki Tadasu

Digitized by Google

severely condemned this reply. He called it a mere confession of inability to give the information sought for, contended that the original inquiry had been strictly within the scope of the Budget now before the House, and moved that the Government was not only treating the House with great want of consideration, but also failing to discharge its duty by withholding information which the House considered essential to the intelligent discussion of the Budget, and by giving no reply to the request that the Minister of State for Agriculture and Commerce be required to attend in the House. He argued that in order to discuss this motion, which amounted to a vote of want of confidence in the Government, no permission need be sought to depart from the Orders of the Day. Messrs. Nakamura Yeisuke and Naito Rihachi supported the motion. Mr, Suyematsu Kencho opposed it. He said that this trouble had not arisen out of any evil intention on the part of the Government. It had grown out of a casual incident. Moreover, the Delegate whom they condemned so strongly had offered an explanation virtually amounting to an apology. Was it manly or dignified to push the affair farther? If, indeed, they wanted to fight the Government, such insistance would be intelligible. But in that case he thought that they might choose some occasion to which the disgrace of unmanliness would not attach. The answer from the Government, too, did not seem to call for any censure. It merely said, "Comply with the law and accompany your question by a statement of reasons." Mr. Wakai Yeitaro took the same view in the main. He denounced the whole affair as undignified from the outset, but suggested that any further discussion of it should be postponed until after the important debate on the Budget had been concluded. Mr. Tanaka Shozo supported the motion. He relied on Article 44 of the Law of the Houses, which provides that a Committee may through the President, demand explanations from the Delegates of the Government. As he proceeded to dilate upon the necessity of mutual forbearance on the part of the Administration and the Legislature, several members laughed. Mr. Tanaka inquired sternly what they found to deride in such an important subject. His speech lasted some time, and when he was in the act of descending from the rostrum, cries of "Can't understand" were heard. "If you can't understand, listen, you rude fellows," cried Mr. Tanaka (*wakarankeriya kite iro, burei monomega*). The motion was then put to the House and lost. A proposition was made to take all votes relating to the Budget by ballots with names. The President thought that as the Rules provided for a show of hands as well as for ballots, a general decision of this kind would amount to a change of the Rules, and could not, therefore, be taken without due discussion involving a departure from the Orders of the Day. Several members argued against the necessity of changing the Orders, their contention being that the motion related only to the matter before the House, namely, the Budget. The motion was subsequently altered so as to refer only to occasions when a vote by ballot was taken. A confused debate ensued, some members endeavouring to speak to the motion, despite the President's ruling that the question of changing the Orders must be decided first. Mr. Inouye Kakugoro charged the President with failure of duty because he allowed two questions to be simultaneously discussed. The President gave an explanation, and said that he must ask the House to decide as to the propriety of Mr. Inouye's stricture. Mr. Inouye withdrew the remark. After further discussion, the House decided that the motion might be debated without changing the Orders. After the mid-day recess the debate was continued, and amid some confusion the motion was carried by a considerable majority, the closure having been voted, although several members' names had been sent in as desiring to speak. Mr. Ooka Ikuzo and others protested againt such arbitrary behaviour on the part of the majority. The result of the voting was also questioned, whereupon the roll was called. During this process Mr. Shiota Okuzo answered for the member beside him as well as for himself, and a motion was made for handing him over to the Committee for Disciplinary Punishments. The motion was lost. The voting by names was then continued, and resulted in 135 "ayes" and 113 "noes." The House rose at 3.55 p.m.

THURSDAY, FEB. 5.

The House met at 10.5 a.m. Mr. Tsubota Shigeru's motion came up for discussion, namely:—"With respect to the concurrence of the Government in the matter of expenditures mentioned in the 67th Article of the Constitution, so soon as this House comes to a decision involving such concurrence, steps shall be forthwith taken to seek that concurrence." Mr. Tsubota explained that there were three views about the rendering of the 67th Article:—First, that the Diet had simply to vote for any reductions or rejections approved by it, and then to leave the Government to endorse these or not as it pleased; secondly, that as the expression used in the Constitution was "the Diet," neither House could act independently in respect of the Government's concurrence; thirdly, that either House was competent to seek the Government's concurrence in relation to any reductions or rejections made by it. He held that the third view was correct. The first he condemned as conflicting with the 64th Article of the Constitution, which provided that the Budget must have the consent of the Diet. It could not be said to have that consent if alterations voted by the Diet might be endorsed or otherwise as the Government pleased. The second view he condemned because, as a matter of reason, whichever House desired to make a rejection or reduction should be at liberty to seek the Government's concurrence. The arguments relating to these points were set forth by Mr. Tsubota at considerable length, and the third view was advocated as best calculated to expedite the process of legislation. Several questions were addressed to the mover, after which Mr. Yasuda Yuitsu spoke in opposition, maintaining that the concurrence of the Government related only to the carrying out of the rejections or reductions voted by the Diet. In the course of his speech he condemned the Japanese Constitution because the phrase "concurrence of the Government" did not occur in any other Constitution. This led to some commotion which the President ultimately quelled. Mr. Misaki Kamenosuke supported the motion, his contention being that if the rejection or reduction of a particular class of expenses was not permitted without the Government's concurrence, then that concurrence must be sought before the House passed a final vote on the subject. He supported this view by reference to the Articles providing that a member could not be arrested while the House was in session without the permission of the House, and that, except in cases provided by law, the dwelling of a Japanese subject must not be entered or searched without his consent. It was perfectly plain that in the case of the dwelling and the member alike, the act of entry or that of arrest must be preceded, not followed, by the consent of the owner or the permission of the House. No material difference could be discerned between the phraseology of these Articles and that of the 67th Article which they were now considering. He dwelt upon the fact that by the Constitution the Budget had to be submitted to the Lower House first, a provision which endowed the House with a certain amount of independence in the exercise of its fiscal functions. Some people contended that because the Minister of State for Finance had announced the Government's inability to consent to the Committee's Report, therefore no occasion existed for further inquiry as to the Government's concurrence. But he thought such a view untenable, as the Minister had merely made a general statement, and had not referred to any item, whereas it was fair to conclude that some portions, at any rate, of the Report would meet with favourable consideration at the Government's hands. He contended for independence of the Lower House in respect of the Budget, and claimed that the share taken by the Upper House in passing it was a mere matter of form. Mr. Aoki Tadasu spoke on the other side, and pointed out that if the final decisions of the House were to be taken in the sequel of obtaining the Government's concurrence, then, in order to seek that concurrence, a preliminary decision must be arrived at. In other words, the whole procedure of the House would have to be changed. As to the contention that the House of Representatives might act independently in this matter, he wished it were so, but the language of the Constitution was plain. The 67th Article said "the Diet," and the Diet consisted of two Houses. Mr. Suyematsu Saburo asked to have the stenographic record read, and this being done, it appeared that the expression "improper," applied by Mr. Yasuda Yuitsu to the Constitution, was duly recorded. Mr. Suyematsu Saburo protested strongly against such language being used in the House, and maintained that if it were permitted, similar epithets of condemnation might be applied without illegality to the Imperial messages themselves. He thought that it fell within the President's duty to rule such language out of order. The President said that he had reproved Mr. Yasuda, but that doubtless Mr. Suyematsu failed to hear him. Mr. Suyematsu Kencho urged that the incident need not delay the House. It was on record that Mr. Yasuda had denied his intention of using the words impugned, and his denial amounted to a withdrawal. The words should be expunged from the records. Mr. Suyematsu Saburo then proceeded to argue in favour of the motion. He asserted that the power of dealing with the Budget rested virtually with the Lower House, the members of which had been elected by the people, and he laid down the proposition that the Upper House, which contained only a few elected members, ought not to interfere in such a matter. Mr. Ishida Kannosuke opposed the motion, and charged its supporters with want of obedience to the Constitution, where it was distinctly enunciated that the Diet consisted of the Upper and the Lower Houses. The word "Diet" in the 67th Article could not possibly be read as referring to either House singly. He also pointed out that no machinery existed for seeking the concurrence of the Government, as suggested by the mover of the proposition. Mr. Suyematsu Kencho opposed the motion, on the ground that the 33rd Article of the Constitution defined the Diet as consisting of two Houses, and the Lower House could not, consequently, take action which would prevent the Upper House from receiving the Budget in its original form. Mr. Ooka Ikuzo supported the motion, and warned the opposition that the responsibility of future complications would rest on their shoulders if they rejected it. Mr. Seki Naohiko moved the closure, but the President said that many names of intending speakers were still before him. Several members, however, having urged the needlessness of further debate, the closure was put and carried. The motion was then put, at first by show of hands and afterwards by calling the roll, when 93 "ayes" and 138 "noes" resulted. The President then announced that the Minister of State for Finance wished to address the House. Count Matsukata, ascending the rostrum, said:—"Gentlemen. In connection with your discussion of the urgency motion just now decided, I think it advisable to say a word on one point. It being necessary that the Government's concurrence be obtained in the event of any reduction or rejection of the expenditures enumerated in the 67th Article of the Constitution, the moral duty plainly devolves upon the Government of clearly intimating its opinion to you for your information. According to the Government's view, then, when rejections or reductions are to be made of the expenditures referred to in the 67th Article the proper course is that each Hourse before coming to a decision, should seek the Government's concurrence." The House rose at 4.30 p.m.

## *CORRESPONDENCE.*

### THE YOKOHAMA HARBOUR WORKS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—With reference to the article headed "Yokohama Harbour" which appeared in *Engineering* on the 12th of December, may I ask you to be kind enough to publish the following letter which I am sending to the editor of that journal?

Yours faithfully,

THE ENGINEER OF THE HARBOUR WORKS.

February 1st, 1891.

TO THE EDITOR OF "ENGINEERING."

SIR,—On the 12th of last December you published an article purporting to describe the Yokohama Harbour Works, and commenting in strong terms on the Japanese authorities and their advisers. To fair criticism, founded on a knowledge of facts, no reasonable objection could be taken. But against criticism supported only by misstatements and suppressions of fact so numerous and so extraordinary as those which I find in the article referred to, it is really necessary to make a serious protest. I will do so as briefly as I can.

I have to point out, in the first place, that the statement that "the Japanese wise men must begin outwards and work inwards," in constructing the breakwaters, is absolutely untrue; as also is the statement that "the mercantile community of Yokohama recently held a meeting to protest" against "this method of procedure." Equally false is the assertion that "a commencement has been made at the pier-heads by dumping down the rubble base;" and equally false and unjust are the sneering comments founded on that fabrication. False, again, is the assumption that the works "cannot be carried out for less than half a million sterling," on the "most moderate computation." They will cost barely two-thirds of that sum. And, as for the statement that the Japanese "are going to waste a large sum of money," it is a mere slander, unsupported by a shred of proof. To cite a few other errors, your writer states that "the breakwaters are to consist of rubble-stone mounds, with a concrete superstructure below high-water mark." The mounds, however, are not of rubble stone, and the superstructure is to be carried above high-water mark. Further, that class of construction is to extend to but little more than one-third of the whole length of breakwater. The pier is to be 1,900 feet long, instead of 1,500 feet as stated in your article; and the graving-docks form no part of the harbour-works scheme, but are the separate concern of a private company. The geographical data in the article are inexact; the longest fetch of the sea outside of the proposed harbour is 27 miles instead of "from 11 to 15 miles;" and one of the chief features of the scheme—the training works for the Katabiragawa water—is neither mapped nor mentioned.

The above and many other errors, running through nearly every sentence of your article, sufficiently betray its author's ignorance of the local conditions and the scope and particulars of the works. No other conclusion is possible, in respect of a writer who seems to think it a simple matter to provide at this port means of "berthing vessels alongside quays, or to furnish" quay room for all classes of vessels," with "a small amount of shelter;" who argues that the "sensible plan would have been to have commenced with internal docks or wharves," leaving the anchorage alone for a while; who suggests that the present works are "monumental," and designed without regard to expense or to "the commercial aspect of the question;" who complains that the breakwaters are not built out from the shore, and that the entrance is "right in the middle of the anchorage;" and who talks of our ornamenting the bay with "two sunken reefs," on which, for years to come, there will, perhaps, be occasional wrecks. If he had tried his best, he could not have given surer proof than by this random writing of his ignorance of the special conditions which really govern the case—of the nature of the bottom in the different parts of the Bay and its shores; of the needs of the port; of the destructive effects of typhoons; of the limit of money which was available for the enterprise; of the substantial amount of berthage for cargo-vessels that is provided under the present scheme; of the training-works by which the silt-laden stream-waters that have operated for ages past to fill up the anchorage are to be conducted seaward past the inner ends of the breakwaters; and of a dozen other essentially local particulars by which the whole problem is hedged in. In the face of all these considerations, it is idle to propound abstract theories as to what would be the most perfect method of procedure under some imaginary set of conditions, just as it is perfectly idle to attempt to apply to Japan, in matters at large, the canons of criticism that in our own country have been evolved, in the course of centuries, from a wholly different order of things. The main point is that in these Yokohama Harbour Works the Japanese authorities are going to have exactly what they want, at a decidedly moderate cost—that is to say, breakwater shelter for the anchorage, prevention of the rapid silting-up latterly observed, and a pier affording some 3,000 linear feet of berthage for cargo vessels, in direct railway communication with the railway system, leaving to private enterprise the further development of berthage as the needs of the port may dictate.

One can understand the exigencies of a newspaper writer attempting to describe a large engineering work in a distant country, aided only by the imperfect and inaccurate little sketch which served to illustrate your article. But the heedlessness with which, in this case, sweeping charges, founded on false premises, have been preferred against the Japanese authorities and their advisers is less intelligible. And I certainly should have thought that at the hands of *Engineering*, of all papers, members of the engineering profession might fairly count on receiving some measure of protection from anonymous and unjust attacks.

On the unkindly spirit which influenced the writer of your article I do not care to dwell. It is so palpable as to furnish its own condemnation and to call for no rejoinder. But I have thought it right and necessary to show up a few of the chief misstatements of fact by which the article is disfigured, not only as a just protest on behalf of those for whom I act, but as an answer to a really unpardonable attack upon my own good name.

I am, Sir, faithfully yours,

THE DESIGNER AND ENGINEER OF THE WORKS.

Yokohama, Feb. 1st, 1891.

### ELECTRIC LIGHTS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—From the fact that Mr. "Electron" wrote something about my report on the fire in the Diet building and published it in the *Japan Gazette* of the 28th inst., I noticed that my report had been published in your paper on the 26th inst., in which some parts were mistranslated and ought to be translated as follows:—(4) Both the insulation resistance and conductivity of the system had been tested several times. (6) From about 12.50 a.m. to 1 o'clock, however, the *number* of *lamps* or *amount* of *current* gradually increased up to 100 amperes, and between 10 o'clock and 1.5 a.m. the needle of the amperemeter oscillated violently once or twice. . . . . The covering of the wires must therefore have disappeared. Even if the covering remained, however, *it certainly turned to be very rough*, and throwing water *over the wires should cause a short-circuit there so that* the safety fuses, &c. . . . . , whereas in the station *there was no other change than the gradual increase of lamps switched in or of amount of current.* . . . . . If, however, the fire . . . and water had been thrown on to the *perfect* wires *through a floor or a ceiling*, the water reaching the covering of the wires and penetrating into them slowly, the amount of current at the station would have been increased *just as though more and more lamps had been switched into the circuit*, and ultimately, &c. &c.

Mr. "Electron" denies that the fact of nothing having occurred at the Russian Legation and Mr. Kuki's residence proves anything, but both theoretically and practically this fact proves a most important thing which I leave him once more to find out himself.

If Mr. "Electron" . . . will study the construction of the dynamos, he will see that the error in his statement is distinctly on his own side, for he writes that *the effect of a length of copper wire becoming red-hot would be to start a fire in several places at once.* Well, is it possible to produce such a state of affairs practically? I suggest that he avoid repeating this statement for it shows nothing but that he is quite ignorant of electric lighting both practically and theoretically.

But, on the whole, I devote many thanks to Mr. "Electron" for his writing; for otherwise I should never have noticed that my report was placed before foreigners in the form mistranslated.

Yours, &c., T. IWATA, M.E.,

Chief Engineer to the Yokohama, U.E.L. Co.

Yokohama, Jan. 29th, 1891.

[The Japanese copy of the report which we translated was evidently faulty. Mr. Iwata's corrected sentences did not occur in it.—ED. *J.M.*]

### THE RECENT HALO OF THE MOON.—SCIENCE AND SUPERSTITION.

TO THE EDITOR OF THE "JAPAN MAIL"

SIR,—I have been watching your columns for some reference to the beautiful halo of the moon of last Tuesday evening, the 27th inst. I cannot believe that it was visible only from this vicinity; and am more inclined to think that it may be of such frequent occurrence as not to call for any special notice. And yet that even does not seem like a satisfactory explanation; for the people here say that, while moon halos are not infrequent occurrences, such a large and magnificent halo as that of last Tuesday evening is very rare. Your correspondent must acknowledge that he has never in Japan or in the United States seen such a one. Is there any special reason why such a phenomenon should be more clearly manifested in Japan than in the United States? Does the humidity of the atmosphere have any effect? Your correspondent, being ignorant, asks for information.

In connection with that wonderful phenomenon of nature, some curious fears and superstitions were brought to light. Our attention was first directed to it by a neighbour, who called in at the window: "*O Tsuki San wo goran nasai.*" When I went outside to look at the moon, he excitedly pointed out the striking features, such as the streams of light in the shape of a cross, the spots of red light; and he seemed greatly worked up over the matter. He knew of the cross as the symbol of Christianity, and red as the colour of blood; and he seemed to think, that the phenomenon was a sign of Christ's coming. He is by no means an educated man, or a believer in Christianity: he is in fact, a wicked old "heathen," if "X. Y. Z." will excuse me for using that term. But, being extremely superstitious, he was considerably frightened, and, if one had been inclined to play on his fears, would have been a good subject for "conversion." As he turned to leave, he raised his hands, and bowed his head, in the attitude of prayer.

There were some others who were inclined to connect the phenomenon in some way with Christianity: but most of those ignorant of its scientific aspects looked upon it as a sign of impending misfortune. I am rather inclined to think that the latter opinion must have spread a little; for the local paper, a day or two later, took occasion, on the authority of one of the High School teachers, to say directly, that such an idea was a great mistake.

Our final query is, "Was the cross which Constantine is said to have seen in the sky some such phenomenon as this?"

I ought, perhaps, to add that some said that the phenomenon was a sign to accept Christianity; while others claimed that it was a sign to drive out that religion!

Yours, &c., CLEM.

Mito, January 31st, 1891.

### THE NAGOYA EPISODE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Referring to the comments of the *Hyogo News* upon the Nagoya episode, reprinted in the *Japan Weekly Mail* of Jan. 31, may I ask in what way "the law of the land" was broken by Dr. Perin? While it is, of course, true that foreigners are not competent to hold Christian services outside the limits fixed for their residence, I had not supposed that the right of Japanese subjects to hold such meetings could be impugned. Further, after a somewhat long experience in missionary work in the interior, I think I have unimpeachable evidence that the right of Japanese subjects to secure the aid of foreigners in the conduct of Christian meetings is fully recognized by the Japanese Authorities The only question raised in connection with a foreigner's presence on such occasions has been, so far as I am aware, whether his passport gave him the right to be in that particular town at that particular time. In the case of teachers, the inquiry has gone farther, and means have been taken to ascertain whether any contract existed involving pecuniary obligation without the sanction of the proper Authorities. In no case within my observation has any objection been made to the rendering of temporary aid in schools or in church work, where it was evident the aid was of a purely gratuitous character.

Nearly all work in the interior on the part of touring missionaries is of this description. As regards myself, my own visits to the interior are always at the invitation of the Japanese concerned, and my speaking is confined to such times and places as my Japanese friends sug-

Digitized by Google

gest. I should as soon think of intruding myself into a pulpit of New York or Boston, as of making an independent appointment in connection with any of the churches affiliated with the American Board, whose missionary I have the honour to be. This subordination of my activity, in these lines, to that of the leaders of the Japanese churches is not mere matter of form. It is the actual condition of affairs. It is a necessity of the situation, as I view it, and I acquiesce in it with great heartiness.

As I understand the case, Dr. Perin arranged to address the meeting in Nagoya in pursuance of a definite invitation from a Japanese friend. That friend was fully within his rights as a Japanese subject in extending the invitation, and Dr. Perin was quite within his rights in accepting it and appearing on the platform.

With many thanks for the opportunity of making this statement, I remain, yours faithfully.

DANIEL CROSBY GREENE.

[We do not think that Dr. Perin was "within his rights" unless his presence in Nagoya—*i.e.* outside Treaty Limits—was sanctioned by some form of engagement qualifying him to teach moral doctrine. If he travelled on an ordinary passport, he did not possess the *right* to lecture in public. But he availed himself of a privilege which is willingly permitted by Japanese officials and Japanese people alike.—ED. *J. M.*]

## *MR. ICARUS LUMPKIN AND MR. HAUGHTY STYLUS.*

(A DIALOGUE OVERHEARD BY OUR DEFUNCT REPORTER.)

HAUGHTY.—Good morning, Mr. Icarus. How goes the new trade?

ICARUS.—Tough work, Mr. Haughty, tough work. Folks are so exacting.

H.—Indeed. Not disposed to see your wings yet, are n't they, Mr. Ic.?

Ic.—No, confound them. They seem to regard me as a sort of blundering prancer. My kindliest intentions are misconstrued. Look here. The other day I re-published a malicious attack upon one of our leading residents, just that the able man might have a chance of answering his assailant. What do you think? The ungrateful fellow called me a ventilator of slanders.

H.—That's bad. But accidents will happen, you know.

Ic.—Then there's that morning contemporary of mine. He makes me mad all the time with his "style."

H.—Well, you can't have expected to sail along perpetually in a clear empyrean. You appreciated, doubtless, that some clouds would mar the serenity of your 'prentice flight.

Ic.—Don't talk like that. You remind me of the *Mail*. I wish I had n't been brought up to eschew swearing. Yes, of course I foresaw some difficulties. But I have a back-door that lets me out of every tangle. That's one comfort.

H.—A back-door, have you? How do you work it?

Ic.—Very simply. It's the motives door. Whenever that *Mail* gets troublesome I divert attention from its arguments by charging it with being servilely pledged to support the Japanese Government through thick and thin.

H.—Very clever, Mr. Ic. May I inquire whether you yourself discovered that useful postern?

Ic.—Well, not exactly. It's been the favourite exit of the *Mail's* opponents for quite a number of years. That old reviler over in the alley scurries through it once a week, on the average, all the year round.

H.—You mean Mr. Tubbie Maunder, I suppose. He's a good model, is he?

Ic.—He, the yapper! I don't even condescend to notice him. We have nothing in common.

H.—Not even the back door?

Ic.—Ah! But that's so serviceable. One can slip through it at any moment. Mercenary motives; obsequiousness to officialdom; pandering to the powers that be—such handy and effective weapons for discrediting an adversary! They take splendidly with the masses. Then, too, there's the incidental charge of inconsistency. A writer that supports Cabinet after Cabinet cannot be consistent.

H.—Hum! Is that true in Japan's case?

Ic.—True? Of course it is. "Surely the principles and practice of the statesmen who in succession have held the reins of State are widely different. They cannot all be equally good."

H.—Perhaps not. But my memory of Japanese Cabinets during the past twenty years is that they have consisted of pretty much the same men throughout. Am I wrong?

Ic.—Quite wrong. There have been "the Sanjo Government, the Ito Government, the Kuroda Government, the Yamagata Government," and so forth.

H.—So there have. And you can doubtless show in what respect "the principles and practice of these statesmen have been widely different?"

Ic.—I must decline to discuss the matter if you talk in that fashion, "ignoring the significance of my disclosures, undermining the value of any testimony, and trying to trip the witness up on small points."

H.—I beg your pardon. I had nearly fallen into the popular error of supposing that to convict a man of inconsistency in politics, he must be shown to have advocated conflicting lines of policy. Besides, I imagined that the foreign policy of the Japanese Government was the main point of discussion between you, Mr. Maunder and the *Mail*, and I am ignorant enough to think that the country's foreign policy has undergone no marked change during the past ten years.

Ic.—That only shows how "undiscerning" you are. Why, in this very matter of foreign policy, there have been three distinct and widely different programmes of Treaty Revision put forward by the Japanese Government, and the *Mail* has supported them all in succession.

H.—How very unconscientious! May I inquire what the first of those schemes was?

Ic.—Count Inouye's scheme, of course.

H.—And the second?

Ic.—Well, at the time of its discussion I was too much occupied with other things to pay any attention to it: I cannot tell you what its leading features were.

H.—And the third?

Ic.—The third has not been published. We don't know what it is.

H.—Yet you aver that the *Mail* has advocated them all, and that their radical differences convict it of inconsistency.

Ic.—There you are again, trying to trip me up on minor points and ignore the significance of my disclosures. I believe that the connection between the *Japan Mail* and the Government could be proved in a court of law.

H.—Quite so. But that's the postern. Talking of courts of law reminds me that you have said a good deal on that subject lately?

Ic.—I should think so. I have made most significant disclosures. You see, "owing to the fact that I can read the vernacular newspapers," I recently "came across some very awkward disclosures" made by Mr. Murata Tamotsu. They showed that in 1887, Count Yamada, Minister of State for Justice, had attempted to promote "a wild and unscrupulous scheme, calculated not only to undermine the authority of law but to prove subversive of all morality." They also "demonstrated, beyond the shadow of a doubt, that the Commercial Code was unsuited to the nation's condition."

H.—May I ask you where you found these "awkward disclosures?"

Ic.—In the *Nippon*.

H.—Humph! Oh yes, I've heard of that paper once or twice. It's one of the journals strongly antagonistic to the Government, is'nt it?

Ic.—Antagonistic, yes; but "if the principle of praising the men in power were universally adopted as a maxim of journalism, would any reforms in Government ever take place?"

H.—Quite true. But I imagined that since, according to your view, a pro-official paper is utterly untrustworthy, some caution ought also to be observed in accepting the statements of an anti-official journal.

Ic.—If you try to "trip me up on minor points" I shan't argue with you.

H.—Pardon, again. Mr. Murata, then, "demonstrated beyond the shadow of a doubt that the Commercial Code is unsuited to the nation's conditions." How did he do that?

Ic.—He made significant disclosures. He brought three principal charges against the Code.

H.—But these charges were controverted by the *Mail*, I think?

Ic.—The *Mail*, Mr. Haughty, is a very artful journal. What do you think it did? It "availed itself of the services of one or two lawyer friends" and then "wrote an article three or four columns long undermining the value of Mr. Murata's testimony."

H.—What a weary business! But I imagined that the *Mail's* one article was a reply to three of yours.

Ic.—Don't try to "trip me up on minor points."

H.—Pardon, again. But what a dirty advantage the *Mail* took of you when it consulted lawyers about a Code of law. Well, what did the lawyer friends do?

Ic.—They proved that "in several details Murata was wrong."

H.—In several details! Why you told me that he only brought three principal charges against the Code. How many of the three remained if "several" were wrong!

Ic.—There you are again, "trying to trip me up on minor points."

H.—Quite accidental, I assure you. Besides, you made other "awkward disclosures" about the Department of Justice, did n't you?

Ic.—I should think so. I showed that Count Yamada had been treated with shameless duplicity by his colleagues in the Cabinet.

H.—Indeed. How did you discover that?

Ic.—In the *Toyo Shimpo*.

H.—The *Toyo Shimpo*. I have an indistinct recollection that such a journal exists in Tokyo. Anti-Government I think?

Ic.—Yes, but "suppose the principle of praising the men in power were universally adopted as a maxim of journalism, would any reforms in Government ever take place?

H.—Certainly, certainly. And what did the *Toyo Shimpo* disclose?

Ic.—It disclosed that whereas Count Yamada was induced to undertake the compilation of the Civil and Commercial Codes in 1889 because Viscount Aoki declared them essential to Treaty Revision, the same Viscount Aoki, in 1891, told the Diet that "no connection existed between the Commercial Code and Treaty Revision."

H.—"Induced to undertake the compilation of the Codes in 1889!" Why their compilation had been undertaken years before then. Besides, a few minutes ago you accused Count Yamada of unscrupulous and immoral conduct in 1887 because he tried to push the Revision of these same Codes in the avowed interests of Treaty Revision.

Ic.—Poh! What matter about "a few dates." Moreover, I'm happy to say that my charge was confirmed.

H.—Indeed. By whom?

Ic.—By the *Nippon*.

H.—Ah. That other Anti-Government paper that supplied "the significant disclosures about Count Yamada and the Commercial Code."

Ic.—You "think it advisable," do you, "to make a good sweeping statement about the sources of my information."

H.—Not at all. I imagined that it was you who made sweeping statements about the bias and servility of your opponents.

Ic.—I believe it could be proved in a Court of Law that the *Japan Mail*—

H.—Assuredly. But we needn't take the postern yet. And so Count Yamada was left in the lurch by Viscount Aoki?

Ic.—Yes. And thereupon "the honest old warrior, believing in not trimming to the wind, with a heavy heart severed his connection with the Government, a leading member of which could deliberately say one thing to his fellow-Ministers and another to the Diet."

H.—"Honest Old Warrior!" "No believer in trimming to the wind!" Why, you said just now that Count Yamada, was the author of a "wild and unscrupulous scheme, subversive of law and morality."

Ic.—There! That's one of your "journalistic dodges." "Words are always capable of being understood in two ways. By understanding them one way your adversary does not contradict himself." "But you won't give him the credit of consistency." "The word honest is of course used in the sense of bluntness and openess. It is also used to express deceitfulness. If taken in the former sense in this instance, a contradiction in my description of Count Yamada's character can be made out."

H.—Ah! Then you meant to say that the deceitful Old Warrior, believing in not trimming to the wind, with a heavy heart severed his connection with a deceitful Government." Yes, I daresay he was sorry for the parting.

Ic.—"It belongs to the art of journalism to try and show that an opponent contradicts himself, whether he actually does or not, and more especially is this the case when grave issues are concerned."

H.—Yes. They're a bad lot those journalists. May I be permitted to ask what is your own particular policy?

Ic.—"I am one of the warmest friends of the Japanese Government, as I hope to prove in print before long."

H.—Oh, indeed, I thought you had described the Government of Japan as an "administration said to work incalculable harm, liable to commit a series of blunders that take years to set to rights;" an administration that "has encouraged abuses, bribery for instance, or the employment of hundreds of useless and corrupt officials for personal reasons; and has been guilty of a score of shady transactions in the use of State money."

Ic.—I repeat that "it belongs to the art of journalism to try and show that an opponent contradicts himself whether he does or does n't?

Digitized by Google

H.—May I ask how long you have been an editor?

Ic.—Something over a month.

H.—And during the whole of that time, have you, in discussing Japanese affairs, written a single article that is not calculated to discredit the Japanese Government, to bring Japanese institutions into disrepute and to obstruct the realization of Japan's national aspirations?

Ic.—You are again trying "to trip me up on minor points."

H.—No, but have you ever written in anything but a hostile spirit?

Ic.—"I am one of the warmest friends of the Japanese Government, as I hope to prove in print before long."

H.—Well, well. Don't get excited. You have been an editor for a little over a month, you say. Would it be an impertinence to inquire how much you have written during that time with the object of proving the *Japan Mail* to be a mercenary and biassed supporter of the Government?

Ic.—I have written four leading articles and some editorial notes.

H.—Indeed. It seems to me that your use of the postern is about up to the average of your friend, Tubby Maunder.

Ic.—"I see no reason whatever why I should expose myself to a shower of cynic arrows by taking the trouble to argue with you."

H.—I beg your pardon, Mr. Icarus. My only object is to examine both sides of the question. Your position, I understand, is that an honest controversialist should address himself to the arguments of an opponent, not to his motives or his personal proclivities. Am I right?

Ic.—I hold that all discussion "ought to be raised far beyond the range of sensationalism and perversion."

H.—Yet, unless I have read you wrongly, the only weapons you have hitherto used in your discussion with the *Mail* have been general charges of mercenary motives, servility, a studied resolve to conceal the truth, insolence of style, artful trickery, and assumption of superiority.

Ic.—I "decline the thankless task of replying to an organ which, on the question of Treaty Revision it bound to be one-sided. I shall in future, as far as possible, adopt the plan of leaving my contemporary to follow its course of officialdom defensive warfare, while I proceed on my own independent lines."

H.—Has the *Japan Mail* ever retorted in a similar spirit?

Ic.—No. How could it?

H.—Softly, Mr. Icarus. Remember that you are the salaried editor of a Company whose avowed policy is to prove Japan's unfitness to exercise the right of an independent State, and remember that during the whole time of your editorship every one of your comments on Japanese affairs has been directed to discredit the country.

Ic.—I defy your insinuation. "I am sorry to observe that you are unable to give an opponent credit for the possession of the same honesty and conscientiousness that you claim for yourself."

H.—But I thought that it was you who refused to give your opponent, the *Japan Mail*, credit for any honesty and conscientiousness whatsoever?

Ic.—You are trying to undermine the value of my testimony. I "carefully avoid the imputation of motives." My journalistic object is "to provide an antidote for the mischief which the one-sided writing of the *Japan Mail* is bound to work," and in that way it results that "a glance at the leading articles which have appeared in my columns since I became editor might lead a casual observer to infer that my object is to institute a crusade against the Japanese Goverment."

H.—The exigencies of your position must be very trying, Mr. Icarus. Unless the *Japan Mail* becomes converted, it appears, according to your own showing, that you will be condemned to continue your crusade against the Japanese Government in perpetuity. However, you have at least the comfort of knowing that such a course will not be censured by your employers.

Ic.—I'll have none of your cynic arrows. I "deny that the tendency of my criticism is anti-Government."

H.—Hullo! I thought you just said that you had hitherto been carrying on a crusade against the Government.

Ic.—"It belongs to the art of journalism to try and show that an opponent contradicts himself whether he actually does or not." "Words are always capable of being interpreted in two ways." Thus the words "crusade against" are of course used in the sense of attacking or assaulting. But they are also used to express supporting and defending. Taken in the latter sense, no contradiction can be made out.

H.—I think that the Judicial Department has come in for the major share of your hostile criticism. Perhaps I sought to explain that I use the word "hostile" in the sense of "inimical," not in that of "friendly."

Ic.—Undoubtedly. The Judicial Department deserves the severest condemnation. Last year its "defects and weaknesses were exposed in three articles" by the *Nippon*, and "the facts published by the *Nippon* were of such an indisputable character as to enable the paper to win its case in the Law Courts" when action was taken against it by the Public Procurator.

H.—Do I understand you to say that if articles are proved to be not actionable, the truth of the allegations contained in them is also proved?

Ic.—I say that "the accusations of the *Nippon* were indirectly confirmed by officers appointed by the very Department whose methods and organization it had attacked."

H.—What was the ground of action against the *Nippon*?

Ic.—That it tried to bring officials into contempt.

H.—On what portion of its articles was that charge founded?

Ic.—On one sentence chiefly, but five or six others were referred to by the prosecution.

H.—Was any question raised about the truth or falsehood of the *Nippon's* statements?

Ic.—None whatsoever.

H.—The whole issue turned, did it not, upon whether certain sentences in the articles were written with the intention of bringing officials into contempt?

Ic.—Yes.

H.—And yet you claim that the truth of all the statements contained in the articles was established by the verdict?

Ic.—No. "It would be going too far to understand the acquittal of the paper in the sense of a direct confirmation of all the allegations about the Department of Justice made thereby."

H.—But I understood you to say just now that "the facts published by the *Nippon* were of such an indisputable character as to enable the paper to win its case in the Law Courts."

Ic.—"It belongs to the art of journalism to try and show that an opponent contradicts himself whether he actually does so or not."

H.—I believe that you published a résumé of the *Nippon's* allegations, explaining, at the same time, that the interest of the trial for foreigners lay in the circumstance of the paper having been enabled to win its case owing to the indisputable character of its facts?

Ic.—Yes, I did. I deem it a duty to "expose serious official abuses."

H.—Certainly, but if "the acquittal of the paper must not be understood in the sense of a direct confirmation of all its allegations," may I ask how you made your selection from among those allegations? Which did you select as proved, and on what authority?

Ic.—You are trying to "ignore the significance of my disclosures." "I am far better acquainted with the editors of most of the chief papers of Tokyo and with their literary and other qualifications for pronouncing opinions on public affairs than the editor of the *Japan Mail* is."

H.—Yes? And you doubtless know exactly how many acquaintances the editor of the *Mail* has among the Tokyo representatives of the press, and what is the degree of his intimacy with them?

Ic.—I know nothing whatever about the relations between the editor of the *Japan Mail* and the Japanese editors in Tokyo.

H.—Really! On what grounds, then, do you assert the wider scope and closer intimacy of your own acquaintance with those gentlemen?

Ic.—You are trying to trip me up on minor points.

H.—Well, well, let us part friends. I appreciate the tangle you're in, but keep your head down and rush it.

Ic.—"My motto is honesty first, honesty second, and honesty last."

H.—Which kind of "honesty." "Old-warrior" honesty or Icarus Lumpkin honesty?

## *LECTURE BY M. BOISSONADE.*

M. Boissonade, the distinguished jurist, having been invited to deliver a course of lectures at the Imperial University, alluded in the first to the question of the Japanese Codes. We translate, from the columns of *Le Japon*, the portion of his lecture bearing upon this important subject:—

Before going farther, and since I am speaking of ancient Japanese customs and of the modifications that the Civil Code has produced therein, allow me to reply to some pretty sharp, even impassioned, criticisms of which the new codes have been the object before and since their promulgation.[1] In the first place, the system of codification in general has been criticized. It has been claimed, too, that there were contradictions between the Civil and the Commercial Codes, the former having drawn its inspiration especially from French and the latter from German law. Lastly, the codifiers of these codes have been reproached with having abandoned, without any necessity, national customs and traditions, and with having too much imitated foreign legislations. I will reply to these three criticisms.

I.—It is not from the present time that codification in general has had its detractors as well as its defenders. Formerly, in Germany especially, the controversy among legists upon this subject was very sharp; but you know that Germany itself has resolutely entered into the system of codification. One understands that England has up to now refrained from codifying its civil law (although some good minds have sometimes regretted it): England possesses a jurisprudence that is very rich in precedents; these precedents have been collected, classified, published, and are known to the legal gentry (it would be well if they could be easily so to those amenable to them), and they differ but little, I believe, in the various parts of the United Kingdom. But such was not the condition of Japan when your Government undertook to give it codes; your jurisprudence was unsettled, because there were very few laws and ordinances, and because customs, not being in written forth, were uncertain; besides, they were silent upon a crowd of matters liable to contestation. However, you had the pretension, a very legitimate one most assuredly, of arriving at the subjection of foreigners residing upon your territory to your laws and to your tribunals. For that purpose, the body of laws to which they would be subjected had in the very offset to be presented before them. A regular and complete judicial organization too was necessary; finally a settled mode of procedure. Codification alone could respond to these necessities. It is claimed besides, that in the system of codification there are two inconveniences:—

1. That it incites legislators to anticipate without any necessity the wants of the country, with the sole view of having a complete legislation to meet all events.

2. That it is hostile to reforms that experience may show the need of, but which are not made for fear of disorganizing the ensemble of a code.

The first of these objections is no better founded than the second. Doubtless there are in the new codes many provisions of which there is no trace in old Japanese law, as usufruct, as last wills and testaments, as privileges granted to certain evidences of indebtedness. But does it follow that these provisions are destined to satisfy imaginary needs only? The drafters of your codes have recognized that if similar provisions exist in all foreign codes it is because they respond to real needs that belong to all times and to all countries. It does not follow that because the old Japanese law did not afford relief to these wants the wants did not exist. Besides, civil and commercial transactions acquire every day in Japan developments that require that her laws shall be in a posture to provide for all situations of which other countries give daily examples. For more than ten years Japan, out of the necessity of her commercial and industrial development, has been making use of bills payable to order, of bills of exchange, and of cheques, without there having been any law in regard thereto; joint stock companies have been founded with the authority of the Government, while to grant or to refuse this authority the administration has had to be influenced only by its own prudence and by new needs; of marine insurance and of insurance upon property on land almost no use has been made in Japan up to now, for want of legislation. Your new Commercial Code, by enacting on all these subjects, has not then anticipated needs; it has furnished urgent relief for them. I will say as much for the Civil Code: in establishing under the name of servitudes new rights and duties among neighbours; in organising payment by a third party with the transfer to him of the rights of the creditor (*subrogation*); in settling the conditions of substitution of one obligation for another (*novation*), and those of offsets (*compensation*); in instituting privileges for certain preferred debts; finally, in organizing the forms and conditions of last wills and testaments, scarcely ever made in Japan, for fear of their not being valid; in all these cases, I say it does not anticipate the needs of the country, but responds to them.

It is not as easy for me to prove that the Japanese codification will not be an obstacle to

[1] M Boissonade asks us to draw attention to the fact that his speech, having been delivered in October, makes allusion only to the criticisms of the press, and not to those, more moderate moreover, that have been enunciated in the Diet.—(Ed. *T.M.*)

Digitized by Google

the progress of civil and commercial legislation: here, indeed, it is a question of the future, and I have no pretension to predict anything. But two considerations reassure me.

In the first place, for more than twenty years past Japan has shown herself so zealous for progress that even the reproach of temerity has been made to her on account of it. It is not likely, then, that having given herself codes, she believes herself to be henceforth in possession of absolute and immutable truth and goodness in matters of legislation. In the second place, I perceive that codification has not prevented other peoples from correcting and perfecting their laws. To take but one example, that of France, I find that the French Civil Code has been modified by more than thirty laws, many of which have been therein incorporated or substituted without any discomposure of its ensemble. If there have been fewer modifications of the Code of Civil Procedure and of the Commercial Code, they have been more important ones; at this very time, even, new ones are in preparation. Our two Criminal Codes also have, at various times, undergone notable changes without nevertheless having lost their identity. I do not see why Japan should in this respect have any more scruples than France has.

II.—The second criticism will not detain me long. It has been claimed, without furnishing sufficient proofs, that the Japanese Civil Code, inspired especially by the French and Italian Codes is not always in harmony with the Commercial Code and the Code of Civil Procedure drawn from German Codes. What I do know is that the commission of revision has striven to avoid these contradictions, and that it found many that had to be corrected; if some few have escaped it, it would not be the first time that a legislator has given an example of human frailty. Many contradictions have been found even in the various French Codes. If there are any in the Japanese Codes, it will be as easy as it will be necessary to correct them. Contradictions would be much more to be feared if civil and commercial laws were not codified but resulted (as critics would have had it) from special successive enactments, not conceived in one and the same spirit, and necessarily influenced by circumstances.

III.—I come to the third, the most serious criticism: national customs, it is said, have been too much sacrificed to foreign law.

In the first place, this criticism has been premature; later on it would not perhaps have been brought forward; it was formulated before the promulgation of the book concerning *persons* and of the matter concerning *inheritance*: now, it is ill-founded in fact as regards these matters, for on the contrary great account has been taken of Japanese customs and traditions. For my part, I should say that they have been too much conformed to, especially in the matter of inheritance, by preserving the right of primogeniture with an absolute characteristic that at no period has it ever presented in Europe. In the matter of *property* even, you can see a certain number of articles wherein the law refers "to local usages" when they are different from the provisions it enacts: for instance in the matter of leases and of neighbouring servitudes. However, in the matter of *property*, of ownership, and of its dismemberment, of obligations and of securities for indebtedness, as well as in that of *proofs*, I recognize that the new Code has made many innovations, but that was necessary. The fact is that in these matters there is an ideal of reason, justice, and of economical utility that can scarcely vary with times and places; there is a universal common law, the first manifestation of which we find in the Roman law, one that has transmitted itself more or less directly, to the people of Europe with the complements demanded by the variety and complication of modern transactions. You have today, at the University, classes in Roman law where you are learning the merits of that imperishable legislation. Your ancient customs were in general distant from this ideal of justice and of reason; they were moreover necessarily greatly diversified and above all incomplete. Sufficient, perhaps, when the feudal provinces, having each one a particular government of its own, held scarcely any communication the one with the other, these customs could no longer suffice as soon as communications between the North and the South, between the East and the West, by steamboats and by railways, by post and by telegraph, became of daily occurrence. Besides, in contracts between persons of different provinces, which custom would have been applied? That of the debtor? But if the contracts were reciprocal, where each party is creditor and debtor of the other? The custom of the place where the contract was made? But if the contract was made by letter? The unity, the uniformity of the civil and of the commercial legislations, was not then less necessary than that of the penal and administrative legislations. Japan has already for more than twenty years been a country politically centralized; it had to be so in like manner juridically and judicially; furthermore, you have a Court of Cassation to insure uniformity of jurisprudence. It is no longer even sufficient to have in Japan a legislation uniform for the whole Empire; you now have international relations; you enter into contracts with foreigners, either in your own country or in theirs; a legislation in harmony with that of the West is assuredly needed by you. And not only is it necessary for the development of your commercial relations with foreign lands, but also it is the formal condition under which you can recover your complete autonomy in matters of legislation and of jurisdiction. This latter consideration comes to the support of what I was saying just now about the necessity of a general codification; for you could not submit to foreigners a confused legislation, disseminated in part in the laws of different periods of time, always incomplete (when they had no other defect), and in part in customs as different as was the spirit of the old provinces. However, it is not in Japan alone that one meets with this sacrifice of local customs to unity of legislation; I can give you other examples of it, the one of France in 1804, that of Italy twenty-five years ago, that of Germany in our times. At the beginning of this century when France gave herself codes, she had, like Japan in 1868, just abolished what still remained of the feudal system; she found herself confronted by provincial and local customs. The former and the greater number of the latter were officially reduced to writing (what has never been done in the case of your customs), and yet they had to be sacrificed to the unity of legislation. When, by the aid of the French arms, Italy commenced her political unification in 1859, it was composed of three monarchies, comprising the Pontifical States, with several autonomous duchies, and of two provinces subjected to Austria. When unity had been consummated to the benefit of the Crown of Sardinia, a legislation uniform in civil and commercial, in penal and administrative matters, had to be given to new Italy. The civil code borrowed much from the old Sardinian code, more yet from the French code; but the particular legislations of Naples and of Sicily, of the duchies of Modena, of Parma, and of Tuscany, of Lombardy, and of Venice (former provinces subjected to Austria), had to be sacrified.

In our times, Germany, which forms a vast confederation of monarchies, of duchies and of principalities, having still a certain political existence, also gave herself a uniform legislation: already she has one general Penal Code and one general Code of Criminal Procedure, one general Code of judiciary organization and of Civil Procedure, and one general Commercial Code, and she has in preparation a general Civil Code. Assuredly, the particular legislations of each German and Italian State had a real value, and doubtless answered the wants of each one of them just as well, if not better, than customs did in Japan; but political unity there again has imposed unity of legislation.

You see that Japan has had honourable predecessors in this path of sacrifice of particular customs to the general good of the State. From what precedes, I find I have at the same time replied to the last reproach made to your Codes, as regards whatever of truth there is in it, of having sacrificed national to foreign law. I will add that your national *amour propre* should not suffer from it. You do not blush at having borrowed from West its sciences and its industry, its means of communication by steam and by electricity, its arms and its armoured vessels: why should you blush at having also borrowed from it a little in the way of legislation? We ourselves have had in France for the last twenty years a Society of Comparative Legislation to which your University and your Department of Justice are adherent; well then, in France, no law, civil or commercial, penal or administrative, is prepared without the Society of Legislation being admitted, invited even (in concert with the Bureau of Comparative Legislation established in the Department of Justice) to give information about the state of foreign legislation concerning the matter in question. This Society has already given its attention to your new codes, and has noticed certain innovations in them with interest and sympathy. I doubt whether your old customs would have attracted its attention to the same degree. They would interest more deeply our Ethnographical Society or one of historical studies, as presenting the reflection of a civilisation that grew up and seriously developed itself in former times almost exempt from all European influence.

I hope that these remarks, which I should have liked to present more briefly, will make your codes sympathetic to you as the object of your studies and that you will know how to defend them in your turn, if necessary, against attacks more impassioned than those here discussed. Do not forget above all that the double obstacle your country has met with up to now towards the abolition of the privileges of foreigners in matters of legislative and of jurisdiction, has been the absence of a positive and satisfactory legislation together with the insufficiency of judicial guarantees. Already, for several years back, the recruiting of the magistracy has taken place only from among the young men who, after severe examinations, have come out of the University and of Law Schools recognized and controlled by the State (you are called upon to make a part of it upon the same conditions); moreover, the magistracy has been made independent by irremovability. Since several years, too, the two Criminal Codes have been in vigour and have given satisfactory results owing to the scrupulous proportion of penalties to the gravity of the offences. All that was wanting in Japan was these last codes; they have to-day been promulgated. It seems then that the time is not far off when the wish of the country, which has always been mine as it is yours, will at last be realized.

## *NIPPON RACE CLUB.*

The annual general meeting of the Nippon Race Club was held on Wednesday afternoon at 4 o'clock in the Club Hotel. Senator Oki, President of the Club, presided, and there were also present Messrs. W. B. Walter (Vice-President), N. Mitsuhashi, F. Walkinshaw, F. Varenne, J. E. Beale, J. Merian, E. Knaff, H. H. Jacobs, A. Hearne, F. Biagioni, P. Beretta, L. Longin, and J. H. Pinn (Secretary).

Mr. W. B. Walter said—I have been requested by Mr. Oki, the President of the Club, to act for him at this the annual general meeting of the Nippon Race Club. I think we shall not have occasion to take very long. I am only sorry to see the very small attendance here to-day. During the last year, as you will see from the accounts before you, the financial position of the Club has, we may say, fairly satisfied expectations, and the Executive Committee are able to present to you an account showing that we have now in hand the sum of no less than $3,275.24 against our balance for the previous year of $2,333.36. The subscriptions during the year amount to $2,295 against about $2,125 last year, showing a small gain of about $150 in subscriptions. The entries are about $100 more than they were in the previous year; the gate money has declined considerably, owing, I believe, to the very bad state of the weather at the spring meeting, which prevented a great many from being present who would otherwise have attended. The Pari mutuel brought in about the same amount as in the previous year. In spite of the Club having distributed in prizes about $400 in excess, we are certainly in a better position than before. There is a diminution in the expenditure caused by the fact that for the previous year we had the sum of $378 to pay on account of the Grand Stand, being in excess of the cost as compared with the amount raised by Mr. Robison in the shape of subscriptions. That, of course, does not occur for the current year. The Club has sustained a heavy loss by the death of Mr. Fitz-Henry, who was always one of our most active and energetic members, and who has been a loss not only to this Club but, I may say, to everyone in Yokohama, with whom he was universally popular. Mr. Tyler was elected on the Committee in his place; Mr. Kaufmann retired on account of ill-health, but as this occurred after the autumn meeting the Committee did not elect a successor in his place. The present Executive Committee are Dr. Wheeler (Chairman) and Messrs. Varenne, Tyler, Beale, Mitsuhashi, and Hara Rokuro, and it is for you at this meeting to elect a fresh Committee. We regret that His Imperial Majesty the Emperor was unable to come down during the past year, but His Imperial Highness Prince Haru favoured us with his presence last autumn. We have pleasure to note that several additional Japanese gentlemen have joined the Club, which shows that in that direction more interest is taken in our affairs. During the last two or three months a subscription list has been sent round for Hokkaido Griffins but the Committee are sorry to say the list is not filled up. A list, however, for half-breds which was circulated at the same time, has met with a certain amount of success, for already ten or fifteen names have been put on it. These ponies are now, I believe being selected at Shimosa and in Hokkaido through the aid of Viscount Fujinami. The course, I believe, has been kept in excellent order, and Mr. Beale informs me that it is now in better condition than it has been for a long time past. Before you elect fresh members of Committee it might

Digitized by Google

be as well to mention that our old friend Mr. Robison, who has been such an active member of the Club, and whom we hope to see again taking an active interest in racing matters, and Mr. Thomas, who rendered us great assistance for many years, are on their way back. I will now ask that the accounts be read, and if you approve of them perhaps some gentleman will propose that they be adopted.

On the motion of Mr. MERIAN, seconded by Mr. JACOBS, it was unanimously resolved to hold the accounts as read and to adopt them.

The following were the accounts:—

THE NIPPON RACE CLUB, IN ACCOUNT WITH THE HONORARY TREASURER.—DR.

E. & O. E.
Yokohama, January 26th, 1891.

F. VARENNE, Hon. Treasurer.

I have examined the above statements with the vouchers and books and find the same correct.

Yokohama, January 31st, 1891, O. SCHINNE,

The CHAIRMAN, remarking that the next business was the election of an Executive Committee, stated that the new rules, having been approved by the Permanent Committee, had been printed and distributed amongst the members. The new rule relating to the election of the Committee read:—"The Executive Committee shall consist of not less than five and not more than seven members; they shall be elected by the full members of the Club by ballot at the annual general meeting." It would perhaps be better to elect seven members in all, which would make allowance in case any one should not be able to serve.

The ballot was then taken for the Committee.

The CHAIRMAN, while the scrutineers (Messrs Walkinshaw and Pinn) were counting the votes, invited remarks from members present.

Mr. JACOBS said many of the members would like to know whether the proposed programme was to be read to day so that it might be discussed.

Mr. WALTER said the programme concerned the new Committee, who would attend to it no doubt as soon as they were appointed.

The CHAIRMAN announced that the ballot had resulted in the election of the following:—Dr. Wheeler, and Messrs. Robison, Varenne, Thomas, Walkinshaw, and Hara Rokuro. This only numbered six members. The next four gentlemen tied—Messrs. Mitsuhashi, Tyler, Beale, and Strahler, and it would be necessary to elect from them one more member.

A second ballot resulted in the election of Mr. Strahler.

The CHAIRMAN said he was sorry to find that there had been some misapprehension about the rules of the Club, several gentlemen not having received them. He would suggest that to prevent further misapprehension application be made at once for copies. The rules had been printed for a considerable time, and it was understood they had been sent to all members.

Mr PINN said copies were sent to all members of the Club at the same time.

This concluded the business, and the meeting, having, on the motion of Mr. JACOBS seconded by Mr. LONGIN, passed a vote of thanks to the retiring Committee and to the Chairman, was adjourned.

## *LETTER FROM SHIMANE.*

(FROM AN OCCASIONAL CORRESPONDENT.)

Matsue, January 25th.

A singularly painful tragedy took place here at the opening of the year—a tragedy, which, I think, had some peculiarly Japanese features. Two lovers took poison, and died in each other's arms as desperate lovers very often do in the Occident. But the only non-Oriental feature of this tragedy was the poison: it was a product of modern chemistry. In old days, doubtless, the sword or knife would have been the terminator of earthly cares. Why poison was preferred seems to have been because the young man, although a soldier, was the son of a physician, had studied chemistry a little before adopting the military career, and—for his frailer companion's sake—had decided to end their troubles as gently and as sleepily as possible.

It is somewhat the fashion abroad to jeer at love-suicides. They are usually spoken of as examples of weakness and folly. Only a feeble character, practical people say, would commit suicide for a woman's sake. The strong man battles with his despair, trains himself to forget, travels, wins his way in the world, and finds at last better luck. Such is held to be the "healthy opinion" on the subject. Somehow or other, to me this so-called "healthy opinion" seems little more than an echo of the worship of force for its own sake only. Is one sort of human nature much better than another because its nerves are less sensitive, its imagination less susceptible, its passions cooler, its blood less vigorously young? Is that human nature in which the intellect preponderates at the expense of the emotions really very much superior to that in which the higher emotions preponderate and rule? Is the being in whom the passions are torpid and the calculating faculties extraordinarily active, a higher creature than the being in whom the heart governs the life? Perhaps this question cannot be decided now. The age is worshipping intellect as a force and condemning emotion. But the future will decide—for the Occident, at least—whether intellect cultivated by the suppression of the emotions can produce welfare and improve the present enigmatical social conditions of the world. I am heterodox enough to believe that natures capable, during vigorous youth, of suicide for love's sake, for honour's sake, are among the most generous and the bravest.

The case in Matsue was to the point. It was one of those which the philosopher Schopenhauer would have cited with telling power in a chapter upon the reason of love.

The girl's name was Mitani Kame; she was very beautiful; she was twenty-one years of age. She had another name, a "flower-name,"—Yoshiko. She was a *joro*. In the Occident, the simple announcement of this fact would be sufficient to kill all sympathy. But in this Orient, except, perhaps, in some of the open ports, the girls exercising this profession do not sink to the degraded level of their sisters abroad. Woman is everywhere what man makes her; and man has not made the *joro* in Japan the dangerous and loathsome being which she has been made abroad. Sometimes the career is adopted as a desperate sacrifice for the sake of parents or relatives reduced by infirmity or other misfortune to the last degree of hopeless misery. Such was the case of Yoshiko: she had sold herself into slavery for the sake of a mother and child-sister.

The man's name was Tashiro Riuchiro; he was twenty-three years old, a handsome, gifted youth; the son of an eminent Matsue physician. He had two years before voluntarily enlisted in the Imperial Guards. Last spring, in consequence of a severe fit of sickness, he returned to Matsue on leave of absence. During his stay here, he met the girl; and the two fell in love with each other at first sight. The result of a mutual passion under such circumstances could only be misery. In order to be always with her, the young man, after expending whatever money he possessed, incurred a larger debt than he was able to pay. He probably felt that to appeal to his parents to buy the girl's freedom would be hopeless. She, on her part, also incurred a heavy debt for the sake of her lover. The means of both becoming exhausted, despair followed. Without money the lovers could not meet. Nothing more horrible than the consequence of love under such conditions could well be imagined; on the man's side the frenzy of jealousy and impotent rage against the social vice which raised an impassable legal barrier between him and the object of his affection; on the woman's side, loathing unspeakable for her position, despair,—vain appeal to hearts hardened to regard affection as a weakness to speculate upon. Nevertheless, by some means, the lovers were able to arrange for a last meeting. On New Year's night the girl secretly visited the young man's house at a late hour; the signal agreed upon was the throwing of a little pebble against the *shoji*. The family were so occupied with preparations for the new year's festival that they heard nothing, and suspected nothing. Indeed the young man's parents had never had a suspicion of the amour. Their first knowledge of it came with the morning of the new year, when a servant, opening the *shoji*, found their young master dead, with a dead woman in his arms, and some letters lying beside them explaining the tragedy. They had taken morphine.

The letters were very characteristic; the girl's letter, especially. Most suicides abroad write very stupid letters, if they write any. This woman wrote a very beautiful letter: I think no one could read it without feeling touched. But the strangest circumstance about it—to a foreign mind at least—was that this letter was a letter of gratitude to—the house in which she had been a slave! (Fancy the possibility of a similar episode in the West!) A very curious letter, a letter full of kind thoughts, kind words, and strange faith. "You know," she wrote, "that I fell in love with him last spring. I do not know why I love him so much. We can never live together in this world; and I promised him—I do not know why—to die with him, so that we might live together in the next world. And according to that promise I must now take my way with him to the *meido* (*meido-no-tabiji*). You were very, very kind to me, and to my mother, and to my sister; and I would that I could thank you as I ought to, but I cannot now, not in this world. Still, though I am going to another world, I will never forget your goodness to me; and I will surely return that kindness hereafter to you and to your house. *From under the shadow of the grasses* I will send my gratitude to you; you will be thanked; you will never be forgotten. Please do not be angry with me."

The city's heart fluttered a little while over the event. There was a great funeral, of course; and a procession of women in white, ghostly as the dreams of processions of souls painted upon *kakemono* representing the Shadow-world. Then the great storm came; and the event was quickly forgotten; and the new graves were hidden with the old beneath high drifts of snow. And the life of the town proceeded precisely as before.

I do not know whether there is a moral to this incident. Are the conditions which render such little tragedies possible very much more evil than our social conditions abroad? And if changed by legislation, would the result of the change be morally for the worse or for the better? To some the question may seem easy. But those who have studied sociological problems the most profoundly would probably hesitate the longest in replying. The brutalities and the horrors and the monstrosities of Western unlicensed vice are happily still unknown in this Orient.

## *LETTER FROM SAN FRANCICO.*

(FROM OUR SPECIAL CORRESPONDENT.)

San Francisco, January 10th.

Since I last wrote, the American people have been generally devoted to the gaieties of the season, and to the usual interchange of good wishes for the New Year. Nothing of interest has transpired in Congress, except the transmission of the Behring's Sea correspondence to that body by the President. The Force Bill is practically dead. The dominant party appear to be weary of contention over silver, and to be willing that Stewart of Nevada and other cranks should frame the bill which it is proposed to pass. Of amendments to the tariff, the public hears nothing. The Republicans declare that the McKinley Act is a very good act as it stands; the Democrats, when they undertake to amend it, will not attack it piecemeal.

The correspondence between Mr. Blaine and Lord Salisbury is entertaining reading. Your readers will remember that the contention of our Government was that the waters of Behring Sea were territorial waters, and that American Revenue cutters were justified in seizing foreign

Digitized by Google

vessels found sealing therein, in contravention of the Act of Congress of 1870. On more than one occasion, if I remember rightly, I stated in this correspondence that it would be difficult to reconcile this contention with the traditional policy of the United States Government, and with the recognized principles of international law. That law declares that those seas only are closed seas which are enclosed on all sides by the territory of the nation claiming territorial jurisdiction over them. It appears that it took Mr. Blaine something over a year to realise that this is the law, and that the position formerly assumed by himself and by his predecessors was untenable. In writing to the British Minister, he now states that no one ever denied that the limit of territorial jurisdiction was one league from low water mark; forgetting that he himself, and Secretaries of the Treasury, from John Sherman to Mr. Windom, did most emphatically deny it. However, it is better to be right late, than never. It is agreeable to find that the Government has at last assumed an attitude is consistent with the policy faithfully pursued by all administrations since that of Adams, until the Alaska Commercial Company came into existence.

M. Blaine proposes an arbitration on the question whether, in the interest of the preservation of the fur seal, it would not be well for the maritime nations to agree upon a close season, and upon some regulations to prevent the killing of seals and especially female seals en route for the Prybiloff Islands. There seems to be no reason why this proposal should not be accepted, and the proposed restrictions on indiscriminate seal killing adopted. In the meantime, the United States will have to pay for the British sealers seized in Behring's Sea just as Great Britain had to pay for the depredations committed by vessels launched from Laird's ship-yard.

General Miles continues the work of corraling the hostile Indians in a strip of territory lying north of the Nebraska State line. Troops are encamped, north, south, and west of them; the eastern side of the corral is left open, because the line of retreat on that side leads to the reservation. Miles has suspended Colonel Forsyth of the 7th Cavalry, first for having unnecessarily exposed his men to the Indian fire, and next for having permitted the killing of squaws and children. He states in his report that sixty women and children were buried on the battle-ground. In the States west of the river valleys, the killing of an Indian woman or her child involves no disgrace, and in bar-rooms it is rather regarded as a feather in the cap of the slayer. But humanity and civilization still reign at the East, and are supposed to pervade the minds of the officers of the army. If the facts as alleged are proven, it will go hard with Colonel Forsyth.

In my letter of December 18th, I mentioned that the President had removed Minister Mizner for allowing a party of Guatemalan soldiers to murder General Barrundia on board a Pacific mail steamer carrying the American flag. Secretary Tracy has now administered the following rebuke to Commander Reiter, of the Navy, who had two ships of war under his command at the port where the occurrence took place:—

From the moment that the approach of the *Acapulco*, a steamer bearing the American flag, was known to you, you should have taken every step legally in your power to give countenance and support to her captain and protection to all persons on board, especially when you knew their safety was likely to be menaced. Instead of this, in your apparent endeavour to escape the responsibility, you remained so completely passive that, as far as the events on board the *Acapatco* were concerned, you and your vessels might as well have been on the other side of the ocean.

Whenever any passenger, whether American or foreigner, is received on board an American vessel he comes under the American flag and is entitled to the protection and security of which that flag is a guarantee. It was within your legitimate power, as it was your imperative duty, to execute by every means legally at your command the guarantee of protection which the United States gives to all vessels under its flag. Your ships were on the spot; you had full knowledge of General Barrundia's approach; you were informed of the intention to seize him as a political offender. He was not a fugitive from the Territory of Guatemala, seeking to escape territorial jurisdiction; neither was he a conspirator attempting to return to his country to foment a revolution. He was a passenger on board an American ship which he had joined in Mexico with Panama for his destination, and he had thus, without your intervention and outside of local jurisdiction, obtained a place under the flag and protection of the United States.

In this situation you found him. His safety was threatened. Under these circumstances it was your plain duty to proceed at once to meet the steamer before she cast anchor in port, to warn the captain of the danger and offer to his passenger, should he desire it, an asylum on board your ship. It is believed that few cases have ever occurred in the history of the United States Navy where a commanding officer so completely abandoned the responsibility of his position as, according to your own showing, you did upon this critical occasion. A United States officer does not ask of foreign Governments permission to offer an asylum to any person on board an American vessel at sea, who stands in need of a refuge. At officer who so abdicates his authority and that of the nation he represents, and surrenders it to others, has a lesson to learn before he can safely be entrusted with the command of a ship of war.

This has the right ring. It contrasts with the shifty chatter of those who argued when the event was first announced, that the conduct of Mizner and Reiter would be justified by some legal quibble.

Most of the South and Central American States have agreed to the proposal of the Pan-American Congress, to establish a silver currency which shall be uniform in weight, and shall circulate throughout the Americas, from the Canadian border to Patagonia. The Mexican dollar is to be taken as the standard of the new Pan-American dollar; subsidiary coins will be made to conform to it. It is believed that the reform will prove of service in commercial exchanges. It will certainly obviate one of the annoyances which travellers experience. It would be a good thing if the American nation would go a step further, and make their currency uniform with that of the Latin Union in Europe. There is no reason why the Union, like the Postal Union, should not embrace Japan as well.

On August 18th last, a furniture dealer named Jacobson was "held up" by two foot-pads opposite his house in California Street, at 10 p.m., and, resisting them, was shot dead. The police scoured the city for the murderers, but were unable to get any clue until this week, when they arrested two young men named Bell and Campbell. To the surprise of the detectives, both men confessed that they were professional highway robbers, and had been engaged for some months in the prosecution of their calling in this city. Only on one point did they differ. Campbell testified that he saw Bell shoot Jacobson. Bell denied the crime. According to the story which Jacobson told before his death, he was "held up" by a man who stood in front of him, and with whom he struggled. This man suddenly cried to his pal, who was behind Jacobson—"Let him have it," and then the fatal shot was fired. Campbell says he was the pal, but that it was Bell and not he, who fired the shot. Both were committed for trial, and evinced remarkable composure.

Emma Abbott is dead. Some of your readers will remember her as a popular singer of light opera, and one of the most successful managers of the day. She was beautiful in her youth, and not a whisper was ever heard against her fair fame. Some years ago (she was forty-two at the time of her death) she married a business man at Denver, and lived happily with him, though she never bore children. He died a couple of years ago, and since then his widow has indulged in gloomy forebodings that her own life would not be long. On a visit to Salt Lake City, pneumonia attacked her; she seemed to have lost her vital power, and quickly succumbed to the disease. She is said to have left a fortune which exceeds a million.

The man Hammond, who kept an unsavoury den in London for the use of the aristocracy, and was bundled out of England in a hurry to prevent his being called as a witness, is again in trouble. He went to Seattle, where all the bad people go, and there opened a saloon. But he had no notion of abandoning the milch cow which had strayed in his path. He was in the habit of writing to his noble ex-customers, and of demanding regular supplies of hush money. They got tired of paying, at last, and sent over an English detective to work up Mr. Hammond's case, and see if there was nothing against him at Seattle. The detective did his work cleverly. He soon got Hammond foul, and had him laid by the heels in the county jail. He languishes there at this moment, swearing that he will tell the whole truth about the English den. It is no fun to get into the clutches of such a scoundrel.

Another of the double homicides which are becoming so common occurred in this city yesterday. A man named Barnett lived with a beautiful girl of the town named Margaret Custine. Last evening, shortly after they had retired to their room, two shots were heard. The door was broken open; the woman was found lying on the bed in her nightdress, with blood flowing from a wound in the breast. The man was leaning back in a chair, bleeding from an injury in his chest. To a detective who asked what had happened, Barnett replied, with gasps and groans:—

This is a case of booze. For three days we have been drinking together. We are old acquaintances. For the last six months she has begged me to kill her, and she repeated the request time and time again. We have been drinking to-day, and when we went to the room we agreed to die together. She pointed out the spot where I should shoot. I shot and hit it just where she had placed her finger, over her heart. After I hit her I fired at myself, and I am so sorry I made such a bad job of it, for I am suffering terrible pain. I fully realize my position and that the finger of death is upon me.

As I close this letter, the poor fellow is in extremis.

## *IN H.B.M. COURT FOR JAPAN.*

Before N. J. HANNEN, Esq., Judge—THURSDAY, February 5th, 1891.

EDITOR V. PROPRIETOR OF THE "JAPAN GAZETTE."

An action was raised to-day at the instance of E. P. Nuttall against J. R. Anglin.

The petition and answer in the case were as follows:—

The petition of Edgar Pearson Nuttall of Yokohama, journalist, the above named plaintiff, shows as follows:—

1. By an agreement dated the 17th day of July, 1888, and made in England between the defendant (therein described as the Proprietor and Manager of the *Japan Gazette*) by his Attorney, William Harwood, and the plaintiff, it was agreed that the plaintiff should proceed from London to Yokohama in the month of August, 1888, and during the term of three years from the date of his arrival at Yokohama should act as Sub-editor and Reporter of the defendant for the said *Japan Gazette* at the salary therein mentioned, and it was provided by clause 5 of the said agreement that the defendant might determine the engagement of the plaintiff at any time before the expiration of the said term on giving to the plaintiff one week's previous notice in writing and a sum equal to three calendar months' salary, and that if the defendant should terminate the engagement of the plaintiff pursuant to that clause he should provide the plaintiff with a second-class passage to England.

2. By an agreement dated the 28th day of Dec., 1889, and made between the parties to the said agreement of the 17th day of July, 1888, and endorsed thereon, it was agreed that the said agreement of the 17th day of July, 1888, should be so far modified that from the 1st day of January, 1890, the plaintiff should assume charge of the editorship of the said *Japan Gazette* at a salary of $185 per mensem and that in all other respects the said agreement should be confirmed.

3. The plaintiff served the defendant under the said agreement up to and until the 1st day of January, 1891, and has always been ready and willing so to serve the defendant, but the defendant towards the end of the year 1890 assigned the said *Japan Gazette* and all his rights in connection therewith to the Yokohama Printing and Publishing Company, Limited, as from the 1st day of January, 1891, and the said company assumed the proprietorship of the said *Gazette* on the said 1st day of January, 1891.

4. By the said action of the defendant he has determined the engagement of the plaintiff, but the defendant has not paid and refuses to pay to the plaintiff the sum or any part of the sum named in clause 5 of the said agreement of the 17th day of July, 1888, or to provide him with a second-class passage to England.

5. The plaintiff has lost the benefit of the said agreement and has remained unemployed since the said 1st day of January, 1891, and has also suffered damage by his detention in Yokohama from that date until the trial of this action.

The plaintiff therefore prays:

1. That the defendant may be ordered to pay the plaintiff the sum of $555, being a sum equal to three months' salary of the plaintiff as Editor of the *Japan Gazette*, and that the defendant may be ordered to provide the plaintiff with a second-class passage to England or a sum equivalent thereto, namely $250.
